MAR QTR 1996 KEY POINTS

TREND ESTIMATES

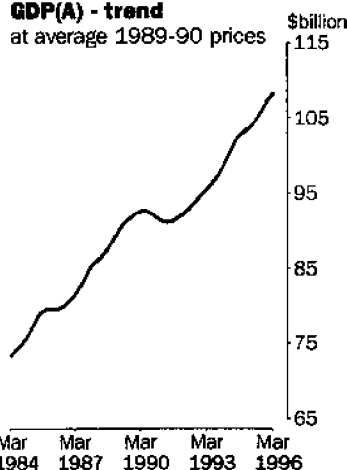

- GDP(A) increased 1.0% in March quarter to a level 4.1% higher than in March quarter 1995.
- GDP(E) and GDP(I) grew by 0.8% and 1.0% respectively, while GDP(P) increased at a somewhat higher rate of 1.3%.
- The terms of trade increased 1.2% in March quarter. This resulted in an increase of 1.3% in real gross domestic income, in comparison with the 1.0% growth in GDP(I).
- Gross farm product increased 4.7% in March quarter, while gross non-farm product increased 0.9%.

SEASONALLY ADJUSTED ESTIMATES

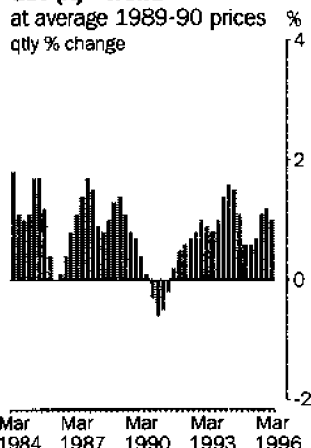

- GDP(A) increased 1.8% in March quarter and is now 4.8% higher than in March quarter 1995.
- All measures of GDP recorded higher growth rates in March quarter than in December quarter 1995.
- Gross fixed capital expenditure rose 5.1% in March quarter, following a 3.0% fall in December quarter 1995. Private GFCE was up 2.9%, while public GFCE rose 13.2% in the March quarter.
- The implicit price deflator for GDP rose 0.5% in March quarter to a level 2.5% higher than in March quarter 1995.

NATIONAL ACCOUNTS NOTES

FORTHCOMING ISSUES	ISSUE	RELEASE DATE
	5206.0 <i>Australian National Accounts: National Income, Expenditure and Product, June quarter 1996</i>	To be advised
	5242.0 <i>Australian National Accounts: State Accounts, March quarter 1996</i>	11 July 1996

.....

DETAILED INTERNATIONAL TRADE DATA The March quarter 1996 issue of *Balance of Payments, Australia* (5302.0) is scheduled for release on Friday 31 May 1996. Copies of tables which will be released in 5302.0 on Friday and which contain details of current and constant price exports and imports of goods and services underlying the aggregated data published in the Domestic Production Account in this publication (ie 5206.0) can be obtained now from Mr Michael Morgan on (06)252 6716.

.....

REVISIONS IN THIS ISSUE Revisions to percentage changes for major summary aggregates in trend terms are shown in Tables 41 to 43, while revisions to the major summary aggregates in original terms are shown in Tables 44 to 46. Revisions to major summary aggregates this quarter have been relatively small, although some component series have been revised to reflect the availability of later, more complete information.

.....

CHANGES IN THIS ISSUE There are no changes in this issue.

MARCH QUARTER SUMMARY COMMENT

FINAL CONSUMPTION EXPENDITURE

- Private expenditure grew 0.9% (1.0% seasonally adjusted). There were increases in most categories.

GROSS FIXED CAPITAL EXPENDITURE

- Dwelling construction fell 5.3% (-5.5% seasonally adjusted) in March quarter, the sixth consecutive quarterly decline. Investment in equipment rose 2.7% (10.7% seasonally adjusted), while non-dwelling construction rose 1.2% (-2.1% seasonally adjusted). Overall, private GFCE rose 0.1% compared with an increase of 2.9% in seasonally adjusted terms. Public GFCE grew strongly in seasonally adjusted terms (see note on page 11).

INCREASE IN PRIVATE NON-FARM STOCKS

- The build-up in private non-farm stocks over the past three years continued, but at a slower rate. There was an increase of \$504 million in March quarter following an increase of \$645 million in December quarter. The corresponding increases in seasonally adjusted terms were \$461 million and \$332 million.

EXPORTS OF GOODS AND SERVICES

- Exports of goods and services grew 4.0% in March quarter. Rural exports rose 6.5% mainly due to cereals, while machinery was the major contributor to the growth of 3.7% in non-rural exports.

IMPORTS OF GOODS AND SERVICES

- Imports of goods and services increased 2.7% in March quarter. Both capital goods and intermediate goods grew strongly. ADP equipment and parts for ADP equipment were the major contributors to growth.

Comments are based on trend constant price estimates, unless otherwise stated.

MARCH QUARTER SUMMARY COMMENT

AGRICULTURE, FORESTRY AND FISHING

- Increased 4.3% in trend terms and 6.5% in seasonally adjusted terms. The latter was largely due to increases in wool and meat production in the March quarter.

MANUFACTURING

- The trend estimate increased 1.3%, while the seasonally adjusted estimate rose 2.8%. In both cases the major contributor to growth was machinery and equipment.

WHOLESALE TRADE

- Wholesale grew 3.3% in trend terms and 4.2% in seasonally adjusted terms. Increased sales of cereal grains by public marketing authorities were entirely responsible for the seasonally adjusted growth.

RETAIL TRADE

- The trend estimate increased 1.0%, while the seasonally adjusted estimate was 2.1% higher. Growth in the seasonally adjusted figures was widespread, but was particularly strong for motor vehicle retailers.

TRANSPORT AND STORAGE

- Rose 2.4% in trend terms and 2.5% in seasonally adjusted terms. Both movements were influenced by substantial growth in rail transport associated with the transport of cereal grains.

Comments are based on trend **constant** price estimates, unless otherwise stated.

MARCH QUARTER SUMMARY COMMENT

WAGES, SALARIES AND SUPPLEMENTS

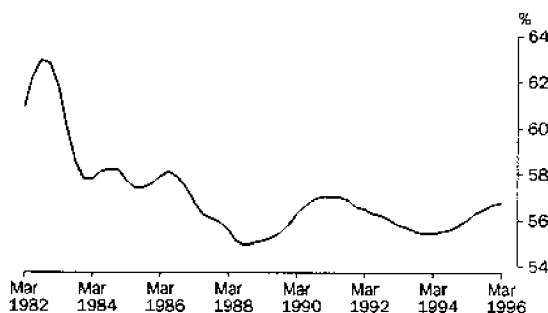

- Rose 1.6% (1.0% in seasonally adjusted terms).
- The rise reflects an increase of 0.2% in the number of wage and salary earners and 1.4% in underlying average earnings. The corresponding changes in seasonally adjusted terms were a fall of 0.3% in the number of wage and salary earners and an increase of 1.3% in underlying average earnings.

GROSS OPERATING SURPLUS

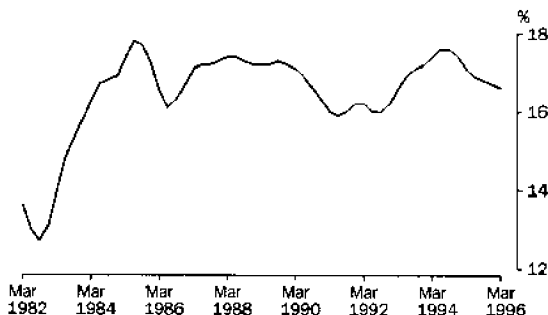

- In March quarter GOS of private corporate trading enterprises increased 1.0%, following identical increases in the previous two quarters. In seasonally adjusted terms, the increase was 4.4% following a decline of 1.7% in December quarter 1995.

Comments and graphs are based on trend current price estimates, unless otherwise stated.

WAGES SHARE OF GDP (AT FACTOR COST)¹

PROFIT² SHARE OF GDP (AT FACTOR COST)¹

¹ GDP at factor cost is equal to the sum of wages, salaries and supplements and gross operating surplus (i.e. it equals GDP(I) less net indirect taxes).

² GOS of private corporate trading enterprises

ANALYSES AND COMMENTS

RELIABILITY OF CONTEMPORARY TREND ESTIMATES

Seasonally adjusted series include both the trend effects and the irregular effects which influence movements in a series. As a result, seasonally adjusted estimates do not necessarily provide a good indication of the underlying behaviour of a series. On the other hand, trend estimates represent the underlying direction of the series, excluding seasonal effects and residual/irregular factors. Trend estimates are calculated by smoothing the seasonally adjusted series using a statistical procedure based on centred Henderson moving averages. The procedure used is designed to minimise distortions in the trend level, turning point shape and timing of turning points.

For the most recent quarters, insufficient data exist to use centred Henderson moving averages to calculate the trend values and so approximations to the Henderson moving averages are used for the latest three quarters. This means that revisions to the trend estimates for the last few quarters are unavoidable, even if none of the original data have been revised. More details about trend estimation are contained in the ABS Information Paper *A Guide to Interpreting Time Series — Monitoring "Trends", An Overview* (1348.0) which was released on 19 April 1993.

Potential revisions to trend estimates can be indicated by showing the effects of particular changes in seasonally adjusted estimates that might occur in the next quarter. The table below shows the trend estimates for the last few quarters and the values to which they would be revised if the notional movements in seasonally adjusted GDP(A) actually occurred in June quarter 1996.

Seasonally adjusted growth of 0.9% is required in June quarter 1996 to maintain the trend growth, in June quarter, of 1.0% currently estimated for March quarter 1996.

