INQUIRIES:

- about *these statistics in this publication and the availability of related unpublished statistics*, contact Dr Annette Barbetti on Canberra (06) 252 6908, Mr Peter Claydon on Canberra (06) 252 6910 or any ABS State office.
- *for information about other ABS statistics and services* please refer to the back page of this publication

PREFACE

This publication provides detailed information concerning the 1993-94 Input-Output Commodity Classification (IOCC), and commodity supply and exports by detailed commodity item for 1993-94. A separate publication *Australian National Accounts, Input-Output Tables, 1993-94* (5209.0) provides a comprehensive range of input-output flow and coefficient tables.

The input-output tables for 1993-94 are the fifteenth compiled by the ABS in a series published over the past thirty two years. Experimental tables for 1958-59 were published in 1964. Subsequently, tables were published for 1962-63, 1968-69, 1974-75, for each year from 1977-78 to 1983-84, 1986-87, 1989-90 and 1992-93.

The IOCC is an industry-of-origin commodity classification that has been specifically developed for the compilation and application of Australian input-output tables. The industry classification to which the 1993-94 IOCC is related is the *Australian and New Zealand Standard Industrial Classification* (ANZSIC) 1993.

Australian Bureau of Statistics

CHANGES IN THIS ISSUE

1. The 1993-94 input-output tables are the second published set of input-output tables based on the 1993 *Australian and New Zealand Standard Industrial Classification* (ANZSIC) and contain 107 industries at the disaggregated level and 35 industries at the aggregated level. The 1989-90 tables were based on the 1983 *Australian Standard Industrial Classification* (ASIC) and contained 109 disaggregated and 28 aggregated industries respectively. The relationship between the new ANZSIC based Input-Output Industry Classification and the 1993 ANZSIC is shown in Table 9.

2. The 1993-94 input-output tables are the final set of input-output tables based on the 1968 System of National Accounts. The 1994-95 tables will be based on the 1993 System of National Accounts. An information paper, to be published in November 1997, will provide further details. The 1994-95 tables publication, containing both current and constant price tables, will be released in early 1998.

EXPLANATORY NOTES

Introduction

1. This publication provides detailed information about the 1993-94 Input-Output Commodity Classification (IOCC), and supply and exports by commodity item. The information complements the broadly classified input-output flow and coefficient tables released on floppy disk and the publication *Australian National Accounts: Input-Output Tables, 1993-94* (5209.0). That publication also contains extensive notes about Australian input-output tables and the sources and methods used for their compilation.

2. Tables 5, 6, 7 and 8 of this publication refer to the detailed 1993-94 concordance between IOCC items and component items of production, merchandise imports and merchandise exports. Each table provides a sample page from the concordance showing the data content and presentation. The tables are described in paragraphs 4 to 13 below. Full details are available on floppy disk.

3. This edition of the IOCC is consistent with the 1993 edition of the *Australian and New Zealand Standard Industrial Classification* (ANZSIC), the *Australian and New Zealand Standard Commodity Classification* (ANZSCC) and the 1989-90 *Harmonised Commodity Description and Coding System* (HS) at the 6 digit level.

Description of tables

Table 1

4. This table provides a full list of IOCC commodity items and shows, for each commodity item and group, the value of supply in 1993-94, its source (Australian production or imports) and the value of exports. Commodity values shown in these tables can be related directly to Tables 1, 2 and 3 of the publication 5209.0. For each commodity group total in Table 1 of this publication, entries in the column headed *total* are equal to those in the column *total supply* (T6) in Table 2, *Absorption matrix - input by industry and final demand category and supply by commodity group*, of publication 5209.0. Similarly, entries in the column headed *exports* are equal to those in the column *exports* (Q7) for each commodity group in Table 2 of 5209.0.

5. The value of Australian production for each commodity group is equal to the total Australian production for the corresponding commodity group in Table 1, *Make matrix - output by commodity group by industry*, of publication 5209.0. The value of competing imports cif (including duty) for each commodity group is equal to *total supply* (T6) for the corresponding commodity group in Table 3, *Imports matrix - supply by commodity group and inputs by industry and final demand category*, of publication 5209.0 (floppy disk version); in total, it is also equal to the sum of the row entries, *competing imports cif* (P6B) and *duty on P6B* (P7B), shown in Table 2, *Absorption matrix - input by industry and final demand category and supply by commodity group*, of publication 5209.0.

6. The value of complementary imports (including duty) is equal to the total for *complementary imports* in Table 3, *Imports matrix - supply by commodity group and inputs by industry and final demand category*, of publication 5209.0 (floppy disk version); it is also equal to the sum of the row entries, *complementary imports cif* (P6A) and *duty on P6A* (P7A) shown in Table 2, *Absorption matrix - input by industry and final demand category and supply by commodity group*, of publication 5209.0. The classification of complementary imports differs, however, between this publication and 5209.0. In publication 5209.0 these imports are classified to the industry or final demand category using the imports. In this publication, they are classified to the industry to which they would be primary had they been produced locally. Imports treated as complementary are also listed in Appendix C of publication 5209.0.

Tables 2 to 4

7. These tables provide a reconciliation between information shown in Table 1 and information shown in the source data series of international merchandise trade, agriculture, forestry, fishing, hunting, mining and manufacturing.

Table 5

8. This table provides a sample page from the concordance, for the agriculture, mining (excluding services to mining) and manufacturing sectors, between each item used for data collection in 1993-94 and the IOCC item(s) to which it is classified. The concordance also links each electricity and gas item used for data collection in 1993-94 and the corresponding IOCC item. Full details of the concordance are available on floppy disk.

9. Most of the production that is primary to the agriculture, mining, manufacturing, electricity and gas sectors relates to specified items for which a concordance to IOCC item(s) can readily be established. In addition, some production is recorded against broadly specified items which cannot be classified directly to an IOCC item. Production for the latter items is included in the input-output tables but no source data items are included in this classification table. The broadly defined items are referred to as production item gaps with respect to the IOCC and are discussed in paragraph 31 below. A reconciliation between mining census and manufacturing survey data and input-output tables is provided in Table 4.

Tables 6 and 7

10. These tables also provide samples of output available on floppy disk. They provide details of the IOCC item(s) to which each import or export item in international merchandise trade statistics is classified. These items relate to the HS at the 6 digit level.

11. In addition to international merchandise trade, international trade in services and adjustments required for balance of payments and national accounting purposes are included in input-output tables. However, no items for

these additional flows are included in Tables 6 and 7. These flows are referred to as international trade item gaps with respect to the IOCC and are discussed in paragraph 32 below. A reconciliation between the international trade source data series and the input-output tables is shown in Table 2.

Table 8

12. This table is a further sample of output available on floppy disk. It provides a concordance between each IOCC item and the items specified for the collection of production, merchandise imports and merchandise exports data. For each IOCC item, the table shows the code and description of the input-output industry and ANZSIC industry of origin, and the relevant source data items. In addition, where an IOCC item comprises a source data item that is split between IOCC items, percentage allocations and all relevant item codes are shown. For a more detailed explanation see paragraphs 19 to 37 below.

Table 9

13. This table provides a link between the input-output industry sectors and the corresponding sectors of the 1993 edition of the ANZSIC. The ANZSIC codes shown in Table 9 consist of the first four digits of the codes generally used to define commodities in the IOCC shown in Tables 1 to 8. The structure of the IOCC in terms of the ANZSIC is discussed in paragraphs 19 to 22 below.

Nature of the Input-Output Commodity Classification

14. Because the input-output system describes the production and subsequent use of all goods and services, an input-output commodity classification needs to be defined in terms of characteristic products of industry sectors. The overall principles for the preparation of such an industry-of-origin commodity classification are:

- (a) homogeneity of inputs - each commodity or commodity group should consist of items that have similar input-structures or technology of production. This principle is generally applied through the definition of each IOCC item in terms of the ANZSIC industry sector in which it is mainly produced.
 - (b) homogeneity of disposition - each commodity or commodity group, having satisfied the first criterion, should consist of items that have similar patterns of disposition or usage. This principle is applied by reference to the description of source data items and information about the transport, distribution and commodity taxation margins applying to particular commodities.
15. At its most detailed level the IOCC comprises approximately 1,100 individual commodity items. For confidentiality and data availability reasons the values of some of these detailed commodities are aggregated in this publication.

