Statistician
Australian Capital Territory**

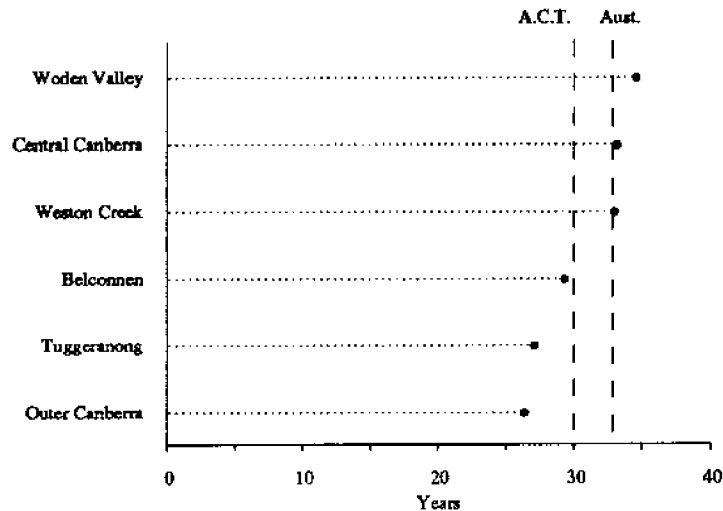

SUMMARY OF FINDINGS

The estimated resident population of the A.C.T. (excluding Jervis Bay Territory) at 30 June 1993 was 298,300, an increase of 4,600 or 1.6% since 30 June 1992.

The median age of the estimated resident population of the A.C.T. at 30 June 1993 was 30.0 years. This was 3.0 years lower than the Australian median age of 33.0 years. The highest median age was in the subdivision of Woden Valley (34.7 years), followed by Central Canberra (33.3 years), Weston Creek (33.1 years), Belconnen (29.3 years), Tuggeranong (27.1 years) and Outer Canberra (26.3 years). Although Woden Valley had the highest median age, the suburbs with the highest median ages, Red Hill (39.3 years), Deakin (39.3 years), Campbell (38.9 years) and Yarralumla (38.9 years), are in the subdivision of Central Canberra. Suburbs with the lowest median age include Duntroon (20.3 years) which largely comprises cadets and other military personnel, Acton (20.7 years) which contains a high proportion of university students, and Bruce (23.1 years) which includes the Australian Institute of Sport athletes and university students.

MEDIAN AGE OF ESTIMATED RESIDENT POPULATION,
AUSTRALIAN CAPITAL TERRITORY SUBDIVISIONS,
30 JUNE 1993

Children aged 0-14 years accounted for 22.6 per cent of the population of the A.C.T. at 30 June 1993 compared with 23.0 per cent at 30 June 1992. The subdivision with the highest proportion of its population in the 0-14 years age group was Tuggeranong (30.5%), followed by Outer Canberra (22.9%), Belconnen (22.6%), Weston Creek (18.6%), and Woden Valley (17.3%). Central Canberra had the lowest proportion of children aged 0-14 years (16.0%). The suburb of Gilmore had the highest proportion of its population in the 0-14 years age group (36.3%), followed by Chisholm (35.5%), Macarthur (35.1%) and Richardson (34.9%).

