(a) For the current account aggregates, a minus sign means an increase in a deficit, a decrease in a surplus, a decrease in exports or a decrease in imports; and a plus sign means a decrease in a deficit, an increase in a surplus, an increase in exports or an increase in imports. (b) Period averages.

### June quarter 1994 —

#### Balance on current account (seasonally adjusted)

The current account deficit for the June quarter rose by \$1,283 million, or 38 per cent, to \$4,648 million. The rise in the deficit was caused by:

- a turnaround of \$548 million, from a surplus to a deficit, in the balance on merchandise trade (merchandise exports rose 3 per cent while merchandise imports rose 6 per cent);
- a rise of \$857 million (27 per cent) in the net income deficit (income credits fell 29 per cent while income debits rose 8 per cent); and
- a turnaround of \$216 million, from a surplus to deficit, in the net unrequited transfers balance (unrequited transfers credits fell 8 per cent and unrequited transfers debits rose 26 per cent).

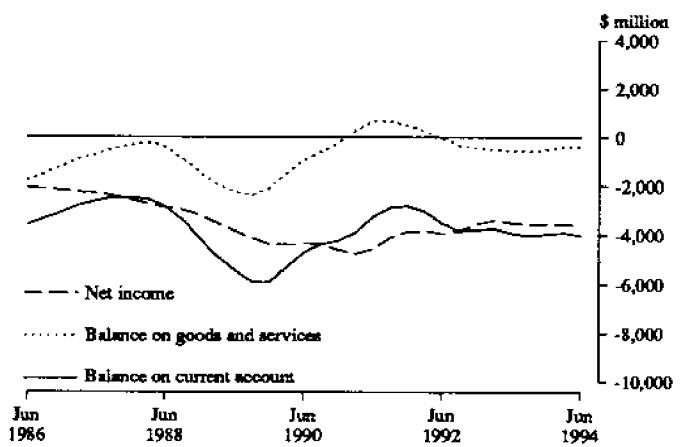

Partly offsetting these movements in merchandise trade, income and unrequited transfers was a fall of \$338 million (69 per cent) in the net services deficit.

The trend estimate for the June quarter current account deficit was \$4,111 million, up \$166 million (4 per cent) on the March quarter deficit.

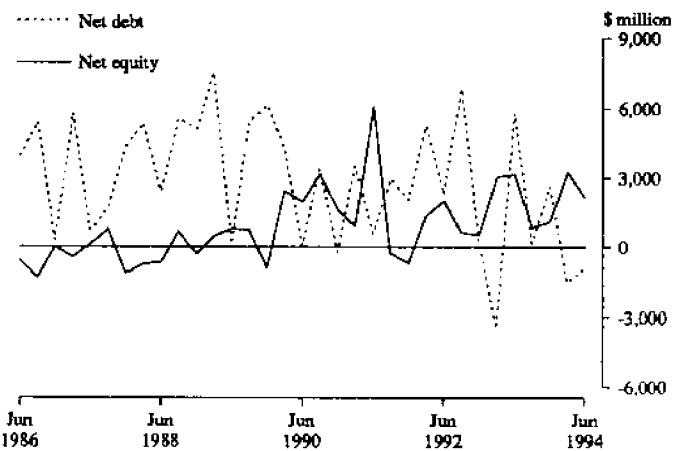

#### Balance on capital account (not seasonally adjusted)

The *balance on capital account* recorded a net inflow of \$459 million, down \$1,249 million on the net inflow recorded in the March quarter 1994. This change was the result of a fall of \$1,093 million (to \$2,160 million) in the net inflow from equity transactions, and an increase of \$793 million (to \$804 million) in the net outflow from "other" transactions. The movements in these components were partly offset by a decrease of \$637 million (to \$897 million) in the net outflow from debt transactions.

**GRAPH 1. CURRENT ACCOUNT MAIN AGGREGATES**  
trend estimates at current prices

**GRAPH 2. CAPITAL ACCOUNT MAIN AGGREGATES**

Reflecting the outcomes on the current and capital accounts, the balancing item for the June quarter 1994 increased by \$2,679 million, from a net inflow of \$1,299 million to a net inflow of \$3,978 million. It should be noted that the data underlying the balance on capital account for the most recent quarters is preliminary and subject to revision.

#### **Financial year 1993-94 —**

**Balance on current account.** In original terms, the current account deficit was \$16,436 million, up \$1,099 million, or 7 per cent, on the deficit for 1992-93.

The increase in the deficit was due to:

- a turnaround of \$1,124 million, from a surplus to a deficit, in the merchandise trade balance (merchandise exports rose 6 per cent, while merchandise imports rose 8 per cent);
- an increase of \$569 million, or 4 per cent, in the net income deficit; and

- a decrease of \$452 million, or 62 per cent, in the net unrequited transfers surplus

These movements in merchandise trade, income and unrequited transfers were partially offset by a fall of \$1,046 million, or 43 per cent, in the net services deficit.

**Balance on capital account.** The balance on capital account recorded a net inflow of \$7,966 million, down \$8,929 million on the net inflow for the previous year. The change was mainly the result of a fall of \$8,984 million in the net inflow from net debt transactions, with a fall in State Government borrowing domiciled abroad and a turnaround in transactions in reserve assets (from a net inflow to a net outflow) being the main contributor.

**Balancing item.** Reflecting these outcomes on the current and capital accounts, the balancing item turned around by \$10,028 million, from a net outflow of \$1,557 million to a net inflow of \$8,471 million. It should be noted that the estimates underlying the balance on capital account for the most recent quarters are preliminary and subject to revision as further data, particularly from the annual Survey of Foreign Investment, become available.

