OVERSEAS TRADE

1966-67

BULLETIN NO. 64

Prepared under instructions from the Right Honourable the Treasurer by

K. M. ARCHER
COMMONWEALTH STATISTICIAN

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS
CANBERRA, AUSTRALIA

PREFACE

Basic documents

Overseas trade statistics are derived from documents obtained under the Customs Act by the Department of Customs and Excise, and compiled by the Commonwealth Bureau of Census and Statistics. These documents are duplicate copies of export and import entries submitted by exporters and importers or their agents to the Department of Customs and Excise. Certain items for which customs entries are not required are excluded from the statistics.

2. Export entries show date and port of shipment, country of consignment and the description, quantity (where required) and value of the goods. Prior to July 1966 the statistical item number was inserted and verified by officers of the Department of Customs and Excise in Canberra. As from July 1966 the statistical item number has been inserted by the exporter or his agent and verified by officers of the Department of Customs and Excise in the local offices of the Collectors of Customs.

3. Import entries show date and port of entry, country of origin, description of goods, quantity (where required), value of the goods and amount of duty paid thereon. The tariff item number under which the goods are admitted and the statistical key code are inserted by the importer or his agent, and these are verified by officers of the Department of Customs and Excise in the local offices of the Collectors of Customs.

Scope of the statistics

General

4. All goods moving into or out of Australia are recorded in overseas trade statistics except those listed in paragraph 5. The statistics are not confined to goods which are the subject of a commercial transaction. The area to which all overseas trade statistics issued by this Bureau apply is the whole of the Commonwealth of Australia, comprising the State of New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania, the Northern Territory and the Australian Capital Territory. Non-contiguous territories under Australian administration are treated as outside countries, and trade transactions between Australia and those non-contiguous territories are part of the overseas trade of Australia. Such transactions are shown separately, i.e. the trade of Australia with each particular area is separately recorded and tabulated.

Inclusions and exclusions

5. (a) Imports and exports on government account including defence equipment are treated as normal transactions and are an integral part of overseas trade statistics.
- (b) Direct transit trade, i.e. goods being transhipped or moved through Australia for purposes of transport only, is not recorded.
- (c) Outside packages (containers, crates, etc.) are included as a separate item in the tabulation of imports but they have only been fully classified by country of origin since 1950-51. For exports, however, the value recorded for each item includes the value of the outside package.
- (d) Bunkers and stores supplied to vessels and aircraft have been excluded from export statistics since 1906. The quantity and value of these stores shipped during the year 1966-67 is shown in Table 28.
- (e) Those migrants' and passengers' effects for which a customs entry is not received are excluded from imports and exports.
- (f) Those parcels post imports and exports of small value for which customs entries are not received are excluded from overseas trade statistics.
- (g) Certain materials for intergovernmental defence projects for which customs entries are not required are excluded from imports.
- (h) The value of ores and concentrates imported and exported includes the value of the gold content and the latter is not recorded in imports and exports of gold. However, Table 25 shows estimates of the quantity of gold and other metals contained in ores and concentrates exported from Australia.

- (i) Vessels and aircraft engaged in the transport of passengers or goods between Australia and other countries are excluded from imports and exports.
- (j) Vessels and aircraft purchased for use on overseas routes are excluded from imports and any subsequent overseas sales of such vessels and aircraft are excluded from exports.
- (k) Fish and other sea products landed abroad directly from the high seas by Australian vessels are excluded from exports.

Period covered by the statistics

Exports

6. These are recorded statistically in the month in which the export entries are passed by the Department of Customs and Excise. Normally this is within a few days of shipment although delays sometimes occur in the lodging of entries. Shipments are at times delayed by abnormal factors affecting sales, deliveries for export and the loading of ships. When such delays occur, exports during the affected period are diminished and when the delays are overtaken shipments include substantial quantities of accumulated stocks as well as current disposals. Wool shipments in any trade year may be materially affected by the time spread of wool auctions which normally end in July. The carry-over of shipments varies from year to year. New season's wheat normally becomes available for shipment from December onwards, and the quantity shipped in any trade year (ending June) depends on the size of the crop, the time spread of sales for export, and physical factors affecting the scheduling of deliveries.

Imports

7. Imports are recorded statistically in the month in which import entries are passed by the Department of Customs and Excise. Normally this is within a few days of discharge of cargoes.

General

8. Since July, 1914, detailed trade statistics have been compiled for financial years (July to June). Prior to that, details were compiled on a calendar year basis.

Valuation

9. Commencing with Bulletin No. 62, 1964-65 values in the Overseas Trade Bulletin have been expressed in \$A. Prior to this values were expressed in £(Aust.) except for imports into Australia which, up until 15 November, 1947, were recorded in British currency values. Full explanatory notes on the methods of recording import values before and since 15 November, 1947, were included in Overseas Trade Bulletin No. 45, 1947-48 and *Official Year Book* No. 37, page 396.

10. All values in overseas trade statistics are determined on a 'free on board (f.o.b.) port of shipment' basis. This means that all charges, in particular the cost of freight and insurance, incurred after the goods have been exported from the port of shipment are excluded. Only transport and service charges incurred, or usually incurred, prior to export are included in the determination of trade values.

11. The procedure adopted to value imports and exports is as follows:

Exports. The recorded value of goods exported includes the cost of containers and outside packages and has been determined, since July 1937, as follows:

- (a) Goods sold to overseas buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price at which the goods were sold.
- (b) Goods shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are dispatched for sale.

An account of the bases of valuation in operation prior to July 1937 is given on page 469 of *Official Year Book* No. 39.

Imports. The recorded value of goods imported is the amount on which duty is payable or would be payable if the duty were *ad valorem*. Value for duty is the f.o.b. port of shipment equivalent of either:

- (a) the actual price paid or to be paid by the Australian importer plus any special deduction (transactions value); or
- (b) 'the current domestic value' of the goods; whichever is the higher.

'Current domestic value' is defined as, 'the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country.'

The cost of containers and outside packages is excluded from the value of individual import items but is included as a separate item in the tabulation of imports.

Quantity data

12. Where quantities are shown they are generally, but not invariably expressed in terms of the normal trade unit. Where 'cental' is used, the unit is equivalent to 100 lb. avoirdupois. Quantities are not tabulated in respect of statistical items for which there is no appropriate unit of quantity (for example, a statistical item which covers a number of commodities that cannot be recorded under a uniform unit of quantity).

Statistical concepts of trade

Trade Systems

13. There are two generally accepted systems of recording overseas trade statistics, namely (a) special trade and (b) general trade. The Statistical Office of the United Nations defines the two systems as follows:

'System of Trade. Two systems of recording trade are in common use, differing mainly in the way warehoused and re-exported goods are recorded.

- (a) *Special Trade.* Special imports are the combined total of imports directly for domestic consumption (including transformation and repair) and withdrawals from bonded warehouses or free zones for domestic consumption. Special exports comprise exports of national merchandise, namely, goods wholly or partly produced or manufactured in the country, together with exports of nationalized goods. (Nationalized goods are goods which, having been included in special imports, are then exported without transformation).
- (b) *General Trade.* General imports are the combined total of imports directly for domestic consumption and imports into bonded warehouse or free zone. General exports are the combined total of national exports and re-exports. Re-exports, in the general trade system, consists of the outward movement of nationalized goods plus goods which, after importation, move outward from bonded warehouse or free zone without having been transformed.

Direct transit trade, i.e. goods merely being transhipped or moving through the country for purposes of transport only, is excluded from the statistics of both special and general trade'.

14. Statistics in this bulletin are compiled on the 'General Trade' basis; imports on a 'Special Trade' basis are published in the bulletin *Imports Cleared for Home Consumption* issued annually.

15. Australian produce (national produce) is defined as goods, materials or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only repair or minor operations which leave them essentially unchanged.

16. Re-exports are defined as goods, materials or articles originally imported which are exported in the same condition in which they were imported, and goods, materials or articles originally imported which are exported after undergoing repair or minor operations which leave them essentially unchanged.

'Minor operations' include blending, packaging, bottling, cleaning, sorting, husking and shelling.

Merchandise and Non-merchandise Trade

17. Total trade is divided into merchandise and non-merchandise trade. Merchandise trade is the equivalent of total imports and exports less certain items specified as non-merchandise. Prior to July 1965 non-merchandise trade consisted of imports and exports of specie and gold and silver. In July 1965 merchandise and non-merchandise trade were redefined in accordance with international standards recommended by the United Nations and since that date non-merchandise items include commodities such as gold, legal tender, decorations, trophies, samples, passengers' personal effects, military equipment and stores for Australian Forces abroad, goods for the use of diplomatic and consular representatives, goods imported with the intention of being re-exported, goods exported with the intention of being re-imported, etc. A complete description of these commodities is contained in the Australian Export and Import Commodity Classifications published by the Bureau.

Balance of Payments Basis

18. Statistics of exports and imports for balance of payments purposes are derived by making certain adjustments, relating both to scope and valuation, to statistics of merchandise exports and imports. Statistics on the adjusted basis are published in statistical bulletins relating to the balance of payments. The adjustments include the following: imports are adjusted for the overall excess of recorded value for duty over the actual selling price to the importer; exports and imports of goods for repair and return and the value of repairs are deducted from merchandise trade; exports and imports of ships and aircraft for use on overseas routes, certain imports of defence equipment, and other trade items for which customs entries are not required are added. Adjustments are also made for timing differences between the change of ownership and the lodgement of import entries, in the case of certain large items of equipment (e.g. warships).

Excess of Exports or Imports

19. The excess of the value of exports or imports is shown on the basis of total trade and merchandise and non-merchandise trade in Tables 4 and 6. The excess of exports or imports does not, on these bases, represent the balance of trade. The balance of trade is derived by comparing statistics of exports on a balance of payments basis with statistics of imports on that basis. (See paragraph 18.)

Balance of payments

20. Estimates of the balance of trade do not measure Australia's total balance of payments which includes other transactions such as freight and insurance charges on imports, shipping expenditure in Australian ports, overseas travel, payments of profits and interest, and private and government borrowing overseas. Estimates of these transactions will be found in statistical bulletins relating to balance of payments.

Country of consignment or origin

21. 'Country of consignment' referred to in export tables means the country to which goods were consigned at the time of export. Where the country of consignment is not determined at the time of export the goods are recorded as exported 'For orders'.

22. 'Country of origin', referred to in import tables, means the country of production. Classification of imports according to country of shipment was discontinued after the year 1920-21. A brief account of the dual system of import classification by country, operating prior to the year 1921-22, was given on page 500 of *Official Year Book* No. 51.

23. Throughout this bulletin, countries are shown in alphabetical order. Details for Singapore prior to October 1965 are included with Malaysia. Bechuanaland was renamed Botswana on 30 September 1966 and Basutoland was renamed Lesotho on 4 October, 1966. For purposes of this bulletin the new countries titles have been used.

24. Where, in respect of any statistical item in Tables Nos. 1 and 3, the total value is less than \$10,000, details of Australian States and overseas countries are omitted. Where country details are shown for a statistical item, only those countries with totals of \$10,000 or more are shown separately. In Table No. 2 the same Australian States and overseas countries are shown as for the corresponding statistical items in Table No. 1. However, where there are no re-exports for a State or country that State or country has been excluded.

25. A list of countries, showing the areas included under each individual country, appears on pages xi to xiii.

Commodity classifications

26. Overseas trade statistics for years up to and including 1964–65 were compiled according to the Statistical Classification of Imports and Exports. From July 1965 imports have been classified according to the new Australian Import Commodity Classification. This classification is based on the Standard International Trade Classification, Revised—(S.I.T.C.)—which is closely related to the Brussels Tariff Nomenclature used in the new Australian Customs Tariff introduced in July 1965. In accordance with the principles of the S.I.T.C. imports of defence equipment by the Australian Services are normally classified according to the commodity imported, e.g. warships are classified under ‘ships and boats’.

27. Although the basis of the classification of exports remained unchanged for 1965–66, the export section of the Statistical Classification of Imports and Exports was published separately, with some minor revisions, as the Australian Export Commodity Classification. A new Australian Export Commodity Classification based on S.I.T.C. was introduced in July 1966.

28. Because of the introduction of the new commodity classifications it has not been possible to show exactly comparable figures for years prior to their introduction. However, details at the Division (2 digit) level of the new classifications have been calculated by country of origin for the years 1963–64 and 1964–65 in the case of imports and 1963–64 to 1965–66 in the case of exports, and details are shown in the comparative tables in the last section of this bulletin. Apart from these figures details for imports classified according to the Australian Import Commodity Classification are not generally available prior to 1965–66 and details for exports classified according to the Australian Export Commodity Classification are not generally available prior to 1966–67.

Description of commodities

29. In this bulletin it has been necessary to abbreviate descriptions for some items and generic headings have been used extensively. Descriptions of commodities appearing thereunder have been indented appropriately and the extent of such indentation is shown by the number of asterisks (*) which appear before the first line of a description. A full description of any export or import item can be obtained from the Australian Export or Australian Import Commodity Classifications, 1966–67.

Commodity index

30. An index to Articles of Trade is included at the end of this volume. The articles are arranged in alphabetical order and show Commodity Classification reference numbers.

Pre-federation records

31. In the years preceding federation each State recorded its trade independently, and in so doing did not distinguish other Australian States from external countries. The aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, but the results obtained may be subject to error, since past records of values and the direction of imports and exports were not on uniform lines. Imports and exports for years prior to federation may be found in issues of the Year Book prior to No. 41. On the introduction of the *Customs Act* 1901 the methods of recording values were made uniform throughout the States.

Rounding

32. Any discrepancies between totals and sums of components in tables are due to rounding.

Abbreviations

33. N.E.I. means 'not elsewhere included'.

Special periodical return system

34. A subscription service is available to provide for the particular detailed requirements of individual users of overseas trade statistics. These special periodical returns show trade according to items of the Australian Export and Import Commodity Classifications or statistical key code dissections of Australian Customs Tariff items. These returns are obtainable monthly or quarterly. A charge is made which varies from 10 cents to 75 cents per item per return depending on the amount of detail required. Tabulation extracts are also available at a fee of 5 cents per item where these are more suitable.

Publications relating to overseas trade

35. Details of exports and imports are given in the following publications

Total	2,151,812	2,782,460	2,651,449	2,720,953	3,023,925

(a) The value of refined newly-won gold was \$31,468,000 in 1962-63, \$28,518,000 in 1963-64, \$27,378,000 in 1964-65, \$24,304,000 in 1965-66, and \$22,837,000 in 1966-67.

Relative Importance of Industrial Groups.

In the year 1966-67, Australian produce (other than gold) exported amounted to approximately \$2,918 million. Of this, \$2,372 million or 81.3 per cent was mainly produce of primary industries, comprising \$1,769 million of unprocessed produce and \$602 million of goods which had been processed in some degree before export. The values of the principal individual items of processed Australian primary produce exported were:—raw sugar, \$98,186,000; flour (wheaten), \$23,074,000; canned fruit, \$40,760,000; dried fruit, \$23,185,000; wool (scoured, tops, etc.) \$79,648,000; canned meats, \$18,452,000; butter, \$64,841,000; milk (condensed, dried, etc.), \$29,531,000; pig lead, \$32,943,000; lead bullion, \$20,445,000; zinc bars, blocks, etc., \$28,608,000; copper ingots, \$27,399,000, and undressed timber, \$4,138,000.

The value of manufactures exported as classified above was \$456 million, or approximately 15.6 per cent of Australian produce (other than gold) exported in 1966-67. The values of principal individual items here included were:—manufactures of metal, \$140,269,000; implements and machinery, \$54,870,000; drugs and chemicals, \$31,421,000; and paper and stationery, \$14,824,000.

The items enumerated indicate the arbitrariness of the line necessarily drawn between primary produce and manufactures in any classification of this kind. The value of processed primary products exported includes some element of value added by the simpler processes of manufacture, while the value shown for manufactures exported necessarily includes the value of raw material (primary produce) used in those manufactures.

Refined petroleum oils exported are shown separately, as they consist of imported crude oils refined in Australia and exported in the refined form. The values of principal individual items shown as 'unclassified' in 1966-67 were: individual consignments of less than \$100 in value \$14,815,000; and military equipment and stores and supplies for Australian projects overseas, \$15,124,000.

INDEX TO ARTICLES OF TRADE, 1966-67

Entries in this index are arranged in alphabetical order and listed against each entry is an Australian Import and/or Export Commodity Classification reference number of 3, 5 or 7 digits. Where a reference number relates to both imports and exports, no distinction has been made, but in those cases where a reference relates to an import item only or an export item only, this has been indicated by an (I) or an (E) respectively after the number. Those entries which cover a homogeneous group of statistical items have a statistical reference of 3 or 5 digits. Entries not readily associated with a homogenous group of items, or which are sufficiently important, have a statistical reference of 7 digits. Consequently any article not specifically mentioned in the index is included under its generic heading, e.g., 'champagne' is not listed but may be located in the classification through the 5 digit reference for 'wine' or the 3 digit reference for 'alcoholic beverages'.

If an article has more than one reference number and the leading digits of each reference number are identical, the leading digits are shown for the first reference number only, e.g., the entry 512.21, 22, 23, 24, 25 means 512.21, 512.22, 512.23, 512.24 and 512.25.
