INTRODUCTION

Balance of Payments and International Investment Position, Australia is an annual publication presenting statistics on Australia's international accounts: its balance of payments and international investment position statistics. It amalgamates information that was published in three separate publications until 1992-93: *Balance of Payments, Australia* (ABS Catalogue No. 5303.0), *International Investment Position, Australia* (5305.0) and *International Trade in Services, Australia* (5354.0).

Included in the publication is an analysis of the latest annual statistics together with a commentary on trends in the major aggregates over the past 10 years, comprehensive tables, as well as some explanatory notes.

The statistics are generally presented as time series for the years 1989-90 to 1994-95 inclusive, together with some more detail for the 1994-95 data, particularly for country breakdowns.

The statistics shown are consistent with those published in the December quarter 1995 issues of *Balance of Payments, Australia* (5302.0) and *International Investment Position, Australia* (5306.0).

RELATIONSHIP BETWEEN BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT POSITION STATISTICS

Balance of payments statistics and international investment position statistics are closely related.

The Australian balance of payments is a statistical statement designed to provide a systematic record of economic transactions between residents of Australia and residents of other countries (non-residents of Australia). The balance of payments statement is divided into a current account and a capital account.

The *current account* records transactions between Australian residents and residents of other countries in merchandise, services, income and unrequited transfers.

The *capital account* records financial transactions involving the creation, extinction, growth or reduction of Australian residents' claims on, and liabilities to, residents of other countries.

The *international investment position* records the levels of Australia's foreign financial assets and liabilities at a particular date. It also records increases and decreases in these assets and liabilities as a result of capital transactions (including reinvestment of earnings), exchange rate variations and other revaluations and reclassifications.

The difference between the level of foreign financial assets and the level of foreign liabilities reflects Australia's *net international investment position* with other countries (the rest of the world).

Both balance of payments and international investment position statistics are derived from common data sources and use the same conceptual framework.

Capital transactions included in international investment position statistics are equivalent to the transactions measured in the capital account of the balance of payments.

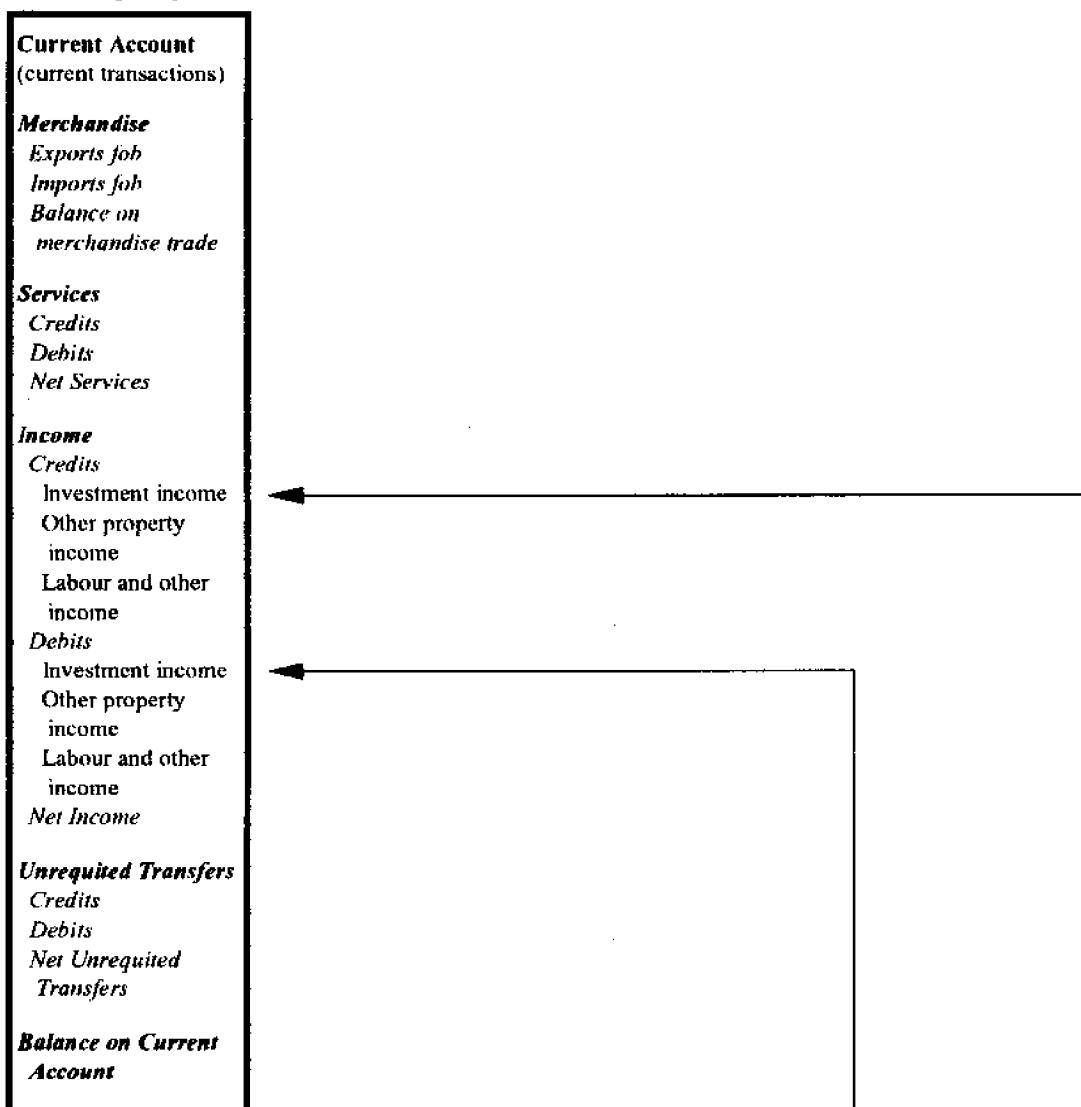

Income receivable on Australian investment abroad and income payable on foreign investment in Australia are equivalent to, respectively, the investment income credit and debit items included in the current account of the balance of payments.

As the balance of payments accounts are only concerned with transactions, the levels of foreign financial assets and liabilities and changes in those levels not due to capital transactions are excluded from the scope of these accounts. They are, however, captured in the international investment position summary table, which can be viewed as a reconciliation table, reconciling the changes in the levels of Australia's international assets and liabilities with capital transactions in the balance of payments.

The following table illustrates the relationship between balance of payments and international investment position statistics.

Relationship between the Balance of Payments and International Investment Position Statements

Balance of Payments

Level at Beginning of Period	Capital Account (capital transactions)	Exchange Rate Changes	Other Changes (other valuation changes, reclassifications, etc.)	Level at End of Period	Investment Income
Foreign investment in Australia	Foreign investment in Australia			Foreign investment in Australia	Income payable on Foreign investment in Australia
Australian investment abroad	Australian investment abroad			Australian investment abroad	Income receivable on Australian investment abroad
Net international investment position at beginning of period	Balance on Capital Account (net capital transactions)			Net international investment position at end of period	Net investment income

Balancing Item
(the sum, with sign reversed, of balance on capital account and balance on current account)

ANALYSIS OF RESULTS

Australia's Balance of Payments

Current Account (current transactions)

The current account deficit for 1994-95 increased by \$10,927 million (or 66 per cent), to \$27,581 million, compared with 1993-94. As a result, the current account deficit as a percentage of Australia's Gross Domestic Product (GDP) rose 2.2 percentage points, from 3.9 per cent in 1993-94 to 6.1 per cent in 1994-95.