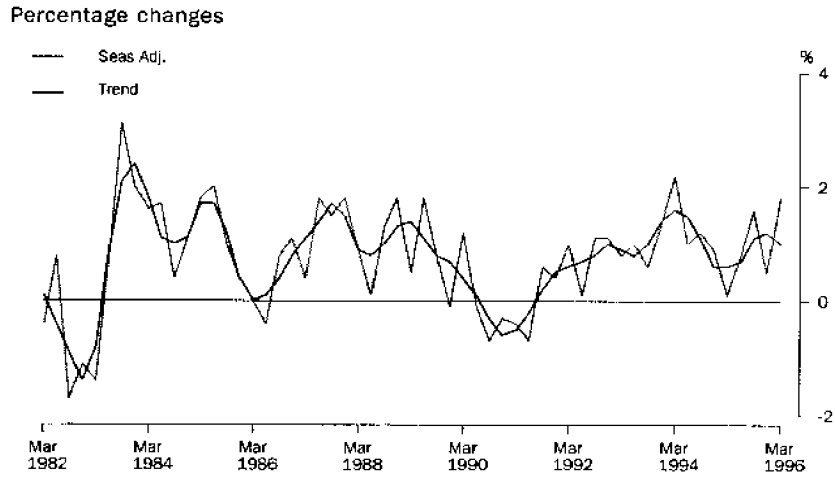

TREND ESTIMATE — PERCENTAGE CHANGE IN GDP(A)

	Seasonally adjusted GDP(A) as published in Table 1	Trend GDP(A) as published in Table 1	Trend estimate if seasonally adjusted GDP(A) changes by the following amounts in June quarter 1996

ANALYSES AND COMMENTS (continued)

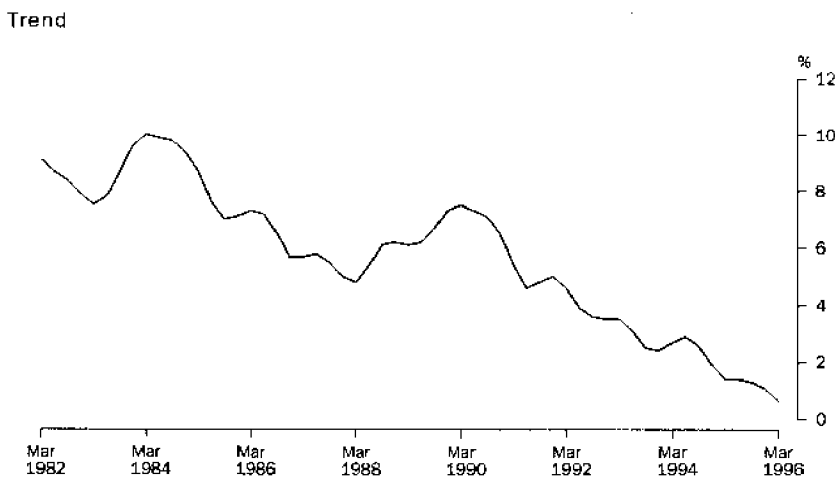

GROWTH RATES IN GDP(A)

The graph below provides a comparison of the quarterly growth rates (percentage changes) in constant price GDP(A) in both seasonally adjusted and trend terms in recent years.

HOUSEHOLD SAVING RATIO

The proportion of household disposable income devoted to consumption in the March quarter was 99.4%. The balance, household saving, was 0.6%. A large increase in income tax paid contributed to the more sharply declining trend in household saving in March quarter 1996. Caution should be exercised in interpreting this ratio in recent years, because major components of household income and expenditure may still be subject to significant revisions. The impact of these revisions on the saving ratio can cause changes in the apparent direction of the trend. The following graph presents the household saving ratio derived from trend data (see Explanatory Notes, paragraph 26).

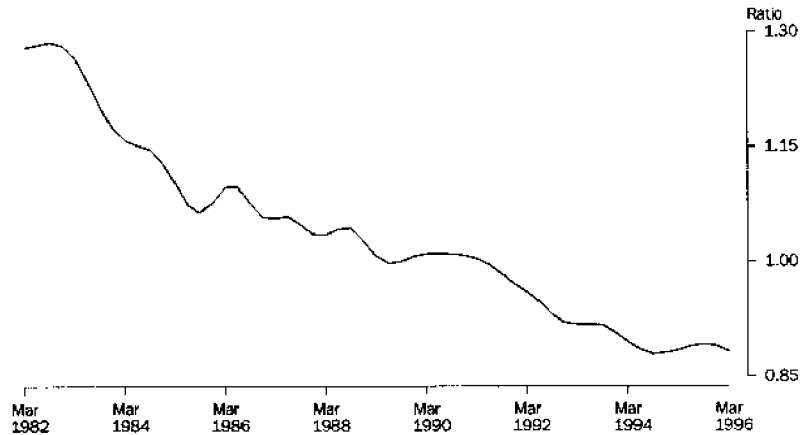

ANALYSES AND COMMENTS *(continued)*

PRIVATE NON-FARM STOCKS TO SALES RATIO

In trend current price terms, the book value of private non-farm stocks increased by \$508 million (0.7%) in March quarter, while sales increased \$1,126 million (1.5%). Consequently the stocks to sales ratio declined from 0.890 to 0.883. The following graph presents the ratio of private non-farm stocks to sales over the last fourteen years (see Explanatory Notes, paragraph 24).

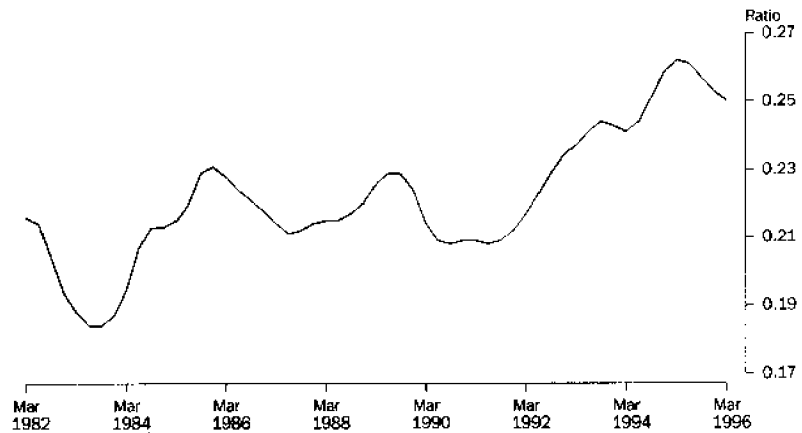

Trend at Current Prices

IMPORTS TO SALES RATIO

The imports to sales ratio, trended and at current prices, fell to 0.250 in March quarter from 0.253 in December quarter 1995. The following graph presents the ratio of imports to sales over the last fourteen years (see Explanatory Notes, paragraph 25).

Trend at Current Prices

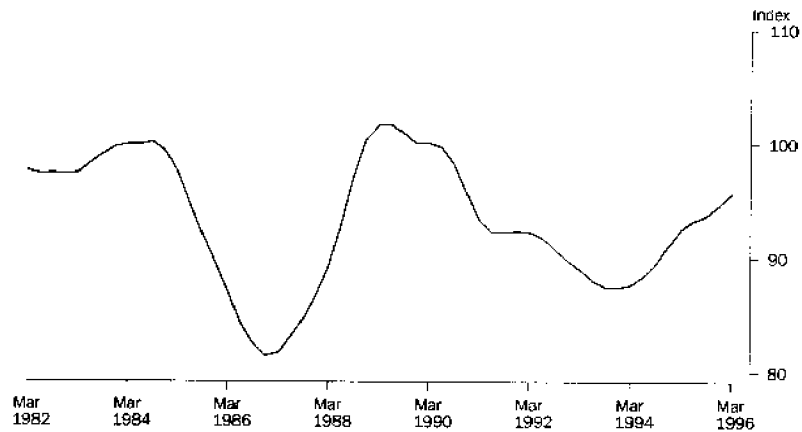

ANALYSES AND COMMENTS *(continued)*

TERMS OF TRADE

In March quarter 1996 the terms of trade index derived from trend estimates (see Explanatory Notes, paragraph 16) rose 1.2%. A fall in export prices of 1.0% was more than offset by a fall in import prices of 2.2%.

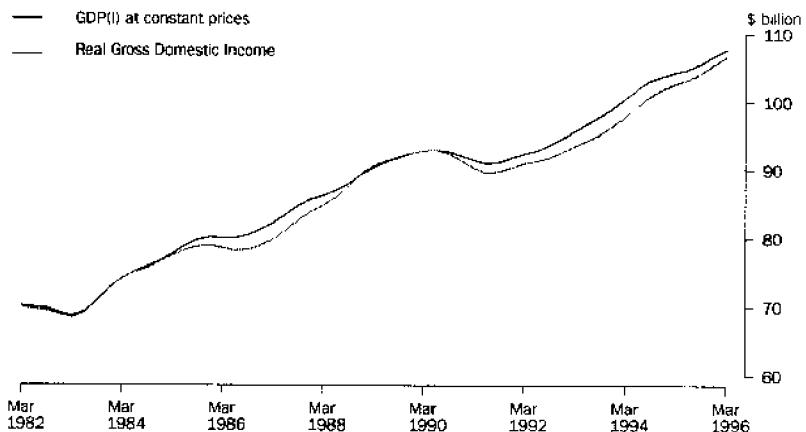

Trend (1989-90 = 100)

REAL GROSS DOMESTIC INCOME

GDP at constant prices is a measure of the volume of goods and services produced in Australia. If the terms of trade change significantly over the period of comparison, then this measure of real GDP will not accurately reflect the change in real purchasing power of the income generated by domestic production. (See the Technical Note included in the September quarter 1993 issue of this publication for a more detailed discussion.) A better measure of the real purchasing power of income generated by domestic production is GDP(I) at average 1989-90 prices adjusted for the terms of trade effect, which is referred to as *real gross domestic income*. The graph below provides a comparison of trend GDP(I) at average 1989-90 prices and real gross domestic income. Trend and seasonally adjusted estimates of real gross domestic income are shown in Tables 68 and 69 respectively.