16. An integral part of the input-output commodity classification is a concordance between the items in the classification and data source items of production, imports and exports. The concordance ideally relates each data source item to a single input-output item. When it is not possible to satisfy both the one-to-one concordance and the industry-of-origin criteria simultaneously, the industry-of-origin criterion takes precedence.

Relationship between the IOCC and the ASCC

17. In general, items in *The Australian and New Zealand Standard Commodity Classification (ANZSCC)* (1254.0) originate from one ANZSIC class and relate to one IOCC. In some cases, ANZSCC items sometimes cover commodities originating from more than one industry. However, the input-output commodity items are specified in strict industry-of-origin terms. This necessitates classifying or linking some commodities to more than one input-output commodity item. This limitation is overcome in practice by the allocation of such commodities using special investigations and imputations.

18. *The Australian and New Zealand Standard Commodity Classification (ANZSCC)* (1254.0) classifies domestically produced transportable goods and links them to the HS and the ANZSIC. This classification is the basis of the production items included in the IOCC.

Structure of the IOCC

19. The structure of the IOCC arises from its industry-of-origin basis. In an industry-of-origin classification, each commodity item is shown according to the industry in which it is primarily produced. Thus, the structure of the IOCC consists of industry-of-origin headings with detailed commodity items shown under each heading.

20. This structure is implemented in the IOCC by the adoption of ANZSIC classes as the basis for defining IOCC items. In this scheme, for 1986-87 and earlier tables, each IOCC item was identified by a seven digit code with the first four digits generally indicating the *Australian Standard Industrial Classification (ASIC)* class to which the item is primary and the last three digits indicating the commodity number within an ASIC industry-of-origin category. However, from 1989-90 onwards IOCC items are identified by an eight digit code with the first four digits referring to the ANZSIC class (ASIC class for 1989-90) and the last four digits the commodity number. The longer commodity number allows greater flexibility to expand the classification. For example, the commodity item *bacon and ham (excl. ham paste)* is IOCC item 21130010. This commodity is primary to ANZSIC class 2113 *bacon, ham and smallgood manufacturing*. In addition, each IOCC item is related to an input-output industry group. That group classification is comprised of 107 sectors and is used for the presentation of input-output commodity by industry flow tables in the publication *Australian National Accounts, Input-Output Tables* (5209.0). The

input-output industry classification is shown in terms of ANZSIC in Table 9 of this publication.

21. There are, however, some instances where the IOCC industry-of-origin categories are identified with more than one ANZSIC class. Where an industry-of-origin category represents a combination of activities primary to two or more ANZSIC classes, either a four digit code not used in the ANZSIC has been adopted, or the first ANZSIC of the combined group has been adopted. In both situations, the codes of the combined ANZSIC classes are shown in brackets in the IOCC item heading.

22. IOCC item 21130010 *bacon and ham (excl. ham paste)*, is an example of an item which is primary to a single ANZSIC class. An example of an IOCC item which combines activities that are primary to more than one ANZSIC class is 41200010 *non-residential building construction* (4113, 42 part). This IOCC is comprised of activities primary to ANZSIC 4113 *non-residential building construction* and activities primary to ANZSIC classes within the subdivision 42 *construction trade services* that serve non-residential building construction.

Composition of IOCC Items

Splitting of international merchandise trade items

23. All international merchandise trade items have been examined in order to establish a concordance to IOCC items. The concordances established have been based on ANZSIC and HS links between items of production, imports and exports and the description of individual import and export items. The attainment of concordances, without gaps or overlaps, between international merchandise trade items and individual IOCC items is not always practicable because some import and export items are related to production items primary to more than one IOCC item. In such circumstances the import or export item is split between relevant IOCC items and separately keyed to each item.

24. To facilitate use of these concordances the basis of the splitting process is described below. Once an import or export item is split between IOCC items further investigation is required in order to allocate first a broad part code and then a percentage to the trade item. The part code will be one of the letters P, S or D; for each code, the following definitions and percentage allocation conventions are adopted:

- (a) P (PART) - denotes that an import or export item is primary to two or more IOCC items and that a significant proportion of its value may relate to each of the relevant IOCC items. In each case a percentage of the source data item value is assigned to each relevant IOCC item using special investigations and imputation.
- (b) S (SURPLUS) and D (DEFICIENCY) - these part codes are applied to individual import and export items that are primary to two or more IOCC items.

Where an ANZSCC item includes parts of commodities which would be attributed to a different IOCC item if more narrowly defined import or export commodity items were available, the part of the item necessarily included is referred to as *SURPLUS*. This inclusion results in a *DEFICIENCY* in the IOCC item which ideally would include the designated part of the import or export item. Although the basic data does not allow an ideal allocation of such international trade items, the IOCC makes an arbitrary allocation of such items to the relevant IOCC items. For significant trade items a percentage allocation is made to the relevant IOCC item of both *SURPLUS* and *DEFICIENCY* components based, where practicable, on special investigations. For other trade items the full relationship of the item to the IOCC is noted by the classification but zero allocation is made to the *DEFICIENCY* component. If the *SURPLUS* component is attributed to more than one IOCC item a pro rata percentage allocation is made.

Overlapping ANZSIC classes

25. An objective of the IOCC is that individual items be defined as being primarily produced by a single industry. However, some commodity items are produced by separate establishments engaged in a fundamentally different mix of activities with respect to one another. When the separate activities are individually significant, the ANZSIC defines separate industry classes to reflect the different activity mixes. The relevant classes are termed overlapping ANZSIC classes.

26. In the IOCC, source data items primary to more than one ANZSIC class are treated as split items within the respective IOCC items. The compilation conventions adopted in the implementation of this approach are:

- (a) for Australian production of an IOCC item primary to an overlapping ANZSIC class, the production is treated as being primary to the industry of the establishment undertaking it. For example, manufacturing production item 43990 *other general purpose machinery and parts thereof, nec* is split between the IOCC items 28510140 *parts and component equipment nec, for household appliances* and 28690050 *industrial machinery and equipment nec*.
- (b) for imports and exports, affected international merchandise trade items are split between the relevant IOCC items. For example, HS item 610311 *men's or boy's suits, knitted or crocheted of wool or fine animal hair* is split between the IOCC items 22390050 *knitted articles nec, fabric knitted at the same establishment* and 22420020 *men's and boy's suits and uniforms (incl. trousers), coats, blazers and jackets (excl. leather, plastic or waterproof)*.

Redefinition of production

27. The input-output industrial classification departs in some respects from the usual application of the ANZSIC. The nature of industry estimates and the composition of IOCC items is determined not only by the categories within the classification but also by the definition of the units which are classified according to it.

28. ANZSIC is applied to establishment units (as defined in annual ABS economic collections), each establishment being classified to an industry. This is the starting point for most of the input-output industries. However, for input-output tables it is desirable that an industry corresponds as closely as possible to the production of commodities primary to that industry. This applies especially where establishments classified to one industry produce significant amounts of commodities primary to another industry which has a quite different pattern of inputs. In such cases, where it is practicable, the secondary or subsidiary production is treated as output of the industry to which the production is primary; this is called redefinition of production.

29. The following are the major redefinitions made. Trading activity of miners and manufacturers is redefined to wholesale or retail trade, and manufacturing activity of wholesalers, where significant, is redefined to appropriate manufacturing industries. The industries *mechanical repairs* (5401) and *other repairs* (5402) have no counterpart in ANZSIC. They are formed by redefinition of the repair activity undertaken by wholesalers and retailers. Significant cases of capital work on own account, where not primary to the industry of the establishment undertaking the activity, are redefined to construction or an appropriate manufacturing industry. The imputed component of the industry *ownership of dwelling services* (61.06) is specified in the 1993 ANZSIC as being part of industry *residential property operators* (ANZSIC class 7711).

