## CHAPTER 20

### EMPLOYMENT AND UNEMPLOYMENT

Further detail on subjects dealt with in this chapter is contained in the *Labour Report* (6.7) and other publications of this Bureau. For subjects relating to population censuses reference should be made to the series of mimeographed and printed publications listed in the *Publications of the Commonwealth Bureau of Census and Statistics* (1.8). Detailed information on the labour force and on employment and unemployment is contained in mimeographed bulletins *The Labour Force* (6.22, annual and 6.20, quarterly) and *Employment and Unemployment* (6.4, monthly). Current information is also available in the *Monthly Review of Business Statistics* (1.4), the *Digest of Current Economic Statistics* (1.5), and the *Quarterly Summary of Australian Statistics* (1.3). Preliminary estimates of unemployment and of the labour force are issued quarterly in *Unemployment* (6.35) and *The Labour Force* (6.32) respectively, and preliminary employment estimates are issued in a monthly statement *Employed Wage and Salary Earners* (6.12).

### THE LABOUR FORCE

This chapter contains a number of series relating to the labour force and its components. The labour force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the labour force, classified according to industry, occupation and occupational status (i.e. whether employers, self-employed persons, wage and salary earners or unpaid helpers) and personal characteristics such as age, sex, marital status and birthplace, are obtained only at a general census of population. Information about the labour force questions in the population census of June 1971 and a table showing the industry and occupational status of the labour force are given on this and the following four pages.

In the periods between population censuses, estimates of the labour force for the whole of Australia are obtained through the population survey, which is carried out by means of personal interviews at a sample of households throughout Australia in February, May, August and November each year (see pages 693–705). The survey provides, in addition to particulars of the demographic composition of the labour force, broad estimates of occupational status, occupation, industry and hours of work.

Detailed industry estimates for each State and Territory are obtained only in respect of wage and salary earners, through a monthly collection from employers. These estimates, which exclude employees in agriculture and private domestic service, are based on benchmarks derived from the population census, and other data but they do not agree exactly with census figures at relevant dates, partly because of a different method of allocating employees to industries. Further information about estimates of employed wage and salary earners, and in particular the reason for differences between estimates and census data, is given on pages 720–1.

### The population census

#### General

For the 1971 Census of Population and Housing the term 'labour force' is used in place of 'work force' in conformity with the Bureau's quarterly population survey and with international usage.

The labour force is defined as those persons aged 15 years and over who answered 'yes' to any of the following questions on the 1971 Census schedule:

- (a) Did this person have a full or part-time job, or business or farm of any kind last week?
- (b) Did this person do any work at all last week for payment or profit?
- (c) Was this person temporarily laid off by his employer without pay for the WHOLE of last week?
- (d) Did this person look for work last week?

Thus the labour force comprises those persons who worked, those who had a job from which they were temporarily absent, those who were temporarily laid off without pay for the whole of the reference week and those who did not work, did not have a job and were actively looking for work.

Persons helping but not receiving wages or salary who usually worked less than 15 hours a week are excluded from the labour force. Bonded trainees (including trainee teachers) and cadets engaged in full-time study at educational institutions are also excluded, even though such institutions were conducted by their employer.

The unemployed members of the labour force are those persons who answered 'No' to questions (a) and (b) and 'Yes' to question (d) and those who answered 'Yes' to question (a), 'No' to question (b) and 'Yes' to question (c). Thus the unemployed consist of those who did no work during the reference week *and* either looked for work (having no job) or were temporarily laid off from a job.

This approach conforms closely to the recommendations of the Eighth International Conference of Labour Statisticians held in Geneva in 1954 and to the approach used at the 1966 Census.

According to the definition any labour force activity during the previous week, however little results in the person being counted in the labour force.

Thus many persons whose main activity is not a labour force one (e.g. housewife, full-time student) are drawn into the labour force by virtue of part-time or occasional labour force activity in the previous week. Answers to the questions on usual major activity indicate that there were substantially more of such persons at the Census of 1971 than at the Census of 1966 and that they were predominantly females.

On the other hand, the definition excludes persons who may frequently or usually participate in the labour force but who in the previous week happened to have withdrawn from the labour force. Answers to the question on usual major activity indicate that there were substantially more of such persons at the 1971 Census than at the 1966 Census, especially among males.

A similar definition of the labour force is used in the quarterly population sample survey conducted by the Bureau by the method of personal interview. This survey is used to measure changes in the labour force from quarter to quarter in the intercensal period.

Evidence from post-enumeration surveys and pilot tests indicates that the personal interview approach tends to identify a larger number of persons as in the labour force than does the completion of the census questionnaire by the householder. This tendency has increased between the 1966 and 1971 Censuses.

The above considerations should be borne in mind if comparisons of the total labour force or labour force participation rates are made between the 1966 and 1971 Censuses, or between the 1971 Census and the 1971 labour force quarterly estimates, or if the 1971 Census figures for wage and salary earners are compared with estimates of employed wage and salary earners shown on pages 721-4.

#### Occupational status, employment status and labour force status

At the 1971 Census the terms *occupational status*, *employment status* and *labour force status* were used, and the relationship between these terms is illustrated by the following classifications.

<i>Occupational status</i>	<i>Employment status</i>	<i>Labour force status</i>
Employer . . . . }	Employed }	In the labour force
Self-employed . . . . }		
Employee . . . . }		
Helper . . . . }		
Looking for first job . . . . }	Unemployed }	Not in the labour force
Other unemployed . . . . }		
Not in the labour force . . . . }	Not in the labour force	Not in the labour force

Prior to the 1971 Census unemployed persons were classified according to their last job held. For the 1971 Census however, details of occupation and industry were sought only in respect of *employed* persons.

### Occupation

Occupation is defined as the type of work performed by an employed person and should not be confused with the type of productive activity, business or service carried out by the establishment in which a person works, e.g. a carpenter employed by a steel-making establishment would have the occupation of 'carpenter' and industry 'steel manufacture'; an electrician working at an oil refinery would have the occupation of 'electrician' but his industry would be that of 'oil refining' (see Industry).

In accordance with the International Standard Classifications of Occupations the structure of the Australian classification used for the 1971 and previous censuses is based primarily on the nature of the work done. The 1971 classification was prepared from the International Standard Classification of Occupations 1958 (revised 1966). The changes in the revised classification were given careful consideration in the preparation of the 1971 Australian classification. A number of new entries have been created to maintain convertibility to the international classification and others created to give more precise codes in certain occupation groups.

### Industry

Industry is defined as the branch of productive activity, business or service carried out by the establishment in which a person is employed.

For the 1971 Census the classification of industry was based on the *Australian Standard Industrial Classification* Preliminary Edition (ASIC). For the purposes of the population census an 'undefined' category was added, where appropriate, to individual divisions, subdivisions and groups of the classification to facilitate the coding of imprecise or generalised descriptions of industrial activities on the census schedules.

At the 1966 and previous Censuses, industry was determined from the respondent's own stated description of the 'kind of industry, business or service' in which he worked. With the adoption of ASIC for the 1971 Census comparability with previous censuses is greatly impaired, not only because of changes in the classification itself but also because in 1971 the industry coding in general was not determined from the stated description. Instead the name and address of the establishment at which the respondent worked, in general, provided the industry code for employees of that establishment. However, in a number of cases, owing to deficient replies concerning name and address of employer or because the establishment had not been pre-coded for industry, recourse still had to be made in coding to the respondent's own description of the industry in which he worked.

**EMPLOYED POPULATION(a), INDUSTRY BY OCCUPATIONAL STATUS  
AUSTRALIA, CENSUS 30 JUNE 1971**

Industry (division)	Occupational Status				Total	Proportion of total (per cent)

(a) Persons who, during the week prior to the census, were unemployed or who were classified as 'not in the labour force', are not included in this table.

### The population survey

The population survey is the general title given to the household sample survey carried out in February, May, August and November of each year in all States and Territories. Emphasis in the survey is placed on the collection of data on demographic and labour force characteristics, the principal survey component being referred to as the labour force survey. The remaining part of the population survey consists of supplementary collections which are carried out from time to time in conjunction with the labour force survey.

The population survey is based on a sample of dwellings selected by area sampling methods. Information is obtained each quarter from the occupants of selected dwellings by carefully chosen and specially trained interviewers during a four-week period on each occasion. Prior to the reselection of the sample in 1972 (using data from the 1971 Census of Population and Housing), the sample framework was extensively redesigned with a view to improving its efficiency, thus enabling economies to be made in the overall size of the sample. There are now about 30,000 households in the sample, representing two-thirds of one per cent of all households in Australia.

A description of the labour force survey and a selection of principal statistics obtained from it are given in this section. Data from supplementary surveys are published in mimeographed bulletins which are available on request. Results of the principal surveys held in the past have been published in earlier issues of the Year Book. Supplementary surveys for which results are contained in this chapter are leavers from schools, universities or other educational institutions, February 1974; child care, May 1973; multiple jobholding, August 1973; labour mobility, November 1972; superannuation, February 1974; and labour force experience during 1972. Reference to a survey covering ex-service personnel and their dependants conducted in November 1971 is made in Chapter 5, Repatriation, page 122.

### The labour force survey

The labour force survey commenced in November 1960, and until November 1963 it was confined to the six State capital cities. The first survey for the whole of Australia was carried out in February 1964. Estimates are published quarterly in the mimeographed bulletin *The Labour Force* (6.20) and in the preliminary statements *The Labour Force* (6.32) and *Unemployment* (6.35). More comprehensive statistics have been published in special bulletins entitled *The Labour Force* (6.22), covering the period 1964 to 1968, and single years thereafter.

The survey includes all persons fifteen years of age and over (including full-blood Aborigines), except members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from census and estimated populations.

The classification used in the survey conforms closely to that recommended by the Eighth International Conference of Labour Statisticians held in Geneva in 1954. In this classification, the labour force category to which an individual is assigned depends on his actual activity (i.e. whether working, looking for work, etc.) during a specified week, known as 'survey week,' which is the week immediately preceding that in which the interview takes place. The interviews are carried out during a period of four weeks, so that there are four survey weeks in each of the months to which the survey relates. These survey weeks generally fall within the limits of the calendar month.

A person's activity during survey week is determined from answers given to a set of questions specially designed for this purpose. The principal categories appearing in the tables in this section are the employed and unemployed, who together constitute the labour force, and the remainder, who are classified as not in the labour force. Definitions of these categories are as follows:

- (i) *The labour force* comprises all persons who, during survey week, were employed or unemployed as defined in (ii) and (iii) below.
- (ii) *Employed persons* comprise all those who, during survey week,
  - (a) did any work for pay, profit, commission or payment in kind, in a job or business, or on a farm (including employees, employers and self-employed persons), or
  - (b) worked fifteen hours or more without pay in a family business (or farm), or
  - (c) had a job, business or farm, but were not at work because of illness, accident, leave, holiday, production hold-up due to bad weather, plant breakdown, etc., or because they were on strike.

A person who had a job but was temporarily laid off by his employer for the whole week without pay is excluded, and is classified in the tables as unemployed. A person who did some work during the week, however, before he either lost his job or was laid off, is classified as employed. A person who held more than one job is counted only once, in the job at which he worked most hours during survey week.

- (iii) *Unemployed persons* comprise all those who, during survey week, did no work at all, and who either,
  - (a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available, or had not already made definite arrangements to start work in a new job after survey week); or
  - (b) were laid off from their jobs without pay for the whole week.

A person who either lost his job or was laid off *during* survey week, but did some work at his job during that week, is classified as employed.

- (iv) *Persons not in the labour force* are all those who, during survey week, were not in the categories 'employed' or 'unemployed' as defined. This category therefore includes persons without a job, business or farm who were not actively looking for work, and who, during survey week, were either keeping house (unpaid), attending an educational institution (e.g. school or university), retired or voluntarily idle, permanently unable to work or inmates of institutions. A person who worked less than fifteen hours without pay in a family business during survey week is also classified as not in the labour force.

Figures of total population fifteen years of age and over for each sex are derived from the official population estimates, which in turn are based on results of population censuses. Figures of marital status and all labour force characteristics of these populations are derived from the sample survey data. For this and other reasons, including differences in timing, methods of collection (personal interview in the survey, self-enumeration in the census) and, in some cases, concepts and definitions, the survey estimates of marital status and labour force characteristics may not agree closely with the corresponding census figures.

Estimates of total population, revised on the basis of the 1971 Census of Population, indicate that the estimates that were used for the population surveys in mid-1971 were, overall, some 55,000 persons too high. The revised estimates classified by age, which are necessary to enable the revision of labour force estimates to be carried out, are not yet available. Caution should be exercised in using the estimates in this Year Book as indicators of long-term change. A preliminary assessment of the effect of the revised population estimates indicates that it will be necessary to reduce the level of the estimated labour force from mid-1971 onwards by about 28,000 persons (mostly males). Successively smaller revisions will be made to the estimates for earlier periods back to mid-1966.

Industry estimates published in Year Book No. 58 and previous issues were based on the Classification and Classified List of Industries used at the 1961 and 1966 population censuses. Industry is now coded by use of the Australian Standard Industrial Classification (ASIC). Industry estimates shown in this issue for May 1973 and May 1974, are, therefore, not strictly comparable with those shown in earlier issues.

#### Reliability of the estimates

Since the estimates which appear in the following tables are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample, and not the whole population, was enumerated. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained from a comparable complete enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors.

Space does not allow for the separate indication of the standard errors of all estimates in this section. A table of standard errors which is intended to be of general application is therefore given below:

The standard errors in the table are averages based on calculations for a limited number of surveys and are also averages over a wide range of labour force characteristics. These figures thus give not a precise measure but an indication of the magnitude of the standard error of any particular estimate for any particular survey. An example of the use of the table is as follows: if the estimate obtained from the sample is 100,000 and the standard error is 3 per cent of the estimate, i.e. 3,000, there are about two chances in three that the true figure is within the range 97,000 to 103,000 and about nineteen chances in twenty that this figure is within the range 94,000 to 106,000.

#### STANDARD ERRORS OF QUARTERLY ESTIMATES

Size of estimate (persons)	Approximate standard error of estimates	
	Persons	Percentage of estimate
4,000	800	20.0
5,000	900	18.0
10,000	1,200	12.0
20,000	1,600	8.0
50,000	2,300	4.6
100,000	3,000	3.0
200,000	4,000	2.0
500,000	6,000	1.2
1,000,000	8,000	0.8
2,000,000	10,000	0.5

The standard errors of estimates relating to agricultural employment are generally somewhat higher than the standard errors of other estimates of the same magnitude. Estimates for females also tend to have higher standard errors than estimates of equivalent size for males in similar employment categories.

The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the numerator and the size of the denominator. Percentages quoted in the following tables, and any other percentages calculated from figures shown, have generally somewhat lower proportional standard errors than have the estimates which form the numerators of the percentages, particularly where the percentages are large.

As the standard errors in the table show, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the following tables, estimates less than 4,000 have not been shown. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable.

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

(a) For a note on persons excluded see explanatory notes on page 693. (b) For definitions see page 694. (c) The labour force in each group as a percentage of the civilian population aged 15 years and over in the same group (labour force participation rate). (d) Never married, widowed and divorced.

NOTE. Discontinuity indicated by horizontal line. At the 1971 population census, trainee teachers were for the first time classified as not in the labour force. They have been likewise excluded from the labour force estimates from August 1971. In consequence there is a break in the labour force series between May and August 1971, the numbers of males and females excluded being approximately 7,000 and 17,000 respectively.

Discontinuity between 1972 and 1973 was caused by a change in the basis of industry coding. Industry is now coded according to the Australian Standard Industrial Classification (ASIC). See page 695.

## LABOUR FORCE PARTICIPATION RATES

(THE LABOUR FORCE IN EACH GROUP AS A PERCENTAGE OF THE CIVILIAN POPULATION AGED  
15 YEARS AND OVER IN THE SAME GROUP)

## UNEMPLOYMENT RATES

(THE UNEMPLOYED IN EACH GROUP AS A PERCENTAGE OF THE CIVILIAN LABOUR FORCE  
IN THE SAME GROUP)

(a) Never married, widowed and divorced.

(a) Aged 15 years and over. (b) For definitions see page 694. (c) See note (c) to table on page 696. Persons in institutions for whom, for the purpose of the survey, the institution was regarded as their usual place of residence, have been omitted from the civilian population since it is not practicable to ascertain the birthplace or the year of arrival in Australia for such persons.

\* Estimates less than, or based on a figure less than 4,000 are not published because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable.

NOTE. For an explanation of the discontinuity in the series (indicated by horizontal line), see NOTE on page 696.

### Leavers from schools, universities or other educational institutions

Surveys based on the population survey sample (*see* page 693) have been carried out in February of each year since 1964 in order to obtain information about persons aged 15 to 24 who had attended full time at a school, university or other educational institution at some time during the previous year. Estimates for the years 1964 to 1973 have been published in previous issues of the Year Book. Estimates for February 1974 are shown below.

The main survey questions were designed to distinguish among persons who had attended full time at a school, university or other educational institution at some time in the previous year, those who were intending to return to full-time education and those who were not returning to full-time education, the latter being described in this section as 'leavers'.

The estimates relate to all persons in the age group 15 to 24 years, except members of the permanent armed forces and certain diplomatic personnel customarily excluded from census and estimated populations. Certain categories of persons covered by the survey were not asked the survey questions. These comprised persons who were patients in hospitals and sanatoria, or inmates of gaols, reformatories, etc., and for whom, for the purposes of this survey, the institution was regarded as their dwelling, and persons reported as permanently unable to work. An estimate of the total number of such persons is shown in the first table in this section.

All persons covered by the survey were asked questions about their occupational status and those in the labour force were further questioned about their occupation and industry. Occupational status is shown for 'leavers', but not for persons returning to full-time education. Although many of these latter persons were in the labour force at the time of the surveys, their numbers would not give a useful indication of the extent of vacation employment because, in the years 1971, 1972 and 1974, the 'survey week' extended from the second week in February to the first week in March. Hence, between the first and last survey weeks, the level of vacation jobholding would have decreased substantially.

For further details reference should be made to the periodic mimeographed bulletins *Survey of Leavers from Schools, Universities or Other Educational Institutions* (6.9).

#### CIVILIANS AGED 15 TO 24 YEARS<sup>(a)</sup>, BY ATTENDANCE OR NON-ATTENDANCE FULL TIME AT A SCHOOL, UNIVERSITY, ETC., IN THE PREVIOUS YEAR AUSTRALIA, FEBRUARY 1974 (<sup>'000</sup>)

### Survey of multiple jobholding, August 1973

In August 1973 a survey, based on the quarterly population survey (see page 693), was conducted throughout Australia to obtain information about the nature and extent of multiple jobholding. The results of earlier surveys of multiple jobholding were given in Year Book No. 54, pages 1162-6 (August 1966 and 1967), and in Year Book No. 58, pages 707-10 (May 1971).

In these surveys persons were classified as *multiple jobholders* if, during the survey week, they:

- (a) worked in a second job or held a second job from which they were temporarily absent, and
  - (b) were employed in at least one of their jobs as a wage or salary earner. Work as an unpaid family helper or service in the reserve defence forces was not regarded as a second job.
- Persons who by nature of their employment worked for more than one employer, e.g. domestics, odd-job men, baby-sitters, etc., were not counted as multiple jobholders unless they also held another job of a different kind; nor were those who worked for more than one employer solely by reason of changing jobs during the survey week.

The table of standard errors and the comments on the reliability of estimates given on pages 695-6 are also applicable to this survey.

Further details of the survey were published in the mimeographed bulletin *Multiple Jobholding*, August 1973 (6.19).

## MULTIPLE JOBHOLDERS, AUGUST 1973(a)

(a) Non-institutional civilians aged 15 years and over. (b) Statistical Divisions of the six State capital cities as defined in *Census of Population and Housing*, 30 June 1971, see pages 140-1. (c) Never married, widowed and divorced. (d) Includes miners, quarrymen and related workers.

\* Less than 4,000 or based on an estimate less than 4,000. Not published because subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable.

NOTE. State figures do not include the Northern Territory or the Australian Capital Territory. However, the estimates for the Territories are included in all other dissections.

### Labour force experience during 1972

In February 1973 a survey, based on the quarterly population survey (see page 693), was conducted throughout Australia to obtain information about the labour force experience during 1972 of civilians aged fifteen years and over. Information obtained included the length of time (in 1972) during which persons were employed, unemployed or not in the labour force, the number of times they were unemployed and other aspects of labour force experience. The results of an earlier survey of labour force experience, conducted in February 1969, were given in Year Book No. 57, pages 695-700.

Each person was assigned to a labour force category for each week in 1972, on the basis of his actual activity (i.e. whether working, looking for work, etc.) during that week. The principal categories appearing in the tables are as follows:

- (i) *Persons in the labour force.* A person was classified as having been in the labour force during any week in which he was employed or unemployed as defined in (ii) and (iii) below.
- (ii) *Employed person.* A person was classified as having been employed during a week if, in that week, he: (a) did any work for pay, profit, commission or payment in kind, in a job or business, or on a farm (including employees, employers and self-employed persons), or (b) worked fifteen hours or more without pay in a family business (or farm), or (c) had a job, business or farm, but was on paid leave (including sick leave).
- (iii) *Unemployed persons.* A person was classified as having been unemployed during a week if, in that week, he did not work at all, and either: (a) did not have a job or business and was looking for work, or (b) was laid off from his job without pay for the whole week.
- (iv) *Persons out of the labour force* are all those who, in any week, were not in the categories "employed" or "unemployed", as defined above. For the purposes of this survey a person who was on strike and who did no work during a week was classified as out of the labour force in that week.

A person was classified as having worked mostly full time in 1972 if the number of weeks in which he worked 35 hours or more (*full-time work*) exceeded or was equal to the number of weeks in which he worked less than 35 hours (*part-time work*). If the number of weeks worked full time was less than the number of weeks worked part time he was classified as having worked mostly part time. When absent on paid leave (including paid sick leave) he was classified according to the usual hours worked in the job from which he was absent.

The table of standard errors and the comments on the reliability of estimates given on pages 695-6 are also applicable to this survey.

Further details of the survey were published in the mimeographed bulletin *Labour Force Experience During 1972*, February 1973 (6.26).

### Labour mobility

In November 1972 a survey, based on the quarterly population survey (see page 693), was conducted throughout Australia to obtain information about changes of employment or job location and other aspects of the mobility of the labour force.

For the purposes of the survey, a *job* was defined as: (i) employment as a wage or salary earner (or unpaid family helper) by a particular employer, in a particular locality; or (ii) self-employment (with or without employees) in a particular locality. Thus, a change of job may have involved a change of employer without a change of job locality; a change of locality without a change of employer; or a change in both employer and locality. For example, the movement of an employer's operations to premises in a different locality would entail a change of job for employees who moved to the new location. Promotion or transfer of an employee which involved a move to premises in a different locality would also constitute a change of job. In capital cities and major towns, each suburb was considered to be a different locality; otherwise, each town and each country area associated with a town constituted a separate locality. It should be noted, however, that for a person who worked at different sites for the same employer (for example, a construction worker), his base of operations (i.e. his employer's office, depot, yard, etc.) was considered to be his place of work.

A *temporary job* was defined as a job of a temporary nature (e.g. relieving for someone who was away) in which the occupant had worked less than 13 weeks at the time of the survey.

In this survey definitions of 'employed', 'unemployed', and therefore 'labour force status', were slightly changed. The definitions used were:

- (a) *The labour force* comprised all persons who, during survey week, were employed or unemployed as defined in (b) and (c) below.
- (b) *Employed persons* comprised all those who, during survey week, did any work for pay, profit, commission or payment in kind, in a job or business, or on a farm (including employees, employers and self-employed persons), or worked fifteen hours or more without pay in a family business (or farm), or had a job, business or farm, but were not at work because of illness, accident, leave, holiday or industrial dispute; or because of production hold-up due to bad weather, plant breakdown, etc., or were laid off from their jobs without pay.
- (c) A person who held more than one job was counted only once, in the job at which he worked most hours during survey week.
- (d) *Unemployed persons* comprised all those who, during survey week, did no work at all, and who did not have a job or business and were looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available, or had not already made definite arrangements to start work in a new job after survey week).
- (e) *Person not in the labour force* were all those who, during survey week, were not in the categories 'employed' or 'unemployed' as defined. This category therefore included persons without a job, business or farm who were not actively looking for work, and who, during survey week, were either keeping house (unpaid), attending school, university, etc., retired or voluntarily idle, permanently unable to work or inmates of institutions. A person who worked less than fifteen hours without pay in a family business during survey week was also classified as not in the labour force.

The reason for changing the usual definitions was that interviewers had to be given reasonably simple criteria to judge whether a person was employed, unemployed or not in the labour force, so that they could ask the correct sequence of questions in the labour mobility survey. Thus, some persons, recorded in the labour force survey as looking for work but not taking active steps to find work (classified for that survey as not in the labour force) were, for the purposes of this survey, classified as unemployed. Similarly, some persons who were temporarily laid off by their employer for the whole of the survey week without pay were classified as employed in this survey, whereas in the labour force survey they are classified as unemployed.

The table of standard errors and the comments on the reliability of estimates given on pages 695-6 are also applicable to this survey.

Further details of the survey were published in the mimeographed bulletin *Labour Mobility*. November 1972 (Preliminary Statement) (6.34).

### Survey of child care, May 1973

In May 1973 a survey, based on the quarterly population survey (see page 693), was conducted throughout Australia in order to obtain, for persons who were in the labour force and who also had the responsibility for the care of children under twelve years of age, information about the arrangements they made to have their children cared for while they themselves were at work (including arrangements for after-school and school holiday care). The inquiry was directed mainly to working mothers, but males with the sole responsibility for children were also included.

For the purposes of the survey, a *child care centre* was defined as a registered or unregistered establishment, other than a private dwelling, where care was provided for five or more children below compulsory school age. Some other common names given to these centres are 'child minding centre', 'creche', 'cot room', 'day nursery' and 'nursery school'. Centres such as pre-schools and kindergartens were also included in this category. A *home care centre* was defined as one operated on a commercial basis in a private dwelling, in which the proprietor generally lived.

The *person responsible* for the care of a child under twelve years of age was defined as the person who, being a member of the household to which the child belonged, ranked highest in the following list:

- (a) Child's mother, step-mother, foster mother, female guardian
- (b) Child's father, step-father, foster father, male guardian
- (c) Any other person considered by the respondent as being responsible for the child.

The *labour force* comprises all persons who, during the survey week, were employed or unemployed, according to the definitions customarily used in the population survey. (For detailed definitions see page 694.)

The table of standard errors and the comments on the reliability of estimates given on pages 695-6 are also applicable to this survey.

Further details of the survey were published in the mimeographed bulletin *Child Care*, May 1973 (Preliminary Statement) (17.11). Results of an earlier survey of child care, conducted in May 1969, were published in the mimeographed bulletin *Child Care*, May 1969 (17.2).

### Survey of superannuation, February 1974

In February 1974 a survey, based on the quarterly population survey (see page 693), was conducted throughout Australia to obtain information about employed persons covered by superannuation-type schemes and those not so covered, and about other persons who were receiving or had received benefits from such schemes.

A *superannuation, provident, pension or retirement scheme* is any fund, association, scheme or organisation set up for the purpose of providing financial cover for members when they retire.

A *superannuation pension* is a payment received on a regular basis (e.g. fortnightly) from any superannuation or similar scheme by the member or his or her dependants. A lump sum payment is an amount paid to a member of a scheme, or to his or her dependants, on ceasing employment or membership of the scheme. It does *not* include annual leave, sick leave or other payments on terminating employment, e.g. bonuses. It may be only a refund of the member's contributions with or without interest added, or it may include an employer's contribution.

For this survey the estimates related to all persons aged 15 years and over, except members of the permanent armed forces and certain diplomatic personnel customarily excluded from census and estimated populations. Persons who were patients in hospitals and sanatoria, and for whom, for the purposes of the survey, the institution was regarded as their dwelling, were included in the survey. Inmates of gaols, reformatories, etc. were excluded.

The table of standard errors and the comments on the reliability of estimates given on pages 695-6 are also applicable to this survey.

Further details of the survey were published in the mimeographed bulletin *Superannuation*, February 1974 (Preliminary Statement) (6.41).

(a) See note (a) to table on page 718.

(b) Includes persons whose benefits were provided by another person's job.

(c) Includes persons whose benefits were provided by another person's job (other than spouse's).

\* Less than 4,000. See footnote \* to table on page 718.