Trend

ANALYSES AND COMMENTS *(continued)*

PRIVATE GROSS FIXED CAPITAL EXPENDITURE— NON-DWELLING CONSTRUCTION AND EQUIPMENT

Movements in private gross fixed capital expenditure can often be affected by large second-hand transactions and large one-off purchases. Details of recent transactions in second-hand assets between the private and public sectors, expenditure on new equipment and new work on non-dwelling construction are provided in the table below.

BUSINESS INVESTMENT AT AVERAGE 1989-90 PRICES

	NON-DWELLING CONSTRUCTION.....			EQUIPMENT.....		
	<i>New work done - private</i>	<i>Net second-hand purchases from public sector</i>	<i>Total</i>	<i>New assets purchased - private</i>	<i>Net second-hand purchases from the public sector</i>	<i>Total</i>

ANALYSES AND COMMENTS *(continued)*

FLOW-ON EFFECTS OF INCREASED FARM PRODUCTION

Farm production in 1995-96 will be considerably higher than in 1994-95 following the breaking of the drought over much of Australia. The first notable impact in the national accounts was the 19.4% increase in the seasonally adjusted estimates of gross farm product in September quarter 1995. Because of the way the output of crops is seasonally adjusted (by dividing annual production equally over the four quarters - see Analyses and comments, page 11 from the December quarter issue of this publication for a more detailed explanation), all of the impact of increased crop production in 1995-96 was reflected in the September quarter 1995 movement. However, much of the impact of the increased crop production on incomes, expenditures and downstream industries is being reflected in the national accounts for subsequent quarters.

In March quarter 1996, the need to distribute and transport the extra grain has boosted the wholesale trade and transport and storage industries. In the case of wholesale trade, sales by private wholesalers was virtually unchanged in seasonally adjusted terms, but the growth in sales of grain by public marketing authorities caused the gross product of the wholesale industry to grow by 4.2%. Rail freight transport of cereals has shown strong growth and contributed to the 2.5% seasonally adjusted growth in transport and storage. In seasonally adjusted terms, exports of cereals and cereal preparations grew strongly in the December and March quarters of 1995-96: recording \$525 million, \$947 million and \$1,209 million in the September, December and March quarters, respectively. To a large extent, the contribution to growth in GDP of the resulting increases in exports was offset by lower increases in the stocks held by cereal grain public marketing authorities.

PUBLIC GROSS FIXED CAPITAL EXPENDITURE

All components of seasonally adjusted constant price public gross fixed capital expenditure grew strongly in March quarter 1996, as shown in the table below.

	December quarter 1995	March quarter 1996	
	\$million	\$million	% change
Commonwealth			
Public enterprises	1 026	1 324	29.0
General government	313	358	14.4
State and local			
Public enterprises	1 490	1 637	9.9
General government	1 952	2 092	7.2
Total public sector	4 781	5 411	13.2

IMPLICIT PRICE DEFLATORS

The implicit price deflator (IPD) for seasonally adjusted government final consumption expenditure fell 1.4% in March quarter. The IPD for Commonwealth declined 2.7% from a high December quarter caused by a back-dated pay increase.

The deflators for private gross fixed capital expenditure on equipment are formed from import price indexes and price indexes relating to the outputs of Australian equipment manufacturers. These indexes are weighted together to reflect the current composition of capital expenditure on equipment by making estimates of the supply of capital goods in current and constant price terms, with the constant price estimates being derived using the aforementioned import and domestic manufacturing price indexes. The IPDs formed from the current and constant price supply estimates are current-weighted (Paasche) indexes.

ANALYSES AND COMMENTS *(continued)*

IMPLICIT PRICE DEFLATORS (continued)

The import price indexes used to derive the constant price estimates of the supply of capital goods are lagged. They are averaged over the current quarter and the two preceding quarters to take account of the "distribution lag" between import price increases and increases in prices paid by final purchasers.

In the March quarter the IPD for seasonally adjusted gross fixed capital expenditure on equipment fell by 2.1%, which was mostly due to the decline in import price indexes. Of particular significance was the sharp fall in the US Bureau of Economic Analysis's computer price index, which is used to derive the ABS's constant price estimates of computer equipment production, exports, imports and final expenditures (after lagging and adjustment for exchange rate movements). The fall in the computer price index also made a significant contribution to the 1.9% decline in the IPD for seasonally adjusted imports of goods and services.

MINING GROSS PRODUCT

Mining gross product recorded strong growth in the March quarter, increasing 6.3% in seasonally adjusted terms. The major contributors to growth were oil and gas production, which recovered from a weak December quarter, and gold production.

WAGES, SALARIES AND SUPPLEMENTS

Quarterly movements in wages, salaries and supplements can at times be significantly affected by changes in the level of severance, termination and redundancy payments or in the level of supplements to wages and salaries (ie employers' contributions to superannuation and workers' compensation claims). Employers' contributions to superannuation were increased on 1 July 1995, under the Superannuation Guarantee Levy legislation. Severance, termination and redundancy payments for recent quarters are shown below (although an estimate for March quarter 1996 is not yet available) together with estimates for supplements for the last nine quarters. (The estimates can be shown only in original terms because wages, salaries and supplements are seasonally adjusted in total.)