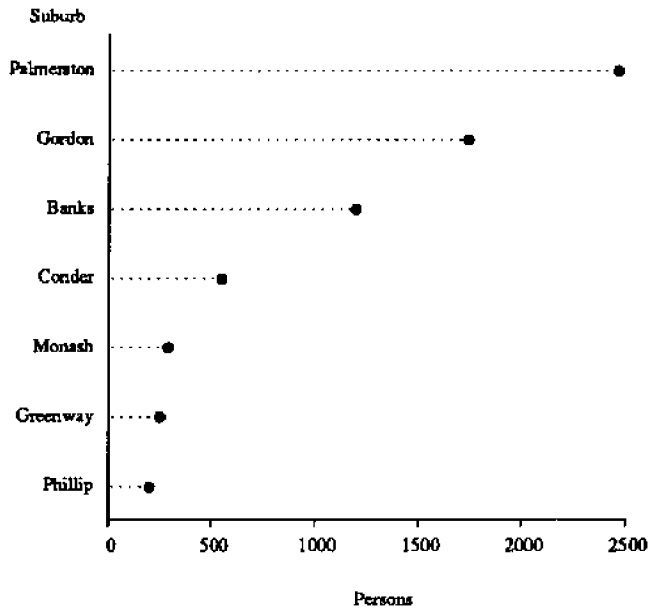

The 65 years and over age group comprised 6.7 per cent of the total population of the A.C.T. at 30 June 1993. The subdivision of Central Canberra had the highest proportion of its population aged 65 years and over (14.2%), accounting for almost half of the total population of this age group in the A.C.T. This was significantly greater than the subdivision of Woden Valley which had the next highest proportion in this age group (9.7%). Tuggeranong had the lowest proportion of people in the 65 years and over age group (2.4%). The suburbs with the highest proportion of the population aged 65 years and over were Braddon (20.1%), Deakin (19.5%), Red Hill (19.1%) and Griffith (18.3%).

PROPORTION OF POPULATION IN SELECTED AGE GROUPS,
30 JUNE 1993

During the year ended 30 June 1993 the population in the A.C.T. increased by 4,600 or 1.6 per cent. However this varied considerably between subdivisions. Outer Canberra (up 2,500 or 100.5%) and Tuggeranong subdivision (up 4,300 or 5.4%) showed positive growth. Woden Valley (down 300 or 0.7%), Central Canberra (down 500 or 0.9%), Belconnen (down 900 or 1.0%) and Weston Creek (down 500 or 1.8%) experienced negative growth. Suburbs that experienced significant population increases included Palmerston (up 2,500), Gordon (up 1,700), Banks (up 1,200), and Conder (up 600).

POPULATION CHANGE, SELECTED SUBURBS, 1992-93

Although the 0-14 years age group experienced a decline in population for the A.C.T. (down 300 or 0.4%), the subdivisions of Outer Canberra (up 700 or 148.7%) and Tuggeranong (up 800 or 3.3%) increased. The subdivisions of Belconnen (down 1,300 or 5.9%), Weston Creek (down 400 or 7.1%) and Woden Valley (down 100 or 2.1%) contributed to the overall decline.

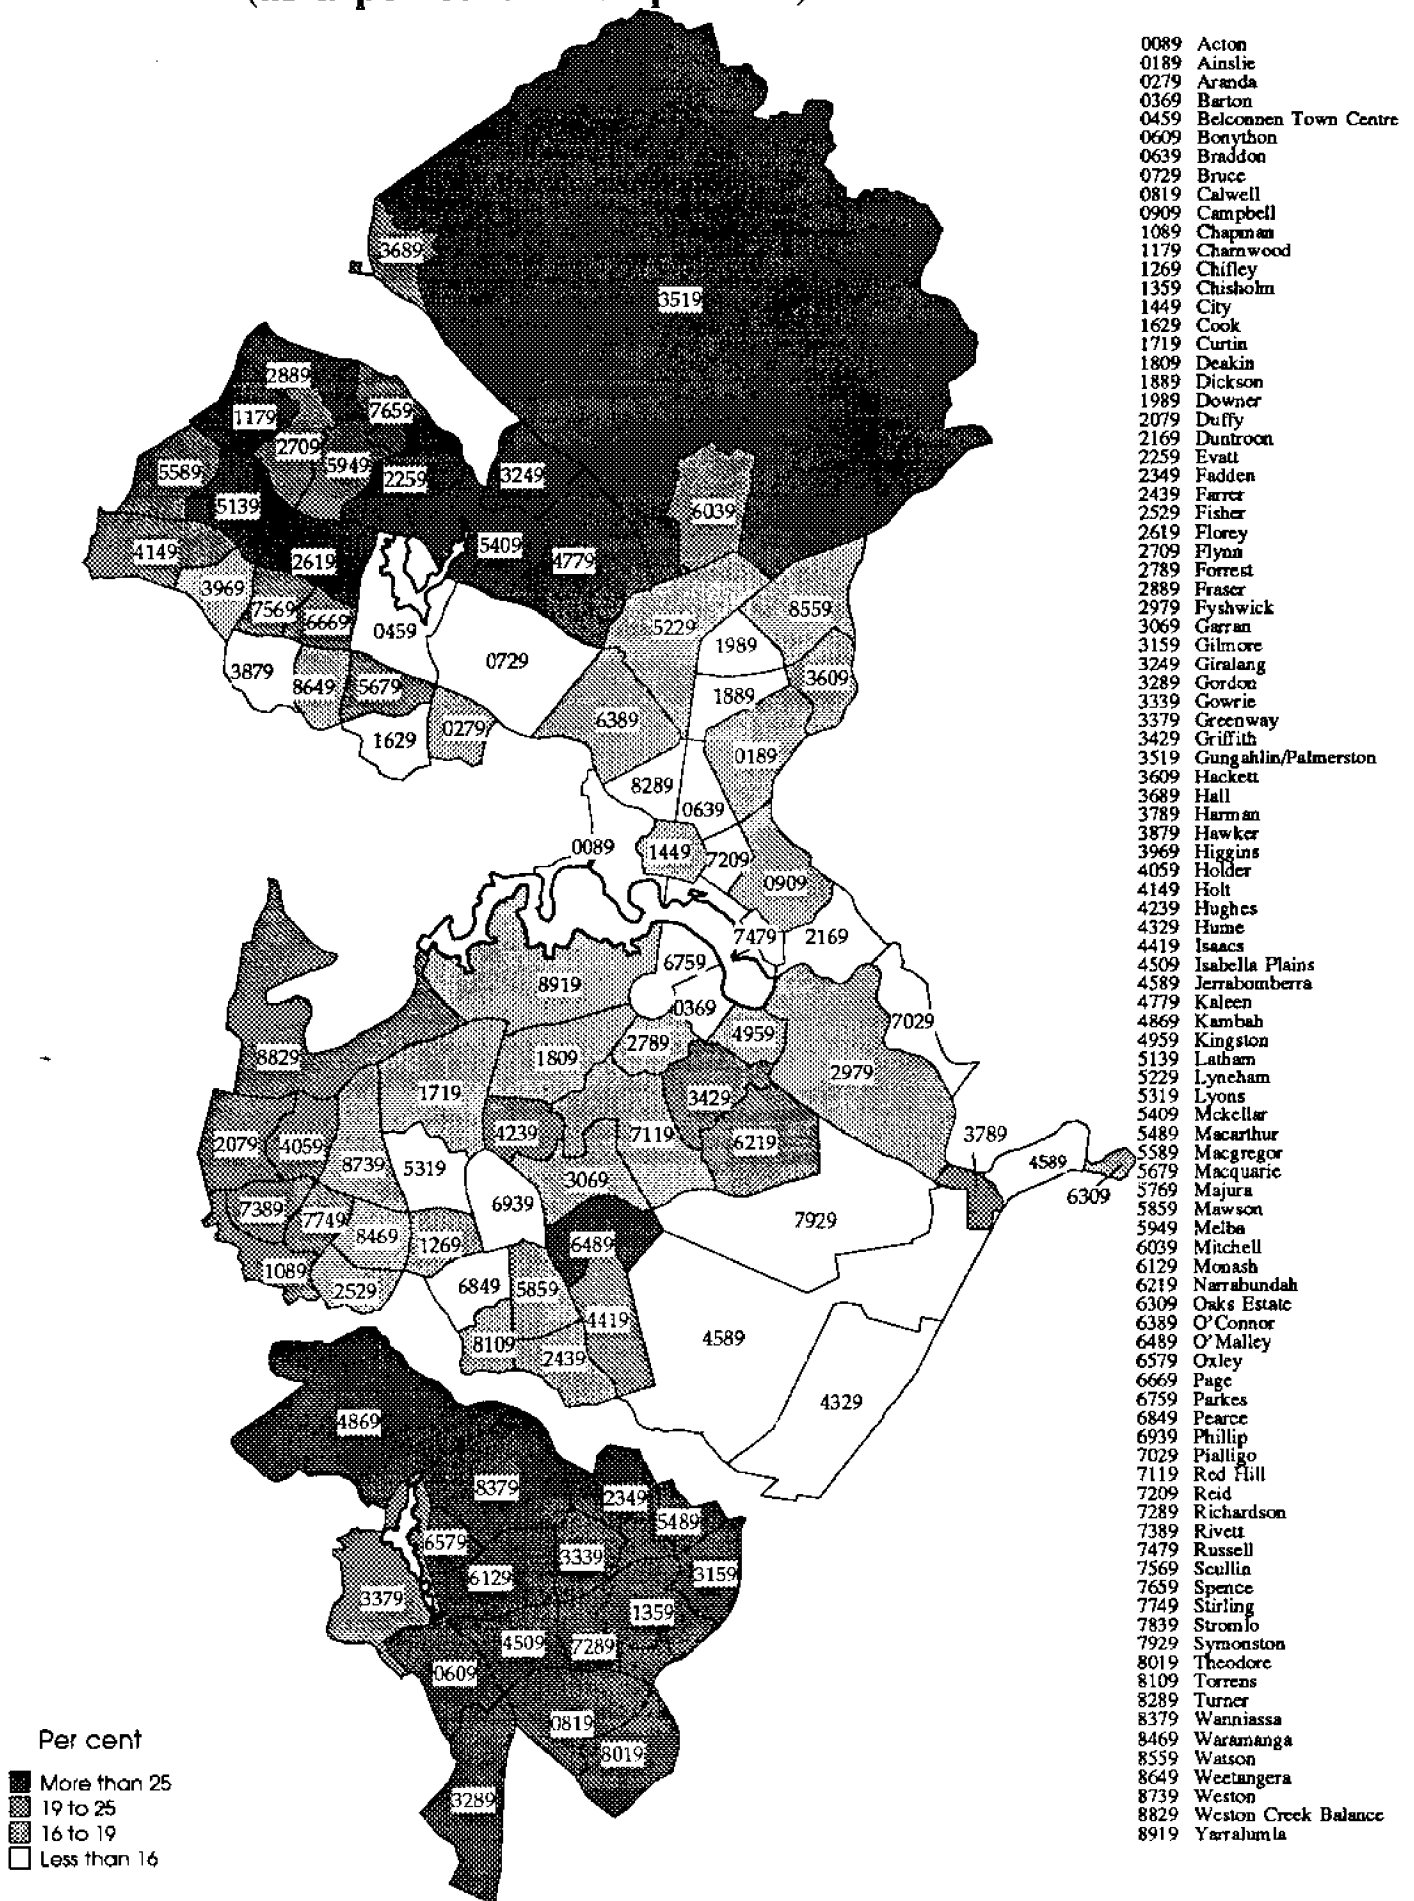

The 15-64 years age group in the A.C.T. increased by 3,800 or 1.9 per cent over the same period with most of the growth occurring in Tuggeranong (up 3,300 or 6.2%), Outer Canberra (up 1,800 or 94.1%) and Belconnen (up 100 or 0.2%). The subdivisions of Central Canberra (down 800 or 1.9%), Woden Valley (down 400 or 1.4%), and Weston Creek (down 200 or 0.9%) experienced negative growth.

The 65 years and over age group in the A.C.T. increased by 1,000 or 5.5 per cent over the year. All subdivisions experienced an increase with the largest changes occurring in Tuggeranong (up 200 or 9.4%), Woden Valley (up 200 or 7.2%), and Belconnen (up 200 or 6.2%).

(a) Excluding Jervis Bay

EXPLANATORY NOTES

Introduction

This publication contains estimated resident populations by age and sex for the Statistical Local Areas (SLA's) of the Australian Capital Territory at 30 June 1993. Estimates for the ACT do not include Jervis Bay Territory.

2. Area statistics are classified according to the *Australian Standard Geographical Classification* (1216.0). The SLA's in Canberra equate directly with the suburbs. Details for the adjacent (N.S.W.) Queanbeyan subdivision are not included in this publication. They are published in *Age and Sex Distribution of the Estimated Resident Population of Statistical Local Areas, New South Wales* (Catalogue No. 3209.1).

Estimated Resident Population

3. The Estimated Resident Population of an area is the estimate of the number of persons who usually reside in that area.

4. An explanation of the concept of estimated resident population, as adopted by the Australian Bureau of Statistics for official population estimates, is contained in the ABS technical paper, *Methods and Procedures in the Compilation of Estimated Resident Population 1981 and in the Construction of the 1971-81 Time Series* (3103.0), issued on 11 March 1983.

Methodology

5. The figures contained in this publication were obtained by the following demographic cohort method:

(a) Estimates by age and sex in SLA's at 30 June 1991 (based on the 1991 Census) were used as the base for updating;

(b) Estimates of total persons in each SLA at 30 June 1993 are derived from estimates of the number of occupied dwellings and their occupancy ratios. For each suburb the number of occupied private dwellings is estimated by using domestic electricity connections and enumerations of the number of occupied dwellings supplied by A.C.T. Administration. Historical housing occupancy trends derived from census counts are used to estimate occupancy rates for dwellings. These are applied to the number of occupied private dwellings to give an estimated population for each suburb. Births and student numbers are also used as indicators of population size.

(c) The total population growth for each SLA during 1992-93 was then split into natural increase and net migration components. Natural increase was derived for each SLA from birth and death registration statistics for 1992-93. Net migration was derived for each SLA as the difference between total population growth and natural increase.

(d) Age/sex migration profiles were derived for each SLA from 1986 census data on usual residence one year prior to the census date. Profiles were produced for:

- (i) Inter-SLA arrivals - persons residing in the SLA whose usual residence one year ago was in another SLA within Australia
- (ii) Inter-SLA departures - persons whose SLA of usual residence one year ago was that SLA but whose residence at the date of the census is another SLA within Australia.
- (iii) SLA overseas arrivals - persons in the SLA whose usual residence one year ago was overseas.

SLA overseas departures profiles were derived using an average for the last three years of overseas departures data by usual residence for the A.C.T., obtained from passenger cards.

- (e) Using the migration profiles and the derived net migration component for an SLA, the age/sex distribution of the net migration component was compiled for that SLA. The net migration estimates for all SLA's by age and sex were further adjusted to add to the net migration estimates for the A.C.T. by age and sex which were derived independently from other sources of statistics (Medicare and overseas arrivals and departures statistics). This distribution and data on deaths by age, and births in each SLA were then added (or subtracted) to the 1991 estimates described in (a) above. The totals for each age/sex group were then forced to add to the A.C.T. total for that age/sex group.

Geographic Boundaries

6. The geographic areas used in this publication are defined in the *Australian Standard Geographical Classification*, Edition 2.2 (1216.0). The boundaries of SLA's used in determining the population are those in existence at 30 June 1993. The population for previous years have been adjusted where appropriate so that they reflect the population changes for each area had the June 1993 boundaries existed then.

Reliability

7. Although estimates of resident population are shown to the nearest unit, accuracy to this level is not claimed and should not be assumed.

Data on disk

8. Data is available on disk upon request.

Related publications

9. Other ABS publications which may be of interest to users of this publication include:
