

SECTION X.—CHANGES IN RATES OF WAGE.

1. **General.**—The collection of information regarding changes in rates of wage throughout the Commonwealth dates from the 1st January, 1913, and the statistical results for the first complete year (1913) were published in Labour Report No. 5, pp. 62-70. The annual figures for the year 1914, together with complete figures for the year 1915, were published in Labour Report, No. 6, pp. 85-99. Details relating to all changes in rates of wage recorded for each quarter of the years 1913, 1914, 1915 and the first three quarters of the year 1916 were published in Labour Bulletins Nos. 5 to 15 respectively. The annual figures for the year 1916, as well as the particulars concerning changes recorded during the fourth quarter of that year, are given in the following tables.

(i.) *Definition of a Change in Rate of Wage.*—For the purpose of these statistics a change in rate of wage is defined as a change in the weekly rates of remuneration of a certain class of employees, apart from any change in the nature of the work performed or apart from any revision of rates due to increased length of service or experience. It is obvious that under this definition certain classes of changes are excluded, such, for example, as (a) changes in rates of pay due to promotion, progressive increments, or, on the other hand, to reduction in pay or grade to inefficient workers, and (b) changes in average earnings in an occupation due to a change in the proportions which higher paid classes of workers bear to lower paid classes. Each single change recorded relates to a change in the rates of wage effected in a specific industry or calling, and includes any and all changes to workers in that industry, irrespective of the different number of separate occupations or trades affected. Further, it should be observed that in some instances a change may relate to the employees of a single employer or to those of a number of employers, according to the instrument or method operating to bring about the change. In a few instances a number of separate instruments, all of which have not necessarily affected rates of wage, but all of which relate to a specific industry or craft, are grouped and taken as a single change. This course is adopted in order to obviate a multiplicity of changes affecting only a small number of workers in each instance. Particularly is this significant with respect to the large number of industrial agreements filed under the Commonwealth Conciliation and Arbitration Act by the Federated Engine Drivers' and Firemen's Association. In these instances each batch of industrial agreements as filed has been taken as representing a single change in the rates of wage to members of that craft.

(ii.) *Sources of Information.*—Primary information merely as to the fact that a change in rate of wage has occurred is obtained through the following channels :—(a) The Commonwealth and State Industrial Registrars and the Chief Inspector of Factories in each State ; (b) Reports from Labour Agents and Correspondents ; (c) Quarterly reports from Secretaries of Trade Unions ; (d) Returns relating to industrial disputes which resulted in changes in rates of wage ; (e) Reports in newspapers, labour and trade reviews, and other publications.

(iii.). *Collection of Particulars concerning Changes.*—On the occurrence of a change in rate of wage, forms* (prescribed under the Census and Statistics Act 1905) are issued to employers' associations (if any) and also to the secretaries of the trade unions, the members of which are affected by the change. In certain cases forms are also issued, if necessary, to individual employers. The particulars which have to be inserted in these forms furnish information regarding the occupations of the workers affected, the number of workers in each occupation, the rates of wage paid before and after the change, the locality affected, and the date on which the change took effect. Information must also be furnished regarding employers and employers' associations concerned, if any, and the method by which the change was effected.

When the forms are returned from the various persons who are required to fill them in, the returns are checked and compared with each other and with copies of awards, determinations, and agreements. In all cases when the information furnished on the forms is incomplete or unsatisfactory further inquiries are made, and the figures checked by reference to Census results, industrial statistics, factory reports, etc.

(iv.).—*Summary of Particulars Tabulated.*—The particulars† thus obtained are summarised under the following headings:—(a) Number of workpeople affected; (b) the total net amount of increase‡ in the weekly wage distribution; (c) the consequential average increase per week to each of the workpeople affected; (d) the method by which the change was brought about; and (e) if effected with or without a stoppage of work. As regards the number of persons affected, the particulars summarised refer to the total number of persons ordinarily engaged in the specific industry or calling. As to the total net amount of increase in wages this is computed for a full week's work for all persons ordinarily engaged in the specific industry or calling, and includes particulars of any decreases effected. In cases of changes in the minimum rates of wage payable under awards or determinations of industrial tribunals, it has ordinarily been assumed (in the absence of any definite information to the contrary) that the whole of the workers in each designated occupation received the minimum rates of wage before and after the change.

