#### Purchasing-Power-of-Money, Wholesale Prices, and Nominal and Effective Wage Index-Numbers, and Percentage of Unemployed.

÷2

**EXPLANATORY NOTE.**—The figures on the left represent the scale for the percentage of persons unemployed according to trade union returns. The figures on the right represent the scale for the several index-numbers, the year 1911 being taken in each case as base (=.1900). Since the end of the year 1911 the index-numbers for cost of food, groceries, and house rent (average for the six metropolitan towns) and for wholesale prices (Melbourne) are shewn each quarter, while weemployment percentages are shewn quarterly since the end of the year 1912 only. Unemployment figures for previous years are shewn as at the end of each year, while other ladex-numbers refer to the average for the whole year. Nominal and effective wage index-numbers are only computed annually. It should be observed that the purchasing-power-of-money and wholesale price index-numbers since the year 1911 ahew the average level during the whole of each quarter; but for purposes of convenience they have, however, been plotted on the graph as at the end, and not the mildle, of each quarter. The purchasing-power-of-money index-number is based upon a constant regimen: see Report No. 1, Appendix via, and Labour Bulletin No. 9, pp. 27 to 46.