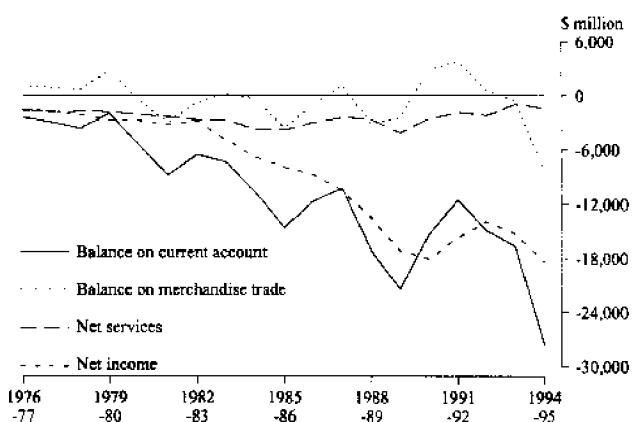

The increase in the current account deficit was caused by:

- an increase of \$7,693 million, to \$8,282 million, in the merchandise trade deficit;
- an increase of \$3,071 million, to \$18,354 million, in the net income deficit; and
- an increase of \$472 million, to \$1,432 million, in the net services deficit.

These results were partly offset by an increase of \$309 million, to \$487 million, in the net unrequited transfers surplus.

Historically, the direction of change in the current account balance largely reflects fluctuations in the balance on goods and services; more specifically the balance on merchandise trade. However, as can be seen in Graph 1, the level of the net income deficit has had a major impact on the actual level of the current account deficit, especially in the last 10 years. This relationship between the merchandise trade, income and current account balances continued in the 1994-95 year.

GRAPH 1: CURRENT ACCOUNT MAJOR AGGREGATES

When analysed by country, Australia's largest current account surpluses in 1994-95 were with Republic of Korea (\$3,594 million), Japan (\$2,600 million), New Zealand (\$1,979 million), Singapore (\$1,274 million), Hong Kong (\$1,187 million) and Indonesia (\$1,052 million). Its largest current account deficits were with the USA (-\$16,318 million), UK (-\$6,424 million), Germany (-\$4,154 million), international capital markets (-\$3,950 million, being net interest payable on securities issued on these markets), Sweden (-\$1,453 million) and Switzerland (-\$1,353 million).

In the ten years from 1984-85 to 1994-95, the current account balance has widened by \$16,903 million, from a

\$10,678 million deficit to a \$27,581 million deficit. The main contributor to the widening deficit has been the growing net income deficit, which increased \$11,562 million, from a net deficit of \$6,792 million to a net deficit of \$18,354 million.

The balance on goods and services recorded a deficit of \$9,714 million, up \$5,630 million, on the deficit of \$4,084 million recorded in 1993-94. This largely reflected a \$7,932 million increase in the deficit on merchandise trade.

Goods and Services

The *balance on goods and services* for 1994-95 recorded a deficit of \$9,714 million, a deterioration of \$8,165 million on the \$1,549 million deficit recorded in 1993-94.

Exports of goods and services rose \$4,010 million (5 per cent) in 1994-95, to \$86,371 million. *Merchandise exports* rose \$2,612 million (4 per cent), while *services credits* rose \$1,398 million (8 per cent).

The main destinations for *merchandise exports* in 1994-95 were: Japan (25 per cent), Republic of Korea (8 per cent), New Zealand (7 per cent), USA (7 per cent), Singapore (5 per cent) and Taiwan (5 per cent). The main destinations for *services exports* were: Japan (19 per cent), USA (11 per cent), UK (9 per cent), Singapore (6 per cent) and New Zealand (6 per cent).

Imports of goods and services rose \$12,175 million (15 per cent) in 1994-95, to \$96,085 million. The major contributor was *merchandise imports* which increased \$10,305 million (16 per cent), while *services debits* rose by \$1,870 million (10 per cent).

The main source countries for *merchandise imports* in 1994-95 were: USA (22 per cent), Japan (17 per cent), Germany (7 per cent), UK (6 per cent), the People's Republic of China (5 per cent) and New Zealand (5 per cent). The main source countries for *services imports* were: UK (16 per cent), USA (14 per cent), Japan (9 per cent), Singapore (6 per cent) and New Zealand (5 per cent).

In the ten years from 1984-85 to 1994-95 the *balance on goods and services* has fluctuated between a deficit of \$9,714 million in 1994-95 and a surplus of \$1,898 million in 1991-92.

Income

The net income deficit rose by \$3,071 million (20 per cent) in 1994-95, from a deficit of \$15,283 million, to a deficit of \$18,354 million. The rise reflected a \$4,787 million increase (23 per cent) in *income debits* which was partly offset by a \$1,716 million increase (30 per cent) in *income credits*.

The rise in *income credits* in 1994-95 was mainly due to a \$1,432 million increase (59 per cent) in reinvested earnings.

The main countries from which income was receivable in 1994-95 were: USA (27 per cent), UK (21 per cent), New Zealand (10 per cent) and Europe nes (8 per cent).

The rise in *income debits* in 1994-95 was mainly due to a \$2,686 million increase (75 per cent) in reinvested earnings.

The main countries to which income was payable in 1994-95 were: USA (25 per cent), UK (19 per cent), international capital markets (15 per cent) and Japan (11 per cent).

In the ten years from 1984-85 to 1994-95 the net income deficit has increased by \$11,562 million, from a net deficit of \$6,792 million, to a net deficit of \$18,354 million. *Income credits* have risen by \$5,635 million, while *income debits* have risen by \$17,197 million.

The largest contributors to both these increases were reinvested earnings and other property income.

Unrequited Transfers

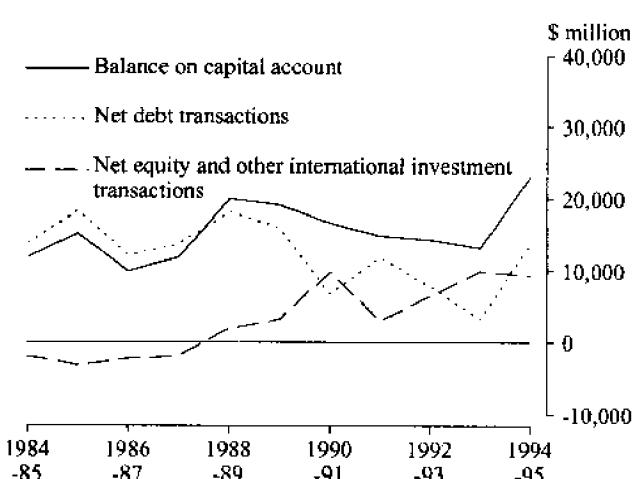

After three successive falls, the *net unrequited transfers* surplus rose \$309 million in 1994-95, to \$487 million. *Unrequited transfers credits* rose \$407 million (15 per cent), to \$3,209 million, while *unrequited transfer debits* rose \$98 million (4 per cent), to \$2,722 million.

Capital Account (capital transactions)

The *balance on capital account* for 1994-95 recorded a net inflow (surplus) of \$23,121 million, up \$9,937 million on the net inflow recorded in 1993-94. This change was the result of an increase of \$10,604 million, to \$13,796 million, in the net inflow from debt transactions and a turnaround of \$3,005 million, from a net outflow to a net inflow, from 'other' transactions. These movements were partly offset by a decrease of \$3,673 million, to \$7,028 million, in the net inflow from equity transactions.

In the ten years from 1984-85 to 1994-95 the *balance on capital account* has increased by \$11,189 million, from a net inflow of \$11,932 million to a net inflow of \$23,121 million. As shown in Graph 2, the instrument composition of this balance has varied over the period, with debt being the main form of financing except in 1990-91 and 1993-94 when equity dominated.

GRAPH 2: CAPITAL ACCOUNT MAJOR AGGREGATES

The inflow of foreign investment in Australia in 1994-95 was \$23,473 million, down \$5,487 million on the inflow recorded in 1993-94.

The main contributors to the decreased inflow of investment in Australia were:

- foreign portfolio investment in Australian corporate equities, down \$11,706 million (80 per cent) to \$2,932 million; and
- public sector portfolio borrowing, down \$2,972 million, from a net outflow of \$438 million to a net outflow of \$3,410 million.

These decreases were partly offset by increases recorded in most other instruments, the largest being:

- total borrowing by the official sector, up \$4,195 million to \$12,486 million;
- a turnaround of \$3,133 million, to a net inflow of \$2,789 million, in private sector borrowing from unrelated foreign lenders; and
- reinvestment of earnings, up \$2,686 million to \$6,256 million.

The largest inflows of foreign investment in Australia in 1994-95 came from international capital markets (\$11,533 million), USA (\$2,148 million) and UK (\$2,130 million). The largest withdrawal of investment (net outflows) was recorded for Singapore (\$919 million).

When analysed by industry, the largest inflows of investment were into government administration and defence (\$12,537 million), finance and insurance (\$6,039 million) and manufacturing (\$5,644 million). Net withdrawals of investment were recorded for a number of industries, the largest being retail trade (\$1,805 million).

The outflow of *Australian investment abroad* fell sharply in 1994-95, to \$353 million from \$15,777 million the year before.

The main contributors to the decreased outflow of Australian investment abroad were:

- a turnaround of \$5,134 million, to a net inflow (sales) of \$492 million, in Australian portfolio investment in foreign corporate equities;
- a turnaround of \$3,358 million, to a net inflow of \$1,547 million, in lending by the private sector to unrelated enterprises abroad;
- a turnaround of \$3,008 million, to a net inflow (run-down) of \$1,971 million, in reserve assets; and
- a turnaround of \$1,947 million, to a net inflow of \$461 million, in accounts receivable/prepayments made (mainly due to the public sector).

These decreases were partly offset by an increase of \$1,432 million, to a net outflow of \$3,866 million, in reinvestment of earnings.

The largest outflows of Australian investment abroad in 1994-95 were to the UK (\$1,728 million), New Zealand (\$1,437 million) and Europe nes (\$1,053 million). The largest withdrawals of investment (inflows) were recorded for Japan (\$3,479 million) and USA (\$2,103 million).

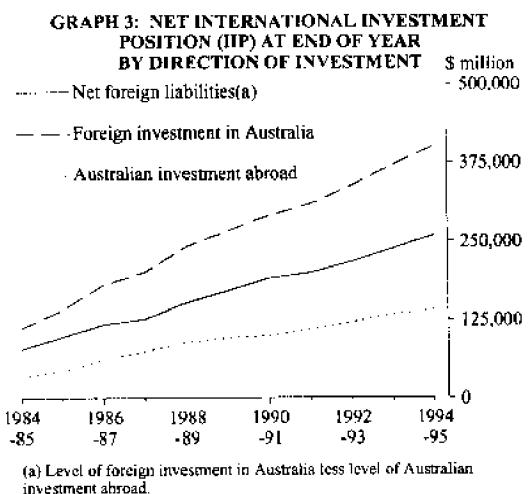

When analysed by industry, for which data are only available for Australian direct investment abroad, the largest outflows of investment were into printing, publishing and

recorded media (\$1,852 million); and finance and insurance (\$1,838 million).

Australia's International Investment Position

Net Foreign Liabilities

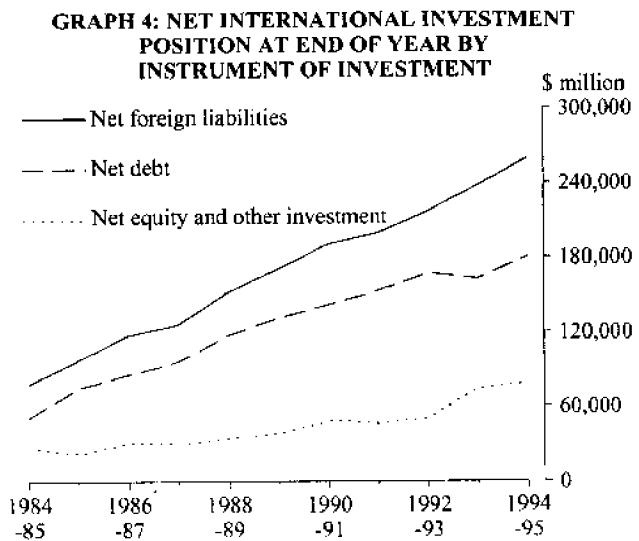

Australia's net international investment position represents the difference between the level of foreign investment in Australia (liabilities) and the level of Australia's investment abroad (assets).

At 30 June 1995, Australia had *net foreign liabilities* of \$259,717 million. As shown in Graph 3, this compares with net foreign liabilities of \$77,858 million a decade earlier.

Instrument Composition of Net Foreign Liabilities

As indicated in Graph 4, the mid 1980's saw a rapid change in the composition of Australia's *net foreign liabilities*. The *net foreign debt* share of Australia's net foreign liabilities increased 24 percentage points from the end of 1983-84 to the end of 1985-86 when it reached 78 per cent. After seven years of remaining relatively constant between 73 and 77 per cent, the net foreign debt share dropped 8 percentage points during 1993-94 before increasing by 1 percentage

point during 1994-95. At the end of 1994-95, net foreign debt comprised 70 per cent of Australia's net foreign liabilities. Net equity and other investment, accounted for the remaining 30 per cent.

Net Foreign Debt

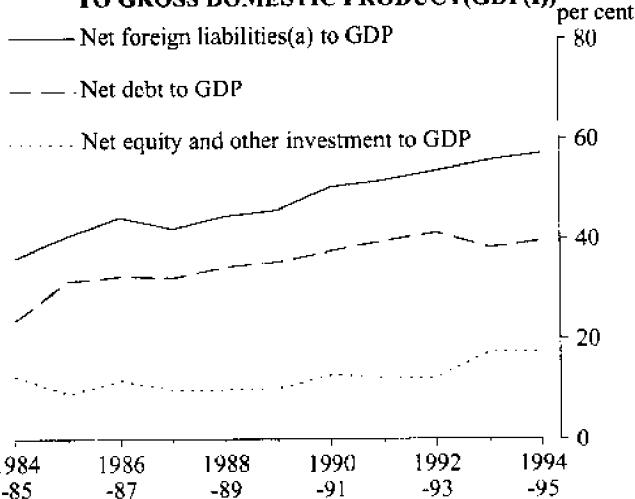

Australia's net foreign debt, at \$180,590 million at 30 June 1995, was over three times higher than the level recorded a decade earlier when it was \$51,208 million. At 30 June 1985, the *official sector* was a net borrower from the rest of the world, with net borrowing liabilities of \$1,260 million. At the end of 1994-95 the level of net foreign debt for that sector reached \$54,665 million. This was an increase of \$13,514 million over the previous year.