## NOTES ON THE ESTIMATES

### June quarter 1994—

#### *Current account (seasonally adjusted)*

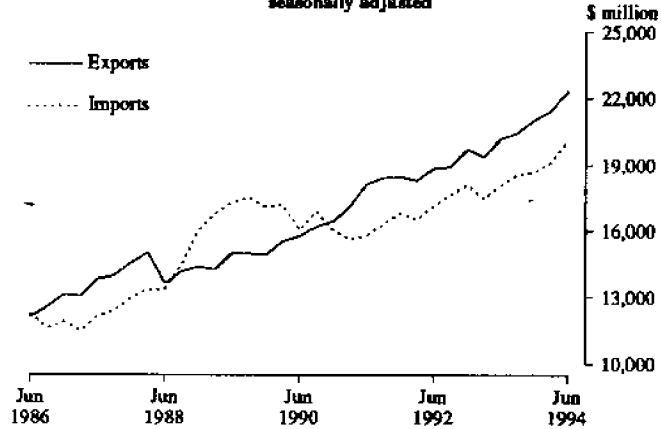

"Volume" refers to values at average 1989-90 prices and "price" refers to implicit price deflators.

#### *Goods and services*

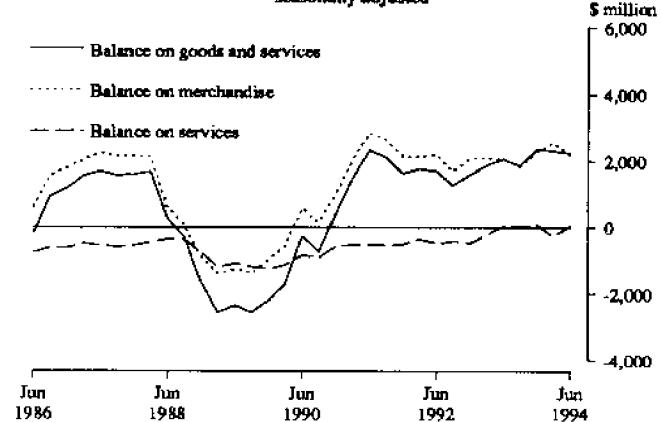

The *deficit on goods and services* at current prices was \$504 million, an increase of \$210 million on the deficit recorded in the March quarter 1994. This was due to a turnaround of \$548 million, from a surplus to a deficit, in the balance on merchandise trade, which was partly offset by a fall of \$338 million in the net services deficit.

In volume terms, exports of goods and services rose \$883 million (4 per cent), while imports of goods and services rose \$963 million (5 per cent). The resulting decrease of \$80 million in the surplus on goods and services will make a small negative contribution of 0.08 percentage points to the June quarter 1994 expenditure based estimates of GDP at average 1989-90 prices, assuming no significant revisions to the GDP estimates for the preceding quarter. The surplus on merchandise trade fell by \$405 million, while the net services balance recorded a turnaround of \$325 million, from a deficit to a surplus.

**GRAPH 3. EXPORTS AND IMPORTS OF GOODS AND SERVICES**  
at average 1989-90 prices  
seasonally adjusted

**GRAPH 4. BALANCE ON GOODS AND SERVICES**  
at average 1989-90 prices  
seasonally adjusted

#### *Exports of merchandise*

Exports of merchandise at current prices rose by \$447 million, or 3 per cent, to \$16,258 million, as a result of a 4 per cent increase in volume, partly offset by a 1 per cent decrease in price.

*Rural exports* at current prices rose \$31 million, or 1 per cent, due to a 1 per cent increase in price.

Increases were recorded in:

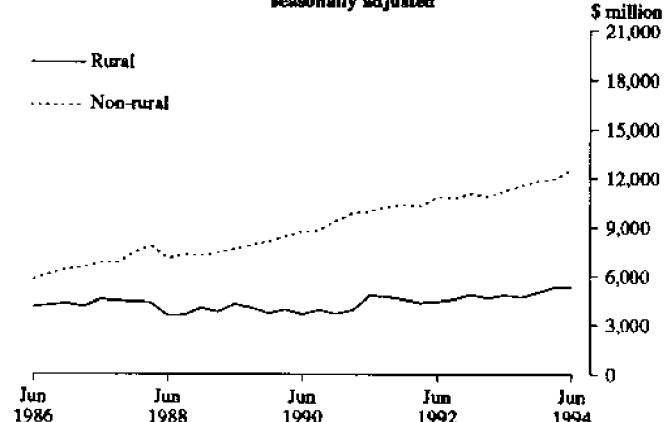

- wool, up \$111 million (13 per cent), as a result of a 13 per cent increase in volume; and
- sugar, up \$82 million (23 per cent), as a result of a 22 per cent increase in volume and a 1 per cent increase in price.

Decreases were recorded in cereals, down \$49 million (6 per cent) as a result of a 7 per cent decrease in volume, partly offset by a 1 per cent increase in price; meat, down \$35 million (3 per cent), due to a 6 per cent decrease in volume, partly offset by a 2 per cent increase in price; and "other" rural, down \$78 million (5 per cent), due to an 8 per cent decrease in volume which was partly offset by a 4 per cent increase in price.

*Non-rural exports* at current prices rose \$416 million, or 4 per cent, reflecting a 5 per cent increase in volume, partly offset by a 1 per cent decrease in price. The most significant increases were recorded in:

- "other" mineral fuels, up \$143 million (18 per cent), due to a 14 per cent increase in volume and a 4 per cent increase in price;
- transport equipment, up \$112 million (28 per cent), due almost entirely to a 27 per cent increase in volume;
- "other" metals, up \$83 million (6 per cent), due to a 4 per cent increase in volume and a 2 per cent increase in price; and
- metal ores and minerals, up \$82 million (4 per cent) due to a 9 per cent increase in volume which was partly offset by a 4 per cent fall in price.

**GRAPH 5. MERCHANTISE EXPORTS**  
at average 1989-90 prices  
seasonally adjusted

Decreases were recorded in gold, down \$116 million (8 per cent) due to a 5 per cent decrease in volume and a 3 per cent decrease in price; and coal, coke and briquettes, down \$78 million (5 per cent) due to a 5 per cent decrease in price.

#### *Services credits*

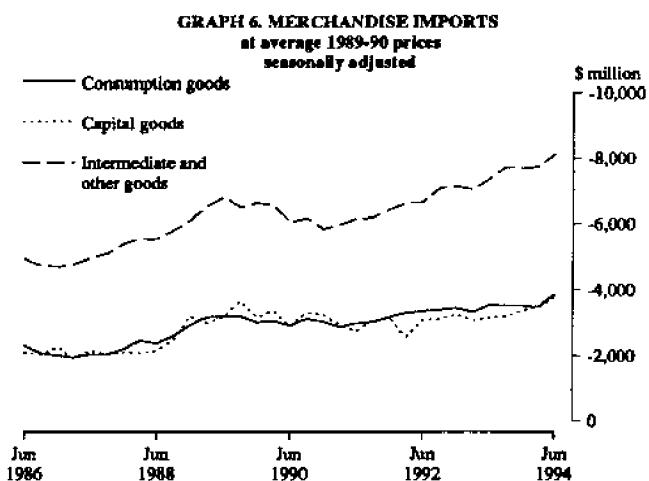

*Services credits* at current prices rose \$401 million (9 per cent) to \$4,828 million, due to a 6 per cent increase in volume, and a 2 per cent increase in price. At current prices, all component items increased, with the largest increase being in travel. In volume terms, increases in travel, "other" services and shipment were partly offset by a decrease in "other" transportation. In price terms, increases in "other" transportation, travel and "other" services were partly offset by a decrease in shipment.

#### *Exports implicit price deflator*

The *implicit price deflator (IPD)* for total exports of goods and services was flat between the March and June quarters. On a fixed-weighted basis, export prices fell 0.5 per cent, indicating that compositional change within exports of goods and services had a marginal (upwards) effect on the overall level of the IPD.

#### *Imports of merchandise*

*Imports of merchandise* at current prices rose \$995 million, or 6 per cent, to \$16,607 million, as a result of a 7 per cent increase in volume, which was partly offset by a 1 per cent decrease in price. Increases were recorded in each of the three end-use categories, with imports of *consumption goods* up \$418 million (10 per cent), due to an 11 per cent increase in volume; *capital goods* up \$223 million (6 per cent), due to an 8 per cent increase in volume which was partly offset by a 2 per cent decrease in price; and *intermediate and other goods* up \$354 million (5 per cent), due to a 5 per cent increase in volume.

Increases were recorded in 22 of the 26 commodity groups with the most significant being:

- fuels and lubricants, up \$184 million (27 per cent), due to a 15 per cent increase in price and an 11 per cent increase in volume;

- non-industrial transport equipment, up \$110 million (12 per cent), due to a 10 per cent increase in volume and a 2 per cent increase in price;
- machinery and industrial equipment, up \$108 million (7 per cent), due almost entirely to a 7 per cent increase in volume;
- consumption goods n.e.s., up \$104 million (9 per cent), due to a 10 per cent increase in volume which was partly offset by a 1 per cent decrease in price; and
- textiles, clothing and footwear, up \$100 million (19 per cent), due to an 21 per cent increase in volume which was partly offset by a 1 per cent fall in price.

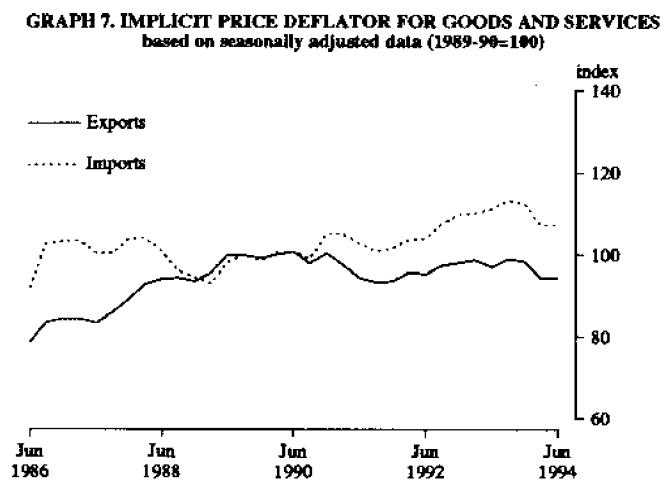

The most significant decreases were in civil aircraft, down \$56 million (84 per cent), due almost entirely to an 84 per cent decrease in volume; non-monetary gold, down \$25 million (10 per cent), due to a 7 per cent decrease in volume and a 3 per cent decrease in price; and "other" goods, down \$23 million (24 per cent), due to a 23 per cent decrease in volume and a 2 per cent decrease in price.

#### *Services debits*

*Services debits* at current prices rose \$63 million (1 per cent), to \$4,983 million, as a result of a 3 per cent rise in price, offset partly by a 1 per cent fall in volume. In current price terms, rises in shipment and "other" services were partly offset by a decrease in travel services. In terms of volume, falls in "other" transportation and travel were partly offset by increases in shipment and "other" services. In price terms, all four components recorded increases, with the largest in "other" transportation.

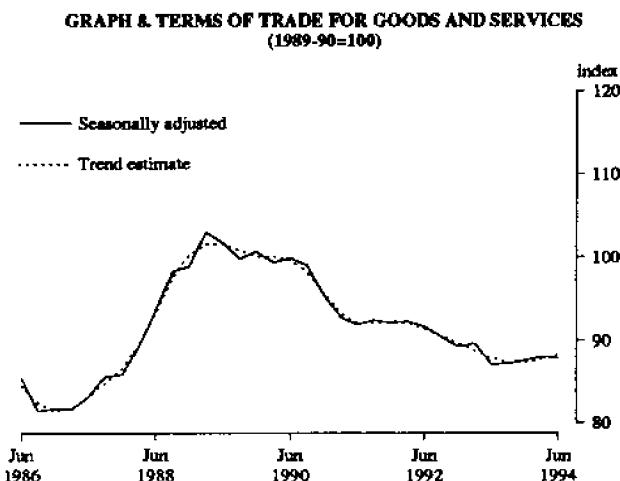

#### *Imports implicit price deflator*

The *implicit price deflator (IPD)* for imports of goods and services rose 0.2 per cent. On a fixed weighted basis, import prices fell 0.1 per cent indicating that compositional change of goods and services within imports had a marginal (upward) effect on the overall level of the IPD.

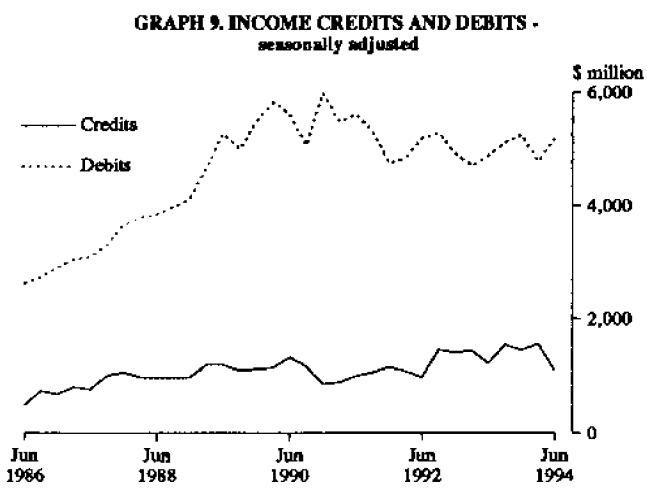

### Terms of trade

Australia's *terms of trade* fell marginally (0.2 per cent), resulting from an unchanged IPD for exports of goods and services, and a rise of 0.2 per cent in the IPD for imports of goods and services.

### Income

The *net income* deficit rose \$857 million (27 per cent) to \$4,066 million. Income credits fell \$462 million (29 per cent) to \$1,107 million, due mainly to falls in income receivable on reserve assets and dividends receivable on Australian direct investment abroad. Income debits rose \$395 million (8 per cent) to \$5,173 million, due mainly to increases in remitted profits and dividends payable on foreign direct investment in Australia. These increases were partly offset by a decrease in interest payable on borrowing by the official sector.

### Unrequited transfers

The *net unrequited transfers* balance turned around \$216 million, from a surplus to a deficit of \$78 million. Unrequited transfer credits fell \$61 million (8 per cent) and unrequited transfer debits rose \$155 million (26 per cent).

### Capital account (not seasonally adjusted)

In original terms, the *balance on capital account* recorded an inflow of \$459 million, down \$1,249 million on the net inflow recorded in the March quarter. This change was the result of a fall of \$1,093 million (to \$2,160 million) in the net inflow from equity transactions, and an increase of \$793 million (to \$804 million) in the net outflow from "other" transactions. The movements in these components were partly offset by a decrease of \$637 million (to \$897 million) in the net outflow from debt transactions.

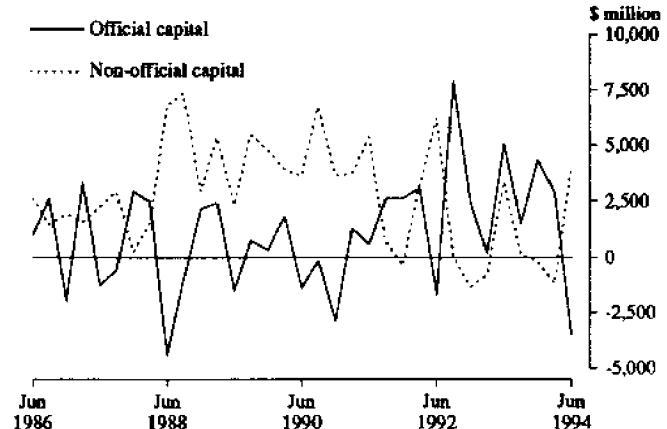

By sector, the balance on capital account was comprised of:

- a net outflow of \$3,490 million in official sector transactions, a turnaround of \$6,388 million on the net inflow during the previous quarter; and
- a net inflow of \$3,949 million in non-official sector transactions, a turnaround of \$5,139 million on the net outflow during the March quarter.

The change in *official sector* transactions resulted from:

- a turnaround of \$5,448 million, from a net inflow to a net outflow of \$2,882 million, in net general government transactions (State Government borrowing domiciled abroad turned around \$4,314 million, to a net outflow of \$3,216 million, while borrowing domiciled in Australia fell \$861 million to a net inflow of \$897 million); and
- a turnaround of \$940 million, from a net inflow to a net outflow of \$608 million, in Reserve Bank transactions (largely reflecting purchases of official reserve assets).

### GRAPH 10. NET CAPITAL TRANSACTIONS

The *non-official sector* transactions were comprised of:

- a net inflow of foreign investment in Australia of \$4,343 million, down \$893 million on the March quarter inflow; and
- a net outflow of Australian investment abroad of \$394 million, down \$6,032 million on the previous quarter's outflow.

The lower *foreign investment in Australia* in respect of the *non-official sector* was mainly the result of:

- borrowing from unrelated enterprises, which turned around \$1,686 million, to a net outflow of \$144 million;
- portfolio investment in corporate equities, which fell \$1,538 million to a net inflow of \$1,809 million; and
- direct investment in corporate equities, which turned around \$501 million to a net outflow of \$10 million.

The movements in these components were partly offset by borrowing from related entities, which turned around \$1,896 million to a net inflow of \$1,006 million; and accounts receivable/prepayments made, which turned around \$978 million to a net inflow of \$806 million.

The chief factors responsible for the lower *Australian investment abroad* in respect of the *non-official sector* were:

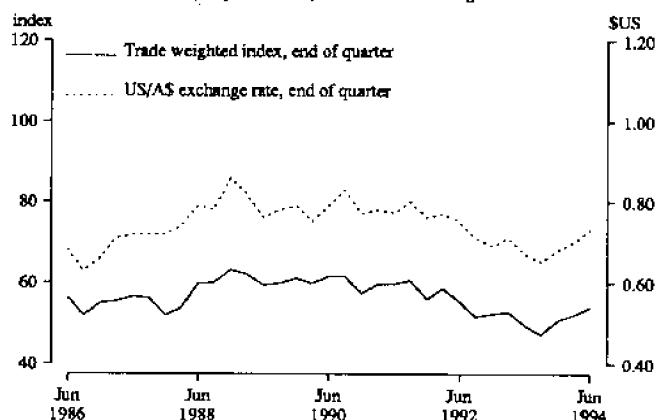

- lending by direct investors, which turned around \$4,207 million, to a net inflow of \$826 million;
- lending to unrelated enterprises, which turned around \$2,619 million, to a net inflow of \$908 million; and
- portfolio investment in corporate equities, which turned around \$1,516 million, to a net inflow of \$539 million.

The movements in these components were partly offset by accounts receivable/prepayments made, which turned around \$1,762 million, to a net outflow of \$1,547 million; and direct investment in corporate equities, which turned around \$355 million, to a net outflow of \$253 million.

#### *Trade weighted index and US/A\$ exchange rates*

The trade weighted index value of the Australian dollar at the end of the June quarter was 53.0, up 1.7 per cent on the previous quarter. The Australian dollar rose by 4.0 per cent against the US dollar to 0.7291 at the end of the quarter.

GRAPH 11. TRADE WEIGHTED INDEX  
(May 1970=100) and US/A\$ exchange rate

#### *Revisions*

Apart from the revisions described below, the estimates in this publication are consistent with those published in the June 1994 issue of *Balance of Payments, Australia* (5301.0), which was released on 29 July 1994.

Revisions to services estimates in December quarter 1993 and March quarter 1994 are due to:

- the incorporation of results from the December quarter 1993 International Visitors Survey into the travel credits estimate;
- the incorporation of results from the March quarter 1994 International Trade in Services Survey into the shipment and "other" transportation credits and debits estimates; and
- the incorporation of March and April 1994 overseas arrivals and departures statistics into the travel credits and debits estimates.

Revisions to investment income credits, investment income debits and capital transactions, back to September quarter 1993, are due to the incorporation of data from the June quarter 1994 Survey of Foreign Investment.

Table 35 shows revisions to current price unadjusted series, on an annual and quarterly basis, since the March quarter 1993 issue of this publication.

## RECENT CHANGES TO SOURCES AND METHODS USED FOR ESTIMATING SHIPMENT, OTHER TRANSPORTATION, TRAVEL AND INSURANCE SERVICES

### **Introduction**

This article summarises a number of recent improvements which have been made to the coverage, sources and methods used in estimating shipment, other transportation, other travel and insurance services. The changes to *shipment* and *other transportation* were first published in the May 1994 issue of the monthly balance of payments publication (5301.0); while the changes to *travel* and *insurance services* were first published in the June 1994 issue of 5301.0. These changes, which are incorporated in this issue, have resulted in much better quality estimates for these items.

### **Changes to Shipment and Other Transportation Services**

Prior to the May 1994 issue of 5301.0, the estimates of *shipment (freight on exports and imports)* and *other transportation* credits and debits were partly compiled using information collected in the ABS Surveys of International Shipping Operations (SISO) and International Airline Operations (SIAO), and from foreign trade statistics. The SISO and SIAO were replaced in September quarter 1993 by new collections within the framework of the ABS International Trade in Services Survey (ITSS). While the new airline collection is essentially the same as the SIAO, the new shipping collection incorporates a number of improvements over the SISO collection. These include: improved collection arrangements; more comprehensive coverage of the target population; and simpler form design leading to better response rates and reduced respondent load.

The SISO collected information from resident and non-resident shipping operators, or the operators' principal agents in Australia. It collected individual information on each voyage of a vessel from some respondents and aggregated quarterly information from other respondents. The collection of information on a vessel voyage basis involved a high level of respondent burden which resulted in low response rates and poor quality data. The follow-up of late or incomplete returns was difficult as it required that details of all ships entering and leaving Australian waters during the quarter be recorded, and that these vessels be matched to the resident agents and operators which handled them.

Under the new collection arrangements, all resident operators and agents of non-resident operators report aggregated information on a quarterly basis. This has significantly reduced the number of forms required to be completed and processed. The amount of data collected on each form has also been reduced. Estimates of non-resident expenditure on bunkers and provedores, which were previously collected from the SISO and SIAO, are now compiled as the difference between total bunkers and provedores, as recorded in foreign trade statistics, and resident expenditure on bunkers and provedores as reported in the ITSS. Both these changes have sig-

nificantly reduced respondent reporting load. The reduction in the reporting load of the new shipping collection allows easier follow-up and achieves higher response rates.

As part of the new collection strategy a more comprehensive population frame was established. This new frame included many units which, though in scope of the previous survey, had not been included in the SISO. The new collection therefore also provides much better coverage of both resident and non-resident producers of sea transport services.

The changed collection arrangements have also led to a significant improvement in the timeliness of data. Estimates are now available from the ITSS for incorporation into balance of payments statistics approximately four months after the reference quarter, an improvement of two months.

The new shipping collection has had little impact on estimates for *shipment* debits (which comprises *freight on imports* and *insurance on imports*). This is because estimates of *freight on imports* (that is the value of freight and other distributive services performed by non-residents on merchandise imports) are derived largely from foreign trade statistics. The estimation methodology involves deducting from the cost, insurance, freight (c.i.f.) value of imports, the free on board (f.o.b.) value; a small estimate for insurance; and freight earnings of resident transport operators (from the SISO and SIAO). While the freight earnings of resident transport operators are now sourced from the ITSS, they are similar to those from the SISO and SIAO. The source data for *insurance on imports* has not changed.

In contrast to *shipment* debits, the new shipping collection has resulted in estimates that are significantly higher than those based on SISO, for *shipment* credits (that is freight, other distributive services and insurance services performed by residents on merchandise exports) and *other transportation* credits and debits (that is those services provided by residents to non-residents (credits) and vice versa (debits) in connection with the transportation of goods and people other than such services classified as *shipment* and *travel*). This outcome is largely as a result of the more comprehensive coverage of the new collection and better response rates achieved from a much simpler form design. Consequently, undercoverage adjustments (mainly to resident earnings from freight on exports and other goods, and to resident expenditure on chartering/leasing of vessels) have been made to all periods back to 1982-83 based on data from the new collection and historical information supplied by the major respondents. Prior to 1982-83 the level of undercoverage is not considered to be significant. Whilst the net effect of the undercoverage is relatively small for each year up to and including 1992-93, the impact is much larger on the separate credit and debit items.

The impact of these adjustments on the current account deficit is outlined in *Revisions* in the May 1994 issue of 5301.0, which was released on 30 June 1994.

