REVISIONS IN THIS ISSUE

Revisions to estimates were mainly due to incorporating final data from various quarterly surveys. The Australian estimate of gross operating surplus of private corporate trading enterprises in December quarter 1993 was revised down by \$490 million. Later data for the farm sector also affected quarter to quarter movements for State gross operating surplus. Trend estimates of private gross fixed capital expenditure in Victoria from September quarter 1992 onwards have been revised as a result of removing the irregular movements caused by the Victorian Government's sale of Loy Yang Power Station and a 20% share of Portland Smelter Trust to the private sector.

INTERPRETATION OF SEASONALLY ADJUSTED AND TREND ESTIMATES

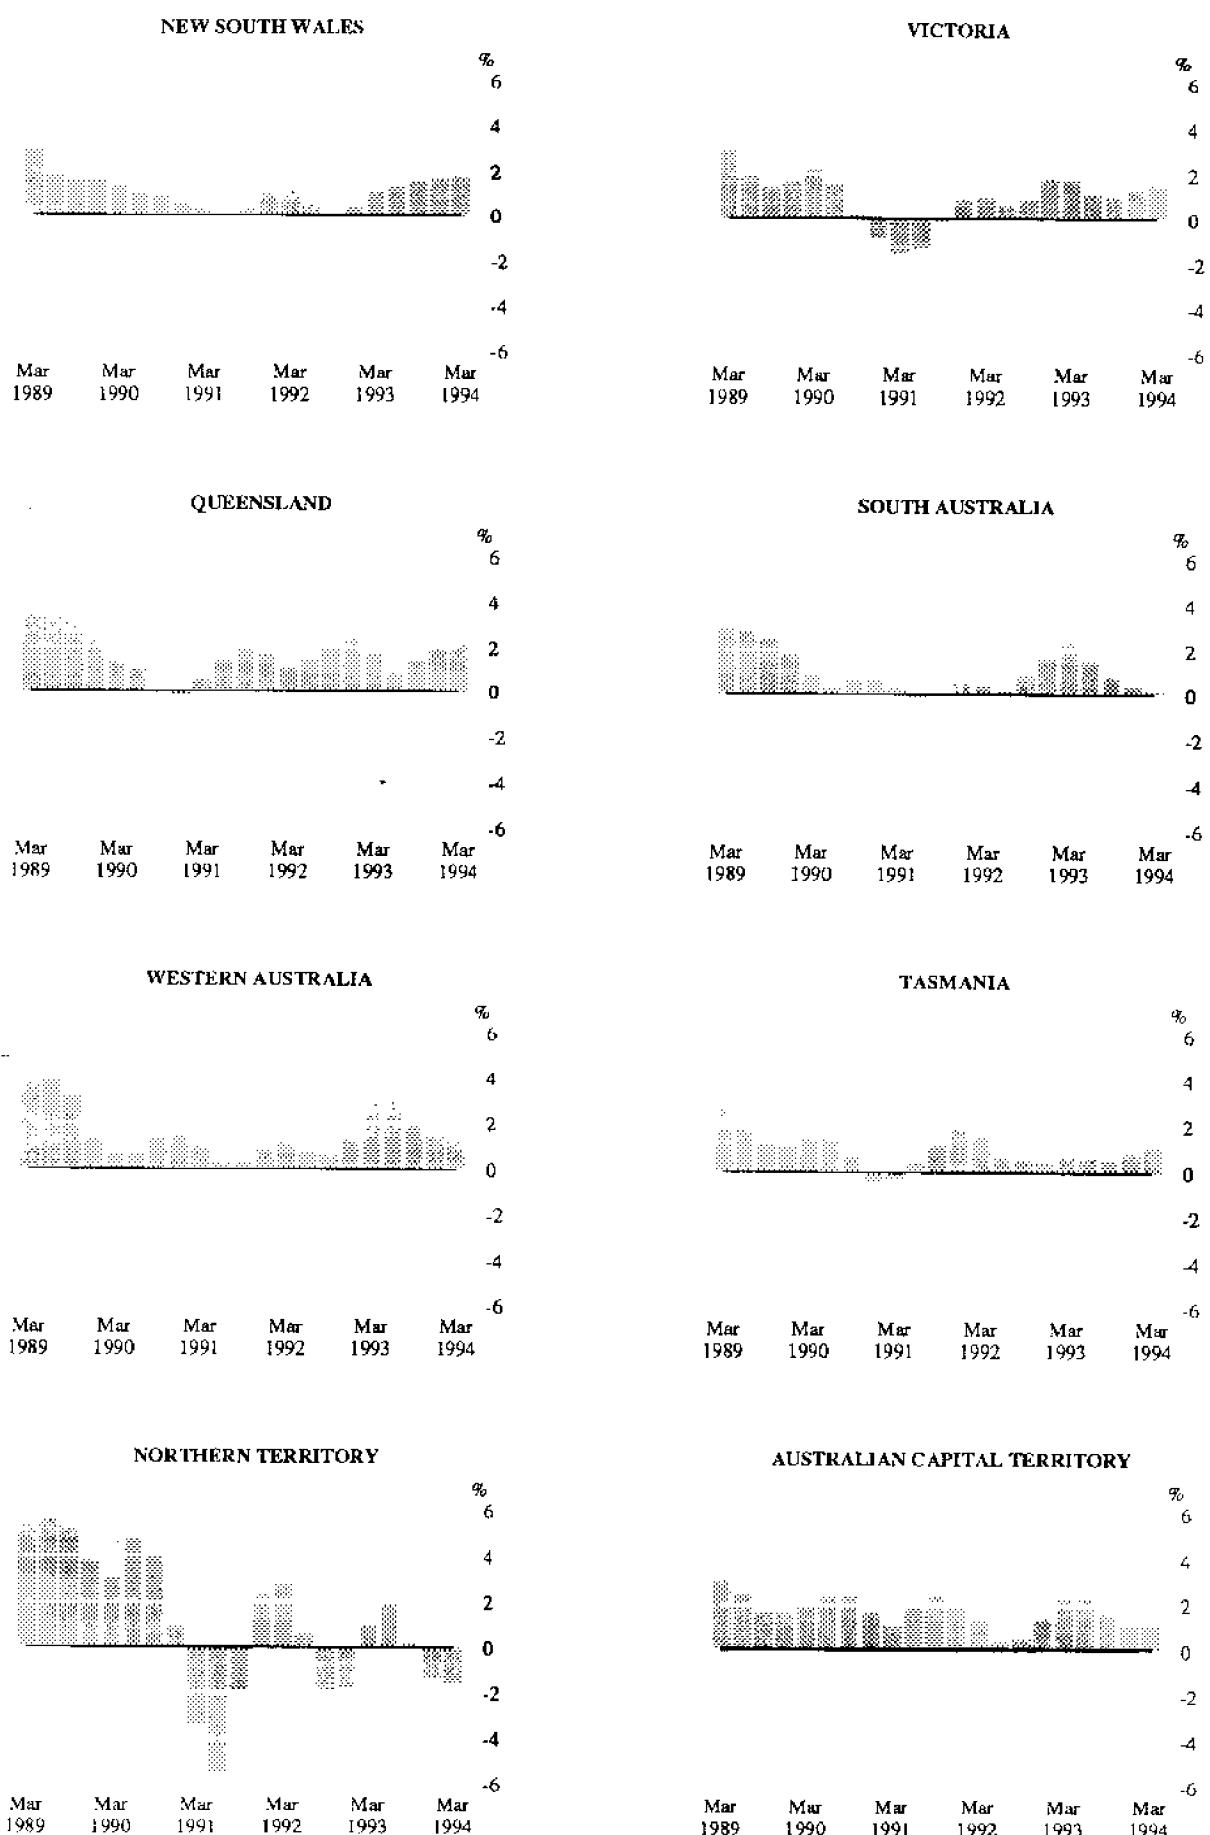

There are a number of factors that combine to make seasonal adjustment and trend estimation more problematic at the State and Territory level than at the "total Australia" level. Only relatively short time series are available for most aggregates at the State level, making it more difficult to estimate appropriate seasonal factors. Also, because of the lack of disaggregated data for some State series, and the potentially large number of series involved for others, seasonal adjustment has generally been carried out at a more aggregated level than for the Australian estimates. In addition, for gross operating surplus by State, data sources for some components have changed towards the end of the series, possibly introducing new seasonal patterns in the data. Also, the industry composition of the economies of those States and Territories experiencing rapid growth over the last decade has changed significantly, introducing further difficulties for seasonal adjustment.

All the above influences result in differences between the sum of seasonally adjusted and trend estimates for the States and the counterpart estimates for Australia. It is anticipated that, as the length of the State series increases, these differences will decrease. Nevertheless, users are strongly advised not to consider the latest quarter in isolation when analysing State economic activity.

A number of the differences between the quarterly Australian estimates and the sum of seasonally adjusted State estimates are quite large. However, the differences in the corresponding trend estimates are generally relatively small. Therefore, it is recommended that the trend estimates be used in preference to the seasonally adjusted estimates in most circumstances.

MARCH QUARTER 1993

Summary comment

NEW SOUTH WALES

GSP increased 1.8% in March quarter, continuing the increasing growth evident since March quarter 1993. Growth in each of the last three quarters has exceeded the growth rate for Australia, following periods of significantly lower growth during most of 1992. Contributing to the March quarter 1994 growth in GSP was wages, salaries and supplements (up 1.5%) which was higher than the Australian growth rate of 0.7%. Indirect taxes less subsidies recorded growth of 1.5%, above the national rate of 1.0%. The gross operating surplus component grew at a rate of 2.3%, slightly below the Australian growth rate of 2.7%.

Comments are based on trend current price estimates, unless otherwise stated.

VICTORIA

The growth in GSP over the last two quarters has steadily increased with the March quarter 1994 figure matching the Australian growth rate of 1.5%. Contributing to this growth in GSP was gross operating surplus (up 2.8%). Net indirect taxes less subsidies grew 1.9%, significantly lower than the high growth rates recorded for the previous four quarters. Wages, salaries and supplements grew at a moderate rate of 0.4%, slightly below the national rate of 0.7%. The GSP growth between March quarter 1993 and March quarter 1994 of 4.9% was lower than the corresponding Australian rate of 6.0%. The annual growth in wages, salaries and supplements was a lot lower than the Australian movement because the March quarter 1993 level was inflated by some large redundancy payments.

QUEENSLAND

The 2.1% rise in GSP for both December quarter 1993 and March quarter 1994 was the highest of all the States. Over the year to the March quarter 1994, GSP grew by 6.5%, slightly higher than the national growth rate. The stronger growth experienced in the last three quarters reflects, in particular, a pick-up in gross operating surplus after only moderate growth in the last two quarters of 1992-93. The growth in gross operating surplus reflects stronger growth in a number of the industry indicators. Both indirect taxes less subsidies and wages, salaries and supplements also contributed to Queensland's higher rate of growth compared to the national growth rate in March quarter 1994.

MAIN FEATURES**GROSS STATE PRODUCT — TREND***continued***SOUTH AUSTRALIA**

In March quarter 1994, South Australia experienced a slow pace of growth of 0.2%. Growth in GSP has declined from higher levels experienced for most of 1992-93. Both wages, salaries and supplements and indirect taxes less subsidies fell in March quarter 1994. The gross operating surplus component has maintained steady growth with March quarter increasing by 1.6%.

WESTERN AUSTRALIA

After experiencing reasonably strong growth from March quarter 1992 to September quarter 1993, the pace of growth in GSP has slowed a little in the last two quarters to 1.4% in December quarter 1993 and 1.2% in March quarter 1994. However, the growth over the year to March quarter 1994 is above that for Australia and remains the highest of all the States. Contributing to the slower growth rate in March quarter 1994 is a moderate growth in the gross operating surplus component of 0.2%, which is significantly below the national rate of 2.7%. There has been a significant downward revision in September and December quarters as a result of final data becoming available from the Survey of Company Profits. In particular, the estimates of gross operating surplus for the mining industry were revised down significantly, with a large part of this revision impacting on W.A. The growth rates for wages, salaries and supplements and indirect taxes less subsidies continue to be above the corresponding rates of growth for Australia.

TASMANIA

Growth in GSP has strengthened over the last two quarters, but still remains below the Australian growth rate. In March quarter 1994, the declines in both wages, salaries and supplements (-0.4%) and indirect taxes less subsidies (-0.4%) have been more than offset by strong growth in gross operating surplus of 3.3%. The growth in gross operating surplus has strengthened over the last three quarters from the recent low point in June quarter 1993.

NORTHERN TERRITORY

The recent periods of decline in GSP, with March quarter 1994 recording -1.6%, are reflected in the three components. There was no growth in indirect taxes less subsidies, while both wages, salaries and supplements and gross operating surplus declined by 1.3% and 2.2% respectively. Contributing to the decline in gross operating surplus are the continuing declines in oil and uranium production.

AUSTRALIAN CAPITAL TERRITORY

The ACT recorded a relatively slower rate of growth of 1.1% for March quarter 1994, compared with the higher growth rates experienced for the most part of 1993. Growth over the year still remains higher than the national rate and is the fourth highest of all the States and Territories. Contributing to the March quarter 1994 growth in GSP is gross operating surplus, which increased by a relatively strong 2.7%, compared with growth of 1.1% in December quarter 1993 and a decline of 0.6% in September quarter 1993. Both wages, salaries and supplements and indirect taxes less subsidies showed low to moderate growth in March quarter 1994.

MARCH QUARTER 1993

Summary comment

NEW SOUTH WALES

Final consumption expenditure was the major contributor to the 1.7% increase in SFD in the March quarter 1994. Private final consumption expenditure increased 1.5% and public consumption expenditure increased 2.8%. Growth in gross fixed capital expenditure remained low. Private investment in equipment fell for the fifth consecutive quarter (down 0.4%). Private dwelling and non-dwelling construction expenditure (combined) increased by 0.6%. Following a long period of decline (since March quarter 1991), private non-dwelling construction increased 0.8% in the latest two quarters. Although public capital expenditure increased 5.0% in the March quarter 1994, it was still 4.3% below the level twelve months earlier.

Comments are based on trend constant price estimates, unless otherwise stated.

VICTORIA

SFD increased 1.2% in the March quarter and is now 3.3% higher than in March quarter 1993. Private final consumption expenditure increased 1.0%. The 1.2% increase in private capital expenditure was due mainly to increased expenditure on dwelling construction, which rose 3.3%. Private non-dwelling construction expenditure fell for the third consecutive quarter (-2.7%). Expenditure on private equipment was flat in the March quarter. Government final consumption expenditure increased 1.2%, to be just below its level twelve months earlier. Public capital expenditure grew strongly in the March quarter (4.5%), due solely to increased Commonwealth expenditure (up 16.2%).

QUEENSLAND

In the March quarter 1994, SFD for Queensland increased by 1.2%, just below the Australian average (1.3%). Private final consumption expenditure increased 1.1%. Private dwelling construction continued to grow strongly, increasing by 4.2%, to be 12.8% above the March quarter 1993. Overall private capital expenditure increased by only 1.0%, the growth rate being constrained by declines in both non-dwelling construction and equipment, registering falls of 1.3% and 3.1% respectively. Public final demand increased 1.7% - an increase of 2.4% in government consumption expenditure more than offset a 0.3% decline in public capital expenditure.

MAIN FEATURES**STATE FINAL DEMAND
AT AVERAGE 1989-90 PRICES — TREND**
*continued***SOUTH AUSTRALIA**

SFD increased 0.9% during March quarter 1994 to be 2.8% higher than March quarter 1993. Although below the Australian average of 1.3%, SFD has steadily increased since March quarter 1993. Increases in private final consumption expenditure (1.4%) and public final demand (1.4%) were tempered by a fall in private capital expenditure (-2.9%). The fall in private capital expenditure was broad-based, with all major components (except real estate transfer expenses) declining by between 3.0% and 3.6%. Both public final consumption expenditure and capital expenditure contributed to the increase in public final demand, increasing by 1.0% and 3.6% respectively.

WESTERN AUSTRALIA

Western Australia recorded the highest growth rate of all States and Territories for SFD in the March quarter 1994. SFD increased by 1.8% in the quarter. Continuing the pattern of the past four quarters, the growth rate for private final consumption expenditure also exceeded other States and Territories, increasing 1.7% in the March quarter. Despite a 3.5% fall in private equipment expenditure, overall capital expenditure increased by 1.8% in the latest quarter. This increase was due to the relatively strong growth in both dwelling (3.3%) and non-dwelling (6.8%) construction expenditure. (The 20% decline in equipment expenditure, over the previous 12 months, reflects the purchase of a LNG tanker in the March quarter 1993.) Public final demand grew 1.9% in the March quarter 1994, driven mainly by a 5.3% increase in public capital expenditure.

TASMANIA

Growth of 0.4% in SFD was entirely due to a 1.2% increase in private final consumption expenditure. Since March quarter 1993, SFD has only increased 1.2%, the lowest growth rate of all States and Territories over this period. The 2.0% fall in private capital expenditure, in the March quarter 1994, was attributable to a 7.2% fall in equipment expenditure. Public capital expenditure declined by 4.0% in the March quarter 1994, despite the relatively large increase in Commonwealth capital expenditure (13.3%).