The non-official sector's level of net foreign debt rose steadily, from \$49,948 million at 30 June 1985, to reach a peak of \$130,350 million at 30 June 1992, before declining to \$121,864 million at 30 June 1994. During 1994-95 the level rose by \$4,060 million to \$125,924 million. Within the non-official sector, financial enterprises have been responsible for the biggest increase in net foreign debt over the decade, their net liabilities rising from \$10,374 million at 30 June 1985 to \$77,052 million at 30 June 1995.

Ratio of Net Foreign Liabilities to Gross Domestic Product (GDP)

The *ratio of net foreign liabilities to Gross Domestic Product (GDP)* was 36 per cent in 1984-85, while the *net debt ratio* was 24 per cent and *net equity and other investment ratio* was 12 per cent. By 30 June 1995, these ratios had risen to 57 per cent, 40 per cent and 17 per cent respectively. This growth in Australia's net foreign liabilities as a proportion of GDP largely reflects the high balance of payments current account deficits over the decade and the slow to moderate growth in GDP over the five years to June 1995.

GRAPH 5: RATIO OF NET FOREIGN LIABILITIES TO GROSS DOMESTIC PRODUCT(GDP)

(a) Net international investment position.

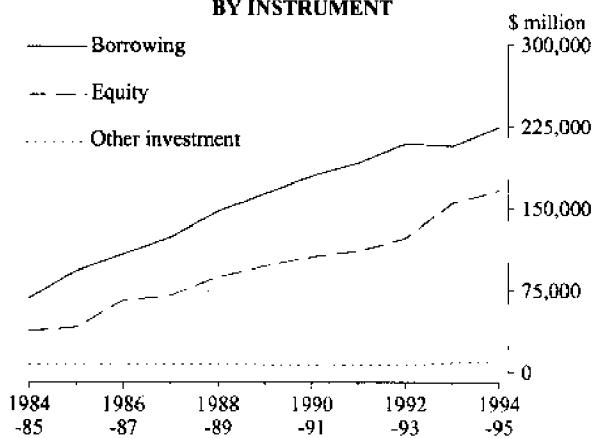

Levels of Foreign Investment in Australia

The *level of foreign investment in Australia* reached \$400,943 million at 30 June 1995. The *official sector* accounted for \$74,972 million, or 19 per cent, of the total level of investment. The *non-official sector* accounted for the remaining \$325,972 million. Of the investment in the non-official sector, \$128,607 million (39 per cent) was direct investment, mainly in the form of corporate equities, and \$197,364 million (61 per cent) was portfolio and other investment, mainly in the form of borrowing.

Of the non-official sector's foreign liabilities at 30 June 1995, 46 per cent was accounted for by debt while equity and other investment accounted for the remaining 54 per cent. This was the second time in a decade that equity and other investment accounted for the majority of the non-official sector's foreign liabilities, the first being 1993-94.

As shown in Graph 6, *borrowing* (\$223,927 million) continued to be the main form of foreign investment in Australia, representing 56 per cent of the total level of investment at 30 June 1995. This was the same as its contribution to the total a year earlier. The proportion of foreign investment in equity (\$166,222 million) fell by 1 percentage point to 41 per cent at 30 June 1995.

**GRAPH 6: FOREIGN INVESTMENT IN AUSTRALIA,
LEVELS OF INVESTMENT AT END OF YEAR
BY INSTRUMENT**

The USA was the leading *investor country* at 30 June 1995 with \$88,649 million (22 per cent) of the total stock of investment, followed by the UK with \$76,034 million and Japan with \$50,913 million. The level of borrowing raised on the international capital markets (e.g. Eurobonds and similar issues) was \$76,329 million at 30 June 1995.

When analysed by the predominant *industry* of the enterprise group receiving investment funds, the level of foreign investment was highest in the finance and insurance

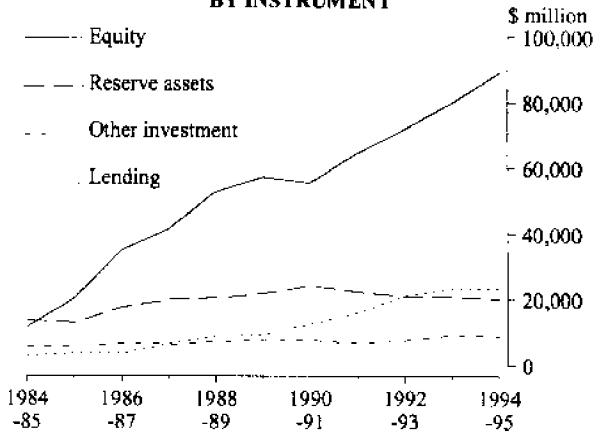

category with \$132,608 million (33 per cent). This was followed by manufacturing, \$76,426 million; government administration and defence, \$74,765 million; mining, \$37,995 million; and wholesale trade, \$25,891 million.

Levels of Australian Investment Abroad

The *level of Australian investment abroad* reached \$141,226 million at 30 June 1995. The official sector accounted for \$22,949 million, or 16 per cent, of the total level of investment. The non-official sector accounted for the remaining \$118,277 million. Of the investment by the non-official sector, \$52,492 million (44 per cent) was direct investment, mainly in the form of corporate equities, and \$65,785 million was portfolio and other investment, also predominantly corporate equities.

As shown in Graph 7, equity (\$89,151 million) has been the main form of Australian investment abroad since 1985-86 and it represented 63 per cent of the total level of investment at 30 June 1995. This was 3 percentage points up on its contribution to the total a year earlier.

**GRAPH 7: AUSTRALIAN INVESTMENT ABROAD,
LEVELS OF INVESTMENT AT END OF YEAR
BY INSTRUMENT**

Australian investment abroad was most substantial in the USA, with a level of \$35,683 million (25 per cent), followed by the United Kingdom with \$27,709 million, New Zealand with \$10,746 million and Japan with \$8,718 million.

Industry data for Australian investment abroad, which are only available for direct investment, reflect the predominant industry of the enterprise group abroad receiving the funds. At 30 June 1995, the largest industry group receiving Australian direct investment was manufacturing with \$19,786 million (38 per cent), followed by finance and insurance with \$19,287 million and mining with \$7,481 million.

INTERNATIONAL COMPARISON OF BALANCE OF PAYMENTS STATISTICS

There are two frequently used methods of comparing balance of payments statistics of different countries.

The first method compares the absolute size of certain key balance of payments aggregates for selected countries over time. This comparison allows analysis of the absolute size and trends in the direction of key aggregates. The method involves converting the relevant aggregates for each country from the unit of currency in which the data are normally presented, into a chosen common unit of account. This is done by use of a particular currency (often the US dollar) or a chosen weighted average of foreign currencies (often the SDR).

The second method expresses each country's aggregates as proportions of its gross domestic product (GDP) or gross national product (GNP). These ratios place the country's balance of payments developments in the context of the size of the country's economic activity. This is a comparison in domestic currency terms; movements over time in the ratios may in part be affected by differences in the impact of exchange rate variations on the numerator and denominator series.