30. In addition, there are some areas of the economy, e.g., *construction* (4101, 4102) and *agriculture* (0101-0200), where the nature of available data or other considerations may preclude a strict adherence to ANZSIC industries. In such areas, the input-output industries and the component IOCC items are formed by the redefinition of commodities from an ANZSIC sector to the relevant input-output industry.

Production item gaps

31. Some production is recorded in input-output data sources under broadly specified items which cannot be classified directly to an IOCC item or which required significant adjustment or refinement before inclusion in the input-output data base. These data source items are not recorded in the IOCC and are termed production item gaps with respect to the IOCC. Additional analysis or adjustments are undertaken in order to determine the nature of the commodity in terms of IOCC items and the level of production of the commodities involved. These commodities have been treated as follows:

- (a) some have been included in IOCC items composed of specific production items of a similar nature. This treatment is particularly relevant to the manufacturing industry for which the following broad categories are treated as production gaps requiring analysis:

19991)
19992)
19993) All other articles
19994)
19995)
Rent, leasing, and hiring revenue
Capital work on own account

- (b) the remainder comprise separate IOCC items for which it is not practicable to record source data production items in the IOCC. This treatment is most relevant to the construction and services sectors of the IOCC for which information is drawn from a diverse range of sources. For each IOCC item in this group, a dummy production item code of 00000 is included and shown in Table 8. In addition, for processing reasons, a dummy production item code of 99999 is recorded against IOCC items where source data production items are identified by a description, but not a numeric code, in the source data series.

International trade item gaps

32. Some import and export flows are obtained from Balance of Payments and other sources in addition to International Merchandise Trade statistics. Those additional source data relate to valuation, scope, coverage and timing adjustments which are required to place International Merchandise Trade information on a Balance of Payments/Input-Output basis, and to international trade in services. The Balance of Payments and other source data items are included in the input-output tables after a process of investigation and analysis and the concordances between those items and IOCC items are not included in this publication. These Balance of Payments and other source data items represent international trade item gaps with respect to the IOCC.

Competing and complementary imports

33. A distinction between competing and complementary imports is made in the input-output tables. Complementary imports are defined, in principle, as those commodities which are not produced in Australia (e.g., natural rubber). In practice, all imports for which insufficient information is available to enable them to be classified to an industry-of-origin specific IOCC item, i.e. *non-classifiable commodities*, are treated as complementary in these tables. Imports which in principle are complementary but which are identified as having a value of less than \$1 million at the import or export item level are not treated as complementary. All remaining imports are treated as competing imports.

34. Complementary imports are shown separately in Table 1 of this publication and are identified in the IOCC by codes ending with numbers in the range 8000 to 8990. For example, the code assigned to the complementary import *natural rubber* is 01698300.

Sales by final buyers

35. This item records the import and export of secondhand goods, and waste and scrap occurring through wear and tear or obsolescence of goods previously entering final demand. Import and export items classified to sales by final buyers are not related to an industry of origin defined in the ANZSIC. The IOCC item *sales by final buyers* has the code 99050010. Waste and scrap also occur as a by-product of production processes, for example, metal offcuts and shavings. Such items are treated as by-products primary to the source industry.

36. Import and export items are classified to sales by final buyers on the basis of the description appearing in the source data classifications. In instances where the relevant import or export items cover new as well as used goods it is assumed that the new component is nil or negligible.

Repairing and servicing, Other income and Increase in stocks of work-in-progress

37. For processing reasons, the above IOCC items primary to the manufacturing industries appear against only the last ANZSIC class in each input-output industry-of-origin group. The items so appearing represent the combination of these activities for all of the ANZSIC classes within the group.

TABLE 2. BROAD RECONCILIATION OF IMPORTS AND EXPORTS WITH INTERNATIONAL MERCHANDISE TRADE 1993-94
(\$ million)

Item	Differences						Input-Output Imports and Exports
	International Merchandise Trade (a)	BOP valuation, scope, coverage and timing adjustments (b)	Input-Output adjustment to place imports on a cif basis (c)	Sales by Final buyers (d)	Other goods and services (e)	Duty on imports (f)	
Imports cif plus duty	64,471	-60	+766	-98	+19,499	+2,747	87,325
Exports fob	64,549	-727	+766	-98	+18,739	—	83,229

(a) International merchandise trade statistics, as recorded in *International Merchandise Trade, Australia* (5422.0).

(b) Adjustments to (a) in compiling international merchandise trade on a balance of payments (BOP) basis. For details, see *Balance of Payments and International Investment Position, Australia, 1994-95* (5363.0) and *Balance of Payments, Australia: Concepts, Sources and Methods* (5331.0).

(c) In order to record imports on an input-output cif basis, it is necessary to include the value of freight and insurance on imports provided by Australian carriers and insurers. Those values are offset by an export of freight and insurance services so as not to affect the balance of trade.

(d) Imports of goods sold by final buyers are recorded as negative exports; duty on these imports is not recorded in this publication, but is reported in aggregate *commodity taxes (net)* in publication 5209.0.

(e) International trade in services transactions as recorded in Australia's balance of payments statistics. For details, see 5331.0.

(f) Duty on excisable commodities is not recorded in this publication but is reported in aggregate *commodity taxes (net)* in publication 5209.0.

TABLE 3. BROAD RECONCILIATION OF AUSTRALIAN PRODUCTION WITH AGRICULTURE, FORESTRY, FISHING AND HUNTING 1993-94
(\$ million)

Industry-of-origin sector	Local value of production, industry basis	Differences						Input-Output Australian production	
		Packaging (a)	Stock valuation adjustment (b)	Public Sector activity (c)	Services to agriculture (d)	Afforestation by the private sector (h)	Forestry royalties (e)		Other (f)
Agriculture(g)	21,172	+235	-43	—	+1,026	—	—	+1,043	23,433
Forestry(h)	1,385	—	—	+222	—	+23	-251	+79	1,458
Fishing(i)	2,098	—	—	—	—	—	—	+15	2,113
Hunting(i)	103	—	—	—	—	—	—	—	103
Total	24,758	+235	-43	+222	+1,026	+23	-251	+1,137	27,107

(a) Based on analysis of the difference between gross value and local value of production.

(b) *Australian National Accounts, National Income and Expenditure, 1994-95* (5204.0).

(c) Based on Public Finance sources relating to the components of general government final consumption expenditure and the activity of public trading enterprises.

(d) Based on *Agricultural Industries, Financial Statistics, Australia, 1993-94* (7507.0).

(e) Royalties paid on forestry products by non-forestry establishments. Based on Public Finance sources.

(f) Includes revisions to source data series; production primary to other sectors (net); general government consumption of capital; other estimates and adjustments made for input-output purposes.

(g) *Value of Agricultural Commodities Produced, Australia, 1993-94* (7503.0).

(h) Based on data in Australian Bureau of Agriculture and Resource Economics publication, *Commodity Statistics Bulletin*.

(i) Based on unpublished ABS data for selected states and data published in Australian Bureau of Agriculture and Resource Economics publication, *Australian Fisheries Statistics*.

TABLE 4. BROAD RECONCILIATION OF AUSTRALIAN PRODUCTION WITH MINING AND MANUFACTURING 1993-94
(\$ million)

Industry-of-origin sector	Source data item, industry basis				Differences					
	Sales and transfers out of goods by the establishment	Capital work on own account and all other operating income	Turnover	Changes in stocks of finished goods and work in progress	Stock valuation adjustment -finished goods and work in progress	Outward freight and cartage expenses and sales commission payments (a)	Imputed commission production (a)	Sales and transfers out of goods not produced by the establishment	Input-Output Australian production	
Mining	28,432	+568	(b)29,000	-94	(a)-18	-1,940	—	-226	(c)+6,142	32,864
Manufacturing	172,357	+11,498	(d)183,855	-310	(c)-212	-4,184	+6,591	-2,676	(f)-234	182,830

(a) Based on investigations of the results of the annual censuses.

(b) *The Australian Mining Industry, 1993-94* (8414.0).

(c) Includes revisions to data series, adjustments made for undercoverage in the mining survey and other estimates and adjustments made for input-output purposes.

(d) *Manufacturing Industry, Australia, 1993-94* (8221.0).

(e) Based on data in *Australian National Accounts: National Income and Expenditure, 1993-94* (5204.0).

(f) Includes revisions to data series and other estimates and adjustments made for input-output purposes.

TABLE 5. SAMPLE CONCORDANCE BETWEEN PRODUCTION (PRODN) ITEMS AND IOCC ITEMS 1993-94
(AGRICULTURE, MINING, MANUFACTURING, ELECTRICITY AND GAS)

The full concordance is available only on floppy disk. A sample showing the data content and presentation is reproduced below.

TABLE 8. SAMPLE CONCORDANCE BETWEEN IOCC ITEMS AND PRODUCTION, USAGE, MERCHANDISE IMPORT AND MERCHANDISE EXPORT ITEMS 1993-94

The full concordances are available only on floppy disk. A sample showing the data content and presentation for IOCC item 21290010 is reproduced below.

IOCC item 21290010				
CURRENT YEAR	1993/94			
I-O GROUP	2102 Dairy products			
ANZSIC IND. OF ORIGIN	2129 Dairy Product Manufacturing n.e.c.			
I-O COMMODITY	60 Cheese and curd			
SOURCE DATA ITEM CODE	%	PART FOOT	DESCRIPTOR	NOTE
PRODUCTION				
229.16.01	100		Other dairy products - Cheese and curd - - Very hard cheese (eg romano, kasseri, montasio)	
229.16.02	100		Other dairy products - Cheese and curd - - Hard and semi-hard cheese (eg cheddar, gouda, edam)	
229.16.03	100		Other dairy products - Cheese and curd - - Soft cheese (eg feta, ghejra, pastorello)	
229.16.04	100		Other dairy products - Cheese and curd - - Fresh cheese (including whey cheese) not fermented, and curd	
IMPORTS				
040610	100		Fresh (unripened or uncured) cheese (incl. whey cheese and curd)	
040620	100		Grated or powdered cheese, of all kinds	
040630	100		Processed cheese, not grated or powdered	
040640	100		Blue-veined cheese	
040690	100		Cheese, nes, not processed	
EXPORTS				
040610	100		Fresh (unripened or uncured) cheese (including whey cheese and curd)	
040620	100		Grated or powdered cheese, of all kinds	
040630	100		Processed cheese, not grated or powdered	
040640	100		Blue-veined cheese	
040690	100		Cheese, nes, not processed	

TABLE 9. INPUT-OUTPUT INDUSTRY CLASSIFICATION: 1993-94 EDITION IN TERMS OF 1993 ANZSIC

<i>Input-output industry classification</i>		<i>Corresponding ANZSIC industries</i>

HOW TO ORDER

Please send me:

1993-94 input-output data on floppy disk:

Tables 1 to 24 (as described in Appendix E of 5209.0)
at \$190

Tables 25 to 38 (full set of margin matrices
as described in Appendix E of 5209.0) at \$160

Tables 5 to 7 from 5215.0 at \$80

OR individual tables (as described in Appendix E of 5209.0)
may be purchased at prices from \$25 to \$60 each
(please circle Table No(s)):

Tables 1, 7, 10 (\$50); 2, 5, 6, 8, 9 (\$60); 3 (\$50); 4, 11,
12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 30,
32, 33, 34, 36, 37, 38, (\$25); 25, 27, 29, 35 (\$40);
26, 28, 31 (\$30)

Tables 1 and 5 from 5215.0 at \$30

Tables 6 and 7 from 5215.0 at \$50 each

Multiplier tables at \$25 each - please tick box(es)
at RHS to indicate table(s) required