It should be clearly understood that the *computations* (amount of increase per week) do not relate to the increase each week, but only to the increase in a single week on the assumption that the full number of persons ordinarily engaged in the particular trade or occupation affected by the change is employed during that week. It is obvious, therefore, that the aggregate effect per annum cannot be obtained without making due allowance for unemployment and for occupations in which employment is seasonal or intermittent. It is also obvious that since unemployment and activity in all branches of industry may vary from year to year and in many branches from season to season also, no accurate estimate of the actual effect of the changes in the total amount of wages received or paid *per annum* can be made, until the determining factors have been investigated. These factors are (a) the amount of unemployment, and (b) the period of employment in seasonal industries.

* As these forms are issued under the authority of the Census and Statistics Act 1905, it is compulsory upon prescribed persons to furnish the information required.

† In each of the quarterly Bulletins since the beginning of the year 1915 a summary is included, giving the following particulars with respect to each change in rate of wage:—(a) Locality, industry and occupations affected; (b) date from which change took effect; (c) approximate number of workpeople affected (male and female separately); (d) method by which change brought about; and (e) brief information as to the extent of the change.

‡ After making allowance for any decreases involved.

Further, it may be pointed out that the aggregate of the particulars given in the Labour Bulletins relating to each of the four quarters of any year, will not necessarily agree with those given in the annual figures published for that particular year. This is due to the inclusion, as far as possible, in the annual figures of particulars of all changes effected within the year. In some instances the advice of a change is not received in time to allow the full particulars relating thereto being collected and included in the Labour Bulletin for the last quarter of the year. These particulars are subsequently included in the annual tabulations.

2. Numbers and Effect of Changes in each State for 1913, 1914, 1915 and 1916.—The following table gives particulars relating to all changes in rates of wage, recorded for each State, Territory, and the Commonwealth during the years specified. It should be observed that changes brought about by awards and agreements under the Commonwealth Conciliation and Arbitration Act 1904-15 are necessarily included hereunder as changes in each State to which such awards and agreements apply. The total net amount of increase per week, set out, is subject to the qualifications mentioned in the fourth paragraph of the preceding sub-section. The average increase per head per week is computed to the nearest penny.

* Including one change (common to all States) brought about by agreement made pursuant to Section 24 of the Commonwealth Conciliation and Arbitration Act. † Including two changes (common to all States), which resulted in an increase in wages of £2958 per week to 19,000 workpeople. ‡ Including six changes (common to all States), which resulted in an increase in wages of £1593 to 3540 workpeople. The particulars relating to the number of workpeople who were affected by these changes, and the net amount of increase per week in each State were not ascertainable.

In point of number of changes in each State, New South Wales has been first, Victoria second, and Queensland third, in each of the years specified. Some little variation has occurred in the position of the remaining States. The relative position of the States in point of the numbers of workers affected in each year is, of course, largely due to the magnitude of the different industries and callings in which changes took place.

Included in the particulars contained in the foregoing table are those relating to five decreases during the year 1914, seven during the year 1915, and eight during the year 1916. The States in which these decreases were recorded were in 1914, New South Wales three, Victoria one, and Tasmania one, affecting 272 persons in all, and a decrease of £59

per week; in 1915 New South Wales two, Tasmania two, and in Victoria, South Australia, and Western Australia one each, affecting in all 494 workers to the extent of a decrease of £81 per week. Of the eight decreases recorded during 1916 in rates of wage, six affected workpeople in New South Wales, one in Victoria and one in Western Australia. The total number of persons affected was 1730, and the amount of decrease per week was £286.

The number of changes recorded during the year 1916 was 870, a number greatly in excess of the changes recorded during any previous year since the systematic collection of statistical information regarding changes in rates of wage was undertaken by the Bureau. The number of workpeople affected was 492,487, and the total net amount of increase per week was £142,923. These figures greatly exceed those for any previous year, as will be seen on comparing them with the figures for the next highest year, 1915, when the number of workpeople affected by changes was 197,410, and the net amount of increase per week was £51,905. The

† Including six changes effected either by an Award or an Industrial Agreement under the numbers affected in each State, are not ascertainable.

average increase per head per week for 1916 was 5s. 10d., as compared with 5s. 3d. during 1915; 4s. 11d. during 1914, and 4s. 6d. during the year 1913. The increase during the year 1916 in the number of changes, workpeople, and wages was not confined to any one particular State, as all States showed correspondingly large increases when compared with the preceding years.

3. **Number and Effect of Changes in Rates of Wage in each State Classified according to Industrial Groups, 1916.**—In the following table particulars are given as to the number and effect of changes in rates of wage in 1916, in each State, classified according to the fourteen industrial groups adopted by this Bureau for the classification of current rates of wage, industrial disputes, etc. Particulars concerning changes in rates of wage during the years 1913, 1914 and 1915, classified according to industrial groups, were published in Labour Report, No. 6, pp. 88-91.

Commonwealth Conciliation and Arbitration Act, the particulars of which, in respect to the

It should be observed that industrial awards and agreements filed under the provisions of the Commonwealth Arbitration and Conciliation Act, which extend in their operation to more than one State, are counted as a change in each State affected. This is necessary in order that the total number of changes in each State may be obtained. The particulars for the whole Commonwealth, however, record each award and agreement once only. For example, an award affecting a section of the Commonwealth Public Service is operative in each State, and is accordingly included in the State table as a change in each State, but in the total for the Commonwealth the award is recorded as one change only. The totals of the changes recorded as operating in each State are, therefore, in some cases in excess of the totals given for the Commonwealth. On the other hand an award affecting the Inter-State Marine Merchant Service (Seamen, Stewards, and Pantry-men, etc.), where the persons affected are not working solely in any one State, the award is not recorded as a change operating in each State, but is added to the number of changes for all States.

Of the 821 changes recorded during the year, 1916, no less than 186 affected workpeople engaged in occupations and industries classified in Group XIV. (Miscellaneous). The principal changes, according to the number of workpeople affected, included in this group were those which affected permanent clerical officers in the Commonwealth service, postal assistants, telegraph and telephone construction and maintenance men, letter carriers, mail officers and telegraphists in all States; shop assistants, engine-drivers, shire council employees, clerks and office assistants, policemen and storemen and packers in New South Wales; shop assistants, storemen and packers, engine-drivers, fuel and fodder employees, and sewerage and waterworks' labourers in Victoria; shop assistants, municipal employees, warehouse clerks, sewerage and waterworks' employees and engine-drivers in Queensland; shop assistants, school teachers, labourers and general workers employed by the State Government and storemen and packers in South Australia; and wood cutters and shop assistants in Western Australia. Railway employees in all States received increases in rates of wage during the year. In the manufacturing industries the principal changes affected workpeople following the undermentioned occupations:—In New South Wales, coachmakers gas workers, brick, tile and pottery makers, engineers, steelworkers, electrical workers, boilermakers, textile workers, shirtmakers, boot makers, tailors and tailoresses and soap and candle makers; in Victoria, brickmakers, fellmongers, boiler-makers, tinsmiths, electrical workers, farriers, clothing makers, shirtmakers, printers, bookbinders, bootmakers, knitters, hosiery and textile workers, cardboard box makers, and rubber workers; in Queensland, sugar workers, confectioners, engineers, ironworkers, bootmakers, furniture makers, sawmillers, and woodworkers; in South Australia, engineers, bootmakers, sawmillers, printers, carriage builders, brickmakers, flourmillers, and tinsmiths; and in Tasmania engineers and textile workers. Other important changes during the year gave increased rates of wage to shearers and pastoral workers, hotel and restaurant employees, caretakers and office cleaners, lift attendants, carters, trolley and draymen, motor drivers, tramway employees, meat industry employees, harbour and river employees, mental and other hospital attendants, marine stewards and cooks, masters and engineers, builders' labourers, carpenters, painters, plumbers and plasterers. It will

be observed from the above comprehensive list of occupations that important changes affecting large numbers of workpeople in each group occurred during the year under review. In addition to the occupations mentioned, many changes occurred in other avenues of employment, but the number of workpeople affected by such changes was not large. In Labour Bulletins Nos. 13, 14 and 15, tabular statements shewing the changes in rates of wage recorded during the first three quarters of the year have been published. In this issue a similar statement is furnished shewing the changes which were recorded during the fourth quarter of the year.

4. Changes in Rates of Wage in Female Occupations. Number and Effect of Changes in each State, 1913-1916.—Included in the changes in rates of wage recorded in the tables on pages 451 to 453, are those which in the whole or part thereof affected female occupations. Particulars in respect to these changes in so far as they relate to the numbers of female workers affected, etc., are set out hereunder.

(i.) *Changes in Rates of Wage according to States.*—In the following table particulars are given of the effect of changes in rates of wage to female workers, as recorded for each State during the years 1913 to 1916 inclusive.

Changes in Rates of Wage.—Female Occupations.—Effect of Changes in each State, 1913-1916.

* Including effect of one change which affected 9 female employees in the Northern Territory.

It will be seen that the number of females affected by changes in rates of wage during the year 1916, is greatly in excess of the number recorded during any previous year. The most notable increase is in Victoria. In all States, with the exception of Western Australia and Tasmania, the numbers affected shew increases. In the tabular statements published in Labour Bulletins Nos. 13, 14 and 15, and also in this issue details are furnished concerning the changes recorded during the year 1916.

(ii.) *Changes in Rates of Wage in Female Occupations according to Industrial Groups.*—The particulars set out in the immediately preceding table are further analysed and classified according to the industrial groups in which the changes took place in each State. Similar information for the years 1913, 1914 and 1915 was published in Labour Report No. 6, pp. 93-94.

Number of Persons affected	303	49	2,334	18,345	3,695	2,331	12	13	100	2,550	13,132	42,954
Amount of Increase per week £	76	8	337	3,690	573	336	3	1	22	543	2,388	7,977

Of the total number of female employees (42,954) who were affected by changes in rates of wage during the year, 18,345 were engaged in the manufacture of clothing, hats, etc. (Group IV.); 13,132 in various occupations classified in Group XIV. (Miscellaneous); 3695 were employed in printing and bookbinding establishments (Group V.); 2550 were working in hotels, restaurants, etc. (Group XIII.), while 2334 were engaged in the preparation or distribution of food and drink (Group III.). In the other groups, with the exception of Group VI. (Other Manufacturing), the number who received increased wages during the year was comparatively small.

5. Changes in Rates of Wage classified according to Methods by which Effected, 1914-1916.—The particulars contained in the foregoing tables in this Section are herein classified for each State, and for the Commonwealth according to the methods by which the changes in rates of wage were arranged.* In the first of these tabulations the aggregate

* The methods whereby changes in rates of wage are effected, have been classified by this Bureau under the seven headings specified in the following table. In some instances more than one method is adopted as a means to effect the attained result. In those instances the method actually in operation at the time the change is determined is taken for the purpose of classification.

figures for the Commonwealth are given for each of the years 1914, 1915 and 1916, irrespective of whether the change was effected "without a stoppage of work" or "after a stoppage of work." In the subsequent tables these characteristics are applied, and separate details are given in respect to each State and the Commonwealth, for the year 1916.

It should be observed that the particulars given for each State include the number and effect of each change recorded for each separate State, whereas the aggregate particulars for the Commonwealth are based on the number of changes effected according to the industrial group tables given on pages 452-453. The result is due to the inclusion of changes effected by awards or industrial agreements under the Commonwealth Conciliation and Arbitration Act, in the total only, irrespective of the number of States to which such changes may apply.

Provision is not included in the existing industrial statutes in Victoria and Tasmania for the registration of industrial agreements.

1254 (i.) Changes in Rates of Wage and Methods by which effected, Commonwealth, 1914-1916.—Comparative particulars are contained in the following table, of the total number and effect of all changes in rates of wage brought about throughout the Commonwealth during the years indicated, as a result of the application of one or other of the specified methods.

Changes in Rates of Wage classified according to Methods by which Effected, Commonwealth, 1914-1916.

Methods by which Changes were Effected.	Number of Changes.			Number of Work- people Affected.			Total Net Amount of Increase per wk.

* In this table an Industrial Award or Agreement under the Commonwealth Conciliation and Arbitration Act is counted as one Change only, although such Award or Agreement may be operative in more than one State. See also remarks on page 449 with respect to the inclusion of a number of Industrial Agreements filed under the provisions of the Commonwealth Act, being recorded as a single change only.

Of the results as set out in the above table, the most notable is the increase in the number of changes in rates of wage which were granted voluntarily by employers or brought about by direct negotiations between representatives of employers and employees, without the assistance of any third party. The number of changes in rates of wage effected by Award or Determination under State Industrial Act was 467, approximately 57 per cent. of the total number recorded during the year. The number of awards made by the Commonwealth Arbitration Court also shews a considerable increase when compared with previous years.

(ii.) *Changes in Rates of Wage and Methods by which Effected in each State and Territory, 1916.*—The following tables set out particulars of the results of all changes in rates of wage which were recorded for the year 1916, according to the method by which the changes were effected. The particulars relating to changes effected with or without a stoppage of work are given separately, and include those involving any decrease in rates of wage. For comparative information for the year 1913, see Labour Report, No. 5, pp. 68 and 69, and for the years 1914 and 1915 see Labour Report No. 6, pp. 97-99.

* Including the effect of one or more changes brought about either by an award of the Commonwealth Arbitration Court or by an industrial agreement made pursuant to Section 24 of the Commonwealth Conciliation and Arbitration Act, particulars of which in respect to the number of workpeople affected and the total amount of increased weekly wages in each State are not ascertainable.

† Including number of workers affected by a decrease in rates of wage.

7. Number and Magnitude of Changes in each State, 4th Quarter, 1916.—The following table gives particulars of changes in rates of wage recorded in each State during the fourth quarter of the year 1916, together with comparative information for the Commonwealth for the preceding quarter of the current year and the corresponding quarter of the year 1915. Information concerning changes in rates of wage which came into force prior to the 1st October, is included in the following tables, as the particulars regarding such changes were not available in time for inclusion in results recorded in previous Bulletins.

Changes in Rates of Wage.—Number of Changes and Persons Affected, Aggregate Net Amount of Increase per Week, and Net Average Increase per Head per Week in each State and Territory, 4th Quarter, 1916.

PARTICULARS.	N.S.W.	Vic.	Q'ld.	S.A.	W.A.	Tas.	N.T. & F.C.T.	COMMONWEALTH.

Net Average Increase per Head per week	5s. 6d.	4s. 3d.	6s. 4d.	6s. 2d.	4s. 5d.	5s. 11d.	5s. 0d.	5s. 3d.	7s. 3d.	5s. 5d.

* Including particulars of changes which involved a decrease in rates of wage.

† Including one or more changes brought about either by an award or variation of an award of the Commonwealth Arbitration Court, or by an industrial agreement made pursuant to Section 24 of the Commonwealth Conciliation and Arbitration Act, particulars of which in respect to the number of workpeople affected and the total net amount of increased weekly wages in each State are not ascertainable.

From the above table it may be seen that the number of changes in rates of wage which were recorded for the whole Commonwealth during the fourth quarter of the year 1916, numbered 251. Included in this number are certain changes, particulars of which were not available for inclusion in the results of changes previously recorded, and in other instances the changes, though brought about subsequent to the 1st October, 1916, were made to operate from retrospective dates. The 251 changes resulted in an aggregate net addition of £29,191 to the weekly wage distribution to the 110,907 workpeople affected thereby, and an average increase in weekly wage of 5s. 3d. per head. The number of changes recorded for each State and Territory was as follows:—New South Wales, 112; Victoria, 40; Queensland, 34; South Australia, 34; Western Australia, 15; Tasmania, 13; Federal Capital Territory, 1; and 2 affecting marine stewards and pantry-men and wireless operators, the effects of which were common to all States. Since the collection and tabulation of these statistics was first undertaken by this Bureau, this quarterly aggregate is the highest which has been recorded. Included in the 251 changes in the above table were 53 which wholly or partly applied to female occupations.

In the following table particulars are set out for males and females separately, as to the number affected by changes in each State, the total amount of increased wages involved each week and per head respectively:—

Changes in Rates of Wage.—Number of Persons Affected, Aggregate Net Amount of Increase per Week, and Net Average Increase per Head per Week in each State and for the Commonwealth, 4th Quarter, 1916.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	N.T. & F.C.T.	C'with.
MALE OCCUPATIONS.								
No. of Persons Affected	41,930	31,450	11,421	6,105	2,059	2,681	8	96,984*
Total Net Amount of Increase per week £	11,980	7,140	3,647	1,940	470	793	2	26,547*
Net Average Increase per head per week	5s. 8d.	4s. 6d.	6s. 5d.	6s. 4d.	4s. 7d.	5s. 11d.	5s. 0d.	5s. 6d.

* Including 1380 workers affected by two changes, the effect of which is common to all States.

Changes in Rates of Wage.—Number of Persons Affected, Aggregate Net Amount of Increase per Week, and Net Average Increase per Head per Week in each State and for the Commonwealth, 4th Quarter, 1916 (continued).

Particulars.	N.S.W.	Vic.	Q'ld.	S.A.	W.A.	Tas.	N.T. & F.C.T.	C'with
FEMALE OCCUPATIONS.								
No. of Persons Affected ..	8,490	4,490	319	419	179	17	..	13,923
Total Net Amount of Increase per week .. £	1,963	544	50	58	26	3	..	2,644

It will be seen by the above figures that 96,984 males, and 13,923 females were affected by changes in rates of wage recorded during the fourth quarter. The average increase per week for each male employee was 5s. 6d. ; while female employees received increases averaging 3s. 10d. per head per week.

8. Number and Magnitude of Changes in Rates of Wage, classified according to Industrial Groups, 4th Quarter, 1916.—The following table gives particulars of changes in rates of wage recorded during the fourth quarter of the year 1916, classified according to the following industrial groups :—

Changes in Rates of Wage.—Number of Changes and Persons Affected, and Aggregate Net Amount of Increase per week, according to Industrial Groups, 4th Quarter, 1916.

				3rd Quarter, 1916	* 206	130,195	47,020
				4th Quarter, 1915	* 214	137,639	37,216

* Including particulars of changes which involved a decrease in rates of wage.

† In this table a change brought about by an Award or Agreement under the Commonwealth Conciliation and Arbitration Act, although operative in more than one State, is counted as one change only.

It will be seen from the above table that 62 of the 219 changes recorded during the fourth quarter of the year were classified in Groups XIV. (Miscellaneous). The occupations and industries included in this group comprise, amongst others, permanent clerical officers in the Commonwealth Service, telegraphists, postal assistants, telegraph and telephone

construction and maintenance men, school teachers, warders, shop assistants, storemen and packers and municipal employees. Approximately 28 per cent. of the total number of workpeople affected by the changes recorded during October, November and December, were classified in Group XIV. The following groups were next in order, according to the number of changes:—Group III. (Food, Drink, etc.); Group VI. (Other Manufacturing); Group IX. (Rail and Tramway Services); Group XI. (Shipping, etc.); Group II. (Engineering, etc.); and Group VII. (Building). Workpeople employed in the various branches of the railway and tramway services to the number of 24,691 benefited to the extent of £4657 per week. The most important of these increases affected employees in the railway services of Victoria, Queensland and South Australia.

Changes in Rates of Wage.—Female Occupations.—Number of Changes and Persons Affected, and Aggregate Net Amount of Increase per week, according to Industrial Groups, 4th Quarter, 1916.

Particulars.	I. Wood, Furniture, etc.	II. Engineering, Metal Works, etc.	III. Food, Drink, Tobacco, etc.	IV. Clothing, Hats, Boots, etc.	V. Books, Printing, etc.	VI. Other Manufacturing.	IX. Rail and Tramway Services.	XIII. Domestic, Hotels, etc.	XIV. Miscellaneous	All Industrial Groups.
Number of changes ..	2	1	7	4	2	7	2	3	25	58
Number of persons affected ..	115	20	744	2,090	900	525	12	183	9,384	13,923
Total net amount of increase per week .. £	32	5	128	398	123	100	3	25	1,831	2,644

The majority of the female employees who were affected by changes in rates of wage recorded during the fourth quarter were engaged in occupations and industries classified in Group XIV. (Miscellaneous), no less than 9334 or 67 per cent. being classified in this Group. Female employees engaged in the undermentioned occupations received increases in rates of wage during the quarter under review:—school teachers, hospital attendants, public servants (clerks), laundry employees, carpet workers, office cleaners, shirtmakers, tailoresses, shop assistants, postal assistants, aerated water factory employees, textile workers, leather workers, pottery workers, chemists' employees and railway employees in New South Wales; clothing factory employees, public servants (clerks), Mental Hospital attendants, harness makers, boot saleswomen, cardboard box makers, grocery manufacture employees, postal assistants, drapery saleswomen, paper bag makers, bookbinders, printing employees and hairdressers in Victoria; public servants (clerks), postal assistants, shop assistants and musicians in Queensland; clerks, school teachers, bedding makers, shop assistants, grocery manufacture employees, postal assistants and tinsmith's assistants in South Australia; public servants (clerks and postal assistants), bootmakers and cooks and waitresses in Western Australia and postal assistants and harness makers in Tasmania.

9. **Particulars of Changes in Rates of Wage Recorded during 4th Quarter, 1916.**—In the subjoined tabular statement, particulars are summarised of each change in rates of wage recorded during the fourth quarter of the year 1916, shewing (a) the locality, industry and occupation affected; (b) the date on which the change came into operation; (c) the approximate number of persons affected; (d) the method by which each change was brought about; and (e) brief particulars of the resulting effect on the existing rates of wage.
