STATE ACCOUNTS NOTES

FORTHCOMING ISSUES	ISSUE	RELEASE DATE
	5206.0 <i>Australian National Accounts: National Income, Expenditure and Product, June Quarter 1995</i>	30 August 1995
	5242.0 <i>Australian National Accounts: State Accounts, June Quarter 1995</i>	14 September 1995

REVISIONS IN THIS ISSUE Estimates for recent quarters have been revised due to the availability of more complete survey data. In particular, the December quarter 1994 estimates for wages, salaries and supplements and gross operating surplus were revised as a result of incorporating more complete data from the Survey of Employment and Earnings and the Survey of Company Profits, respectively.

CHANGES IN THIS ISSUE There are no changes in this issue. However, estimates of GSP at average 1989-90 prices were introduced for the first time in the September quarter 1994 issue of this publication. Details regarding the sources and methods used in their construction are provided in a Technical Note in both the September and December quarter 1994 issues.

W. McLennan
Australian Statistician

MAIN FEATURES PERCENTAGE CHANGE IN GSP¹: Trend

¹Average 1989-90 Prices

NEW SOUTH WALES

GSP grew by 0.5% in March quarter 1995 and by 3.2% over the year from March quarter 1994. The growth rate of GSP peaked in March quarter 1994 and has declined in each of the last four quarters. Final demand has displayed a similar slowdown in its growth rate, and both have grown at lower than the national rate for the last few quarters.

VICTORIA

Growth in GSP of 0.9% was recorded in the March quarter. Growth over the year was 4.7%. March was the first quarter since December quarter 1992 that the Victorian economy grew by less than 1.0%. Final demand has grown more rapidly than production for the last three quarters.

QUEENSLAND

GSP grew by 0.3% in March quarter 1995, which is the first time Queensland has recorded growth lower than the national rate since June quarter 1993. Growth in production has slowed more rapidly than demand over recent quarters.

MAIN FEATURES PERCENTAGE CHANGE IN GSP¹: Trend *continued*

¹ Average 1989-90 Prices

SOUTH AUSTRALIA

GSP showed little change (-0.1%). Over the year GSP has edged down by 0.8%. By contrast, final demand grew strongly by 1.4% in the March quarter and by 8.5% over the year. (See cautionary note on page 10.)

WESTERN AUSTRALIA

GSP continued to grow strongly, recording growth of 1.2% in the March quarter and 5.6% over the year. The growth rate of final demand (0.8%) fell below that of GSP for the first time since March quarter 1994.

TASMANIA

Growth in GSP of 1.1% continued the growth acceleration of the previous two quarters to achieve a level of production 2.5% higher than a year ago. The recent growth contrasts markedly with declining production during 1993-94. (See cautionary note on page 10.)

MAIN FEATURES PERCENTAGE CHANGE IN GSP¹: Trend *continued*

.....

¹Average 1989-90 Prices

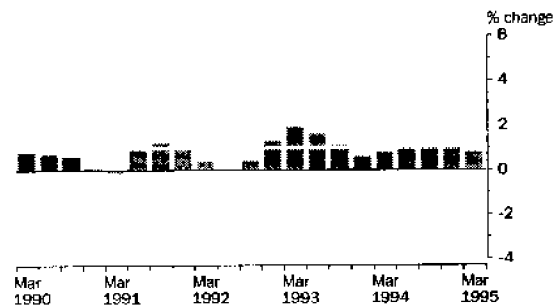

NORTHERN TERRITORY

GSP grew by 0.8% over the quarter to a level 8.5% higher than in March quarter 1994. This annual growth is the strongest experienced by any of the States and Territories and far outpaces growth in SFD of 5.8%.

AUSTRALIAN CAPITAL TERRITORY

Growth of 0.8% in the March quarter brings GSP to a level 3.9% above that of March quarter 1994. This greatly exceeds the growth in demand of 0.9% over the last four quarters.

MARCH QUARTER SUMMARY COMMENT

NEW SOUTH WALES

- The 0.4% increase in SFD marks a further decline in the rate of growth apparent in the previous two quarters.
- Private final consumption expenditure was the major contributor to growth, increasing by 1.0% in March quarter 1995.
- Private gross fixed capital expenditure made a negative contribution to growth of 0.3 percentage points, as expenditure on equipment fell by 2.6%.
- Government final consumption expenditure fell for the third consecutive quarter.

VICTORIA

- Final demand grew by 1.6% in the March quarter to a level 6.4% above that of March quarter 1994, with a broad range of final expenditures contributing to growth.
- The major contributor to growth was private final consumption expenditure which increased by 1.6% in the March quarter, to be 7.6% higher than in March quarter 1994.
- Private expenditure on non-dwelling construction and public gross fixed capital expenditure both exhibited strong growth.
- Government final consumption expenditure grew by 1.1%, the strongest increase for many quarters.

QUEENSLAND

- March quarter growth of 0.7% in final demand is below the national movement of 0.9% and continues a slowdown in growth apparent in the December quarter.
- Private final consumption expenditure grew by 0.8% and contributed 0.5 percentage points to growth in total demand in the March quarter, while government consumption expenditure grew by 1.4% and contributed the remaining 0.2 percentage points.
- Private gross fixed capital expenditure on dwellings fell for the third consecutive quarter and is now at a level 3.4% below that of March quarter 1994.
- Private gross fixed capital expenditure on equipment rose by 0.9%, a marked slowdown over previous quarters, and is now 19.2% above the March quarter 1994 level.

MAIN FEATURES STATE FINAL DEMAND¹: Trend

¹ Average 1989-90 Prices

SOUTH AUSTRALIA

- Growth of 1.4% in the March quarter gave South Australia the highest growth rate over the year from March quarter 1994 of 8.5%, compared with a national increase of 5.8%.
- Private gross fixed capital expenditure on equipment more than doubled over the year and was the major contributor to annual growth (see cautionary note on Page 10).
- Government consumption expenditure continued to decline, falling by 3.4% in the March quarter to a level 4.5% below that of a year ago.

WESTERN AUSTRALIA

- Final demand grew by 0.8% in the March quarter, little different from the national growth rate of 0.9%. As for the nation, the growth rate peaked in mid 1994 and has declined steadily since.
- Private final consumption expenditure was up 0.6% in the quarter and 3.0% over the year from March quarter 1994.
- Private gross fixed capital expenditure on non-dwelling construction fell for the fourth consecutive quarter and is now at a level 26.3% below that of March quarter 1994.
- Private expenditure on equipment grew by 2.4%, after very strong growth over the previous four quarters, to be up 43.3% over the year. This partly reflects the acquisition of an LNG tanker in December quarter 1994.

TASMANIA

- Final demand grew by 1.2% in the March quarter and by 5.3% over the year.
- As in the December quarter, private gross fixed capital expenditure on equipment made the largest contribution to growth, increasing by 8.1% to be 55.4% above the level of expenditure in March quarter 1994.
- Expenditure on non-dwelling construction fell by 2.7%, the first fall since December quarter 1993, and is now at a level 5.9% above that of March quarter 1994.

NORTHERN TERRITORY

- Growth in SFD in the March quarter 1995 was stronger than in any of the States at 2.2%, and compares with a national rate of 0.9%.
- The major contributor to growth was private final consumption expenditure which increased by 3.1% in the March quarter and by 11.3% over the year.
- Private gross fixed capital expenditure on equipment showed a strong increase of 11.5% in the quarter, but capital expenditure on dwellings fell 8.8% to a level 11.4% below that of March quarter 1994.

AUSTRALIAN CAPITAL TERRITORY

- The ACT had the smallest growth in final demand of all the States and Territories, with a March quarter increase of 0.3% to be only 0.8% higher than a year earlier.
- Private final consumption expenditure was the major contributor to growth, increasing by 0.7%.
- Gross fixed capital expenditure on equipment showed the first rise since December quarter 1993, but was still at a level 29.1% below that of a year ago.
- While private gross fixed capital expenditure on dwellings fell for the second consecutive quarter, non-dwelling construction continued to grow strongly, increasing by 9.3% in the quarter and 34.1% over the year.
- The public sector made no contribution to growth in the March quarter.

MARCH QUARTER SUMMARY COMMENT

NEW SOUTH WALES

- GSP rose 1.0% in March quarter and 5.0% over the year to March quarter, slightly below the corresponding national growth rates.
- Wages, salaries and supplements growth has exceeded the corresponding growth rate for Australia in each of the last seven quarters, with the March quarter rising 2.0%.
- There was no change in gross operating surplus in March quarter 1995, while over the year to March quarter a rise of 1.2% was recorded.
- Indirect taxes less subsidies declined slightly in March quarter by 0.2%, following a slowing in growth in the previous three quarters.

VICTORIA

- Following three quarters of growth above the Australian average, GSP grew at a slightly lower rate of 1.1% compared with the corresponding national rate of 1.2%.
- Wages, salaries and supplements continued to grow at a higher than national rate, rising 1.9% in March quarter 1995.
- There was no growth in gross operating surplus in the March quarter, however this aggregate rose 2.8% over the year to March quarter.
- Victoria was the only State to record a rise in indirect taxes less subsidies in March quarter, with an increase of 1.2%.

QUEENSLAND

- The pace of growth of GSP slowed a little in the March quarter, rising 1.1%, following five quarters of stronger growth.
- After experiencing strong growth in 1994, wages, salaries and supplements growth slowed in the March quarter, rising 1.4%.
- Gross operating surplus grew strongly in March quarter, rising 1.4% and is now 7.0% higher than a year ago.
- Indirect taxes less subsidies fell 1.1% in March quarter, following strong growth during most of 1994.

MAIN FEATURES GROSS STATE PRODUCT¹: Trend *continued*

¹Current Prices

SOUTH AUSTRALIA

- The rate of growth of GSP continued to weaken, with a rise of 0.3% in March quarter 1995 and an increase of 2.8% over the year to March quarter.
- For the second consecutive quarter, wages, salaries and supplements grew 0.1%, considerably below the increases experienced in the preceding nine quarters.
- The pace of growth in gross operating surplus slowed a little in March quarter, rising 0.6% compared with rates of 0.8% for both September and December quarters 1994.
- Indirect taxes less subsidies decreased 0.3% in March quarter, matching the national decline in this aggregate.

WESTERN AUSTRALIA

- GSP increased 1.6% in March quarter 1995 to be 6.9% higher than a year earlier.
- Wages, salaries and supplements rose 1.8% in the March quarter, matching the corresponding Australian rate, and increased 4.9% over the year to March quarter.
- Gross operating surplus maintained the strong growth evident since March quarter 1994, rising 2.0% in the quarter and 8.6% over the year to March quarter.
- Indirect taxes less subsidies decreased marginally in March quarter, falling 0.1%, while growth over the year to March quarter remained relatively high at 8.1%.

TASMANIA

- GSP continued to grow strongly in both December quarter 1994 and March quarter 1995, rising 1.7% and 1.9% respectively, and exceeding the corresponding national growth rates for these quarters.
- Following moderate growth in the first three quarters of 1994, wages, salaries and supplements grew strongly in March quarter rising 2.5%.
- Gross operating surplus growth has exceeded the corresponding national rates in both December quarter 1994 and March quarter 1995, rising 1.6% and 2.0% respectively.
- Indirect taxes less subsidies fell 1.6% in March quarter which contributed to moderate growth over the year to March quarter of 6.2%.

NORTHERN TERRITORY

- Following three quarters of stronger growth, GSP grew 1.7% in March quarter, which was still above the corresponding national increase of 1.2%.
- Wages, salaries and supplements continued growing strongly in March quarter, rising 4.1%, the highest growth rate of all the States, and is now 15.7% higher than the same time last year. The rise reflects a large increase in the number of wages and salary earners in the Northern Territory, as measured by the Labour Force Survey.
- Following strong growth in the first three quarters of 1994, gross operating surplus declined for the second consecutive quarter, with March quarter falling 0.4%.
- Indirect taxes less subsidies fell 1.1% in March quarter, following previous quarters of strong growth, to be still 8.6% higher than a year ago.

AUSTRALIAN CAPITAL TERRITORY

- GSP grew steadily in March quarter, rising 1.4%, to be 5.7% higher than in March quarter 1994.
- Wages, salaries and supplements grew 1.2% for the second consecutive quarter to be 4.0% higher than in March quarter 1994.
- Gross operating surplus continued the strong growth evident since March quarter 1994 rising 2.2% in March quarter 1995, and is now 9.8% higher than a year ago.
- Indirect taxes less subsidies remained unchanged in the past two quarters, resulting in a small increase of 1.8% over the year to March quarter 1995.

ANALYSES AND COMMENTS

GSP AT AVERAGE 1989-90 PRICES Care should be taken when interpreting the movements in constant price GSP. The methods used to derive the deflators for the balance between current price GSP (I) and State final demand attempt to directly estimate the price changes of the major items making up that balance, most particularly inter-State and international exports and imports. However, it is not possible to ensure that the corresponding effects on gross operating surplus are treated in an entirely consistent manner for quarters beyond those for which taxation data have been incorporated (that is from September quarter 1993). The impact of any such inconsistency is likely to be most marked for those States for which the changes in the GSP deflator differ most from the Australian average. In recent quarters, the changes in the IPDs for GSP in South Australia and Tasmania are much higher than those for other States. Accordingly the growth rates in constant price GSP for those two States may be understated in recent quarters if this type of inconsistency between the income and expenditure sides is arising in practice.

**PRIVATE GROSS FIXED CAPITAL
EXPENDITURE - EQUIPMENT**

Estimates of private gross fixed capital expenditure on equipment for each State are derived largely from a national survey of businesses. The survey design aims to achieve a high degree of statistical accuracy at the national level, which requires having larger numbers of businesses in the samples in the larger States. However, as the accuracy of the estimates from this survey (in percentage terms) is roughly proportional to the size of the sample, the estimates for the smaller States are generally less accurate than those for the larger States. Hence, the estimates for the Northern Territory, Australian Capital Territory, Tasmania and South Australia are particularly prone to volatile movements.

As an illustration of this, the December quarter 1994 estimates of private capital expenditure on equipment for South Australia were significantly affected by two small businesses reporting large capital expenditure in the quarter which was expanded in the estimation system by large sample weights. As a result these two units contributed a significant part of the increase in expenditure on equipment for South Australia for the December quarter. This factor should be noted when interpreting the seasonally adjusted estimates of capital expenditure for South Australia for the December quarter 1994 (and also the corresponding trend estimates for recent quarters).

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains estimates of gross domestic product and domestic final demand and their major components for each State and Territory from September quarter 1984 to the latest quarter. Trend data for the thirteen most recent quarters are shown in summary tables (Tables 4–12). Data for each aggregate in trend, seasonally adjusted and original terms are also shown in a set of long-term tables. The List of Tables, pages 11–12, indicates the range of data provided.

2 The term *gross State product* (GSP) is used to denote GDP(I) by State/Territory. Conceptually, GSP and GDP(I) are identical. Likewise, the term *State final demand* (SFD) is conceptually identical to domestic final demand at the national level (i.e. the sum of private and government final consumption expenditure and private and public gross fixed capital expenditure). Where *State* is referred to in the text, it is also meant to encompass the two Territories.

CONCEPTS, SOURCES AND METHODS

3 Information on concepts, definitions, data sources and methodology for the Australian national accounts in general is contained in the current edition of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Although annual estimates of State Accounts are covered in that publication, information relating to quarterly estimates by State is not currently included. However, conceptual issues relevant to annual State accounts also apply to the quarterly estimates.

4 National estimates are based on the concepts and conventions embodied in the United Nations, *A System of National Accounts* (SNA) 1968. No such standard is available for sub-national (regional/State) accounts. In the main, the national concepts are applicable to State accounts, but there remain a number of conceptual and measurement issues that either do not apply or are insignificant at the national level. These are discussed in detail in *State Accounts, Australia: Issues and Experimental Estimates*, ABS Occasional Paper 1984/4.

5 While it is possible in some cases to derive quarterly estimates by State using the same data sources as used for the Australian estimates (or to derive the Australian estimates as the sum of the States), it is often necessary to derive dissections of the Australian estimate using a variety of allocators. These allocators vary from being fairly closely related to the aggregate being measured to being only indirectly related. Information on some of the more important conceptual, methodological and data issues relating to quarterly estimates by State are provided below.

ACCURACY OF QUARTERLY ESTIMATES

6 The estimates contained in this publication represent allocations of quarterly estimates published for Australia in 5206.0. Therefore, they will reflect any inaccuracies in those estimates as well as inaccuracies introduced by the particular conceptual, methodological and data problems inherent in the allocation of Australian estimates to States and Territories. As such, the degree of accuracy and reliability will necessarily be lower than that for the counterpart Australian estimates. Some components by State are particularly deficient compared with the corresponding Australian estimates and are subject to potentially large revisions.

7 Estimates of GOS by State are especially deficient as a result of both conceptual issues in some industries and the lack of appropriate State data in some instances. The accuracy of the quarterly estimates is linked to the accuracy of the annual State estimates. For some industries, it is only possible to derive annual State estimates of GOS on the basis of fairly crude allocations of national estimates, or on conceptual bases that have particular limitations for some uses. As a result, the accuracy of annual State estimates is poorer, and sometimes significantly so, than that of the corresponding national estimates. By necessity, the quarterly State GOS estimates are substantially based on indirect indicators that do not necessarily have a direct relationship with GOS.

.....
ACCURACY OF QUARTERLY
ESTIMATES (continued)

While these indicators are benchmarked to both the annual State estimates in 5220.0 and the quarterly Australian estimates in 5206.0, the accuracy of the quarterly estimates by State is considered to be significantly poorer than the corresponding 'benchmark' estimates. Therefore, they should be regarded as indicative only. Despite this qualification, it is considered that useful information is provided by these estimates as they draw together the various partial indicators of State economic activity within a consistent national accounting framework. It is expected that the quality of estimates will improve over time as new data sources and methodologies are developed.

8 Estimates for wages, salaries and supplements, private final consumption expenditure and private gross fixed capital expenditure are based on the results of sample surveys. By their nature, survey results become less accurate as they are disaggregated (for example into States and/or industries). Generally, the ABS surveys used to derive these aggregates are designed to provide accurate estimates at the Australian total level and individual State estimates that are less accurate but still of an acceptable quality. However, it should be noted that relative standard errors are generally higher for the smaller States and Territories than they are for the larger States. This may result in greater volatility in the quarterly estimates for the smaller States and the two Territories.

9 Estimates of indirect taxes less subsidies, government final consumption expenditure, and general government and public enterprise gross fixed capital expenditure can be substantially affected by the indicators chosen to apportion the Commonwealth government component to States and Territories. Care is required when interpreting these estimates.

REVISIONS

10 Most figures are subject to revision as more complete and accurate information becomes available. Revisions are of two types: those made to recent quarters and those made as a consequence of a redistribution across all quarters within a year following revisions to annual totals. In addition, the sources and methods used to compile these estimates will be further developed to improve the quality and scope of the estimates presented. Such developments may result in significant revisions to previously published estimates, particularly as experience is gained in assessing any biases which may be present in the estimates projected forward from the last annual benchmark available.

TREND ESTIMATES

11 Given the qualifications regarding the accuracy and reliability of the quarterly national accounts, the ABS considers that trend estimates provide the best guide to the underlying movements, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

12 A trend estimate is obtained by removing the irregular component from the seasonally adjusted series. For estimates in this publication, it is calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters, even if none of the original data for earlier quarters have changed.

13 If a series has a high 'irregular' component, then the trend estimates will be subject to greater revision than would otherwise be the case for the latest few quarters as data become available for subsequent quarters. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In fact, in such cases the effect of the irregular component on overall movements is likely to be even more marked in the seasonally adjusted and the original estimates than in the trend series.

TREND ESTIMATES (continued)

14 For more information about ABS procedures for deriving trend estimates and an analysis of the advantages of using them over alternative techniques for monitoring trends, refer to *A Guide to Interpreting Time Series — Monitoring 'Trends': an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

Two Feature Articles which have appeared in the ABS monthly publication *Australian Economic Indicators* (1350.0) may also be of interest:

- *Picking Turning Points in the Economy* (April 1991), and
- *Smarter Data Use* (March 1992).

15 Data that are affected by seasonal factors are adjusted to remove the effects of these factors. The general methods for doing so are described in Appendix I of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Three important points should be noted here :

- * The methods used in seasonal adjustment do not force the sum of the adjusted estimates for each quarter of a year to equal the original annual total.
- * Where constant price estimates have no apparent seasonality in their implicit price deflators, the estimates are adjusted using the corresponding factors for current price estimates.
- ⊚ Special methods have been used to adjust some components of gross farm product. These concern the adjustment of crop production where production/harvest only occurs in one or two quarters each year. In these instances, the output for each financial year is distributed equally over the four quarters.

STATE AND TERRITORY
VERSUS AUSTRALIAN SERIES

16 For trend and seasonally adjusted series, the sum of the States and Territories generally does not equal the corresponding estimate for 'total Australia', nor are the quarter-to-quarter movements identical. On a few occasions, these differences have been significant, particularly for the seasonally adjusted series. This reflects both the relatively short span of data available for seasonal analysis at the State level and the fact that seasonal analysis was generally carried out at a more aggregated level than for the 'total Australia' series. The State and Territory trend and seasonally adjusted series are less accurate than the Australian data. However, as the State and Territory time series lengthen, the quarterly movements in the sum of the State estimates should more closely match those in the Australian series.

17 For private final consumption expenditure an interim means of producing closer alignment between State seasonally adjusted series and the Australian total has been adopted. It involves using the quarterly movements in the total Australian series prior to September quarter 1984 to extrapolate back each of the individual State series before analysing the seasonal pattern of the series. This process has enabled account to be taken of the effects on trading patterns of the changing incidence of Easter on the assumption that there are no significant differences between States in this effect.

GROSS STATE PRODUCT
AT CONSTANT PRICES

18 Estimates of GSP at constant prices are derived by directly deflating the current price estimates of GSP (see previous paragraph). The deflator for each State and Territory is obtained by compiling the best possible current and constant price estimates for as many components as possible (given the available data) of GSP using the expenditure approach and then deriving the implicit price deflator of the aggregate. For further details refer to the technical note appearing in both the September and December quarter 1994 issues of this publication.

.....

GROSS STATE PRODUCT

19 GSP is produced by summing factor incomes i.e. wages, salaries and supplements, and gross operating surplus (GOS), plus indirect taxes less subsidies. An expenditure based estimate of GSP is not available. Although domestic final demand and its components and international trade in goods are available by State, estimates of international trade in services, interstate trade in goods and services and increase in stocks by State are required to complete an expenditure-based estimate of GSP. These missing components, combined with the statistical discrepancy, are included as a balancing item in Tables 4 to 12.

WAGES, SALARIES AND SUPPLEMENTS

20 Quarterly estimates of wages and salaries by State are obtained from the same data sources as those used for the Australian estimates (i.e. the ABS Labour Force Survey and the Survey of Employment and Earnings, both of which are designed to produce State data). However, it is generally the case that survey results for the smaller States and the Territories are subject to higher standard errors than those for the larger States. Estimates for supplements are essentially quarterly allocations and extrapolations of annual State totals, using wages and salaries by State as an indicator.

GROSS OPERATING SURPLUS

21 The ABS Survey of Company Profits (SCP) is the major data source used to derive quarterly estimates of the gross operating surplus (GOS) of non-farm trading enterprise companies at the Australian level. From March quarter 1994 the SCP commenced collecting State dissections for non-farm trading enterprise companies. These State dissections have not yet been fully incorporated into the national accounts estimates of GOS by State for two reasons. First, the sample design for the SCP has not, as yet, been stratified by State, so that some industries in some States may be inadequately represented in the survey sample. Second, the relatively short time series of State data currently available from the SCP does not enable a detailed analysis to be undertaken of quarterly movements by State, especially in relation to the seasonality displayed by the existing estimates. Investigations into the current methodology used to compile GOS by State for corporate trading enterprises and the quality of State data from the SCP are being undertaken with a view to increasing the use of the State data collected from the SCP. In the meantime, the approach adopted is to derive estimates of GOS by State using various activity data available from the ABS and other sources as indicators, together with State data from the SCP for the mining industry.

22 Data from the quarterly *Survey of Company Profits* are used to derive quarterly State estimates of GOS for the mining industry from September quarter 1989. The relatively low number of respondents combined with the relatively high degree of coverage in the survey of mining enterprises made it feasible to allocate GOS to State individually for each respondent. In most cases, large multi-State enterprises already provide details of GOS for their separate mining divisions making direct allocation to State possible. Otherwise multi-State mining enterprise GOS was allocated to States using the number of employees in each State. (Quarters prior to September 1989 were estimated using mining activity data by State and mineral price data, both published by the Australian Bureau of Agricultural and Resource Economics.)

23 Quarterly estimates of ownership of dwellings GOS are derived from essentially the same sources used to produce the Australian estimates. Quarterly estimates of GOS by State for the remaining private sector non-farm enterprises and Commonwealth public trading enterprises together were derived by weighting together a variety of general activity indicators. It should be emphasised that some of these general activity indicators are not directly related to GOS, and therefore can only be regarded as indicative (see 'Accuracy of Quarterly Estimates' above).

GROSS OPERATING SURPLUS
(continued)

24 State indicators include turnover for retail and selected service enterprises, building and construction work done, selected manufactured commodities produced combined with data on price movements, airline passenger movements through major airports, road freight movements between capital cities, tourist accommodation statistics and health insurance statistics. These indicators are weighted together (benchmarked) according to their contribution to annual industry estimates of GOS by State published in *Australian National Accounts: State Accounts (5220.0)*.

25 The GOS of State and Local public trading enterprises is available directly from ABS collections. Quarterly estimates of GOS by State for the farm sector were prepared from essentially the same sources as those used to provide the Australian estimates, although a higher degree of approximation was required in the estimation of farm costs.

26 Once a year (the December quarter issue), the composite quarterly indicator derived in the manner described above is balanced to both the quarterly estimates of GOS for Australia published in 5206.0 and the annual estimates for individual States published in 5220.0. It involves alternately balancing the rows and columns. A similar process is followed for the columns (the control totals are derived from the annual State data contained in 5220.0). The rows and columns continue to be balanced alternately until the matrix is completely balanced. In issues subsequent to the December quarter, the fully balanced estimates for each State are extrapolated on the basis of the indicators and balanced to the quarterly estimates for Australia published in 5206.0.

INDIRECT TAXES LESS
SUBSIDIES

27 Indirect taxes received and subsidies paid by State and Local governments are available quarterly from government financial records. Indirect taxes received and subsidies paid by the Commonwealth government are allocated to State using production data where available, but mainly by applying annual State proportions to the quarterly totals.

PRIVATE FINAL CONSUMPTION
AND GROSS FIXED CAPITAL
EXPENDITURES

28 State estimates of private final consumption expenditure and gross fixed capital expenditure are derived largely from the same sources as used for the Australian estimates, although a higher degree of approximation is required. In the case of private final consumption expenditure, data sources for major components such as household goods, dwelling rent, purchase of motor vehicles, fares, and purchases of gas, electricity and fuel are available quarterly by State.

29 State and Territory estimates of private gross fixed capital expenditure on dwellings and non-dwelling construction are derived using data from the ABS quarterly surveys of Building Activity and Engineering Construction, while expenditure on equipment is derived from the quarterly Survey of Private New Fixed Capital Expenditure. Real estate transfer expenses are derived from data supplied by the various State Stamp Duty Offices, and various other data such as the number of real estate property transfers by State and Territory. Essentially, these are the same data sources used to prepare the Australian estimates.

COMMONWEALTH
GOVERNMENT FINAL
CONSUMPTION AND GROSS
FIXED CAPITAL EXPENDITURES

30 The treatment of Commonwealth government final expenditures in regional accounting is rather problematic. Alternative treatments are to attribute final expenditures to the region in which the expenditure was incurred, or to the region in which the beneficiaries reside, or even to consider the Commonwealth government consumer unit as extra-territorial and therefore to exclude it from all regions. For practical reasons the first approach has been adopted in this publication, although it still required extensive use of indirect indicators.

COMMONWEALTH
GOVERNMENT FINAL
CONSUMPTION AND GROSS
FIXED CAPITAL EXPENDITURES
(continued)

An implication is that a large proportion of the consumption of Commonwealth Government services is included in SFD for the ACT, inflating the balancing item for that territory. If data had been available to allocate Commonwealth final consumption expenditure to end users, the balancing item for the ACT would be a much smaller negative because the provision of the services would be regarded as an interstate export instead. Estimates for Commonwealth government expenditures in the States on both an annual and a quarterly basis therefore have to be treated with considerable caution.

31 The wages and salaries component of Commonwealth government final consumption expenditure was directly apportioned to States using data from the ABS Survey of Employment and Earnings and information supplied by the Department of Defence. Expenditures on goods and services classified to defence were allocated according to population while non-defence purchases were allocated on the basis of Commonwealth general government employment by State and Territory.

32 For Commonwealth general government gross fixed capital expenditure, Australian estimates were first subdivided into expenditure on construction and expenditure on equipment. The construction expenditure component was allocated to States and Territories using annual State dissections for projected construction expenditure in each State and Territory, published jointly by the Department of Administrative Services and the Department of Industry, Technology and Commerce. Expenditure on equipment has been allocated using Commonwealth general government employment by State and Territory.

COMMONWEALTH
ENTERPRISES GROSS FIXED
CAPITAL EXPENDITURE

33 A variety of allocators has been applied at the individual enterprise level for Commonwealth public enterprise gross fixed capital expenditure. Direct allocators have been used in a few cases where enterprises operated wholly in one State or Territory. For Telecom, State data for construction activity were available by quarter from the ABS Building Activity and Engineering Construction Surveys. Indirect indicators derived from annual estimates were used to allocate gross fixed capital expenditure of the remaining Commonwealth enterprises by State. For example, purchases of ships and aircraft were allocated using annual State shares for general freight and passenger activity through ports and airports in each State and Territory (consistent with the allocation of GOS).

OCCASIONAL PAPER

34 The following Occasional Paper, which discusses issues specific to State Accounts, is available at ABS offices:

- *State Accounts, Australia: Issues and Experimental Estimates* — S. Burrell, J. Daniel, A. Johnson and R. Walters (1984/4)

RELATED PUBLICATIONS

35 In addition to the publications already mentioned, others of interest include:

- *Australian National Accounts: National Income, Expenditure and Product* (5204.0) — annual
- *Australian National Accounts: Capital Stock* (5221.0) — annual
- *Australian National Accounts: Multifactor Productivity* (5234.0) — annual
- *Australian National Accounts: Financial Accounts* (5232.0) — quarterly
- *A Guide to the Australian National Accounts* (5235.0)

36 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

FOR MORE INFORMATION . . .

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our offices (see below).

INFORMATION CONSULTANCY SERVICES

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our offices (see below).

ELECTRONIC DATA SERVICES

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS office (see below).

BOOKSHOP AND SUBSCRIPTIONS

There is a large number of ABS publications available from the ABS Bookshops in each of our offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free Australia wide on 008 0206 08.