Care should always be exercised in the use and interpretation of international statistical comparisons. An important qualification is that, despite the fact that countries tend to follow international recommendations for the compilation of balance of payments statistics, differences still occur between countries in concepts, coverage, data sources and collection methods. For example, a significant coverage difference occurs when comparing current account balances because some countries (including Australia, United Kingdom, Germany and the United States) follow the international recommendation that reinvested earnings should be included in the statistics, while most countries do not.

Current account balances in US dollars for selected countries

The table below shows the current account balance for Australia and nine of its trading partners (both including and excluding reinvested earnings) for the last 15 years. These balances have been converted into US dollars at quarterly period average exchange rates.

INTERNATIONAL COMPARISON OF CURRENT ACCOUNT BALANCES(a)(b)
\$US '000 million

Year	Australia (c)	United States	United Kingdom	Germany (d)	France	Italy	Japan	Canada	New Zealand	Korea (e)

(a) A minus sign indicates a deficit on current account. (b) The source for all countries except Australia and Korea is *OECD (Main Economic Indicators)* March 1996. (c) Australia's current account balance has been converted to US dollars using quarterly period average exchange rates. (d) The statistics for Germany refer to western Germany (Federal Republic of Germany before the unification of Germany) before 1990-91, and to the unified Germany since 1990-91. (e) The statistics for Korea refer to the Republic of Korea (South) and are obtained from the *IMF Balance of Payments Statistics Yearbook*.

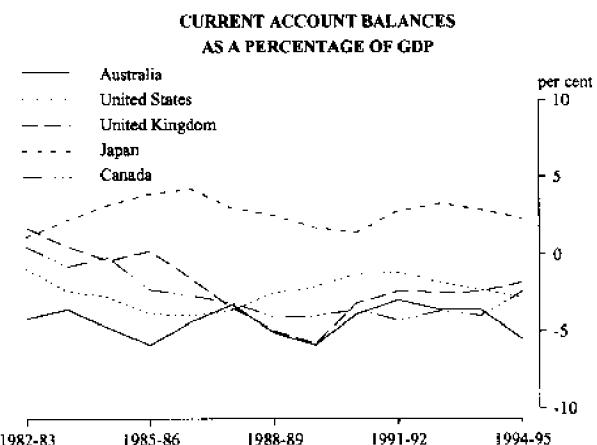

For the years selected, Australia and New Zealand are the only countries to record a current account deficit in each year. A number of major industrial countries also record deficits in most years. When reinvested earnings are excluded, deficits have been recorded in all but one year for both the United States (1980-81) and Canada (1982-83); the United Kingdom has moved from a surplus position for most years through 1985-86 to a deficit position since; and France, Italy and Korea have shown deficits in most years. In contrast Germany and Japan have maintained a surplus in most years, though Germany, since reunification, has shown a deficit position for the last four financial years.

Current account balances as a percentage of GDP for selected countries

In 1994-95, Australia's deficit on current account (including reinvested earnings) was -6.1 per cent of GDP. Australia's ratio from 1980-81 is compared with the corresponding ratios for a selection of countries in the table below.

For the years selected, Australia has recorded the highest average ratio, -4.4 per cent (excluding reinvested earnings), of the countries recording current account deficits. The comparable average percentages for the other countries shown in the table that have also recorded current

account deficits are: Canada, -2.5; the United States, -2.1; Korea, -1.8; the United Kingdom, -1.4; New Zealand, -1.0; Italy, -0.6; and France, -0.3. In contrast, the average percentages for Japan and Germany, which have recorded current account surpluses, are 2.4 and 1.3, respectively.

AUSTRALIA'S INTERNATIONAL TRANSACTIONS IN COMPUTER MERCHANDISE, SERVICES AND ROYALTIES

Introduction

This article looks at Australia's international transactions in computer merchandise, services and royalties. It first provides a definition of international computer merchandise, services and royalties transactions, and, associated with this, issues of scope and classification are discussed. The article then looks at the sources of information and finishes with an analysis of recent estimates of Australia's computer related transactions with other countries.

The discussion and statistics presented are concerned with all international transactions that fall under the scope of computer merchandise, services and royalties and not just those activities undertaken by businesses that are generally regarded as belonging to the computer industry.

Definition

For the purposes of this article, *computer merchandise* is defined as computer hardware, computer parts and recorded computer disks and tapes. *Computer services* are defined as data processing, software implementation and computer consultancy services. *Computer royalties* are defined as payment by one party to another for the rights to use or distribute intangible computer assets, such as software, where ownership of the asset is not transferred to the acquiring party.

The definition of transactions used in this article is the same definition as that used in Australia's balance of payments. In the balance of payments, a transaction occurs when something of economic value is provided by a resident to a non-resident (export) or by a non-resident to a resident (import).

There are two main definitional issues that require discussion. The first is an issue of scope and it concerns those transactions that are closely related to transactions in computer merchandise, services and royalties but fall outside the scope of these transactions. The second issue is the classification of transactions that fall within the scope of transactions in computer merchandise, services and royalties but exhibit the traits of more than one of these categories. Both of these issues are discussed in more detail below.

Issues of Scope

The scope of transactions in computer merchandise, services and royalties excludes, conceptually, computer hardware or software that form an integral part of other merchandise or services. For example, a car may contain one or more computers; however, transactions in the intermediate computer goods embodied in cars fall outside the scope of computer merchandise, services and royalties transactions. Similarly, the scope of computer related transactions will exclude, for example, software which is provided by an accounting firm to a client as part of an accountancy consultancy; it will be counted in with the value of the accounting service.

Closely related to this is the practical problem associated with "bundling". "Bundling" refers to the combination of goods and services or the combination of several different services. When the different goods or services cannot be separately valued, payments or receipts are classified to the service or good which accounts for the majority of the value of the transaction. Thus, in certain instances, estimates of transactions in computer merchandise and services provided later in this article may include transactions in other commodities while, in other instances, the estimates may exclude transactions in computer merchandise and services that have been "bundled" with other transactions.

Computer hardware and software delivered by (to) non-residents to (by) Australian owned entities with long term foreign presence, such as a foreign branch or subsidiary of an Australian company, are excluded from the scope of this article as they are outside the scope of balance of payments transactions. However, services delivered by a parent company to its branch or subsidiary, or vice versa, are in scope, provided that one party is a resident and the other a non-resident.

Issues of Classification

While, conceptually, there is a clear distinction between transactions in computer merchandise, services and royalties, in practice it is not always a straightforward matter to apply these classifications.

To illustrate this, consider an export sale that involves the provision of a computer disk. The disk may have nothing written on it; or it may contain a piece of "off the shelf" software; or it may contain a special piece of software developed for a particular client; or it may hold a master copy of software which when copied and used will earn royalties for its author.

The "empty" computer disk would be classified as a good and included in merchandise trade. Likewise, the disk holding the "off the shelf" software, where the combination of the tangible and intangible properties would generally be packaged as the one item, would also be regarded as a merchandise transaction.

On the other hand, where the disk holds a specially developed piece of software, by far the greater value generally lies with the intangible element which represents the design and development undertaken for a client. The disk is merely the means of carrying the software to its implementation in another system. Payments and receipts for this type of transaction would therefore be predominantly classified as a transaction in services, with only a small amount recorded in merchandise trade to reflect the physical value of the disk.

Similarly, where the disk holds a master copy of a piece of software for subsequent copying under licence agreements, the greater value again lies with the intangible

element which represents future royalties earnings for the author of the software. Payments and receipts for the right to use the software would be predominantly classified as transactions in royalties on computer software.

Sources of Information

There are two main sources of information on Australia's international transactions in computer merchandise, services and royalties. These are international merchandise trade statistics and the International Trade in Services Survey (ITSS).

International merchandise trade statistics provide information on quantities and values of goods which cross the Australian customs frontier. These statistics are, in turn, derived from the customs recording system and are available monthly.

International merchandise trade statistics are the main source for the merchandise (including computer merchandise) items in the balance of payments. A number of adjustments, however, are made to international merchandise trade statistics in order to compile information on a balance of payments (or change of ownership) basis. Details of these adjustments can be found in *Balance of Payments, Australia: Concepts, Sources and Methods* (5331.0).

Merchandise in balance of payments and international merchandise trade statistics is classified by, among other things, country and commodity. The United Nations' *Standard International Trade Classification*, third revision (SITC Rev3), provides a commodity dimension to international merchandise trade statistics. Computer merchandise is defined as SITC group 752 (computer hardware) plus SITC item 75997 (computer parts) plus part of SITC group 898 (recorded computer disks and tapes). For the purpose of this article, unrecorded computer disks and tapes are not included as they are not separately identifiable from other types of unrecorded disks and tapes.

The ITSS is a survey conducted by the ABS. The ITSS obtains details of international trade in services and royalties, including those relating to computer services. Information from the ITSS is classified by country and by industry of the Australian business unit undertaking the transaction, as well as by commodity.

Analysis of Recent Estimates

Table A presents information on Australia's international transactions relating to trade in computer merchandise, services and royalties for 1992-93, 1993-94 and 1994-95.

In this article, computer services and royalties are analysed together. While in the balance of payments the former is a service item and the latter an income item, it is considered more useful to combine the two when analysing international computer transactions.

The main features to note are the large value of imports compared to all other computer related transactions; the growth in exports of computer merchandise; and the turnaround in net computer services and royalties, from a deficit to a surplus.

Imports of computer merchandise in 1994-95 were \$5,611 million, an increase of \$779 million, or 16 per cent on the 1993-94 figure. They constituted about 8 per cent of Australia's total merchandise imports in 1994-95. Exports of computer merchandise rose \$171 million, or 14 per cent, between 1993-94 and 1994-95, although in total these exports contributed only about 2 per cent of Australia's merchandise exports in 1994-95. Since 1992-93 the net computer services and royalties balance has turned around from a deficit of \$16 million to a surplus of \$12 million in 1994-95.

As Table A shows, transactions in computer services and royalties are much smaller than those for computer merchandise. The relative contribution of computer services and royalties credits to total computer related exports is significant but has declined in recent years. In 1992-93

Table A: International Transactions in Computer Merchandise, Services and Royalties

(\$A million)

	1992-93		1993-94		1994-95

<i>Total computer services and royalties</i>	<i>304</i>	<i>-320</i>	<i>388</i>	<i>-387</i>	<i>368</i>	<i>-356</i>
Total	1,113	-4,480	1,574	-5,219	1,725	-5,967

(a) International trade basis. (b) Includes all commodities in the Standard International Trade Classification (SITC) group 752. (c) Includes all commodities in the SITC item 75997. (d) Includes commodities in part of SITC group 898. (Unrecorded computer disks and tapes have not been included as they are not separately identifiable from other types of unrecorded disks and tapes). (e) Includes services related to computer software such as systems analysis, design, programming and maintenance and consultancy services related to computer hardware and software. (f) Includes transactions in royalties, franchise fees, licence fees, distribution fees etc on computer software.

exports of computer services and royalties credits were \$304 million, or 27 per cent of total computer related exports. In 1994-95, exports of computer services and royalties credits, at \$368 million, contributed 21 per cent of total computer related exports. Imports of computer services and royalties debits, at \$356 million were slightly lower than exports of computer services and royalties credits in 1994-95, and formed only 6 per cent of total computer related imports.

In 1994-95, exports of computer services and computer royalties credits accounted for 2 per cent of total exports of services and royalties, while imports of computer services and computer royalties debits accounted for 2 per cent of total imports of services and royalties.

Country Analysis of Computer Merchandise, Services and Royalties Transactions

As mentioned above, information obtained from international merchandise trade statistics and the ITSS can be classified by country. Information from the ITSS can also be classified by the broad industry of the Australian business unit receiving or providing the service, based on

the 1993 edition of the Australian and New Zealand Standard Industrial Classification (ANZSIC).

As Table B shows, for transactions in computer merchandise in 1994-95, \$3,426 million (or 61 per cent) of imports were attributable to *OECD countries*, with the *USA* (\$2,115 million) being the single largest source. Other significant sources were *Japan* (\$725 million) and the *UK* (\$214 million). The *OECD countries* were also the main recipients of Australian exports of computer merchandise, taking \$820 million (or 60 per cent) of these exports. Of this amount, exports valued at \$260 million were shipped to *New Zealand*, \$246 million to the *USA* and \$177 million to *Japan*.

For transactions in computer services and royalties in 1994-95, \$293 million (or 80 per cent) of credits and \$343 million (or 96 per cent) of debits were attributable to *OECD countries*. Of these, credits of \$167 million and debits of \$266 million were recorded with the *USA*. Large flows were also recorded with the *UK* (credits of \$64 million and debits of \$23 million), *Japan* (credits of \$30 million and debits of \$24 million) and *New Zealand* (credits of \$22 million)

(a) Includes reinvested earnings of direct investors. (b) As a result of a change in the methodology used to value non-equity securities issued on foreign capital markets, levels of borrowing from 30 June 1992 are not strictly comparable with levels for earlier periods. The change in methodology accounts for -\$971 million of the amount shown as 'other changes' in 1991-92. (c) Entries for *Investment income* carry the opposite sign to corresponding entries in Tables 17 and 50. (d) These entries carry the opposite sign to corresponding entries in Tables 1, 3, 51, 56 and 63. In this table, the absence of a sign denotes an increase in Australian investment abroad. A negative sign denotes a decrease in Australian investment abroad. (e) As a result of a change in the methodology used to value non-equity securities issued on foreign capital markets, levels of lending from 30 June 1992 are not strictly comparable with levels for earlier periods. The change in methodology accounts for \$2 million of the amount shown as 'other changes' in 1991-92. (f) Net international investment position equals foreign investment in Australia less Australian investment abroad. (g) Foreign borrowing by Australian residents less the sum of reserve assets and Australian lending abroad. (h) As a result of a change in the methodology used to value non-equity securities issued on foreign capital markets, levels of net foreign debt from 30 June 1992 are not strictly comparable with levels for earlier periods. The change in methodology accounts for -\$973 million of the amount shown as 'other changes' in 1991-92.

TERMS OF TRADE (BASE 1989-90 = 100.0)						
Merchandise trade (b)	100.0	94.2	91.2	88.6	86.5	91.2
Services (c)	100.0	98.5	98.6	93.3	92.8	92.6
<i>Goods and services (d)</i>	<i>100.0</i>	<i>94.8</i>	<i>92.3</i>	<i>89.3</i>	<i>87.7</i>	<i>91.6</i>

(a) The fixed-weighted indexes are derived by combining individual component prices (base year 1989-90 = 100) with weights which reflect the relative importance of the components in the base year. For further details see *Balance of Payments, Australia: Concepts, Sources and Methods* (ABS Catalogue No. 5331.0), page 30.

(b) Derived by dividing the implicit Price Deflators (IPD) for merchandise exports fob by the IPD for merchandise imports fob. (c) Derived by dividing the IPD for services, credits by the IPD for services, debits. (d) Derived by dividing the IPD for total exports of goods and services by the IPD for total imports of goods and services.

(a) From 1990-91 entries for categories are not strictly comparable with entries for earlier periods, due to changed confidentiality embargo procedures applied in the compilation of certain merchandise trade statistics. (b) From 1990-91 changed arrangements applied to the classification of government imports. As a result, categories are not strictly comparable with those for earlier periods. (c) Definitions of the component series are given in the ABS Information Paper, *Change to Commodity Classification of Merchandise Imports in Balance of Payments Publications* (ABS Catalogue No. 5344.0).

(a) Entries in this table carry the opposite sign to corresponding entries in Tables 1, 3, 51, 56 and 63. In this table, the absence of a sign denotes an increase in Australian investment abroad. A negative sign denotes a decrease in Australian investment abroad. (b) As a result of a change in methodology used to value non-equity securities issued on foreign capital markets, levels from 30 June 1992 are not strictly comparable with levels for earlier periods.

(a) Includes deposits by non-residents with the Reserve Bank which are classified by the ABS as foreign borrowing. (b) For definition of domiciled in Australia and domiciled abroad; see paragraph 4.35 of *Foreign Investment Australia: Summary of Concepts, Sources and Methods* (\$355.0). (c) As a result of a change in methodology used to value non-equity securities issued on foreign capital markets, levels from 30 June 1992 are not strictly comparable with levels for earlier periods.

(d) Excludes the Reserve bank.

Total all industries	39,488	38,365	43,554	45,653	47,783	52,492

(a) The industry categories shown are based on the 1993 edition of ANZSIC and relate to the predominant activity of the enterprise group receiving the investment funds. This is not necessarily the industry of the end use of the funds, see paragraphs 4.36 to 4.39 of *Foreign Investment Australia: Summary of Concepts, Sources and Methods* (5355.0). (b) These entries carry the opposite sign to corresponding entries in Tables 3, 51, and 56. In this table, the absence of a sign denotes an increase in Australian investment abroad. A negative sign denotes a withdrawal of Australian investment abroad. (c) Levels of investment are at 30 June of each year.

TABLE 32. RESERVE BANK — ASSETS
(\$ million)

OPEC	948	516	576	56	830	405

(a) AFRICA NES includes Algeria, Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Cape Verde, Central African Republic, Chad, Comoros, Congo (Brazzaville), Djibouti, Egypt, Equatorial Guinea, Eritrea, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea - Bissau, Ivory Coast, Kenya, Lesotho, Liberia, Libya, Madagascar, Malawi, Mali, Mauritania, Mauritius, Morocco, Mozambique, Namibia, Niger, Nigeria, Reunion Island, Rwanda, Sao Tome & Principe, Senegal, Seychelles, Sierra Leone, Somalia, St Helena, Sudan, Swaziland, Tanzania, Togo, Tunisia, Uganda, Western Sahara, Zaire, Zambia and Zimbabwe.

AMERICA NES includes Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Falkland Islands, French Guiana, Guyana, Paraguay, Peru, St Pierre & Miquelon, Suriname, Uruguay and Venezuela.

ASIA NES includes Afghanistan, Armenia, Azerbaijan, Bahrain, Bangladesh, Bhutan, British Indian Ocean Territory, Brunei, Burma (Myanmar), Cambodia, East Timor, Georgia, India, Iran, Iraq, Kuwait, Israel, Jordan, Kazakhstan, Democratic People's Republic of Korea, Kyrgyzstan, Laos, Lebanon, Macao, Maldives, Mongolia, Nepal, Oman, Pakistan, Qatar, Saudi Arabia, Sri Lanka, Syria, Tajikistan, Turkmenistan, United Arab Emirates, Uzbekistan, Vietnam and Yemen.

EUROPE NES includes Albania, Austria, Azores, Belarus, Bosnia/Herzegovina, Bulgaria, Croatia, Czech Republic, Cyprus, Denmark, Estonia, Faeroe Islands, Finland, Gibraltar, Greenland, Hungary, Iceland, Latvia, Lithuania, Macedonia, Malta, Moldova, Norway, Poland, Portugal, Romania, San Marino, Slovak Republic, Slovenia, Spain, Turkey, Ukraine and Yugoslavia.

OCEANIA NES includes American Samoa, Australian Antarctic Territory, Canton & Enderbury Islands, Caroline Islands, Christmas Island (Aust - Indian Ocean), Christmas Island (British - Pacific), Cocos (Keeling) Islands, Cook Islands, Fanning Island, French Polynesia, French Southern & Antarctic Territory, Gardner Island, Guam, Johnston & Sand Islands, Kiribati, Marianas Islands, Marquesas Islands, Marshall Islands, Midway Islands, Nauru, New Caledonia, Niue, Norfolk Island, Ocean Islands, Pacific Islands nei, Pitcairn Island, Western Samoa, Solomon Islands, Tahiti, Tokelau, Tonga, Trust Territory of Pacific Islands, Tuvalu, Vanuatu, Wake Island, Wallis & Futuna Islands and Washington Island.

APEC includes Brunei, Canada, Chile, China, Peoples' Republic of, Hong Kong, Indonesia, Japan, Republic of Korea, Malaysia, Mexico, New Zealand, Papua New Guinea, Philippines, Singapore, Taiwan, Thailand and United States of America. China, Hong Kong and Taiwan are included from 1991-92 onwards. Mexico and Papua New Guinea are included from 1993-94 onwards. Chile is included in 1994-95 only.

ASEAN includes Brunei, Indonesia, Malaysia, Philippines, Singapore and Thailand.

EU includes Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and United Kingdom. Austria, Finland and Sweden are included in 1994-95 only.

OECD includes Andorra, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Japan, Liechtenstein, Luxembourg, Mexico, Monaco, New Zealand, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom and United States of America. Mexico is included in 1994-95 only.

OPEC includes Algeria, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates and Venezuela.

(b) Includes Andorra and Monaco. (c) Prior to 1990-91, the former Germany. Democratic Republic is included in Europe nes. (d) The remaining republics of the former USSR have been included in either Europe nes or Asia nes from 1992-93 onwards. (e) Includes Liechtenstein.

See Table 33 for footnotes (a) to (e). (f) Gold held by the Reserve Bank as part of reserve assets that cannot be allocated by country. (g) These entries carry the opposite sign to the corresponding entries in Tables 1, 3, 51, 56 and 63. In this table, the absence of a sign denotes a net increase in Australian investment abroad. A negative denotes a net withdrawal of investment.

(a) As a result of a change in methodology used to value non-equity securities issued on foreign capital markets, levels from 30 June 1992 are not strictly comparable with levels for earlier periods. (b) The definition of direct investment (and as a consequence the scope of portfolio and other investment) changed from 1985-86 and therefore entries from that year are not strictly comparable with entries for previous years; see paragraphs 4.12 to 4.22 of *Foreign Investment in Australia: Summary of Concepts Sources and Methods* (5355.0). (c) Prior to 30 June 1980, foreign investment in Australian corporate equities and Australian direct investment abroad in corporate equities are measured at paid-up value; Australian portfolio investment abroad is measured on a variety of bases including paid-up value. Levels of total investment are not available prior to this date due to the different bases used to value corporate equities and other instruments (the latter are generally measured at market value). From 30 June 1980, all corporate equities are valued at market value. (d) Prior to 30 June 1980, corporate equities excludes non-participating preference shares which were included in borrowing/lending. From 30 June 1980, corporate equities include non-participating preference shares which are excluded from borrowing/lending. (e) Prior to 30 June 1980, direct investment borrowing/lending by banks are included in portfolio and other investment. (f) Prior to 30 June 1980, public sector trading banks are included in the private sector. Also, before that time, some public finance leases are included in the private sector. (g) From 30 June 1985, figures for official reserve assets are not fully comparable with earlier data due to changes in the Reserve Bank's accounting procedures. (h) A negative value denotes an excess of borrowing by direct investors in Australia from their direct investment groups abroad over lending by direct investors in Australia to their direct investment groups abroad. (i) As a result of changes in data sources levels of 'portfolio and other investment, and accounts receivable/prepayments made' at 30 June 1988 are not strictly comparable with levels data for earlier periods. The change in source accounts for \$656 million in the levels of investment at 30 June 1988. (j) Foreign borrowing by Australian residents less the sum of reserve assets and Australian lending abroad.

(a) As published in the December quarter 1995 issue of *Australian National Accounts: National Income, Expenditure and Product* (ABS Catalogue No. 5206.0). (b) Sales are defined as private final consumption expenditure on goods plus private gross fixed capital expenditure on dwellings, non-dwelling construction and equipment plus public gross fixed capital expenditure plus exports of non-rural goods. (c) These series carry the opposite sign to the corresponding series in the main tables of this publication. (d) Data for the years prior to 1981-82 are not available.

Japanese yen	113.27	107.60	100.97	84.22	73.52	70.35
Special drawing right	0.5958	0.5656	0.5580	0.4982	0.4944	0.4972
Trade-weighted index of value of the Australian dollar (May 1970=100) —						
<i>End of year (b)(e)</i>	61.6	59.7	55.2	49.5	53.0	48.4
<i>Period average (d)</i>	60.0	58.9	58.2	52.3	51.4	52.8

(a) These exchange rates and the trade-weighted index are derived using rates provided by the Reserve Bank of Australia in respect of each trading day.

(b) These exchange rates and index numbers relate to the last trading day of the reference period. (c) The rate for \$US is a representative mid-point determined by the Reserve Bank on the basis of market quotations at 4pm Eastern Australian time. Rates for other currencies are calculated by crossing the rate for the US dollar with the mid-points of closing buying and selling rates largely in Asian markets. (d) These exchange rates and index numbers are derived by averaging figures for each trading day. (e) The index is calculated at 4pm on the last trading day of the year on the basis of the representative rate for the US dollar and rates for other currencies, mainly from Asian markets.

EXPLANATORY NOTES

Introduction

This annual publication presents comprehensive details of Australia's international accounts: its balance of payments and international investment position statistics. It amalgamates information that was published in three separate publications until 1992-93: *Balance of Payments, Australia* (ABS Catalogue No. 5303.0); *International Investment Position, Australia* (5305.0); and *International Trade in Services, Australia* (5354.0). It is primarily a reference document, and more timely estimates are available in various monthly and quarterly publications listed below under related publications.

Concepts, sources and methods

2. Descriptions of the underlying concepts and structure of the balance of payments and international investment position statistics and the sources, methods and terms used in compiling the estimates are presented in *Balance of Payments, Australia : Concepts, Sources and Methods* (5331.0).

3. Further elaboration of the concepts, structure and definitions used in international investment position statistics are presented in *Foreign Investment, Australia: Summary of Concepts, Sources and Methods* (5355.0).

4. The following basic principles guide the compilation of Australia's balance of payments and international investment statistics:

- balance of payments statistics cover transactions between residents of Australia and residents of other countries;
- international investment position statistics cover the levels (stock) of foreign financial assets and liabilities at a given point in time; increases and decreases in these assets and liabilities as a result of capital transactions (investment flows); and other changes in value of these assets and liabilities;
- merchandise transactions are recorded at the time ownership changes; services are recorded when the service is performed; income is recorded when due for payment; and capital transactions are recorded at the time ownership changes or the asset or liability is created or extinguished; and
- transactions and levels are recorded at market value. Data recorded in foreign currencies are converted to their Australian dollar equivalent at the appropriate exchange rate.

5. The concept of merchandise, in the balance of payments context, is one of movable goods changing ownership between residents of Australia and residents of the rest of the world. The merchandise items in the balance of payments are predominantly based on ABS international merchandise trade statistics which comprise statistics on quantities and values of goods which cross the Australian customs frontier. Although international merchandise trade statistics are the source for the merchandise items in the balance of payments, they often do not conform to the required balance of payments basis in terms of coverage, valuation and timing. A number of adjustments are made

to the statistics to compensate for these differences. These adjustments are shown in Table 9 in the publication.

Presentation

6. Tables in this publication have been grouped under several headings:

- balance of payments and international investment position summary tables;
- detailed goods and services tables;
- detailed income, transfers and investment tables;
- country tables;
- historical balance of payments and international investment position tables;
- supplementary tables; and
- standard error tables.

In addition to providing summary statistics on Australia's balance of payments and international investment position, the tables also provide details of international merchandise trade, international trade in services, unrequited transfers, capital transactions and associated levels of investment. Tables reconciling levels of investment at the beginning and end of a period are provided in order to show the relationship between capital transactions included in the balance of payments and the international investment position.

7. Related ABS publications which may be of interest include:

Balance of Payments, Australia (5301.0) - issued monthly

Merchandise Imports (Balance of Payments Basis), Australia (5320.0) - issued monthly

Export Price Index, Australia (6405.0) - issued monthly

Import Price Index, Australia (6414.0) - issued monthly

Balance of Payments, Australia (5302.0) - issued quarterly

International Investment Position, Australia (5306.0) - issued quarterly

International Merchandise Trade, Australia (5422.0) - issued quarterly

Overseas Arrivals and Departures, Australia (3402.0) - issued quarterly

Australian National Accounts: Financial Accounts (5232.0) - issued quarterly

Australian National Accounts, National Income, Expenditure and Product (5204.0) - issued annually

Balance of Payments, Australia: Concepts, Sources and Methods (5331.0)

Foreign Investment, Australia: Summary of Concepts, Sources and Methods (5355.0)

Australian National Accounts: Concepts, Sources and Methods (5216.0)

Prices of these publications are available from any ABS office on request.

8. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogues and Release Advice are available from any ABS office.

Unpublished information

9. Additional data on Australia's balance of payments and international investment position, including more detailed breakdowns of international trade in services and investment classified by country and industry, are also available on request. A charge may be made for providing these services.

10. Inquiries about the standard release service or about other information should be made to the persons whose names appear in the Inquiries box at the front of this publication, or to Information Services in your nearest ABS Office.

Symbols and other usages

11. The following symbols, where shown in columns of figures or elsewhere in tables, mean:

na	data not available
nec	not elsewhere classified
nei	not elsewhere included

nes	not elsewhere specified
np	not for publication
nya	data not yet available
..	not applicable
-	nil or rounded to zero

12. All values, unless otherwise indicated, are shown in Australian dollars rounded to the nearest million.

13. Where figures have been rounded, discrepancies may occur between the sums of the component items and totals.