### **Changes to Travel Services**

Estimates of "Other" travel services credits (that is, expenditure in Australia by overseas visitors other than students) are derived using two sources: information on the number of overseas visitors, published by ABS from data collected on passenger cards by the Department of Immigration and Ethnic Affairs; and information on the expenditure of visitors, collected mainly from the International Visitors Survey (IVS) conducted by the Bureau of Tourism Research (BTR). The expenditure information from the IVS covers goods and services purchased or consumed in Australia by overseas visitors, except where some of that expenditure is pre-paid as part of an inclusive tour package.

Inclusive package tour visitors report their total package cost in the IVS, but they are unable to separately identify that part of the expenditure which relates to travel in countries other than Australia, nor are they able to estimate separately the various components of expenditure within Australia which are included in their package. Because of this data availability problem, prior to the June 1994 issue of 5301.0 such expenditure was excluded from ABS estimates of "Other" travel services credits.

The degree of undercoverage resulting from the exclusion of pre-paid package tour (PPT) expenditure was, in the early to mid 1980s, considered to be minimal. However, the popularity of PPTs increased over time with the number of travellers on PPTs rising to significant levels in recent years, with a corresponding increase in the level of undercoverage. This raised concerns over data quality and led to further research and analysis being conducted by the ABS and the BTR.

BTR published, in the December quarter 1993 issue of *BTR Tourism Update*, estimates of the major components of expenditure for 1992 by international visitors on PPTs, that is, on food, drink and accommodation; airfares in Australia; and organised tours. These estimates were derived by removing expenditure on goods and services consumed outside Australia (this was done on a pro-rata basis, according to the number of nights spent in Australia) and using a system which relied on "extracting expenditure data for a group of non-package holiday visitors from the same country who have similar characteristics to the inclusive package tour visitors and using their expenditure as a basis for estimating the relevant package items." (*BTR Tourism Update*, December quarter 1993, page 6.)

The BTR subsequently provided ABS with estimates of expenditure by international visitors on PPTs, derived on the same basis as those for 1992, for calendar years 1990 and 1991. Estimates of the number of travellers on PPTs were also provided for the years 1984 to 1989, although no separate expenditure information was available for those years. Prior to 1984 no data were collected on PPT travellers.

BTR estimates of pre-paid expenditure on airfares in Australia were subtracted from total BTR PPT expenditure estimates as this information is collected by the ABS in the International Trade in Services Survey, and included in "Other" transportation - passenger services item. The ABS also conducted further analysis in order to convert the BTR calendar year estimates to quarterly and financial year estimates and to backcast expenditure estimates to ensure the continuity of the "Other" travel services credits time series.

To determine the conversion methodology, ABS traveller numbers for the relevant period were analysed. It was found that, on average, 50 per cent of travellers arrived in the September and December quarters of the financial year and the other 50 per cent in the March and June quarters of the financial year. Based on this finding, and the assumption that the seasonality of PPT travel does not differ from that of other travel, BTR PPT calendar year traveller estimates were divided by two, with 50 per cent being allocated to each relevant financial year.

Per capita expenditure (PCE) estimates were then derived by analysing the relationship between ABS PCEs for "other" travellers and BTR PCEs for PPT travellers. To do this ABS PCEs for calendar years 1990 to 1992 were derived from quarterly ABS PCE data and compared to the BTR PCEs (excluding the airfare component) provided for those years. It was found that, on average, PPT expenditure came to 32 per cent of "other" travellers' expenditure (as PPT costs do not cover all expenses). This factor was applied to existing ABS financial year PCEs to derive PCEs for visitors on PPTs. The PCEs were then multiplied by the number of travellers to obtain estimates of expenditure by visitors on PPTs.

These estimates have now been incorporated into "Other" travel services credits. Undercoverage adjustments have been made for all periods back to 1983-84. Prior to 1983-84 it is considered that undercoverage would have been minimal. Because no survey data is yet available from BTR for periods after 1992, extrapolations have been made for the last half of the 1992-93 financial year and for all of 1993-94.

For future periods, estimates of expenditure on PPTs will be calculated and included in the estimates of "Other" travel services credits published by the ABS. These estimates will be revised as annual survey data become available from the BTR.

The impact of this improved coverage has been to increase the "Other" travel services credits item by: 2 per cent in 1983-84; increasing to between 6 and 7 per cent in each of the four years 1986-87 to 1989-90; 9 per cent in 1990-91; and 10 per cent in each of the three years 1991-92 to 1993-94.

Details of the impact of these adjustments on the current account deficit are contained in the June 1994 issue of the monthly publication *Balance of Payments Australia* (ABS Catalogue 5301.0) which was released on 29 July 1994.

### **Changes to Insurance Services**

Prior to the June 1994 issue of 5301.0, the estimates of *Insurance services nec* credits and debits (that is, expenditure on insurance services other than freight insurance) were compiled using information obtained from the ABS Survey of Foreign Investment (SFI) and the Australian Taxation Office's taxation statistics. Annual estimates for *Insurance services nec* were compiled as the difference between premiums and "normal" claims. In the case of credits, both premiums and claims were based on SFI data. In the case of debits, estimates of premiums were derived from taxation statistics and estimates of claims were derived by applying a ratio of claims to premiums, calculated from SFI data, to premiums data from taxation statistics.

Since the June 1994 issue of 5301.0, estimates of insurance services are based primarily on information obtained from the ABS International Trade in Services Survey (ITSS). This change in data sources reflects a rationalisation of ABS data collection activity on trade in services. From 1989-90, data relating to international insurance transactions were excluded from the SFI and, from 1990-91, collected by the ITSS. Because of the significant improvements in coverage of insurance premiums data from the ITSS and the substantial time-lag on data from the Australian Taxation Office, the latter source is no longer used directly in the estimation process. However, it is envisaged that the taxation data will continue to provide a useful coverage check.

The ITSS, like the SFI, collects data relating to general insurance, reinsurance and life insurance premiums and claims, and commissions incurred in arranging/writing insurance business placed with and received from non-residents. There are, however, a number of significant differences between the old and new sources and methods. The more significant differences are outlined below.

#### *(a) Statistical Unit*

Information from the ITSS is collected and compiled in respect of a lower level statistical unit than the former SFI collection. This has resulted in significantly better coverage and classification of in-scope activity than was achieved by the SFI, which collected and compiled information at the enterprise group level. Consequently, undercoverage adjustments based on data from the ITSS have been made back to 1986-87. Prior to this it is considered that undercoverage would have been minimal.

#### *(b) Commissions*

In the SFI, claims receivable were collected inclusive of commissions and other expenses receivable. Similarly, claims payable were collected inclusive of commissions and other expenses payable. The ITSS, however, identifies commissions and other expenses receivable and payable separately from claims. This has enabled commissions and other expenses receivable (credits) and payable (debits) to be included in insurance services credits and debits respectively, in accordance with inter-

national statistical standards. Previously, commissions and other expenses receivable were netted off against insurance services debits. Similarly, commissions and other expenses payable were netted off against insurance services credits. In order to separate commissions and other expenses from claims for periods prior to 1990-91 (when separate data on commissions were not collected), an analysis was undertaken of the relationships between ITSS data on commissions and other expenses receivable and premiums on general insurance payable; and ITSS data on commissions and other expenses payable and premiums on general insurance receivable. It was found that, on average, commissions and other expenses represented 15 per cent of premiums payable and receivable on general insurance over the period 1990-91 to 1993-93. This factor was applied to the estimates of general insurance premiums payable and receivable for earlier periods, as reported in the SFI, after adjustment for undercoverage. As a result of this change, the insurance services credit and debit series have been recompiled back to 1968-69, the earliest period for which estimates of insurance services have been produced.

#### *(c) Claims Receivable*

Because neither the SFI nor the ITSS approach Australian resident policy holders or non-resident insurers, neither survey is a good source of information on gross claims receivable on general insurance provided by non-residents to Australian resident policy holders. As a result, such claims have been significantly under-reported in the past. To address this problem, the ABS has developed a methodology, using information from the Insurance and Superannuation Commission (ISC), to estimate gross claims receivable on general insurance placed abroad. Under this methodology a premiums to claims ratio is derived, based on resident to resident transactions reported to the ISC, and then applied to outward general insurance premiums payable to non-residents. These estimates have now been incorporated into insurance services debits and undercoverage adjustments made back to 1976-77. Undercoverage is considered to have been minimal prior to this.

#### *(d) Timing Basis of Recording Premiums*

The ITSS collects information on an accruals basis (ie premiums earned) rather than on a due for payment basis, as was the case in the SFI collection. The accruals basis of recording conforms with the latest international standards for balance of payments statistics, as published in the Fifth Edition of the International Monetary Fund's Balance of Payments Manual. While the impact of this change cannot be quantified, it is not expected to be significant. It should be noted that measurement of premiums on an accruals basis requires an entry in the capital account reflecting that part of premiums paid/received but not yet earned. Reporting of this item is currently under investigation.

The overall impact on the current account deficit of these various changes in the measurement of insurance services is outlined in *Revisions* in the June 1994 issue of 5301.0, which was released on 29 July 1994.

(a) A minus sign means a decrease in credit entries (including exports fob), a decrease in debit entries (including imports fob), an increase in debit entries, an increase in credit entries or an increase in a deficit; and the absence of a sign means an increase in credit entries, an increase in debit entries or an increase in a surplus or a decrease in a deficit. (b) Balance of payments basis. (c) Annual reinvested earnings figures are allocated equally across the quarters resulting in the annual movement being reflected in the September quarter.

(a) Quarterly figures are derived from seasonally adjusted data. (b) The fixed-weighted indexes are derived by combining individual component prices (base year 1989-90=100) with weights which reflect the relative importance of the components in the base year. (c) Derived by dividing the implicit price deflator (IPD) for merchandise exports fob by the IPD for merchandise imports fob. (d) Derived by dividing the IPD for services, credits by the IPD for services, debits. (e) Derived by dividing the IPD for total imports of goods and services by the IPD for total exports of goods and services. (f) Derived by smoothing the terms of trade series using a tailored seven term Henderson moving average.

TABLE 18. MERCHANDISE IMPORTS (BALANCE OF PAYMENTS BASIS) — AT AVERAGE 1889-90 PRICES, SEASONALLY ADJUSTED

(a) These components are not seasonally adjusted. (b) Care should be exercised in using these seasonally adjusted series. The volatility of these imports makes reliable estimation of the weak seasonal pattern very difficult.

## EXPLANATORY NOTES

### Introduction

This publication provides detailed estimates of Australia's balance of payments for the June quarter 1994 together with revised estimates for previous quarters and financial years. Longer term estimates, from September quarter 1959, consistent with those shown in this issue, are available on request. A charge is made for this service.

2. Tables 1 to 6 in this publication provide summary statistics; they show the main aggregates and the more important components of these aggregates and include, in addition, trend estimates and percentage changes in the seasonally adjusted estimates of the current account. The remaining tables, Tables 7 to 37, provide additional breakdowns, related series (e.g. exchange rates and the trade-weighted index), reconciliations of selected balance of payments series with other series (i.e. with foreign trade statistics and levels of official reserve assets), historical data on selected balance of payments aggregates and other analytical information.

### Concepts, sources and methods

3. Descriptions of the underlying concepts and structure of the balance of payments and the sources and methods used in compiling the estimates are presented in *Balance of Payments, Australia: Concepts, Sources and Methods* (5331.0). The publication also provides item definitions; explanations of seasonal adjustment, constant price estimates, implicit price deflators and the terms of trade; and an analysis of the quality of the estimates.

### Commodity breakdowns of merchandise

4. Commodity breakdowns of merchandise exports are provided in Table 11 (at current prices), 13 (at average 1989-90 prices), 15 (at current prices, seasonally adjusted) and 17 (at average 1989-90 prices, seasonally adjusted). The groupings shown are based on the third revision of the United Nations Standard International Trade Classification (SITC Rev 3) as follows:

<i>Exports</i>	<i>SITC rev 3 Section or Division</i>
Rural —	
Meat & meat preparations	01
Cereal grains and cereal preparations	04
Sugar, sugar preparations & honey	06
Wool and sheepskins	21(part), 26(part)
Other rural	00, 02, 03, 05, 07 to 09, 12, 21(part), 22 to 25, 26(part), 29, 4
Non-rural—	
Metal ores & minerals	27, 28
Mineral fuels—	
Coal, coke and briquettes	32
Other mineral fuels	33 to 35

<i>Exports - continued</i>	<i>SITC rev 3 Section or Division</i>
Metals —	
Gold	95, 97
Other metals	67, 68
Machinery	71 to 77
Transport equipment	78, 79
Other manufactures	5, 61 to 66, 69, 8
Other non-rural	11, 93, 96, 98

Note: Division 98 is not part of the SITC. In the balance of payments it comprises confidential items, which are removed from the actual division and combined in Division 98 to prevent disclosure of their values.

5. Commodity breakdowns of merchandise imports are provided in Table 12 (at current prices), 14 (at average 1989-90 prices), 16 (at current prices, seasonally adjusted) and 18 (at average 1989-90 prices, seasonally adjusted). The three broad end-use categories - *Consumption goods*, *Capital goods* and *Intermediate and other goods* - are based on United Nations' Classification of Broad Economic Categories (BEC), but differ from the BEC to the extent that intermediate goods are combined with other goods. These broad end-use categories are further divided into a total of 26 SITC Rev 3-based commodity groupings, which have also been aligned to the BEC.

6. For more information on the commodity classification of merchandise imports, and a detailed concordance between balance of payments merchandise imports end-use categories, commodity groups, BEC and SITC Rev 3, refer to the Information Paper, *Change to Commodity Classification of Merchandise Imports in Balance of Payments Publications* (5344.0), released on 14 April 1994.

### Seasonal adjustment

7. Most of the current account series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation. However, seasonally adjusted statistics in this publication should not be regarded as in any way definitive as results from seasonal adjustment vary according to the method used.

8. The factors to be used in compiling seasonally adjusted estimates for certain series (principally components of merchandise trade and investment income) up to December quarter 1994 can be obtained, for \$65.00, from Mr Trevor Jolly on Canberra (06) 252 6820.

### Trend estimates

9. The trend estimates are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. Unlike the weights of the standard 7-term Henderson moving average, the weights employed here have been tailored to suit the particular characteristics of individual series. While the asymmetric weights enable trend es-

timates for recent quarters to be produced, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. Details of trend-cycle weighting patterns are available on request from the Supervisor, Time Series Analysis, on (06) 252 6345.

#### **Accuracy and reliability of estimates**

10. Because the transactions recorded in the balance of payments are of many different kinds, compilation of balance of payments estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness.

11. Therefore care should be exercised in the use and interpretation of estimates in this publication. The latest estimates are *preliminary and subject to revision* as more accurate data come to hand. Also, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.

#### **Investment income and capital transactions**

12. Additional information about capital account and investment income transactions is available in the quarterly publication *International Investment Position, Australia* (5306.0) and in the annual publication *International Investment Position, Australia* (5305.0). Statistics in international investment publications are consistent with those in balance of payments publications. International investment publications also provide comprehensive statistics on the level of foreign investment in Australia, the level of Australian investment abroad and Australia's external debt.

#### **Transportation transactions**

13. Additional information on freight and other transportation transactions is available on request for a charge from Mr Matthew Hardy on (06) 252 5738.

#### **Comparability with capital expenditure statistics**

14. Tables 12 and 16 in this publication contain current price estimates of *imports of capital goods*. Shorter-term movements in this series can differ quite significantly from the corresponding movements in the *new private capital expenditure on equipment, plant and machinery* series published in *Private New Capital Expenditure, Australia* (5625.0 and 5626.0). The main reasons for the differences are:

- The imports series includes all goods defined as capital goods, whereas the capital expenditure series relates only to goods classified as equipment, plant and machinery that are acquired by private enterprises in selected industries.
- The capital expenditure series includes all plant, machinery and equipment, irrespective of whether it has been imported or manufactured in Australia.
- Imports are valued f.o.b. at the point of export whereas estimates of capital expenditure are measured at domestic market prices, including international transport margins, government duties and domestic trade and transport margins.

15. Accordingly, while movements in imports of capital goods can provide an indication of movements in the *import component* of new private capital expenditure on equipment, plant and machinery, they do not necessarily provide an accurate indication of movements in total new private capital expenditure on these goods.

#### **Series available on request**

16. Detailed quarterly export and import series at constant (average 1989-90) prices can be obtained by contacting Mr Stephen Waugh on Canberra (06) 252 6716. These series are based on foreign trade statistics (ie they are not adjusted to a balance of payments basis) and relate to selected divisions and sections of the SITC rev 3. Quarterly tables showing components of services can also be obtained from Mr Waugh. These tables provide original and seasonally adjusted current and constant price estimates, corresponding to the series shown (in original current price terms) in Tables 22 and 23 of this publication. Both sets of estimates are working estimates only and may not always be completely consistent with published estimates.

#### **Related publications**

17. Other ABS publications which may be of interest include:

*Balance of Payments, Australia* (5301.0) - issued monthly

*Balance of Payments, Australia* (5303.0) - issued annually

*International Trade in Services, Australia* (5354.0) - issued annually

*Balance of Payments, Australia: Concepts, Sources and Methods* (5331.0)

*Information Paper - Change to Commodity Classification of Merchandise Imports in Balance of Payments Statistics* (5344.0)

*Information paper - Seasonal Adjustment of Australia's Monthly Balance of Payments Statistics* (5359.0)

*International Merchandise Trade, Australia* (5422.0) - issued quarterly

*Export Price Index, Australia* (6405.0) - issued monthly

*Import Price Index, Australia* (6414.0) - issued quarterly

*International Investment Position, Australia* (5305.0) - issued annually

*International Investment Position, Australia* (5306.0) - issued quarterly

*Foreign Investment, Australia: Summary of Concepts, Sources and Methods* (5355.0)

18. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

#### **Symbols and other usages**

fob	free on board

## For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

### Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

### National Dial-a-Statistic Line

0055 86 400

(Steadycom P/L premium rate 25c/21.4 secs.)

This number gives 24-hour access, 365 days a year for a range of statistics.

### Electronic Data Services

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS Office (see below).

### Bookshops and Subscriptions

There are over 400 titles of various publications available from ABS bookshops in all ABS Offices (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are provided by mail on a regular basis at no additional cost (telephone Publications Subscription Service toll free on 008 02 0608 Australia wide).
