## BALANCE OF PAYMENTS : QUARTERLY SUMMARY

SEPTEMBER QUARTER, 1962

This atatement provides a quarterly sumary of Australia's balance of payments for the years 1960-61, 1961-62 and the first querter of 1962-63. More comprehensive details for 1960-61 anc 1961-62 were published in "The Australian Balance of Paymenta 1957-58 to 1961-62".

These quarterly estimates are preliminary and subject to minor revisions. In addition, certain information is available only annualify, in particular results of the Survey of Oversea Investment. As this Survey provides most of the available information on private investment, all private capital movements for quarterly periods have been combined with the balancing item。 As details of the Survey for 1961-62 are not yet available, ali private capital movements for that year are similarly combined with the balancing i.tem. This item represents the difference between the monetary movements showr in the last line of the table and those attributed to all other current and capital items identified in the table.

The rise of $£ 39$ million in the apparent inflow shown for private capital and balancing item combined, which occurred between June and September quarter, is partly the result of a shift from an outflow of $\mathcal{E} 3$ million to ari inflow of $£ 17$ million in transactions by marketing authorities. Ir the main, this movement reflected transactions with Mainlend China in respect of meat credits. The net inflow attributed to undistributed income (which offsets corresponding amounts in investment income on current account) is also bigher than in the previous quarter:
