(a) For the current account aggregates, a minus sign means an increase in a deficit, a decrease in a surplus, a decrease in exports or a decrease in imports; and the absence of a sign means a decrease in a deficit, an increase in a surplus, an increase in exports or an increase in imports. (b) Period averages.

September quarter 1996 —

GRAPH 1. CURRENT ACCOUNT MAIN AGGREGATES
trend estimates at current prices

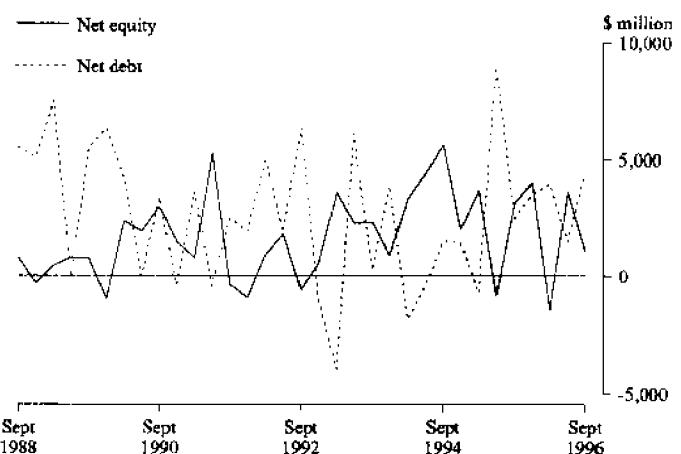

Partly offsetting these movements in income and services were a decrease of \$405 million (82 per cent) in the merchandise trade deficit (merchandise exports fell 1 per cent, while merchandise imports fell 3 per cent); and an increase of \$133 million (44 per cent) in the unrequited transfers surplus (unrequited transfers credits rose 15 per cent, while unrequited transfers debits rose 2 per cent).

Balance on capital account (not seasonally adjusted)

In original terms, the *balance on capital account* recorded a net inflow of \$5,679 million, an increase of \$665 million on the net inflow recorded in the June quarter. This change was the result of an increase of \$2,928 million in the net debt transactions, to a net inflow of \$4,449 million; and a \$271 million turnaround in net "other" transactions, from a net outflow to a net inflow of \$168 million. Partly offsetting these changes was a decrease of \$2,534 million in net equity transactions, to a net inflow of \$1,062 million.

GRAPH 2. CAPITAL ACCOUNT MAIN AGGREGATES

NOTES ON THE ESTIMATES

September quarter 1996—

Current account (seasonally adjusted)

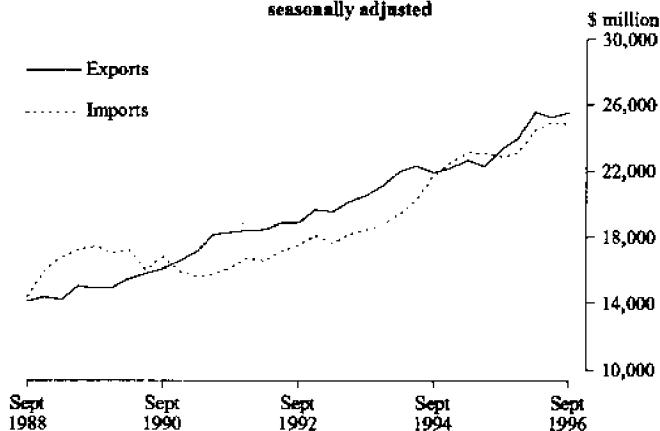

"Volume" refers to values at average 1989-90 prices and "price" refers to implicit price deflators.

Goods and services

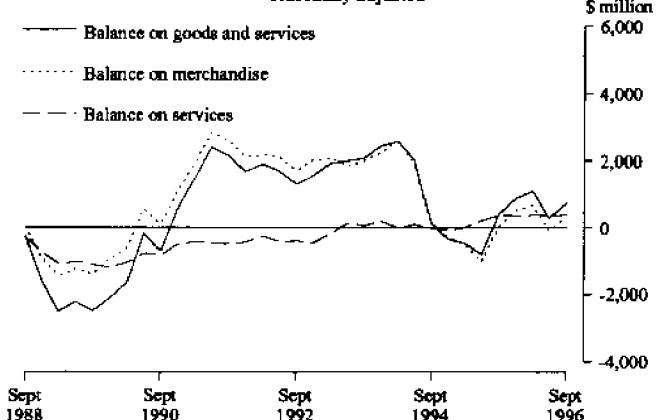

The *balance on goods and services* at current prices recorded a turnaround of \$360 million, from a deficit to a surplus of \$92 million, in the September quarter 1996. This was due to a decrease of \$405 million in the merchandise trade deficit, which was partly offset by a decrease of \$45 million in the net services surplus.

In volume terms, exports of goods and services rose \$294 million (1 per cent), while imports of goods and services fell \$147 million (1 per cent). The resulting increase of \$441 million in the surplus on goods and services made a positive contribution of 0.4 percentage points to growth in the September quarter 1996 expenditure based estimates of GDP at average 1989-90 prices. The balance on merchandise trade recorded a turnaround of \$414 million, from a deficit to a surplus, while the net services surplus rose \$27 million.

GRAPH 3. EXPORTS AND IMPORTS OF GOODS AND SERVICES
at average 1989-90 prices
seasonally adjusted

GRAPH 4. BALANCE ON GOODS AND SERVICES
at average 1989-90 prices
seasonally adjusted

Exports of merchandise

Exports of merchandise, at current prices, fell \$148 million (1 per cent) to \$18,767 million, as a result of a 2 per cent decrease in price and a 1 per cent increase in volume.

Rural exports, at current prices, rose \$25 million, as a result of a 1 per cent increase in volume and a marginal decrease in price. Increases were recorded in :

- sugar, up \$212 million (72 per cent), due to a 66 per cent increase in volume and a 3 per cent increase in price; and
- "other" rural exports, up \$68 million (3 per cent), due largely to a 4 per cent increase in volume.

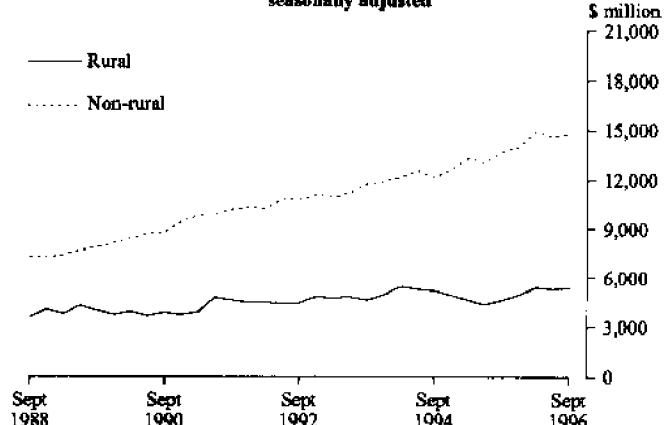

The most significant decreases were recorded in cereals, down \$196 million (14 per cent), due to an 18 per cent decrease in volume which was partly offset by a 6 per cent increase in price; and meat, down \$55 million (8 per cent), due to a 5 per cent decrease in volume and a 3 per cent decrease in price.

Non-rural exports, at current prices, fell \$173 million (1 per cent), as a result of a 2 per cent decrease in price and a 1 per cent increase in volume. The largest decreases were recorded in :

- metal ores and minerals, down \$109 million (5 per cent), due largely to a 6 per cent decrease in price;
- coal, coke and briquettes, down \$97 million (5 per cent), due to a 7 per cent decrease in volume which was partly offset by a 2 per cent increase in price; and
- "other" metals, down \$54 million (3 per cent), due to a 6 per cent decrease in price which was partly offset by a 2 per cent increase in volume.

The most significant increase was recorded in machinery, up \$131 million (8 per cent), due largely to a 9 per cent increase in volume.

GRAPH 5. MERCHANTISE EXPORTS
at average 1989-90 prices
seasonally adjusted

Services credits

Services credits, at current prices, rose \$109 million (2 per cent) to \$5,958 million, as a result of a 2 per cent increase in volume and a marginal increase in price. At current prices the increase was largely due to travel, up \$75 million (3 per cent).

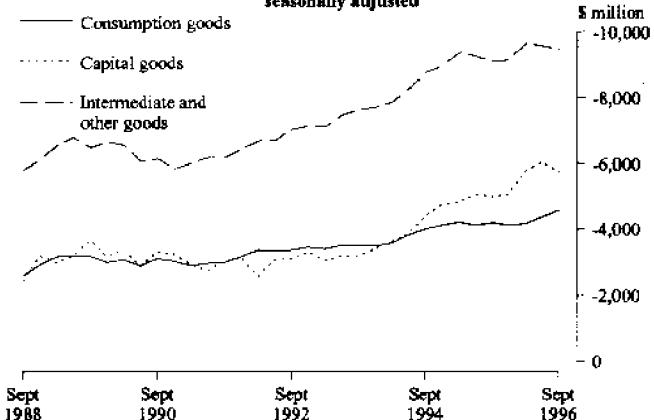

Exports implicit price deflator

The *implicit price deflator* (IPD) for total exports of goods and services fell 1.2 per cent between the June and September quarters. On a fixed-weighted basis, export prices fell 0.6 per cent, indicating that compositional change within exports of goods and services had a downward effect on the overall level of the IPD.

Imports of merchandise

Imports of merchandise, at current prices, fell \$553 million (3 per cent) to \$18,855 million, as a result of a 1 per cent decrease in volume and a 2 per cent decrease in price. Decreases were recorded in two of the three end-use categories: imports of *capital goods* fell \$490 million (10 per cent), due to a 5 per cent decrease in volume and a 5 per cent decrease in price; and imports of *intermediate and other goods* fell \$325 million (3 per cent) due to a 1 per cent decrease in volume and a 2 per cent decrease in price. Imports of *consumption goods* rose \$262 million (5 per cent), due to a 5 per cent increase in volume and a marginal increase in price.

GRAPH 6. MERCHANTISE IMPORTS
at average 1989-90 prices
seasonally adjusted

Decreases were recorded in 13 of the 26 commodity groups with the most significant being:

- fuels and lubricants, down \$296 million (25 per cent), due to a 23 per cent decrease in volume and a 2 per cent decrease in price;
- machinery and industrial equipment, down \$256 million (12 per cent), due largely to a 12 per cent decrease in volume;
- industrial transport equipment nes, down \$96 million (17 per cent), due largely to a 16 per cent decrease in volume; and
- telecommunications equipment, down \$60 million (13 per cent), due to a 5 per cent decrease in volume and an 8 per cent decrease in price.

The most significant increases were recorded in non-industrial transport equipment, up \$171 million (15 per cent), due to a 17 per cent increase in volume which was partly offset by a 2 per cent decrease in price; and textiles, clothing and footwear, up \$54 million (8 per cent), due largely to an 8 per cent increase in volume.

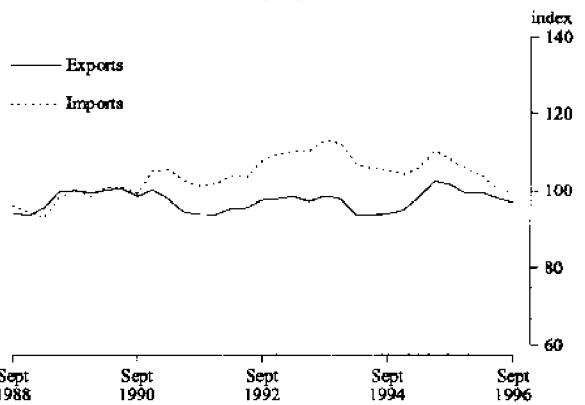

Services debits

Services debits, at current prices, rose \$154 million (3 per cent) to \$5,778 million, as a result of 1 per cent increases in both volume and price. At current prices, the increase was largely due to travel, up \$66 million (4 per cent); and "other" services, up \$88 million (7 per cent).

Imports implicit price deflator

The *implicit price deflator* (IPD) for total imports of goods and services fell 1.0 per cent. On a fixed-weighted basis, import prices fell 0.5 per cent, indicating that compositional change within imports of goods and services had a downward effect on the overall level of the IPD.

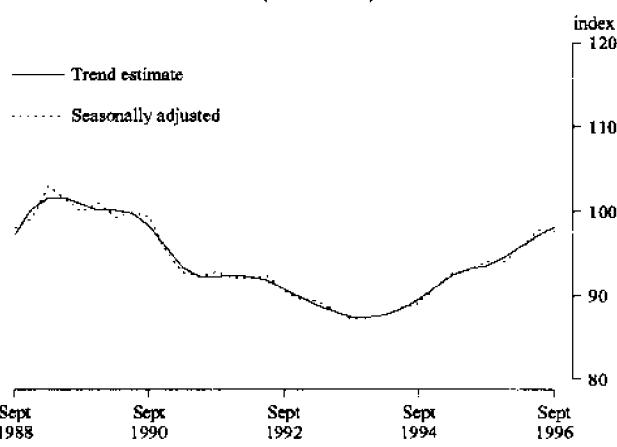

GRAPH 7. IMPLICIT PRICE DEFLATOR FOR GOODS AND SERVICES
based on seasonally adjusted data (1989-90=100)

Terms of Trade

Australia's seasonally adjusted *terms of trade* fell 0.2 per cent, resulting from a fall of 1.2 per cent in the IPD for exports of goods and services, and a fall of 1.0 per cent in the IPD for imports of goods and services. However, the trend estimate of the terms of trade increased for the eleventh quarter in a row.

GRAPH 8. TERMS OF TRADE FOR GOODS AND SERVICES
(1989-90=100)

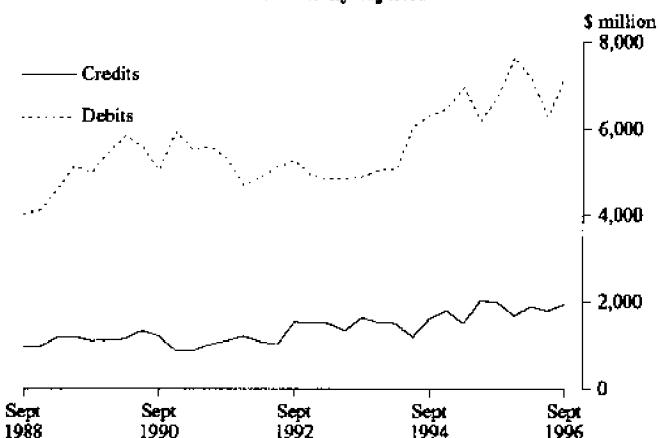

Income

The *net income* deficit rose \$787 million (18 per cent) to \$5,270 million. Income credits rose \$150 million (8 per cent) to \$1,941 million. In original terms, income credits rose \$180 million, mainly due to rises in both earnings on reserve assets and interest receivable on portfolio and other investment. Total income on direct investment abroad was virtually unchanged, with largely offsetting contributions to change in the distributed income and reinvested earnings components.

Income debits rose \$937 million (15 per cent) to \$7,211 million. In original terms, income debits rose \$901 million, largely reflecting increases in both income payable on direct investment in Australia and interest payable on general government borrowing.

GRAPH 9. INCOME CREDITS AND DEBITS - seasonally adjusted

Unrequited transfers

The *net unrequited transfers* surplus rose \$133 million (44 per cent) to \$434 million. Unrequited transfers credits rose \$149 million (15 per cent), while unrequited transfers debits rose \$16 million (2 per cent).

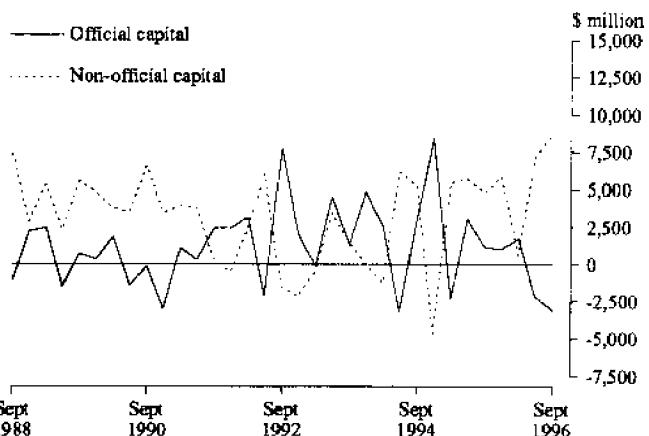

Capital account (not seasonally adjusted)

In original terms, the *balance on capital account* recorded a net inflow of \$5,679 million, an increase of \$665 million on the net inflow recorded in the June quarter. There was an increase of \$2,928 million in net debt transactions, to a net inflow of \$4,449 million; and a \$271 million turnaround, from a net outflow to a net inflow of \$168 million, in net "other" transactions. Partly offsetting these changes was a decrease of \$2,534 million in net equity transactions, to a net inflow of \$1,062 million.

By sector, the balance on capital account was composed of:

- a net outflow of \$3,097 million in official sector transactions, an increase of \$975 million on the net outflow recorded in the previous quarter; and
- a net inflow of \$8,776 million in non-official sector transactions, an increase of \$1,640 million on the net inflow recorded in the previous quarter.

GRAPH 10. NET CAPITAL TRANSACTIONS

The change in the *official sector* transactions resulted from:

- a decrease of \$697 million in general government transactions to a net outflow of \$206 million. This was mainly due to a turnaround of \$2,252 million recorded for borrowing domiciled abroad, from a net outflow to a net inflow of \$159 million (mainly attributable to State government borrowing domiciled abroad). This was partly offset by a \$1,487 million turnaround, from a net inflow to a net outflow of \$259 million in borrowing domiciled in Australia; and
- an increase of \$1,672 million in Reserve Bank transactions, to a net outflow of \$2,891 million, largely reflecting net purchases of reserve assets.

The *non-official sector* transactions were composed of:

- a net inflow of foreign investment in Australia of \$6,963 million, a decrease of \$1,452 million on the net inflow recorded in the June quarter; and
- a net inflow (withdrawal) of Australian investment abroad of \$1,813 million, a turnaround of \$3,092 million on the net outflow in the June quarter.

The chief factors responsible for the decrease in the net inflow of *foreign investment in Australia* in the *non-official sector* were:

- a turnaround of \$3,180 million in foreign portfolio investment in Australian corporate equities from a net inflow to a net outflow of \$1,561 million; and
- a \$2,196 million decrease in borrowing by the private sector from unrelated foreign lenders, to a net inflow of \$2,689 million.

The movements in these components were partly offset by:

- a turnaround of \$2,202 million in borrowing from related foreign lenders, from a net outflow to a net inflow of \$1,249 million;
- an increase of \$987 million in reinvestment of earnings, to a net inflow of \$1,650 million; and

- an increase of \$819 million in foreign direct investment in Australian corporate equities to a net inflow of \$1,014 million.

The chief factors responsible for the turnaround in *Australian investment abroad* of the non-official sector were:

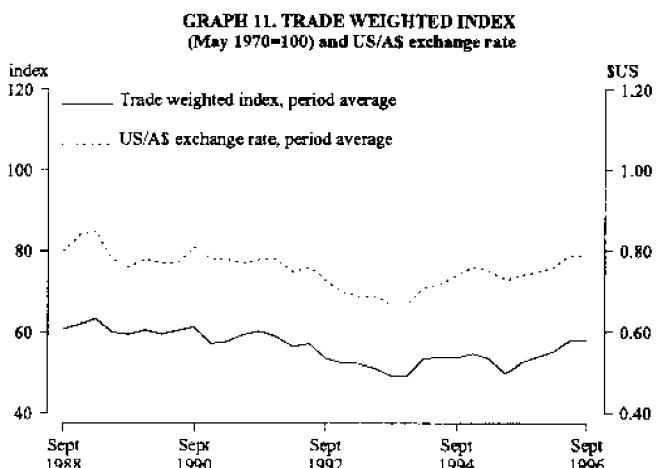

- a \$3,268 million decrease in lending to unrelated enterprises, to a net outflow of \$19 million;
- a \$956 million increase in lending to (or repayments of lending from) Australian direct investors by their direct investment enterprises abroad, to a net inflow of \$1,994 million; and
- a \$515 million disinvestment in Australian portfolio investment in foreign corporate equities, to a net inflow of \$808 million.

These movements were partly offset by a \$1,065 million turnaround in Australian direct investment in foreign corporate equities, from a net inflow to a net outflow of \$259 million; and a \$520 million increase in reinvestment of earnings, to a net outflow of \$590 million.

Balancing item (not seasonally adjusted)

Reflecting the outcomes on the current and capital accounts, the balancing item for the September quarter 1996 was a net inflow of \$480 million, a turnaround of \$1,294 million from the net outflow recorded in the June quarter. It should be noted that data underlying the balance of payments estimates for the most recent quarters are preliminary and subject to revision. It is likely that the volatility of the quarterly balancing item largely reflects differences in the time of recording both sides (i.e. the debit and credit entries) of each transaction.

Trade weighted index and US/A\$ exchange rates

Using period average exchange rates, the trade weighted index value of the Australian dollar for the September quarter was 57.9, down 0.2 per cent on the previous quarter. The Australian dollar fell 0.4 per cent against the US dollar to an average rate of 0.7884. The Australian dollar fell even more against the UK pound and Dmark, but rose

0.9 per cent against the Japanese yen to an average rate of 85.92 for the September quarter.

REVISIONS

Estimates in this publication are consistent with those published in the October 1996 issue of *Balance of Payments, Australia* (5301.0), which was released on 29 November 1996.

Table 33 shows revisions to current price original series, on an annual and quarterly basis, since the June quarter 1996 issue of this publication.

Note: revised seasonal adjustment

Commencing with this issue, data for the period from December quarter 1995 for dividends receivable by Australian investors on their direct investment equity holdings abroad are no longer seasonally adjusted. Since the last seasonal re-analysis was undertaken, the circumstances that have given rise to a six fold increase in the level of the series mean that the forward seasonal factors determined for this series are no longer applicable. The series may be seasonally adjusted in future once sufficient data become available to identify any new seasonal pattern.

CHANGES IN THIS ISSUE

Reclassification within services

Commencing with the September 1996 issue of the monthly publication *Balance of Payments, Australia* (5301.0), and now reflected in this quarterly issue, the classification of the agency and advertising services supplied to international transport operators has been changed. In past issues this series has been included in the miscellaneous services component of *other services*. From this issue, for both services credits and debits, these agency and advertising services are classified to the port services etc. component of *other transportation*.

This classification change has been made to ensure that the data reported by transport operators remain confidential to the ABS. The previous practice of the allocation of some of these data to *other services* was likely to make it increasingly difficult to protect the confidential data in both the *other transportation* and *other services* series. Bringing the confidential data together under the *other transportation* series ensures that confidentiality can continue to be maintained with series that will be consistent over time without the possible need to reaggregate different series with each new reference period.

The classification of agency and advertising expenses to *other transportation* is a recommendation of the fifth edition of the International Monetary Fund's *Balance of Payments Manual* (BPM5). Therefore the change made in this issue will not need to be revisited when the ABS implements BPM5 in balance of payments statistics from the September quarter 1997.

In line with the change to the publication, we have discontinued production of detailed component series for the earnings and expenses of international transport operators, previously available from the ABS as a special data service, to ensure confidentiality continues to be maintained.

Income and Capital account detail no longer available

From the September quarter 1996, the Survey of International Investment no longer collects separate details for certain income and capital account transactions. In Table 30, for both foreign direct investment in Australia and Australian direct investment abroad, the *Net equity in branches* is no longer separately identified and is included indistinguishably in *Corporate equities*. While the related remitted branch profits series in income credits (Table 26)

ceased to be separately available from the June quarter issue of this publication, the remitted branch profits series in income debits (Table 27) ceases to be separately available from this issue.

In Table 29, the net transactions by non-residents in *general government securities domiciled in Australia* can no longer be disaggregated into the separate purchases and sales transactions.

(a) Quarterly figures are derived from seasonally adjusted data. (b) The fixed-weighted indexes are derived by combining individual component prices (base year 1989-90=100) with weights which reflect the relative importance of the components in the base year. (c) Derived by dividing the implicit price deflator (IPD) for merchandise exports fob by the IPD for merchandise imports fob. (d) Derived by dividing the IPD for services, credits by the IPD for services, debits. (e) Derived by dividing the IPD for total exports of goods and services by the IPD for total imports of goods and services. (f) Derived by smoothing the terms of trade series using a tailored seven term Henderson moving average.

(a) Care should be exercised in using these seasonally adjusted series. The volatility of these exports makes reliable estimation of the weaker seasonal pattern very difficult. (b) From December quarter 1995, this component is not seasonally adjusted. (c) Care should be exercised in using this seasonally adjusted series. The seasonal pattern of this series is weak and its influence on the series is declining over time.

(a) The entries carry the opposite sign to corresponding entries in Tables 1 and 6. (b) These exchange rates and the trade-weighted index are derived using rates provided by the Reserve Bank of Australia in respect of each trading day. (c) These exchange rates and index numbers relate to the last trading day of the reference period. (d) These exchange rates and index numbers are derived by averaging figures for each trading day.

EXPLANATORY NOTES

Introduction

This publication provides detailed estimates of Australia's balance of payments for the September quarter 1996 together with revised estimates for previous quarters and financial years. Longer term estimates, from September quarter 1959, consistent with those shown in this issue, are available on request. A charge is made for this service.

2. Tables 1 to 6 in this publication provide summary statistics; they show the main aggregates and the more important components of these aggregates and include, in addition, trend estimates and percentage changes in the seasonally adjusted estimates of the current account. The remaining tables, Tables 7 to 35, provide additional breakdowns, related series (e.g. exchange rates and the trade-weighted index), reconciliations of selected balance of payments series with other series (i.e. with international trade statistics and levels of official reserve assets), historical data on selected balance of payments aggregates and other analytical information.

Concepts, sources and methods

3. Descriptions of the underlying concepts and structure of the balance of payments and the sources and methods used in compiling the estimates are presented in *Balance of Payments, Australia: Concepts, Sources and Methods* (5331.0). The publication also provides item definitions; explanations of seasonal adjustment, constant price estimates, implicit price deflators and the terms of trade; and an analysis of the quality of the estimates. Updated, but less detailed reference material is provided in the 1996 edition of *Balance of Payments, Australia: Summary of Concepts, Sources and Methods* (5351.0).

Commodity breakdowns of merchandise

4. Commodity breakdowns of merchandise exports are provided in Table 11 (at current prices), 13 (at average 1989-90 prices), 15 (at current prices, seasonally adjusted) and 17 (at average 1989-90 prices, seasonally adjusted). The groupings shown are based on the third revision of the United Nations Standard International Trade Classification (SITC Rev 3). For further details see Table 3 in the 1996 edition of *Balance of Payments Australia: Summary of Concepts, Sources and Methods* (5351).

5. Commodity breakdowns of merchandise imports are provided in Table 12 (at current prices), 14 (at average 1989-90 prices), 16 (at current prices, seasonally adjusted) and 18 (at average 1989-90 prices, seasonally adjusted). The three broad end-use categories - *Consumption goods*, *Capital goods* and *Intermediate and other goods* - are based on United Nations' Classification of Broad Economic Categories (BEC), but differ from the BEC to the extent that intermediate goods are combined with other goods. These broad end-use categories are further divided into a total of 26 SITC Rev 3-based commodity groupings, which have also been aligned to the BEC.

6. For more information on the commodity classification of merchandise imports, and a detailed concordance between balance of payments merchandise imports end-

use categories, commodity groups, BEC and SITC Rev 3, refer to the Information Paper, *Change to Commodity Classification of Merchandise Imports in Balance of Payments Publications* (5344.0), released on 14 April 1994.

Seasonal adjustment

7. Most of the current account series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation. However, seasonally adjusted statistics in this publication should not be regarded as in any way definitive as results from seasonal adjustment vary according to the method used.

8. The factors used in compiling seasonally adjusted estimates for certain series (principally components of merchandise trade, services and income credits) up to September quarter 1996 can be obtained, for \$75.00, from Melissa Marino on Canberra (06) 252 6419.

Trend estimates

9. The trend estimates are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. Unlike the weights of the standard 7-term Henderson moving average, the weights employed here have been tailored to suit the particular characteristics of individual series. While the asymmetric weights enable trend estimates for recent quarters to be produced, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. Details of trend-cycle weighting patterns are available on request from Philip Carruthers, Time Series Analysis Section, on (06) 252 6345.

Accuracy and reliability of estimates

10. Because the transactions recorded in the balance of payments are of many different kinds, compilation of balance of payments estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness.

11. Therefore care should be exercised in the use and interpretation of estimates in this publication. The latest estimates are *preliminary and subject to revision* as more accurate data come to hand. Also, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.

Investment income and capital transactions

12. Additional information about capital account and investment income transactions is available in the quarterly publication *International Investment Position, Australia* (5306.0) and in the annual publication *Balance of Payments and International Investment Position, Australia* (5363.0). Statistics in international investment publications are consistent with those in balance of payments publications. International investment publications also provide

comprehensive statistics on the level of foreign investment in Australia, the level of Australian investment abroad and Australia's external debt.

Transportation transactions

13. Additional information on freight and other transportation transactions is available on request for a charge from Chee Low on (06) 252 5738.

Comparability with capital expenditure statistics

14. Tables 12 and 16 in this publication contain current price estimates of *imports of capital goods*. Shorter-term movements in this series can differ quite significantly from the corresponding movements in the *new private capital expenditure on equipment, plant and machinery* series published in *Private New Capital Expenditure, Australia* (5625.0 and 5626.0). The main reasons for the differences are:

- The imports series includes all goods defined as capital goods, whereas the capital expenditure series relates only to goods classified as equipment, plant and machinery that are acquired by private enterprises in selected industries.
- The capital expenditure series includes all plant, machinery and equipment, irrespective of whether it has been imported or manufactured in Australia.
- Imports are valued f.o.b. at the point of export whereas estimates of capital expenditure are measured at domestic market prices, including international transport margins, government duties and domestic trade and transport margins.

15. Accordingly, while movements in imports of capital goods can provide an indication of movements in the *import component* of new private capital expenditure on equipment, plant and machinery, they do not necessarily provide an accurate indication of movements in total new private capital expenditure on these goods.

Series available on request

16. Detailed quarterly export and import series at constant (average 1989-90) prices can be obtained from Michael Morgan on Canberra (06) 252 6716. These series are based on foreign trade statistics (ie they are not adjusted to a balance of payments basis) and relate to selected divisions and sections of the SITC rev 3. Quarterly tables showing components of services can also be obtained from Michael Morgan. These tables provide original and seasonally adjusted current and constant price estimates, corresponding to the series shown (in original current price terms) in Tables 22 and 23 of this

publication. Both sets of estimates are working estimates only and may not always be completely consistent with published estimates.

Related publications

17. Other ABS publications which may be of interest include:

Balance of Payments, Australia (5301.0) - issued monthly

Balance of Payments and International Investment Position, Australia (5363.0) - issued annually