NOTE. A person covered by superannuation, etc., in his present job was not asked whether he was also receiving or had received a benefit from a previous job. Such persons were excluded from the estimates in this table.

In the following table *manual occupations* comprise farmers, fishermen, hunters and timber-getters; miners and quarrymen; most transport and communication workers; tradesmen, production-process workers and labourers; and most service, sport and recreation workers.

*Non-manual occupations* comprise professional, technical, administrative, executive, managerial, clerical and sales workers, wool classers, certain transport and communication workers such as ships' officers, aircraft pilots, stationmasters, postmasters, etc., and photographers.

*Government employees* comprise not only administrative employees but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, post office, air transport, education (including universities), broadcasting, radio and television, police, public works, factories, departmental hospitals and institutions, migrant hostels, etc.

(a) Non-institutional civilians aged 15 years and over.

## EMPLOYED WAGE AND SALARY EARNERS

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force; they therefore exclude employers, self-employed persons and unpaid helpers. Also excluded, because of the inadequacy of current data, are wage and salary earners in agriculture and private domestic service. For the sake of brevity, wage and salary earners are referred to in the tables as 'employees'. Defence forces are included in the table on page 721.

The estimates, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as 'benchmarks') derived for the purpose from the population census of June 1966. Month-to-month changes shown by current data (*see below*) are linked to the benchmark data to derive monthly estimates, which are published in the Bulletin *Employment and Unemployment* (Reference No. 6.4).

Although the series measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and current data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

### Concepts and definitions

The concepts and definitions applicable to these estimates are those which were adopted at the 1966 population census and conform closely to the recommendations of the Eighth International Conference of Labour Statisticians. At the census the following questions were asked in respect of all persons fifteen years of age and over:

'Did the persons have a job or business of any kind last week (even though he may have been temporarily absent from it)?'

'Did the person do any work at all last week for payment or profit?'

Provided he had not been temporarily laid off by his employer without pay for the whole of the week, a person who answered 'yes' to either of these questions was classified as employed. Persons in this category who were stated to be 'working for wages or salary', except members of the defence forces, persons employed in agriculture or private domestic service, and crews of overseas ships, have been included in the benchmarks for the current series. For further details *see* Year Book No. 58, pages 691-2.

Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

Government employees comprise not only administrative employees, but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, post office, air transport, education (including universities), broadcasting, radio and T.V., police, public works, factories, departmental hospitals and institutions, etc.

The data needed to derive the estimates for periods subsequent to the benchmark date (June 1966) are obtained from three main sources, namely (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1966 recorded employment obtained from the foregoing sources accounted for about 85 per cent of the total number of employees in the industries covered, as determined by the census. Since then the percentage covered by direct collections has increased, and at June 1974 was estimated to be about 90 per cent.

Payroll tax returns are lodged at present by all employers paying more than \$400 a week in wages (other than certain Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the Australian and State Pay-roll Tax Acts, 1971-1974).

### Industry

The industry classification used throughout the series is that of the population census of June 1966. The estimated monthly changes are derived mainly from returns from employers relating to establishments or enterprises, but the June 1966 benchmark figures were derived from particulars recorded for individuals on population census schedules. The latter do not in all cases provide precise information to allow accurate coding of industry. Industry dissections of the census totals of wage and salary earners were therefore adjusted to be consistent as far as possible with industry coding at the establishment level. For this reason, and because crews of overseas ships were excluded from the benchmark figures, the estimates for June 1966 differ from those published in census bulletins which show particulars of the occupational status and industry of the population, and in other publications which contain population census results.

**Adoption of new benchmarks and revision of current estimates**

As results from each successive population census become available it is customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. Indications are that if 1971 census totals were to be used as benchmarks for the employment series, the level of the monthly estimates would have to be significantly reduced. However, evidence from census post-enumeration surveys indicates that the filling in of census questionnaires by householders tends to identify a smaller number of persons as being in the labour force than do other methods of measurement (e.g. household surveys conducted by personal interview), and that components of the total labour force, such as employed wage and salary earners, tend to be affected in the same way. This tendency may have increased between the 1966 and 1971 censuses.

Comparison between census results and the monthly estimates of employed wage and salary earners is affected not only by the discrepancy referred to above but also by the accumulation of errors in the intercensal employment estimates and differences in the methods of industry classification. The Australian Standard Industrial Classification was adopted in coding the industry of employees covered by the 1971 population census, whereas in the monthly estimates the 1966 census classification is still used (*see above*).

It is intended that June 1971 benchmarks for the employment series will be established by the use of census and other relevant data, and the current series from July 1966 will be revised. The revision is expected to reduce the level of the current estimates.

In due course the estimates for periods prior to June 1966 will be revised, but on a basis comparable with that of the 1961 census benchmarks, the information needed to revise these benchmarks on the 1966 census basis not being available.

NOTE. At the June 1971 population census, trainee teachers (enrolled at government teachers colleges and in some cases enrolled also at other institutions) were for the first time classified as not in the labour force. The employment estimates for that month include approximately 7,000 male and 17,000 female trainees. For subsequent periods trainee teachers have been excluded from the estimates.

## Government employees

The numbers of civilian employees of government bodies (Australian, State, local and semi-government) in each State and Territory at June 1974 are shown in the following table. Government employees comprise not only administrative employees, but also employees on services such as railways, road transport, banks, post office, air transport, education (including universities), broadcasting, television, police, public works, factories, and departmental hospitals and institutions.

### COMMONWEALTH EMPLOYMENT SERVICE

Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the *Re-establishment and Employment Act 1945-1973* (Sections 47 and 48). In brief, the main functions of the C.E.S. are to assist people seeking employment to obtain positions best suited to their training, experience and qualifications; and to assist employers seeking labour to obtain employees best suited to their needs. The organisation and functions of the C.E.S. conform to the provisions of the Employment Service Convention, 1948, of the International Labour Organisation (I.L.O.) which was ratified by Australia in December 1949. In addition, C.E.S. practices accord substantially with the provisions of the I.L.O. Employment Service Recommendation, 1948.

The C.E.S. functions on a decentralised basis within the Manpower Development Operations Divisions of the Department of Labor and Immigration. The Central Administration is in Melbourne and there is a Regional Office in the capital city of each State. There are 169 Employment Offices of the C.E.S. in suburban and the larger provincial centres and 147 C.E.S. agents in the smaller country centres. The Employment Offices are distributed as follows: New South Wales, 59; Victoria, 41; Queensland, 28; South Australia, 19; Western Australia, 17; Tasmania, 5. The New South Wales figure includes one office in Canberra while the South Australian figure includes three offices in the Northern Territory.

Specialised facilities are provided for young people, handicapped persons, ex-members of the defence forces, migrants, rural workers, and persons with professional and technical qualifications. The C.E.S. provides vocational guidance free of charge in all States and has a staff of qualified psychologists for this function. Guidance is available to any person, but is provided particularly for young people who are leaving school and adults experiencing employment difficulties, as well as ex-servicemen and handicapped persons. In New South Wales the C.E.S. provides vocational guidance to adults, including ex-servicemen and the handicapped, while the State Department of Labour and Industry provides a vocational guidance service within the school system and for young persons leaving school.

All applicants for unemployment benefits under the *Social Services Act 1947-1973* must register at an Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them. The C.E.S. is responsible for placing in employment migrant workers sponsored by the Australian Government under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and recommending the hostels to which migrants should be allocated on arrival. Assistance in obtaining employment is provided to other migrants as required. Since 1951 it has been responsible for recruiting Australian experts for overseas service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance (now replaced by the U.N. Development Programme). The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health, and economic and scientific research and development.

In association with placement activities, regular surveys of the labour market are carried out and detailed information is supplied to interested Australian and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The Service completed its twenty-eighth year of operation in May 1974. During 1973 there were 1,341,955 applicants who registered for employment, of whom 1,135,529 were referred to employers and 596,073 placed in employment. New vacancies notified numbered 979,076.

#### Persons registered for employment

The following table shows the number of persons registered with the C.E.S. at the Friday nearest the end of the month, who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S. All recipients of unemployment benefit are included. A change of definition has resulted in a different treatment of school leavers. Before July 1973, school leavers comprised all persons under the age of 21 who, at the time of registering with the C.E.S., (i) had ceased full-time primary or secondary education within the previous three months; or (ii) were still at school but notified the C.E.S. that they would leave school before the end of the school year if a full-time job were available. As from July 1973 (August for New South Wales) school leavers comprise all persons under the age of 21 who, at the time of registering with C.E.S. had ceased full-time primary or secondary education within the previous six months.

#### PERSONS REGISTERED FOR EMPLOYMENT WITH THE COMMONWEALTH EMPLOYMENT SERVICE

(Source: Department of Labor and Immigration)

June(a)	N.S.W.(b)	Vic.	Qld	S.A.(c)	W.A.	Tas.	Aust.
1970 . . . .	16,527	13,008	8,585	6,360	5,147	1,888	51,515
1971 . . . .	21,609	17,878	9,412	7,975	6,683	2,682	66,239
1972 . . . .	34,176	25,430	11,693	12,328	12,076	3,498	99,201
1973 . . . .	27,003	22,219	10,636	9,339	8,461	3,718	81,376
1974(d) . . . .	28,957	21,258	9,537	7,983	7,782	3,310	78,827

(a) Generally at Friday nearest end of month. (b) Includes Australian Capital Territory. (c) Includes Northern Territory. (d) The discontinuity between June 1973 and 1974 is caused by a change in definition of school leavers. This change in definition is explained above.

#### Job vacancies

The following table shows the number of vacancies registered with the Commonwealth Employment Service. The figures refer to vacancies which employers claimed were available immediately or would be available by the end of the following calendar month.