NORTHERN TERRITORY

The growth of 1.5% in SFD in the March quarter 1994 represents a slowing down from the 2.3% increase in the previous quarter. However, SFD is 7.1% higher than twelve months earlier - the highest annual growth rate of all States and Territories. The main factor underlying this large annual increase is a 41.8% rise in private gross fixed capital expenditure (however, the relatively low levels involved can result in large fluctuations in growth in this component). On the other hand, private final consumption expenditure showed no growth between March quarter 1993 and March quarter 1994, despite a rise of 0.8% from December quarter 1993 to March quarter 1994. Public final demand rose by 2.3% in March quarter 1994 to a level 7.7% higher than in March quarter 1993.

AUSTRALIAN CAPITAL TERRITORY

In March quarter 1994, SFD increased 0.6%, below the Australian average of 1.3%. The increase was affected, primarily, by a fall in private capital expenditure of 0.8%. Private final consumption expenditure increased 1.1%. A small increase of 0.1% in government consumption expenditure and a 4.2% increase in public capital expenditure, resulted in an overall increase of 0.5% in public final demand.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains estimates of gross domestic product and domestic final demand and their major components for each State and Territory from September quarter 1984 to the latest quarter. Trend data for the thirteen most recent quarters are shown in summary tables (Tables 4-12). Data for each aggregate in trend, seasonally adjusted and original terms are also shown in a set of long-term tables. The List of Tables, page 8, indicates the range of data provided.

2 The term *gross State product (GSP)* is used to denote GDP(I) by State/Territory. Conceptually, GSP and GDP(I) are identical. Likewise, the term *State final demand (SFD)* is conceptually identical to domestic final demand at the national level (i.e. the sum of private and government final consumption expenditure and private and public gross fixed capital expenditure). Where *State* is referred to in the text, it is also meant to encompass the two Territories.

CONCEPTS, SOURCES AND METHODS

3 Information on concepts, definitions, data sources and methodology for the Australian national accounts in general is contained in the current edition of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Although annual estimates of State Accounts are covered in that publication, information relating to quarterly estimates by State is not currently included. However, conceptual issues relevant to annual State accounts also apply to the quarterly estimates.

4 National estimates are based on the concepts and conventions embodied in the United Nations, *A System of National Accounts* (SNA) 1968. No such standard is available for sub-national (regional/State) accounts. In the main, the national concepts are applicable to State accounts, but there remain a number of conceptual and measurement issues that either do not apply or are insignificant at the national level. These are discussed in detail in *State Accounts, Australia: Issues and Experimental Estimates*, ABS Occasional Paper 1984/4.

5 While it is possible in some cases to derive quarterly estimates by State using the same data sources as used for the Australian estimates (or to derive the Australian estimates as the sum of the States), it is often necessary to derive dissections of the Australian estimate using a variety of allocators. These allocators vary from being fairly closely related to the aggregate being measured to being only indirectly related. Information on some of the more important conceptual, methodological and data issues relating to quarterly estimates by State are provided below.

ACCURACY OF QUARTERLY ESTIMATES

6 The estimates contained in this publication represent allocations of quarterly estimates published for Australia in 5206.0. Therefore, they will reflect any inaccuracies in those estimates as well as inaccuracies introduced by the particular conceptual, methodological and data problems inherent in the allocation of Australian estimates to States and Territories. As such, the degree of accuracy and reliability will necessarily be lower than that for the counterpart Australian estimates. Some components by State are particularly deficient compared with the corresponding Australian estimates and are subject to potentially large revisions.

7 Estimates of GOS by State are especially deficient as a result of both conceptual issues in some industries and the lack of appropriate State data in some instances. The accuracy of the quarterly estimates is linked to the accuracy of the annual State

EXPLANATORY NOTES *continued*

ACCURACY OF QUARTERLY ESTIMATES (continued)

estimates. For some industries, it is only possible to derive annual State estimates of GOS on the basis of fairly crude allocations of national estimates, or on conceptual bases that have particular limitations for some uses. As a result, the accuracy of annual State estimates is poorer, and sometimes significantly so, than that of the corresponding national estimates. By necessity, the quarterly State GOS estimates are substantially based on indirect indicators that do not necessarily have a direct relationship with GOS. While these indicators are benchmarked to both the annual State estimates in 5220.0 and the quarterly Australian estimates in 5206.0, the accuracy of the quarterly estimates by State is considered to be significantly poorer than the corresponding "benchmark" estimates. Therefore, they should be regarded as indicative only. Despite this qualification, it is considered that useful information is provided by these estimates as they draw together the various partial indicators of State economic activity within a consistent national accounting framework. It is expected that the quality of estimates will improve over time as new data sources and methodologies are developed.

8 Estimates for wages, salaries and supplements, private final consumption expenditure and private gross fixed capital expenditure are based on the results of sample surveys. By their nature, survey results become less accurate as they are disaggregated (for example into States and/or industries). Generally, the ABS surveys used to derive these aggregates are designed to provide accurate estimates at the Australian total level and individual State estimates that are less accurate but still of an acceptable quality. However, it should be noted that relative standard errors are generally higher for the smaller States and Territories than they are for the larger States. This may result in greater volatility in the quarterly estimates for the smaller States and the two Territories.

9 Estimates of indirect taxes less subsidies, government final consumption expenditure, and general government and public enterprise gross fixed capital expenditure can be substantially affected by the indicators chosen to apportion the Commonwealth government component to States and Territories. Care is required when interpreting these estimates.

REVISIONS

10 Most figures are subject to revision as more complete and accurate information becomes available. Revisions are of two types: those made to recent quarters and those made as a consequence of a redistribution across all quarters within a year following revisions to annual totals. In addition, the sources and methods used to compile these estimates will be further developed to improve the quality and scope of the estimates presented. Such developments may result in significant revisions to previously published estimates, particularly as experience is gained in assessing any biases which may be present in the estimates projected forward from the last annual benchmark available.

TREND ESTIMATES

11 Given the qualifications regarding the accuracy and reliability of the quarterly national accounts, the ABS considers that trend estimates provide the best guide to the underlying movements, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

12 A trend estimate is obtained by removing the irregular component from the seasonally adjusted series. For estimates in this publication, it is calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates

EXPLANATORY NOTES *continued*

TREND ESTIMATES (continued)

for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters, even if none of the original data for earlier quarters have changed.

13 If a series has a high "irregular" component, then the trend estimates will be subject to greater revision than would otherwise be the case for the latest few quarters as data become available for subsequent quarters. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In fact, in such cases the effect of the irregular component on overall movements is likely to be even more marked in the seasonally adjusted and the original estimates than in the trend series.

14 For more information about ABS procedures for deriving trend estimates and analysis of advantages of using them over alternative techniques for monitoring trends, refer to the three ABS Information Papers:

- *A Guide to Interpreting Time Series - Monitoring 'Trends': an Overview* (1348.0),
- *A Guide to Smoothing Series - Estimates of 'Trend'* (1316.0), and
- *Time Series Decomposition - An Overview* (1317.0).

Two Feature Articles which have appeared in the ABS monthly publication *Australian Economic Indicators* may also be of interest:

- *Picking Turning Points in the Economy* (April 1991), and
- *Smarter Data Use* (March 1992).

15 Data that are affected by seasonal factors are adjusted to remove the effects of these factors. The general methods for doing so are described in Appendix I of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Three important points should be noted here :

- The methods used in seasonal adjustment do not force the sum of the adjusted estimates for each quarter of a year to equal the original annual total.
- Where constant price estimates have no apparent seasonality in their implicit price deflators, the estimates are adjusted using the corresponding factors for current price estimates.
- Special methods have been used to adjust some components of gross farm product. These concern the adjustment of crop production where production/harvest only occurs in one or two quarters each year. In these instances, the output for each financial year is distributed equally over the four quarters.

STATE AND TERRITORY VERSUS AUSTRALIAN SERIES

16 For trend and seasonally adjusted series, the sum of the States and Territories generally does not equal the corresponding estimate for "total Australia", nor are the quarter-to-quarter movements identical. On a few occasions, these differences have been significant, particularly for the seasonally adjusted series. This reflects both the relatively short span of data available for seasonal analysis at the State level and the fact that seasonal analysis was generally carried out at a more aggregated level than for the "total Australia" series. The State and Territory trend and seasonally adjusted series are less accurate than the Australian data. However, as the State and Territory time series lengthen, the quarterly movements in the sum of the State estimates should more closely match those in the Australian series.

EXPLANATORY NOTES *continued*

STATE AND TERRITORY
VERSUS AUSTRALIAN SERIES
(continued)

17 For private final consumption expenditure an interim means of producing closer alignment between State seasonally adjusted series and the Australian total has been adopted. It involves using the quarterly movements in the total Australian series prior to September quarter 1984 to extrapolate back each of the individual State series before analysing the seasonal pattern of the series. This process has enabled account to be taken of the effects on trading patterns of the changing incidence of Easter on the assumption that there are no significant differences between States in this effect.

GROSS STATE PRODUCT

18 CSP is produced by summing factor incomes i.e. wages, salaries and supplements, and gross operating surplus (GOS), plus indirect taxes less subsidies. An expenditure based estimate of GSP is not available. Although domestic final demand and its components are available by State, estimates of both interstate and international trade and increase in stocks by State are required to complete an expenditure-based estimate of GSP. These missing components, combined with the statistical discrepancy, are included as a balancing item in Tables 4 to 12.

WAGES, SALARIES AND
SUPPLEMENTS

19 Quarterly estimates of wages and salaries by State are obtained from the same data sources as those used for the Australian estimates (i.e. the ABS Labour Force Survey and the Survey of Employment and Earnings, both of which are designed to produce State data). However, it is generally the case that survey results for the smaller States and the Territories are subject to higher standard errors than those for the larger States. Estimates for supplements are essentially quarterly allocations and extrapolations of annual State totals, using wages and salaries by State as an indicator.

GROSS OPERATING SURPLUS

20 The ABS *Survey of Company Profits*, the major data source used to derive quarterly estimates of the gross operating surplus (GOS) of non-farm trading enterprise companies at the Australian level, does not provide estimates by State. Investigations into the availability of State data in company accounting records are currently underway with a view to collecting such data in the future. In the meantime, the approach adopted in these estimates is to derive synthetic estimates by State using indicators from the *Survey of Company Profits* and other general activity data available from the ABS and other sources.

21 Data from the quarterly *Survey of Company Profits* are used to derive quarterly State estimates of GOS for the mining industry from September quarter 1989. The relatively low number of respondents combined with the relatively high degree of coverage in the survey of mining enterprises made it feasible to allocate GOS to State individually for each respondent. In most cases, large multi-State enterprises already provide GOS details of their separate mining divisions making direct allocation to State possible. Otherwise multi-State mining enterprise GOS was allocated to States using the number of employees in each State. (Quarters prior to September 1989 were estimated using mining activity data by State and mineral price data, both published by the Australian Bureau of Agricultural and Resource Economics.) Investigations are continuing into the possible use of data from the survey to derive State estimates of GOS for some other industries.

EXPLANATORY NOTES *continued*

GROSS OPERATING SURPLUS (continued)

22 Quarterly estimates of ownership of dwellings GOS are derived from essentially the same sources used to produce the Australian estimates. Quarterly estimates of GOS by State for the remaining private sector non-farm enterprises and Commonwealth public trading enterprises together were derived by weighting together a variety of general activity indicators. It should be emphasised that some of these general activity indicators are not directly related to GOS, and therefore can only be regarded as indicative (see "Accuracy of Quarterly Estimates" above).

23 State indicators include turnover for retail and selected service enterprises, building and construction work done, selected manufactured commodities produced combined with data on price movements, airline passenger movements through major airports, road freight movements between capital cities, tourist accommodation statistics and health insurance statistics. These indicators are weighted together (benchmarked) according to their contribution to annual industry estimates of GOS by State published in *Australian National Accounts: State Accounts* (5220.0).

24 The GOS of State and Local public trading enterprises is available directly from ABS collections. Quarterly estimates of GOS by State for the farm sector were prepared from essentially the same sources as those used to provide the Australian estimates, although a higher degree of approximation was required in the estimation of farm costs.

25 Once a year (the December quarter issue), the composite quarterly indicator derived in the manner described above is balanced to both the quarterly estimates of GOS for Australia published in 5206.0 and the annual estimates for individual States published in 5220.0. It involves alternately balancing the rows and columns. The difference between each row total (Australian total estimates derived from 5206.0) and the sum of the indicators in the row is prorated across the row components. A similar process is followed for the columns (the control totals are derived from the annual State data contained in 5220.0). The rows and columns continue to be balanced alternately until the matrix is completely balanced. In issues subsequent to the December quarter, the fully balanced estimates for each State are extrapolated on the basis of the indicators and balanced to the quarterly estimates for Australia published in 5206.0.