	Severance, termination and redundancy payments	Supplements to wages and salaries

GDP(P) market sector	0.5	1.4	1.6	0.9	0.5	0.1	—	0.3	0.4	1.1	1.9	1.8	5.2
GDP(P) non-farm market sector	0.6	1.2	1.5	0.8	0.7	0.6	0.4	0.2	0.3	0.8	1.9	2.0	5.1

(a) Input duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to J and P. See paragraph 21 of the Explanatory notes
(c) ANZSIC divisions B to J and P. See paragraph 22 of the Explanatory notes. (d) For the non-market industries the methods used to estimate gross product at constant prices do not adequately capture the change in gross product per unit of labour input. See paragraph 21 of the Explanatory notes. Hence the estimates for the market and non-farm market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries. (e) The seasonally adjusted estimates of hours worked have a history of substantial volatility, and so the most recent trend estimates are subject to revision when seasonally adjusted data for subsequent quarters become available.

Note: Annual data derived from original series. (a) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to J and P. See paragraph 21 of the *Explanatory notes*. (c) ANZSIC divisions B to J and P. See paragraph 22 of the *Explanatory notes*. (d) For the non-market estimates the methods used to estimate gross product at constant prices do not adequately capture the changes in gross product per unit of labour input. See paragraph 21 of the *Explanatory notes*. Hence the estimates for the market and non-farm market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries.

Note: Annual data derived from original series. (a) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to J and P. See paragraph 21 of the *Explanatory notes*. (c) ANZSIC divisions B to J and P. See paragraph 22 of the *Explanatory notes*. (d) For the non-market industries the methods used to estimate gross product at constant prices do not adequately capture the changes in gross product per unit of labour input. See paragraph 21 of the *Explanatory notes*. Hence the estimates for the market and non-farm market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries. (e) The seasonally adjusted estimates of hours worked have a history of substantial volatility, and so the most recent trend estimate are subject to revision when seasonally adjusted data for subsequent quarters become available.

EXPLANATORY NOTES

.....

INTRODUCTION

1 This publication contains estimates of the components of gross domestic product and national expenditure and supporting tables for the latest quarter, together with comparative estimates for the eight previous quarters and the last four financial years. Seasonally adjusted and trend estimates of the major aggregates and some selected series are also provided for the latest quarter, together with comparative estimates for the twelve previous quarters. The List of Tables, pages 13-14, show the full range of data provided.

CONCEPTS, SOURCES AND METHODS

2 These are documented in *Australian National Accounts: Concepts, Sources and Methods* (5216.0). In association with the introduction of constant price estimates at average 1989-90 prices, some of the methods used to derive constant price estimates were changed. The major changes are described in Section 4 of the Information Paper *Australian National Accounts: Introduction of Constant Price Estimates at Average 1989-90 Prices* (5243.0).

ACCURACY OF QUARTERLY ESTIMATES

3 Estimating for a period of less than one year presents special problems. It is often difficult to adhere strictly to definitions used in annual estimates when deriving quarterly ones. This is particularly the case for the quarterly measure of income, because it is not always possible to match the value of production for a quarter with the cost incurred in that production. Difficulties are also encountered in obtaining detailed data for short periods and in preparing consistent estimates from different sources with different accounting procedures and periods. Furthermore, the quarter-to-quarter growth in seasonally adjusted terms is very sensitive to the timing of recording a transaction. If the recording of a transaction is delayed by one quarter, seasonally adjusted movements will be distorted for three consecutive quarters. All these problems affect the accuracy of the current and constant price estimates and should be taken into account in interpreting the estimates.

REVISIONS

4 Most figures are subject to revision as more complete and accurate information becomes available. The revisions are of two types: those made to recent quarters and those made as a consequence of a redistribution across all quarters within a year following revisions to annual totals. Major revisions made this quarter are discussed on page 2.

TREND ESTIMATES

5 Given the qualifications regarding the accuracy and reliability of the quarterly national accounts, the Australian Bureau of Statistics (ABS) considers that trend estimates provide the best guide to the underlying movements, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

6 A trend estimate is obtained by removing the irregular component from the seasonally adjusted series. For estimates in this publication, it is calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters, even if none of the original data for earlier quarters has changed.

7 If a series has a high 'irregular' component, then the trend estimates will be subject to greater revision for the latest few quarters as data become available for subsequent quarters than would otherwise be the case. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In fact, in such cases the effect of the irregular component on overall movements is likely to be even more marked in the seasonally adjusted and the original estimates than in the trend series.

TREND ESTIMATES (continued)

8 For more information about ABS procedures for deriving trend estimates and an analysis of the advantages of using them over alternative techniques for monitoring trends, see *A Guide to Interpreting Time Series — Monitoring 'Trends': an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

Two feature articles which have appeared in the ABS monthly publication *Australian Economic Indicators* may also be of interest:

- *Picking Turning Points in the Economy* (April 1991), and
- *Smarter Data Use* (March 1992).

IMPLICIT PRICE DEFLATOR (IPD)

9 The quarterly implicit price deflators (IPDs) are derived by dividing seasonally adjusted and trend current price estimates by the corresponding constant price estimates. Movements in IPDs can be greatly affected by changes in the physical composition of the aggregates and their components. For this reason, quarterly IPDs derived from seasonally adjusted or trend data are preferred to those using original data. The seasonal adjustment process itself is also a possible source of distortion. For further information see Appendix VI of *Australian National Accounts: Concepts, Sources and Methods* (5216.0).

SEASONAL ADJUSTMENT:
GENERAL METHOD

10 Data that are affected by seasonal factors are adjusted to remove the effects of these factors. The general methods for doing so are described in Appendix I of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Three important points should be noted here :

- The methods used in seasonal adjustment do not force the sum of the adjusted estimates for each quarter of a year to equal the original annual total.
- Where constant price estimates have no apparent seasonality in their implicit price deflators, the estimates are adjusted using the corresponding factors for current price estimates.
- Special methods have been used to adjust some components of gross farm product. These concern the adjustment of crop production where production/harvest only occurs in a couple of quarters each year. In these instances, the output for each financial year is distributed equally over the four quarters.

MEASURES OF GDP

GDP(I)
INCOME APPROACH

11 GDP(I) is the sum of factor incomes, consumption of fixed capital (depreciation) and net indirect taxes. The preferred current price measure of GDP is GDP(I). It is the overall measure which is consistent with subsidiary measures such as national income and the other consolidated tables (such as the national income and outlay account). GDP(I) also provides the base year benchmarks for the constant price estimates of GDP(P). Constant price estimates of GDP(I) are derived by deflating current price estimates of GDP(I) by the implicit price deflator of GDP(E).

GDP(E)
EXPENDITURE APPROACH

12 GDP(E) is the sum of all final expenditures, changes in stocks, and exports less imports. Constant price estimates of GDP(E) are the sum of all these components at average 1989–90 prices.

GDP(P)
PRODUCTION APPROACH

13 GDP(P) is calculated as the market value of goods and services produced by an industry (i.e. gross output) less the cost of goods and services used in the productive process (i.e. intermediate consumption). Constant price estimates of GDP(P) are the sum of constant price estimates (at average 1989–90 prices) for each industry.

MEASURES OF GDP (continued)

GDP(A) THE AVERAGE **14** While the three measures above are identical in concept, they can differ significantly in practice, especially in the short term, because of the different data sources used for each measure. Using the average of the three, GDP(A), smooths out these differences. GDP(A) is considered by the ABS to be the most satisfactory indicator of short-term seasonally adjusted or trend growth (see the Feature Article in the June quarter 1990 issue of *Australian National Accounts: National Income and Expenditure* (5206.0)).

ANALYSIS OF CONTRIBUTIONS
TO GROWTH

15 Tables 6 and 7 present analyses of the contribution provided by each major component to the percentage change in trend and seasonally adjusted estimates of constant price GDP(I). The figures in each table are additive within each quarter, unlike the percentage changes shown in other tables in this publication. The formula used to calculate the contribution of each aggregate to the growth in GDP is:

$$\frac{A(t) - A(t-1)}{GDP(t-1)} \times 100$$

where

A(t) = value of aggregate A in quarter under consideration

A(t-1) = value of aggregate A in preceding quarter

GDP(t-1) = value of GDP in preceding quarter.

TERMS OF TRADE

16 There are several ways of measuring the terms of trade. In this publication, the following index is used :

$$\frac{\text{Implicit price deflator for exports of goods and services}}{\text{Implicit price deflator for imports of goods and services}} \times 100$$

Estimates of the terms of trade are shown in Tables 11, 12, 18, 19, 68 and 69.

REAL GROSS DOMESTIC INCOME

17 GDP at constant prices is a measure of the volume of goods and services produced in Australia. If the terms of trade change significantly over the period of comparison, then this measure of real GDP will not accurately reflect the change in real purchasing power of the income generated by domestic production. (See the *Technical Note* included in the September 1993 issue of this publication for a more detailed discussion.) A better measure of the real purchasing power of income generated by domestic production is GDP(I) at average 1989-90 prices adjusted for the terms of trade effect, which is referred to as *real gross domestic income* (or real GDI). The following adjustment is made to GDP(I) at constant prices to obtain an estimate of real GDI:

- exports of goods and services at current prices are deflated by the implicit price deflator for imports of goods and services
- the actual constant price value of exports is then deducted from this value, and
- the resultant terms of trade adjustment is then added to GDP(I) at constant prices to give real GDI presented in Tables 68 and 69.

.....

GROSS PRODUCT PER UNIT
OF LABOUR INPUT

18 Indexes of constant price gross product per person employed and per hour worked are commonly referred to as measures of labour productivity. However, it should be noted that these indexes reflect not only the contribution of labour to changes in product per unit of labour, but also the contribution of capital and other factors (such as managerial efficiency, economies of scale, etc.).

