Melbourne, Australia.

CENSUS OF THE COMMONWEALTH OF AUSTRALIA.

4th April, 1921.

CENSUS BULLETIN No. 18.

Summary for the Commonwealth of Australia.

Prepared under instructions from the Minister
of State for Home and Territories

BY

CHAS. H. WICKENS, F.I.A., F.S.S.,
COMMONWEALTH STATISTICIAN.

By Authority

ALBERT J. MULLETT, GOVERNMENT PRINTER. MELBOURNE.

CENSUS OF THE COMMONWEALTH OF AUSTRALIA

4th APRIL, 1921.

SECTION 1.—INTRODUCTION.

1. Census Collection.—The Census of Australia was taken as on the night between 3rd and 4th April, 1921, under the provisions of the *Commonwealth Census and Statistics Acts 1905–20*. The work of collection was carried out under the direction of the Commonwealth Statistician, the local organizations of the various States and Territories being under the control of a Deputy Supervisor stationed in the Capital City of each State. Through the cordial co-operation of the Commonwealth Electoral Office the electoral organization was made available for Census purposes, and the Divisional Returning Officers were appointed Census Enumerators in their respective Divisions, the Census Divisions being made coterminous with the Federal Electoral Divisions. To assist the Enumerators, Sub-Enumerators were appointed to control operations in areas which in the main correspond to the Electoral Subdivisions. These latter officers exercised immediate supervision over the work of the actual collectors. The Deputy Supervisor for each State was the Commonwealth Electoral Officer for the State. The total collecting staff for the Commonwealth comprised 8 Deputy Supervisors, 75 Enumerators, 963 Sub-Enumerators, and 9,225 Collectors, a total of 10,271. For the collection of Census data in the Dependencies a further staff was employed, consisting of 3 Deputy Supervisors and 56 Collectors.

2. Tabulation.—On the conclusion of the collection the whole of the material was forwarded to the Census Office, Melbourne, for tabulation. In the main the tabulation has been carried out by the Hollerith electric tabulating plant installed for the purpose. Details in respect of (i) Ages, (ii) Length of Residence, (iii) Conjugal Condition, (iv) Birthplace, (v) Nationality, (vi) Race, (vii) Occupation, (viii) Grade of Employment, (ix) Cause of Unemployment, (x) Duration of Unemployment, (xi) Religion, (xii) Education, and (xiii) Schooling, have been compiled in respect of each of the Local Government Areas throughout Australia, and Bulletins containing information in summarized form relating to these subjects have already been issued for each of the States.

3. Summary of Census Results for Australia.—This bulletin presents in tabular form the summarized results for Australia (but excluding dependencies) as a whole, relating to the subjects mentioned in the preceding paragraph. Where possible, comparisons have been made with corresponding figures from the Census taken in 1911. To the tables have been prefixed some brief comments and explanatory notes.

From the results given in the tables, it may be seen that during the ten years between the 3rd April, 1911, and 4th April, 1921, the population of Australia increased by 980,729, or 22.0 per cent.—from 4,455,005 to 5,435,734. The number of males increased by 19.4 per cent., and females by 24.8 per cent., with the result that the proportion of males to the total population declined from 51.9 per cent. in 1911 to 50.8 per cent. in 1921. The percentage of increase to the population of each of the States of the Commonwealth was as follows:—New South Wales, 27.5 per cent.; Victoria, 16.4 per cent.; Queensland, 24.8 per cent.; South Australia, 21.2 per cent.; Western Australia, 17.9 per cent.; and Tasmania, 11.8 per cent.

SECTION 2.—AGES (Table 1).

1. Age not Stated.—A satisfactory feature of the present results is the very small number of cases of failure to specify the age of the person enumerated, the total number of such cases being only 14,210, or 2.6 in every thousand. In 1911 the corresponding number was 23,384, or slightly more than 5 in every thousand.

2. Centenarians.—On the present occasion 36 persons, comprising 25 males and 11 females, were returned as being aged 100 years or over. The corresponding number returned in 1911 was 64, of whom 35 were males and 29 females.

3. Variation in Age Distribution.—Table 1 of the following Summary furnishes for quinquennial age groups an interesting view of the variation which has taken place in the age constitution of the population during the ten years between the Censuses of 1911 and 1921. With the exception of the age group 20–24, in which males show a decrease of 8,349, the population shows an increase, for both males and females, in each age group up to the century, though the increases vary greatly in their magnitude. An inspection of the table shows a surprisingly regular wave-like movement in the increments to the numbers in the various age groups. The groups 5–9, 30–34, and 55–59, mark the crests of the waves, while the troughs fall in the groups 20–24 and 45–49. From 65 years of age the increases fall away naturally, group by group, in harmony with the smaller numbers living at the older ages. The main causes of the wave-like movements are fluctuations in the birth rate, and in the net migration, which, themselves, indicate social or economic disturbances. Thus the comparatively small increase in the age group 0–4 as compared with group 5–9 reflects the arrest—as an effect of the war—of the increasing birth rate which on the basis of quinquennial averages had been noticeable for some years previously. The depression which is so marked in the age group 20–24 had its origin in the financial collapse of the nineties of the last century. In these years marriages were postponed, and immigrants, who, under normal circumstances, would have reared children to swell the numbers in this group, were not forthcoming. In the case of males the loss of lives

in the war also affected the position. The effects which are so marked in the age group 20-24 in 1921, except such as were due to the war, were, of course, present in the group 10-14 in 1911, and by their depressing effects on the figures for 1911 were instrumental in causing the increase in 1921 for that age group. The increases in age group 30-34, and subsequent groups, were, in a large measure, due to immigration, which was relatively very large during the years 1877-1889, and again during the years 1911-13.

4. Adults and Minors.—In general it may be said that the Census results indicate that the population of Australia in 1921 was more adult than was the case in 1911. In 1921 the number of persons aged 21 and over represented about 57.9 per cent. of the total population as compared with 56 per cent. in 1911.

SECTION 3.—LENGTH OF RESIDENCE IN AUSTRALIA (Table 2).

1. Number Unspecified.—As in the case of the age data, the number of instances in which the length of residence in Australia was not specified for persons born outside the Commonwealth was considerably less than in 1911. In 1921 3.9 per cent. of such persons failed to supply the desired information, as compared with 7.6 per cent. in 1911.

2. Australian Born and Immigrant Population.—The figures in Table 2 indicate that the Australian-born population increased during the ten years by 914,498 persons, or 24.9 per cent., while the immigrant population increased in the same period by 66,231, or 8.4 per cent., so increasing the proportion of the Australian-born from 82.5 per cent. of the population in 1911 to 84.3 per cent. in 1921. Of the 66,231 persons added to the immigrant population of the Commonwealth during the intercensal decade 58,089 were in New South Wales, 4,559 in Queensland, and 10,798 in Western Australia. In the other States the numbers were less in 1921 than in 1911.

3. Variations.—The figures of 1921 bring into prominence the survivors of three periods of relatively heavy immigration. Thus the figures for residence groups 5-9 and 10-14 are composed of those persons who arrived during the years 1911-13, those for group 30-44, represent the arrivals during the boom period of the eighties, while those for group 65-69 represent the survivors of the gold rush of the fifties. A comparison of the figures for 1911 with the corresponding figures for groups ten years in advance in 1921 furnishes striking evidence of consistency in the returns for the two Censuses.

4. Length of Residence 0.—The figures given under "length of residence 0" relate to persons who had been in Australia less than twelve months at the date of the Census. This number is always relatively heavy, as it necessarily includes most of those persons such as crews of oversea vessels, oversea travellers, and others who may in general be termed "birds of passage."

SECTION 4.—CONJUGAL CONDITION (Table 3).

1. Headings Employed.—At previous Australian Censuses the headings used in this connexion were four in number, viz. :—(i) Never married, (ii) Married, (iii) Widowed, and (iv) Divorced. On the present occasion a further heading of "Judicially separated" was included. As, however, there appears to have been some confusion as to the significance of "Judicially separated" and the difference between this expression and "Separated," it is not proposed to utilize the results, but to include all the persons so returned as "Married," thus conforming to the classification of previous Censuses.

2. Conjugal Condition Unspecified.—A total of 14,543 persons, representing about 2.7 per thousand of total population, failed to indicate their conjugal condition, as compared with about 1.3 per thousand whose condition in this respect was unspecified in 1911.

3. Married and Never Married.—Of the total population at the Census of 1921, 3,176,260, or 58.6 per cent., had never been married, the proportion of males who were never married being 60.9 per cent. and females 56.0 per cent. Those whose marriages were still in existence totalled 1,998,582 persons and represented 36.9 per cent. of the total. In 1911 the number of married persons represented only 33.0 per cent. of the total population, while the never married represented no less than 67 per cent. Of those persons who, at the time of the 1921 Census, had never been married 54.3 per cent. were under 15 years of age, as compared with 52.7 per cent. in 1911; these proportions, however, differed somewhat between the sexes, for, whereas in 1921 of the males who had never married 52.2 per cent. were under 15 years of age, the corresponding proportion of females was 56.7 per cent. In 1911 the proportions under 15 years of those who had never married were—males 47.3 per cent., and females 54.3 per cent.

4. Widowed Persons.—Of the total population 4.4 per cent. were in a state of widowhood in 1921, the proportion for the male population being 2.7 per cent., and for females 6.2 per cent. These results are almost identical with those for 1911.

5. Divorced Persons.—At the Census of 1921 the total number of divorced persons recorded was 8,528, as compared with 4,500 in 1911, an increase of 89.5 per cent. in the ten years. In 1921 there were 153 divorced males per 100,000 of male population as compared with 102 per 100,000 in 1911, while there were 161 divorced females per 100,000 of female population in 1921 as compared with 101 per 100,000 in 1911.

SECTION 5.—BIRTHPLACES (Table 4).

1. Birthplace Unspecified.—A satisfactory feature of these returns was the relatively small number of cases in which no return as to birthplace was furnished. Such cases represented, in fact, less than 3 per 1,000 of the population in 1921 as compared with 6.8 per 1,000 in 1911.

2. Born in Australasia.—As already noted in reference to Length of Residence, the Australian born population showed an increase during the intercensal decennium, and in 1921 represented 84.3 per cent. of the total as compared with 82.3 per cent. in 1911. The New Zealand born population increased by 21.1 per cent., and represented a total of 38,582 in 1921 as compared with 31,868 in 1911; of the increase to the New Zealand born, 53.5 per cent. were females.

3. Born in Europe.—An interesting item in this table is the increase shown for the ten years of persons born in the British Isles, the total of 593,702 in 1911 having grown to 675,801 in 1921. In view of the fact that many persons recorded in 1911 as from such birthplaces were of advanced age and would have died before the Census of 1921, the immigration from the British Isles during the decennium must have been sufficient to make good this fairly heavy wastage and give the excess of 82,099 shown above. Many of these arrived in the period of relatively heavy immigration in 1911-13, but from the fact that of the total increase of 82,099, in the number of persons resident in Australia who were born in the British Isles, 51,638, or 63 per cent., were females, it would appear that the British brides of returned Australian soldiers were an important element. The German born population of Australia diminished from 32,990 in 1911 to 22,394 in 1921, while the French born increased from 2,876 in 1911 to 3,249 in 1921. For the whole of the European born there was an increase of 27,192 males, and of 52,062 females, making a total gain of 79,254 persons.

4. Born in Asia.—The decrease of 6,135—from 36,442 in 1911 to 30,307 in 1921—in the Asiatic born population of Australia is largely accounted for by the decline in the numbers of those born in China and Japan. The number of persons born in China declined from 20,775 in 1911 to 15,240 in 1921, and those born in Japan fell from 3,474 to 2,762. The number of persons born in British India and in Syria increased, respectively, by 277 and 265.

5. Born in Africa.—There was an increase of 1,802 in the number of African born, of whom 1,485 were born in the Union of South Africa.

6. Born in America.—The American born population increased from 11,278 to 12,064, or by 786. Of the persons comprising this increase 591 were born in Canada.

SECTION 6.—NATIONALITY, *i.e.*, ALLEGIANCE (Table 5).

1. British Subjects.—Prior to the present Census a record of the population according to allegiance was not attempted in Australia, except in so far as a person was or was not a British subject. On this occasion all persons were asked to state their nationality, and the results disclose that of a total population of 5,435,734 as many as 5,386,693, or over 99 per cent., were definitely stated to be British subjects.

SECTION 7.—RACE (Table 6).

1. Distribution.—At the Census of 1921 the population of Australia comprised 5,387,423 persons of European race, 30,812 persons of non-European race full-blood, and 17,499 half-castes, *i.e.*, persons of whom one parent was of European race and the other non-European. It will thus be seen that, combining the full-blood and half-caste population, the total non-European element represented 8.9 per 1,000. At the Census of 1911 there were 37,789 non-Europeans of full-blood and 14,554 half-castes, representing 11.7 per 1,000 of the total population.

2. Chinese.—The number of full-blood Chinese has declined from 22,753 in 1911 to 17,009 in 1921, a decrease of 5,744 in ten years. Table 4 shows the number of persons, who, at the Census of 1921, were returned as having been born in China as 15,240. The difference between this number and the number of persons of Chinese race is due to the fact that some full-blood Chinese were born in Australia, and others were born elsewhere than in China. During the intercensal ten years Chinese half-castes increased from 3,019 to 3,665.

3. Syrians.—The number of full-blood Syrians increased from 2,339 in 1911 to 2,856 in 1921, and the Syrian half-castes increased from 84 to 335.

4. Hindus.—The number of Hindus recorded in 1921 was 2,860, as against 3,299 in 1911. The figures relating to Hindus, however, are likely to be seriously affected by the numbers of lascars on board ships which happen to be in Australian waters at the time of the Census. The number of Hindu half-castes increased from 399 in 1911 to 674 in 1921.

5. Other Races.—Of other races full-blood Japanese numbered 2,738 in 1921 as compared with 3,489 in 1911. Polynesians show a decrease from 2,524 to 2,355. Half-caste Australian Aborigines increased from 10,113 in 1911 to 11,406 in 1921.

SECTION 8.—OCCUPATION (Table 7).

1. Unspecified.—As with most of the other inquiries, the proportion of cases of failure to specify occupation was much less on this occasion than at the previous Census, representing 4.5 per 1,000 in 1921 as compared with 9.5 per 1,000 in 1911.

2. Breadwinners.—The total number of breadwinners recorded in 1921 was 2,316,589, as compared with 1,961,595 in 1911. The proportion of females to the total of breadwinners was almost identical at both periods, being slightly over 20 per cent. Of the total male population 67.6 per cent. were breadwinners in 1921 and 68.9 per cent. in 1911, while 17.4 per cent. of the females were breadwinners in 1921 and 18.5 per cent. in 1911. Of the total population 42.8 per cent. were breadwinners in 1921, as against 44.5 in 1911.

3. Industrial.—The Census of 1921 marks an interesting phase in the industrial development of Australia, inasmuch as the Industrial Class has displaced the Primary Production Class from the premier position as indicated by the number of persons employed. In 1911 the Industrial Class already had first

place in New South Wales, Victoria, and South Australia, but in the other States the predominance of the Primary Class was such that, for the Commonwealth as a whole, the Primary Class was the greater. By 1921 the preponderance of the Industrial Class in New South Wales, Victoria, and South Australia had increased to such an extent and, at the same time the excess in favour of the primary industries, though still existent in Queensland, South Australia, and Tasmania had diminished so that the number of persons engaged in industrial occupations throughout Australia exceeded those in the primary industries by 124,922, or by nearly 21 per cent. In 1911 the primary industries employed 23,811 persons, or 4.2 per cent., more than were employed in the industrial group. Of the total of 2,316,589 breadwinners recorded in 1921, 723,526, or 31.2 per cent., belonged to the Industrial Class, as compared with 562,337, or 28.7 per cent., of all breadwinners in 1911. The principal group of industries within the Industrial Class is the group of manufacturing industries. During the intercensal period, the number of persons engaged in manufacturing industries increased from 363,805, or 18.5 per cent., of all breadwinners in 1911 to 441,277, or 19 per cent., of breadwinners in 1921, an increase of 77,472, or 21.3 per cent. The group "Undefined Industrial" includes all persons engaged in any capacity in works of utility, or in connexion with the manufacture, construction, or modification of materials, and who have not indicated the particular industry with which they were associated. Some of the principal indefinite designations included in this group were "labourer," "mechanic," "apprentice," "engine-driver," "machinist," "manager," and "foreman." The number of persons included in this group increased from 80,554 in 1911 to 149,161, or by 85.2 per cent.

4. Primary Producers.—As mentioned in the preceding paragraph, the Primary Producers have ceased to be the most numerous of the occupational classes. In 1911 the Primary Producers numbered 586,148, or 29.9 per cent., of all breadwinners, and although the numbers increased to 598,604, this greater number represented only 25.8 per cent. of the breadwinners in 1921. The number of persons engaged in Agriculture increased by 18.5 per cent., which was sufficient to increase slightly the proportion which the agricultural workers bore to the total breadwinners in 1911. The number engaged in the Pastoral Industries declined from 151,861 to 142,080, or by 6.4 per cent. The number engaged in Mining was less in 1921 by 39,043, or 36.9 per cent., having fallen to 66,761 from 105,804 in 1911.

Those engaged in Forestry and in connexion with Water Supply, though still relatively few, increased substantially—the former by 24 per cent. and the latter by 53.5 per cent.

5. Commercial.—Next in numerical importance is the Commercial Class, which increased from 286,687 in 1911 to 355,009, or by 23.8 per cent., in 1921, the increases in the various States ranging from about 18 per cent. in Victoria and Tasmania to 30.5 per cent. in New South Wales. This class represented 15.3 per cent. of the total breadwinners in 1921 as against 14.6 per cent. in 1911.

6. Domestic.—In the Domestic Class the total for 1921 was more than the corresponding total for 1911 by 8,605, of whom 6,868 were females. In 1911 10.3 per cent. of the breadwinners belonged to this class, whereas by 1921 the proportion had declined to 9.1 per cent. The number of persons in the Domestic Class in 1921 is actually less in Victoria by 6.4 per cent. and in Tasmania by 7.2 per cent. than in 1911, while in the other States the increases vary from 3.1 per cent. in Western Australia to 12.5 per cent. in South Australia.

7. Transport and Communication.—The number of persons engaged in employment connected with transport and communication increased from 157,391, or 8.0 per cent., of all breadwinners in 1911 to 207,737, or 9.0 per cent., of all breadwinners in 1921.

8. Professional.—The Professional Class embraces all persons, not otherwise classed, who are mainly engaged in the government and defence of the country, and in ministering to the moral, intellectual, and social wants of the community. The number of persons in this class increased from 144,611 in 1911 to 201,319 in 1921, or by 39.2 per cent. The Professional Class represented 8.7 per cent. of all breadwinners in 1921, as compared with 7.4 per cent. in 1911.

9. Independent.—The number classed as Independent decreased from 23,055 in 1911 to 20,423 in 1921.

SECTION 9.—GRADE OF EMPLOYMENT (Table 8).

1. Nature of Data.—Under the heading of grade of employment are given particulars concerning the number of persons employed in different capacities in the various branches of industry. The grades under which the statistics are published are five in number, viz., (i) Employer, (ii) Working on own account, (iii) Assisting but not receiving wages or salary, (iv) Receiving wages or salary, (v) Unemployed. In addition to these categories provision is made for (vi) Grade not applicable, which consists mainly of dependants, and persons of independent means not engaged in gainful occupations, and (vii) Grade not stated.

2. Grade not Stated.—Of 2,212,850 persons to whom the expression "grade of employment" was applicable 32,957, or 1.5 per cent., omitted to furnish the desired information as compared with 2.3 per cent. in 1911.

3. Employer.—A feature of this table is the marked decrease in the number of persons returned as employers, the number having fallen from 212,583 in 1911 to 139,663, a decline of 34.3 per cent.

4. Workers on Own Account.—In the case of persons working on their own account without employing paid labour the position is reversed, and there is an increase of nearly 93 per cent. The decrease in the number of employers mentioned in paragraph 3 above appears to be accounted for by the increase in the number of workers on own account, many of the smaller employers of 1911 having dispensed with paid assistance by 1921. It is probable also that the establishment of returned soldiers in small businesses and other ventures has tended to swell the number of workers on own account.

5. Assisting but not Receiving Wages or Salary.—This group consists mainly of sons, daughters, and other relatives of the principal who are assisting but are not on wages. During the ten years the number decreased from 76,370 to 35,158, a decrease of 54 per cent.

6. Receiving Wages or Salary and Unemployed.—In considering the extent of the Wage and Salary earning portion of the community, account should be taken of the persons returned as unemployed at the date of the Census since these persons are, ordinarily, earners of salary or wages who happen to be out of employment at that date. Combining the two grades for this purpose it appears that 1,662,633, or 31 per cent., of the total population belong to this class. Eliminating those for whom grade is not applicable and those whose grade was not stated, it may be said that 74 per cent. of the male breadwinners and 86 per cent. of the female breadwinners of Australia at the date of the Census belonged to the class of wage and salary earners.

7. Unemployed.—The total number returned as unemployed in 1921 was nearly three times as great as the corresponding number in 1911, and it is of interest to note that these results are substantially confirmed by figures collected by the Labour and Industrial Branch of the Bureau of Census and Statistics. Details concerning cause and duration of unemployment are furnished in the following sections.

SECTION 10.—CAUSE OF UNEMPLOYMENT (Table 9).

1. Causes Dealt With.—In the Census inquiry persons out of employment at the date of the Census were asked to give the cause of their condition under one or other of the following heads:—(i) Scarcity of employment; (ii) Illness; (iii) Accident; (iv) Industrial disputes; (v) Old age; (vi) Other causes. Of a total of 159,188 recorded as unemployed, 7,524, or 4.7 per cent., failed to comply with this request.

2. Proportion Unemployed.—Adding the unemployed to those receiving wages and salary gives a total for the wage and salary class of 1,286,081 males and 376,552 females. Of these males 10.7 per cent. were unemployed and of the females 5.7 per cent. Combining the sexes, the unemployment percentage over all was 9.6 per cent. The Unemployment data collected quarterly by the Labour and Industrial Branch of the Commonwealth Bureau of Census and Statistics gave an unemployment percentage of 12 per cent. for the first half year of 1921, but, as this figure excludes data from unions where employment is practically permanent, and, also, from casual employees, a close comparison of the results cannot be made.

3. Distribution of Causes.—For the two sexes combined approximately 50 per cent. of the unemployment recorded at the date of the Census was due to scarcity of employment, 29 per cent. to illness or accident, 3 per cent. to industrial disputes, 1.5 per cent. to old age, and 17 per cent. to other causes. Similar details are not available for 1911.

SECTION 11.—DURATION OF UNEMPLOYMENT (Table 10).

1. Nature of Data.—In the instructions accompanying the Census slips unemployed persons, that is persons who were out of work on Saturday, 2nd April, 1921, were asked to state the number of working days during which they had been unemployed. These results have been tabulated in detail and a summary is given in Table 10.

2. Duration Unspecified.—The number for whom duration was unspecified was much larger than was the case with most of the other items, and represented 15.2 per cent. of unemployed persons, being 15.1 per cent. for males and 16.4 per cent. for females.

3. Distribution According to Duration.—The results in respect of specified duration may conveniently be grouped into four periods, viz.:—Under five weeks, 61,998; five and under ten weeks, 23,247; ten and under fifteen weeks, 14,278; fifteen weeks and over, 35,409. Of the total of 134,932 cases for which duration was specified, approximately 46 per cent. were under five weeks, 17.2 per cent. from five to ten weeks, 10.6 per cent. from ten to fifteen weeks, and 26.2 per cent. above fifteen weeks.

SECTION 12.—RELIGION (Table 11).

1. Classification.—As the various denominations of the Christian Religion include about 97 per cent. of the population of Australia, the natural classification of the data relating to Religions would be the division between Christian and other. The main heads actually employed are (i), Christian; (ii) Non-Christian Religions; (iii) Indefinite; (iv) No Religion; (v) Object to State; (vi) No Reply.

2. Unspecified and Indefinite.—Of the heads indicated in the preceding paragraph three, viz., Indefinite, Object to State, and No Reply are very unsatisfactory from the point of view of completeness of information. At the Census of 1921 these represented 112,144 or 2.1 per cent. of the total population as compared with 133,790 or 3 per cent. of the total population for 1911. In the Christian group, also, there are three headings of an indefinite nature, viz., Catholic, undefined; Protestant, undefined; and Christian, undefined. For the Census of 1921 these three together totalled 111,746 or 2.1 per cent. of the Christian aggregate, as compared with 188,623 or 4.4 per cent. of the corresponding aggregate for 1911. There is little doubt that undefined Catholic, representing 38,659 in 1921 and 75,379 in 1911, usually signified Roman Catholic, and that the numbers so returned might, without serious error, be included under that denomination. Concerning those recorded as undefined Protestant, representing 67,112 in 1921 and 109,861 in 1911, no similar allocation can be effected.

3. Church of England.—The denomination with the largest number of adherents, and that in which the greatest numerical increase was experienced, was the Church of England, for which a total of 2,372,830 was recorded in 1921, an increase for the ten years of 662,387 or 38.7 per cent. In the Church of England the male adherents predominate, though the excess of males in 1921 was not as great as in 1911. In 1911 the male members of the Church of England numbered 107.1 to each 100 female members, whereas in 1921 the proportion of males had fallen to 104.5 per 100 females. In the same period the proportion of males to females in the population of Australia as a whole declined from 108 males per 100 females in 1911 to 103.4 males per 100 females in 1921. The adherents of the Church of England represented 44.4 per cent. of those whose religion was stated in 1921, as against about 39.4 per cent. in 1911.

4. Roman Catholic.—Combining the Catholic undefined with those returned as Roman Catholics, the total for 1921 was 1,172,661, as compared with 996,804 in 1911, an increase of 175,857 or 17.6 per cent. As regards sex the masculinity has declined, though in a less degree than in the total population of Australia. In 1911 there were 102.5 males to each 100 females, whereas in 1921 there were only 99.6 males per 100 females. The Roman Catholic total, combined as above, represented 21.9 per cent. of the total population of specified religion in 1921 as compared with 23 per cent. in 1911.

5. Presbyterian.—Third in order of magnitude is the Presbyterian Church with a total of 636,974, or 11.9 per cent. of the total population of specified religion. During the decennium 1911-21 the number increased by 78,638, an increase on the 1911 figures of 14.1 per cent. In respect of sex there were 102.3 males to each 100 females in 1921, as compared with 107.8 males to each 100 females in 1911.

6. Methodist.—The Methodist Church had a total of 632,621 adherents in 1921, as compared with 547,806 in 1911, an increase of 15.5 per cent. during the ten years. The number of Methodists in 1921 represented 11.6 per cent. of the total population. In the Methodist Church the female adherents outnumber the male. The number of females to each 100 males was 106.2 in 1921, whereas in 1911 there were 103.2 females to each 100 males.

7. Baptist.—The only other Church with more than 100,000 followers in Australia is the Baptist Church, with 105,703 adherents in 1921 as compared with 97,074 in 1911. In this Church the female sex is numerically the stronger. In 1921 there were 114.9 females to each 100 males as against 112.6 females to each 100 males in 1911.

8. Other Christian Denominations.—The principal Christian Denominations other than those referred to above were, in order of numerical importance—Congregational, 74,513; Lutheran, 57,519; Church of Christ, 54,574; Salvation Army, 31,589; and Seventh Day Adventists, 11,305.

9. Non-Christians.—The only Non-Christian religion strongly represented in Australia was the Hebrew with a total of 21,615 in 1921 as against 17,287 in 1911, an increase of 4,328 or 25 per cent. during the ten years. The number of persons stated to be of the Hebrew religion represented about 40 per 10,000 of the population in 1921, whereas in 1911 it was about 38.8 per 10,000.

10. No Religion.—In 1921 the number of persons stated to have no religion was 20,544 or 37.8 per 10,000 of the population, as against 10,016 or 22.5 per 10,000 in 1911.

13. EDUCATION (Table 12).

1. Information Collected.—The information in respect of education collected at a Census is necessarily meagre, and in Australia it has never amounted to more than a statement as to ability to read and write. The results are thus broadly a division of the population into three main groups, viz., (i) those who cannot read; (ii) those who can read but cannot write; (iii) those able to read and write. Group (ii) is so small as to be practically negligible, and group (i) consists mainly of children.

2. Education not Stated.—In 1921 there were 86,642 persons who failed to furnish the required information as compared with 95,727 in 1911, the proportion so unspecified in 1921 being 15.9 per 1,000 of total population and 21.5 per 1,000 in 1911.

3. Cannot Read.—The proportion of the population who were unable to read was approximately 15 per cent. at both periods under review. Of the 805,794 persons, who, according to the Census of 1921, could not read, 600,206 or 74.5 per cent. were under five years of age, and many of the remaining 25.5 per cent. were also children. Of the illiterates in 1911 about 79 per cent. were under five years of age.

4. Read Only.—Those returned as able to read but unable to write totalled 14,512, of whom 13,550 were stated to be able to read English, while 962 were returned as able to read a foreign language but not to write it, and not able to read English. The corresponding numbers in 1911 were English, 15,009, foreign language, 2,647.

5. Read and Write.—The number of persons returned as able to read and write English was 4,513,409, while 15,377 were returned as able to read and write a foreign language but not English. With the exception of New Zealand there is, probably, no country in the world so strikingly unilingual as Australia.

14. SCHOOLING (Table 13).

1. Numbers Receiving Instruction.—At the Census of 1921 the number of persons returned as receiving instruction was 1,107,690, or 20.4 per cent. of the total population, as compared with 775,390, or 17.4 per cent. in 1911.

2. Places of Instruction.—Of the places of instruction the State School occupies the foremost position in respect of numbers attending, the total of 791,825 State School pupils in 1921 representing 77.4 per cent. of the number for whom the place of instruction was stated. The corresponding proportion in 1911 was 76.6 per cent. Similar proportions for pupils at private schools were 18.9 per cent. in 1921 and 20.1 per cent. in 1911. The number returned as receiving instruction "at home" though not large at either Census, had increased during the ten years from 23,043 to 30,712, an increase of nearly 33½ per cent. The figures relating to University Students show that the number of such students had nearly trebled in the intercensal period.

3. Sex and Schooling.—Very little change has taken place in the proportion of the sexes attending State and private schools respectively. Such small change as there has been, however, shows a tendency towards a greater proportion of males attending State schools, and a lesser proportion of males at private schools. Of all the boys attending schools 82.3 per cent. were attending State schools in 1921, as compared with 80.9 per cent. in 1911. Of the girls attending schools 78.3 per cent. were at the State schools in 1921, as compared with 77.5 per cent. in 1911. Of the scholars attending private schools 45.4 per cent. were boys in 1921, as against 46.4 per cent. in 1911, whereas, at the State schools the proportions of boys were 52.1 per cent. in 1921 and 51.7 in 1911.