INDIRECT TAXES LESS SUBSIDIES

26 Indirect taxes received and subsidies paid by State and Local governments are available quarterly from government financial records. Indirect taxes received and subsidies paid by the Commonwealth government are allocated to State using production data where available, but mainly by applying annual State proportions to the quarterly totals.

PRIVATE FINAL CONSUMPTION AND GROSS FIXED CAPITAL EXPENDITURES

27 State estimates of private final consumption expenditure and gross fixed capital expenditure are derived largely from the same sources as used for the Australian estimates, although a higher degree of approximation is required. In the case of private final consumption expenditure, data sources for major components such as household goods, dwelling rent, purchase of motor vehicles, fares, and purchases of gas, electricity and fuel are available quarterly by State.

28 State and Territory estimates of private gross fixed capital expenditure on dwellings and non-dwelling construction are derived using data from the ABS quarterly surveys of Building Activity and Engineering Construction, while expenditure on

EXPLANATORY NOTES *continued*

PRIVATE FINAL CONSUMPTION
AND GROSS FIXED CAPITAL
EXPENDITURES
(continued)

equipment is derived from the quarterly Survey of Private New Fixed Capital Expenditure. Real estate transfer expenses are derived from data supplied by the various State Stamp Duty Offices, and various other data such as the number of real estate property transfers by State and Territory. Essentially, these are the same data sources used to prepare the Australian estimates.

COMMONWEALTH
GOVERNMENT FINAL
CONSUMPTION AND GROSS
FIXED CAPITAL EXPENDITURES

29 The treatment of Commonwealth government final expenditures in regional accounting is rather problematic. Alternative treatments are to attribute final expenditures to the region in which the expenditure was incurred, or to the region in which the beneficiaries reside, or even to consider the Commonwealth government consumer unit as extra-territorial and therefore to exclude it from all regions. For practical reasons the first approach has been adopted in this publication, although it still required extensive use of indirect indicators. An implication of this is that a large proportion of the consumption of Commonwealth Government services is included in SFD for the ACT, inflating the balancing item for that territory. If data had been available to allocate Commonwealth final consumption expenditure to end users, the balancing item for the ACT would be a much smaller negative because the provision of the services would be regarded as an interstate export instead. Estimates for Commonwealth government expenditures in the States on both an annual and a quarterly basis therefore have to be treated with considerable caution.

30 The wages and salaries component of Commonwealth government final consumption expenditure was directly apportioned to States using data from the ABS Survey of Employment and Earnings and information supplied by the Department of Defence. Expenditures on goods and services classified to defence were allocated according to population while non-defence purchases were allocated on the basis of Commonwealth general government employment by State and Territory.

31 For Commonwealth general government gross fixed capital expenditure, Australian estimates were first subdivided into expenditure on construction and expenditure on equipment. The construction expenditure component was allocated to States and Territories using annual State dissections for projected construction expenditure in each State and Territory, published jointly by the Department of Administrative Services and the Department of Industry, Technology and Commerce. Expenditure on equipment has been allocated using Commonwealth general government employment by State and Territory.

COMMONWEALTH
ENTERPRISES GROSS FIXED
CAPITAL EXPENDITURE

32 A variety of allocators has been applied at the individual enterprise level for Commonwealth public enterprise gross fixed capital expenditure. Direct allocators have been used in a few cases where enterprises operated wholly in one State or Territory. For Telecom, State data for construction activity were available by quarter from the ABS Building Activity and Engineering Construction Surveys. Indirect indicators derived from annual estimates were used to allocate gross fixed capital expenditure of the remaining Commonwealth public enterprises by State. For example, purchases of ships and aircraft were allocated using annual State shares for general freight and passenger activity through ports and airports in each State and Territory (consistent with the allocation of GOS).

FOR MORE INFORMATION...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below).

INFORMATION CONSULTANCY SERVICE

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

ELECTRONIC DATA SERVICES

A growing range of our data are available on electronic media. The PC TELESTATS service delivers major economic indicator publications ready to download into your computer on the day of release. The PC AUSSTATS service enables on-line access to a database of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on our electronic data services, contact Information Services in any of our Offices (see below).

BOOKSHOP AND SUBSCRIPTIONS

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free Australia wide on 008 0206 08.