19 When analysing labour productivity indexes it is critical to note that they are subject to the vagaries of the growth (or business) cycle as well as the effects of any measurement error in either output or labour input. Differences in the amplitude and phase of the output and input cycles can result in labour productivity indexes deviating substantially from their longer-term trend. Analytical work undertaken within the ABS suggests that movements in employment and hours worked tend to lag movements in GDP. Over a 20 year period, the lag at turning points in the growth cycle varied between zero and four quarters, with the average being between two and three quarters. The implication is that, in the period of the growth cycle when the growth in output is declining, indexes of labour productivity are likely to decline, particularly if rapid growth in GDP is abruptly ended. Conversely, labour productivity indexes are likely to grow strongly when the economy comes out of a cyclical trough.

20 A simple way to estimate the underlying trend in labour productivity is to compare the values of a labour productivity index spanning a growth cycle e.g. from the peak of one growth cycle to the peak of another. Note that such estimates rest on the assumption that labour is being utilised to the same degree at each growth cycle peak. Average annual growth rates, over growth cycles, of estimates of gross product per hour worked in the *market* and *non-farm market* sectors are shown in *Australian National Accounts: Multifactor Productivity* (5234.0).

MARKET AND NON-FARM
MARKET SECTORS

21 The estimates of gross product at constant prices for six industries: Finance and insurance; Property and business services; Government administration and defence; Education; Health and community services; and Personal and other services are derived either wholly or primarily by using either deflated input cost data or hours worked as indicators of output. As such, the estimates cannot adequately reflect changes in productivity. For the purpose of measuring changes in productivity, it is therefore preferable that these industries be excluded. The constant price product of a group of industries referred to as the *market sector* is defined to be GDP(P) less the above six industries, less Ownership of dwellings (for which capital stock is used as the indicator of output), plus the imputed bank service charge related to the 'non-market' industries.

22 A second industry group, referred to as the *non-farm market sector*, comprises the market sector less Agriculture, forestry and fishing. Productivity estimates derived for this group are free of the effects caused by the volatility of agricultural production due to changing seasonal conditions.

INDEXES OF EMPLOYMENT AND
HOURS WORKED

23 The quarterly employment indexes used to derive the gross product per person employed indexes comprise all labour engaged in the production of goods and services and include not only civilian wage and salary earners but also employers; self-employed persons; persons working one hour or more without pay in a family business or on a farm; and members of the Australian defence forces. For details of how the employment and hours worked estimates are formed, refer to Section 23 of *Australian National Accounts: Concepts Sources and Methods* (5216.0), and also Section 4 of the Information Paper *Australian National Accounts: Introduction of Constant Price Estimates at Average 1989-90 Prices* (5243.0) which describes changes in methods introduced in conjunction with the rebase of constant price estimates to average 1989-90 prices.

PRIVATE NON-FARM STOCKS
TO SALES RATIO

24 The ratio is presented in Tables 68 and 69. The denominator of this ratio, in current price terms, is defined as :

- private final consumption expenditure on goods
- *plus* private gross fixed capital expenditure on dwellings, non-dwelling construction and equipment
- *plus* public gross fixed capital expenditure
- *plus* exports of non-rural goods.

IMPORTS TO SALES RATIO

25 The ratio is merchandise imports (ie total imports of goods) to sales (as defined in paragraph 24 above). This ratio is presented in Tables 68 and 69.

HOUSEHOLD SAVING RATIO

26 This is the ratio of household saving to household disposable income, where household saving is the difference between household disposable income and private final consumption expenditure. The ratio is a memorandum item in Tables 27 and 28 and is also shown in Table 67.

GDP(A) PER CAPITA

27 This is the ratio of GDP(A) to an estimate of the resident Australian population. For all but the most recent quarters, the resident population data are drawn from *Australian Demographic Statistics* (3101.0). For the most recent quarters, estimates are made by extrapolating from the latest available data.

DATA ON FLOPPY DISK

28 All quarterly series in this publication are available in spreadsheet format on floppy disk, *Australian National Accounts: Quarterly Data on Floppy Disk* (5228.0). These data generally run from September quarter 1959. An important exception is GDP(P) and its components which run from September quarter 1974. The cost is currently \$130.00 per release or \$390.00 for an annual subscription. Place your order by ringing (06) 252 6627.

RELATED PUBLICATIONS

29 In addition to the publications already mentioned, others of interest include :

- *Australian National Accounts: National Income, Expenditure and Product* (5204.0) — annual
- *Australian National Accounts: State Accounts* (5220.0) — annual
- *Australian National Accounts: State Accounts* (5242.0) — quarterly
- *Australian National Accounts: Capital Stock* (5221.0) — annual
- *Australian National Accounts: Financial Accounts* (5232.0) — quarterly
- *Australian National Accounts: Multifactor Productivity* (5234.0) — annual
- *A Guide to the Australian National Accounts* (5235.0)

30 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

FOR MORE INFORMATION . . .

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our offices (see below).

INFORMATION CONSULTANCY SERVICES

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see below).

ABS PRODUCTS

A large number of ABS products is available from the ABS Bookshops (see below). The ABS also provides a subscription service – you can telephone the ABS Subscription Service Australia wide toll free on 1800 0206 08.

ELECTRONIC SERVICES

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS office (see below) or e-mail us at:
