## Growth in underemployment continues

In December 1992, 68 per cent of part-time workers were satisfied with the number of hours that they worked. The remaining 32 per cent of part-time workers would have preferred to work more hours and as such may be categorised as generally underemployed.

Not all of these underemployed persons were looking for extra work. In December 1992, 60 per cent of persons employed part time who reported a preference to work more hours had not taken active steps to find full-time work.

For many years the ABS has used the term underemployment to include:
(1) persons employed part time who would prefer to work more hour; and
(2) full-time workers who worked less than full-time hours due to economic reasons such as short time and insufficient work. Of the $7,750,100$ employed persons in December 1992, 634,700 persons met this general definition of underemployment. Of these, 10 per cent were full-time workers working less than full-time hours.

Underemployment has been rising since 1988, when the annual average was 300,700 underemployed persons (little different from the 1987 average of 306,900 persons). The 1992 average was 591,200 , equivalent to an increase of 18 per cent per year over the four year period. This increase has generally coincided with increases in unemployment.

The average underemployment rate in 1992 (the number of underemployed persons divided by the number of persons in the labour force) was 6.9 per cent. The average unemployment rate in 1992 was 10.8 per cent. The sum of these two measures gives an underutilisation rate of 17.7 per cent in 1992, compared with 11.0 per cent in 1988.

PART-TIME WORKERS
Annual averages
'000

| Year | Underemployed |  |  | Total part-time workers |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Males | Females | Persons | Males | Females | Persons |
| 1988 | 84.9 | 178.2 | 263.0 | 314.5 | 1151.8 | 1466.3 |
| 1989 | 85.8 | 193.9 | 279.7 | 348.1 | 1237.6 | 1585.7 |
| 1990 | 103.7 | 216.3 | 320.0 | 371.0 | 1292.0 | 1663.0 |
| 1991 | 147.4 | 270.6 | 418.0 | 405.1 | 1309.0 | 1714.1 |
| 1992 | 189.9 | 320.4 | 510.2 | 452.9 | 1358.6 | 1811.4 |

Underemployment, like part-time employment, is mostly associated with employed females. In December 1992, 62 per cent of underemployed part-time workers were females, whereas 75 per cent of all part-time workers were female.

Male part-time workers are more likely to be underemployed than females although for both groups the proportion of workers who would prefer to work more hours has been increasing markedly in the last four years. In December 1992, 49 per cent of male part-time workers and 27 per cent of female part-time workers were underemployed, compared with 34 per cent and 18 per cent respectively in December 1988.

Underemployment was highest among part-time workers in the 20-24 years age group with some 56 per cent preferring to work more hours in December 1992. The proportion preferring to work more hours decreased for older age groups, with 12 per cent of part-time workers aged 55 years and over being underemployed in December 1992.

|  | Underemployed |  |  | Total part-time workers |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Males | Females | Persons | Males | Females | Persons |
| 15-19 | 56.4 | 72.8 | 129.2 | 123.1 | 185.4 | 308.5 |
| 20-24 | 47.6 | 67.1 | 114.7 | 76.6 | 127.9 | 204.5 |
| 25-34 | 46.5 | 63.1 | 109.7 | 69.3 | 292.8 | 362.1 |
| 35-44 | 26.8 | 96.3 | 123.1 | 47.9 | 399.2 | 447.1 |
| 45-54 | 23.1 | 50.0 | 73.1 | 43.6 | 239.4 | 283.0 |
| 55+ | 14.6 | 7.5 | 22.1 | 81.9 | 98.1 | 180.0 |

A narrower measure of underemployment is the number of part-time workers who reported that they would prefer to work more hours and had actively looked for full-time work in the previous four weeks. In December 1992, 40 per cent of persons employed part-time who would have preferred to work more hours had actively looked for full-time work, compared with 39 per cent in December 1988.

In December 1992, 36 per cent of all part-time workers who worked 6-10 hours would have preferred to work more hours. (Of the hours worked ranges tabulated, 6-10 hours had the greatest number of underemployed workers.) Of these persons, 45 per cent had actively looked for full-time work. In December 1988, 27 per cent of part-time workers who had worked $6-10$ hours would have preferred to work more hours, and of these, 41 per cent had actively looked for full-time work.

PART-TIME WORKERS: PREFERENCE FOR MORE HOURS DECEMBER 1992 ('000)

| Hours | Preferred to work more hours |  |  | Per cent |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Did not prefer to work more hours | Actively | Did not |  |  |
|  |  | for fulltime work | for fulltime work | Total | Underemployed |
| 0 | 53.1 | 8.1 | 16.8 | 77.9 | 31.9 |
| 1-5 | 128.0 | 32.7 | 53.1 | 213.7 | 40.1 |
| $6-10$ | 218.0 | 55.0 | 67.9 | 340.9 | 36.1 |
| 11-15 | 172.3 | 33.4 | 46.9 | 252.6 | 31.8 |
| 16-20 | 233.1 | 47.5 | 59.7 | 340.3 | 31.5 |
| 21-29 | 239.3 | 33.7 | 62.7 | 335.8 | 28.7 |
| 30-34 | 169.5 | 19.6 | 34.8 | 223.9 | 24.3 |

## EXPLANATORY NOTES

## Notes

## Revised estimates

Scasonal adjustment factors have been reanalysed. As a consequence seasonally adjusted and trend estimates back to February 1978 have been revised (see paragraph 34 and the Appendix).

Estimates of persons employed in community services and public administration and defence for November 1992 have been revised. For further information contact Heather Crawford on (06) 2526525.

## Changes in this issue

Tables 38 and 39 , showing original and seasonally adjusted estimates by industry, appcar in this publication for the first time and will continuc to appear in the February, May, August and November issucs.

## Introduction

This publication contains estimates of the civilian labour force derived from the labour force survey component of the monthly population survey. Estimates of the labour force characteristics of family members and of family composition are also included.
2. Estimates of the civilian labour force are available for over sixty regions across Australia and are shown in various publications produced by State offices of the ABS. These data are also available on microfiche or as a special data service. For details, see the list of related publications provided in paragraph 57, or contact any ABS office.
3. Preliminary survey results are published in advance of this more detailed publication in The Labour Force, Australia, Preliminary (6202.0).
4. Although emphasis in the population survey is placed on the regular collection of specific data on demographic and labour force characteristics of the population, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from these surveys are published and are available on request. A list of survey publications on labour force and related topics is shown later in this publication.

## The population survey

5. The population survey is based on a multi-stage area sample of private dwellings (currently about 29,000 houses, flats, ctc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about one half of one per cent of the population of Australia. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two
weeks beginning on the Monday between the 6 th and 12 th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

## Scope

6. The labour force survey includes all persons aged 15 and over except:
(a) members of the permanent defence forces;
(b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
(c) overseas residents in Australia; and
(d) members of non-Australian defence forces (and their dependants) stationed in Australia.

## Coverage

7. In the labour force survey, coverage rules are applied which aim to ensure that cach person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are, necessarily, a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible. See paragraph 48 for information about the effect of the coverage rules on family statistics.
8. Persons who are away from their usual residence for six weeks or less at the time of interview are enumerated at their usual residence (relevant information may be obtained from other usual residents present at the time of the survey).

## Population benchmarks

9. Labour force survey estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated distribution of the usually resident population aged 15 and over by age and sex. This procedure compensates for under-enumeration in the survey, and leads to more reliable estimates. Persons who, at the time of interview, are overseas for more than six weeks but for less than twelve months are included in the independent population statistics (benchmarks) and are thus provided for in the calculation of the estimates. The benchmarks are the latest available estimates at the time the labour force survey is conducted, but they usually differ from the official population estimates subsequently published in Australian Demographic Statistics (3101.0) because they are derived from incomplete information about population changes.

## Revision of series

10. Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each Census of Population and Housing, and when population estimation bases are reviewed. These revisions affect original, seasonally adjusted and trend estimates. The last such revision was made in February 1989 to take account of the results of the 1986 Census of Population and Housing, which affected all the monthly estimates from January 1984 to January 1989. For details, sce Information Paper: Revised Labour Force Survey Estimates: January 1984 to January 1989 (6276.0).
11. Following the change in official population estimates to a place of usual residence basis after the 1981 census, the population benchmarks used in the estimation of labour force survey data are compiled according to place of usual residence. For an explanation of the conceptual basis of population estimates see Information Paper: Population Estimates: An Outline of The New Conceptual Basis of ABS Population Estimates (3216.0). To coordinate with the new benchmarks, the labour force survey questionnaire was changed in October 1982 to enable identification of each respondent's place of usual residence. The estimates shown in this publication are based entircly on place of usual residence. Prior to October 1982, the estimates are based on a combination of place of enumeration and place of usual residence.
12. National surveys were conducted in February, May, August and November each year from 1964 to February 1978. The survey has been conducted on a monthly basis since February 1978.
13. The questionnaire used in the survey for the collection of labour force data has been revised from time to time, the latest occasion being for the April 1986 survey. Details of these changes have been published in Information Paper: Questionnaires Used in the Labour Force Survey (6232.0) in March 1978, December 1981, August 1984, June 1986, June 1991 and March 1993.
14. In April 1986, the questionnaire was revised following the extension of the definition of employed persons to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. unpaid family helpers). This definition aligned the Australian labour force concepts with the set of definitions adopted by the 13th International Conference of Labour Statisticians in October 1982.
15. Previously, unpaid family helpers who worked 1 to 14 hours, or who had such a job but were not at work, were defined as either unemployed or not in the labour force, depending on whether they were actively looking for work. In order to assist users to assess the impact of the change, estimates for March 1986 based on the new definition were shown in footnotes to Tables 1 and 2 of
the February, March and April 1987 issues of this publication.
16. A revised procedure for weighting families estimates, as presented in this publication, was also introduced in April 1986. Additional tables were included in the April 1986 issue of this publication to show the impact of this new procedure. Paragraph 50 contains more details.

## Comparability of series

17. As noted in paragraph 10, estimates from January 1984 have been revised to conform to revised population estimates following the 1986 Census of Population and Housing, and are thus not strictly comparable with estimates for periods prior to January 1984 which have not been reviscd. An examination of the revised estimates between June 1981 and June 1986 showed that the effects on labour force survey estimates for the period before January 1984 were inconsequential, and that no meaningful purpose would be served by publishing revised estimates for that period.
18. A revision of estimates to take account of the new definition of marital status was applied back to February 1978. Consequenly, estimates of marital status contained in this publication are not comparable with estimates published before the Fcbruary 1984 issue which classified as married all respondents who reported that they were married or separated. The revision to the marital status classification was undertaken in two parts. First, for all surveys from Fcbruary 1978, persons who reported that they were separated, were reclassified as not married. Second, from June 1983 onwards, the not-married category was expanded to include persons who, although reported as married, did not have a spouse who was a usual resident of the household at the time of the survey. Sce the Glossary for the definition of marital status now used in the labour force survey.
19. Comparability with estimates produced from the quarterly survey of employment and earnings is affected by the use of a different survey methodology and definitions. The labour force survey provides estimates of people in jobs whereas the survey of employment and earnings provides an estimate of the number of jobs held by wage and salary earners. A more detailed description of the differences between these two series is provided in Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings (6263.0).
20. From December 1989 onwards, the category other families has been split into one-parent families and other families. Therefore estimates of other families are not strictly comparable with estimates in previous issues. However, in November 1989, 97 per cent of other families with dependants were one-parent families. For definitions of these terms refer to the Glossary.

## Survey sample redesign

21. Following each Population Census, the ABS redesigns and reselects the LFS to take into account the new information which is obtained from the Census. The sample used in the LFS from September 1987 to August 1992, which was designed and selected using preliminary data from the 1986 Census, has been updated and reselected using information collected in the 1991 Census. The new sample was phased in over the period September 1992 to December 1992.
22. For the most part, one quarter of the new sample was introduced each month with the entire new sample in place in December 1992. Replacement occurred generally at the rotation group level with two groups bcing substituted each month. Such a pattern of implementation was followed to ensure that any changes to labour force estimates due to differences between the two samples, or any other influences, were spread over the four months rather than being concentrated in one inter-month period.
23. This phase-in scheme applied to the private dwelling sample in urban arcas. The new sample for non-private dwellings and for private dwellings in rural arcas was introduced in a single stage in November 1992.
24. The sampling fractions for each State/Territory differ and are such that the resultant sample yiclds reliable estimates of the main labour force aggregates for each State and Territory. The sampling fractions for the new sample together with the sampling fractions determined from the 1986 Census are:

|  | 1986 Census <br> redesign | 1991 Census <br> redesign |
| :--- | ---: | ---: |
| New South Wales | 1 in 230 | 1 in 277 |
| Victoria | 1 in 230 | 1 in 242 |
| Quecnsland | 1 in 160 | 1 in 195 |
| South Australia | 1 in 115 | 1 in 139 |
| Western Australia | 1 in 115 | 1 in 146 |
| Tasmania | 1 in 70 | 1 in 75 |
| Northern Territory | 1 in 115 | 1 in 75 |
| Australian Capital Territory | 1 in 115 | 1 in 75 |

Potential effects on labour force survey estimates
25. Implications for estimates produced from the LFS due to the sample redesign and its implementation are as follows:
(a) the sampling error overall increased initially by about 7 per cent over previous levels but will decline gradually during the life of the new sample. For State estimates, the initial increase was about 8 per cent, while for the Territories, there was a decrease of 19 per cent. There were also higher standard errors for the estimates of month-to-month movements produced over the
period September 1992 to December 1992 compared with those for the corresponding series produced prior to this period and from January 1993 onwards. In general, these were estimated to be up to 20 per cent higher than the normal standard errors on monthly movements.
(b) analysis has shown that the unemployment rate is marginally higher (less than 0.5 percentage points on average) for those persons in sample for the first time. Normally, this will not affect the overall estimates of month-to-month movements because the number of persons in sample does not change significanlly. However, during the transition period, there were about twice as many persons as usual in sample for the first time. This may have caused a small upward movement (of less than 0.1 percentage points on average) in the unemployment rate from August to September 1992 and a compensating decrease from December 1992 to January 1993.
26. For additional information, sce Information Paper: Labour Force Survey Sumple Design (6269.0), available from any ABS office.

## Reliability of the estimates

27. Estimates in this publication are subject to two sources of error:
(a) sampling error: since the estimates are based on information obtianed from occupants of a sample of dwellings they, and the movements derived from them, may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Notes; and
(b) non-sampling error: inaccuracies may occur because of imperfections in reporting by respondents and interviewers and crrors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.
Differences between population census and population survey estimates
28. The results of the 1986 Census of Population and Housing show that labour force estimates derived from the census differ from those derived from the labour force surveys.
29. The broad concepts underlying the measures of the labour force and its components, employment and
unemployment, are similar in the census and the surveys. It should be noted, however, that census estimates of unemployment do not take into account the 'available for work' criterion.
30. There are considerable differences in both the collection methodology adopted (including the detailed questions asked) and estimation procedures. Factors contributing to differences in estimates include under-enumeration in the population census for which census labour force estimates have not been adjusted, the use in the labour force survey of population benchmarks derived from incomplete information about population change (see paragraph 9), the inclusion of permanent defence forces in census estimates, the personal interview approach adopted in the survey as opposed to selfenumeration of census schedules, differing questions used to determine labour force characteristics (particularly the identification of unemployed persons) and differing methods of adjustment for non-response to the survey or census.
31. The labour force survey provides detailed and up-todate estimates of employment and unemployment for Australia, States and regions, whereas the Census of Population and Housing provides counts for small areas but in less detail than is available from the survey.
32. These considerations should be bome in mind when comparisons are made between population census and labour force survey estimates.

## Seasonal adjustment

33. Seasonally adjusted series are published in Tables 2 and 8 . Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Scasonal adjustment does not remove the irregular or non-scasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

| Employment: | 5 in 10 monthly movements |
| :--- | :--- |
| Unemployment: | 7 in 10 monthly movements |

Unemployment rate: 7 in 10 monthly movements Participation rate: 9 in 10 monthly movements
34. The seasonal factors for all scasonally adjusted series are reviewed annually to take account of each additional year's original data. The latest review, in February 1993, revised the Australian and State seasonally adjusted and trend monthly series back to February 1978. Information about the method of adjustment and revised seasonally adjusted and trend estimates for all months since January

1987 for Australia and the States are published in the Appendix of this publication.

## Trend estimation

35. Smoothing seasonally adjusted series produces a measure of trend by removing the impact of the irregular component of the series. The trend estimates are derived by applying a 13 -term Henderson-weighted moving average to the respective seasonally adjusted series. These trend scries are used to analyse the underlying behaviour of the scrics over time. Tables 3 and 9 show trend estimates for the past 15 months. Trend series graphs are shown on pages 1 to 4. Data from Fcbruary 1978 are available on the ABS on-line data dissemination service. PC-AUSSTATS. The trend series of the participation rate for married females are based on smoothed population estimates.
36. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors mentioned above in paragraph 34.
37. Trend estimates for the Australian Capital Territory and the Northern Territory are published in Table 9. Original estimates for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currenuly published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month-to-month revisions. They may, however, be revised as a result of the annual re-analysis of scasonal factors.
38. Users may wish to refer to the ABS Information Papers A Guide to Smoothing Time Series - Estimates of 'Trend' (1316.0), and Time Series Decomposition - An Overview (1317.0) for more detailed information on producing trend estimates by smoothing seasonally adjusted time scries data.

## Month-to-month movements

39. Care should be taken in the interpretation of month-to-month movements in these estimates. Survey estimates are subject to sampling and non-sampling variability as explained in paragraph 27.

## Gross flows

40. In order to minimise respondent load and at the same time maintain continuity within the population survey
sample, one eighth of the dwellings) are replaced after each survey. Adoption of this rotation procedure, whereby about seven-eighths of the sample remains unchanged from one month to the next, enables more reliable measurements of changes in the labour force characteristics of the population to be made than would be possible if a new sample were introduced each month.
41. Because a high proportion of private dwellings selected in one survey remains in the sample for the following survey, it is possible to match the characteristics of most of the persons in those dwellings from one month to the next, to record any changes that occur, and hence to produce estimates of flows between the different categories of the population and labour force.
42. The procedures used to select persons in non-private dwellings preclude the possibility of matching any of them who may be included in successive surveys. For this and other reasons, including the mobility of the population and non-response in either or both surveys, about 10 per cent of persons in those dwellings which are included in the sample in successive months cannot be matched. Those who can be matched represent about 80 per cent of all persons in the survey.
43. Changes in the characteristics of this latter group are shown in the gross flows table. About one half of the remaining (unmatched) 20 per cent of persons in the survey are likely to have characteristics similar to those in the matched group, but the characteristics of the other half are likely to be somewhat different.
44. Gross flow estimates relate only to those persons in private dwelling for whom information was obtained in successive surveys. The expansion factors used in calculating the estimates were those applying to the second of each pair of months.
45. Although it is not possible to provide gross flow estimates for all persons in the survey it is considered that the estimates derived from matched records will be a useful guide to the magnitude of the movements between categories which underlic the changes in monthly levels. When comparing flows for different periods it is important to take into the population represented by the matched sample, as shown in the last line of the table.
46. While every effort is made to reduce non-sampling errors to a minimum any such crrors affecting labour force status will tend to accumulate in the gross flow statistics rather than to cancel out. The estimates are also subject to sampling variability, as explained in the Technical Notes. For these reasons the estimates of flows should be used with caution. The standard errors may be obtained from Table A of the Technical Notes.

## Labour force status and other characteristics of families

47. As a part of survey procedures, family relationships are determined each month, enabling both the estimation
of persons cross-classified by their family status and the estimation of families. This publication contains tables showing the labour force status and family status of individuals and families classified by family type, number of family members, the labour force status of persons within families, the number of children aged 0-14 present and, from the May 1986 issue onwards, the number of dependants present.
48. Because of the coverage rules, persons who usually live with other members of their family may, at the time of the survey, be enumerated as not living with all the usual members of their family. This situation is more likely for persons who are enumerated as visitors to other private dwellings or as persons staying in non-private dwellings (hotels, hospitals, etc.). The determination of family structure and family characteristics in such cases is difficult. Thus for survey questions used to determine family relationships, scope was further restricted to usual residents of private dwellings and the following persons were excluded:
(a) all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions); and
(b) persons enumerated as visitors to (rather than usual residents of) private dwellings.
49. In addition, in those houscholds where it was not possible to obtain information relating to all the usual residents, no family information was recorded. Thus persons living in households which include a member of the permanent defence forces, who is outside the scope of the population survey, are excluded from survey questions used to determine family relationships because family information could not be obtained from each usual resident. Similarly households which, at the time of the survey, have one or more of their usual residents away for more than six weeks, are excluded from the family survey. This also applies to houscholds from which an incomplete or inadequate questionnaire was obtained for any usual resident in on scope and coverage. A summary of those persons for whom family information is obtained as well as those usual residents of private dwellings for whom complete family information cannot be obtained, and those persons specifically excluded from the family determination procedures is contained in the family tables. Generally, family status is determined for more than 90 per cent of all civilians aged 15 and over.
50. Estimates of the number of families in this publication differ from those in publications prior to the April 1986 issuc. This is due to the adoption of a new weighting procedure where the weight for a family is determined using an average of the weights for all family members responding to the labour force survey. Previously, the weight used to derive estimates of the number of families was determined by nomination of a proxy 'head of houschold' as representative of the family.
51. Revised data for March 1986 using the new weighting procedure for familics and the revised definition of employed persons were shown in the April 1986 issue of this publication. Revised data for March 1986 using the new weighting procedure for families and the old definition of employed persons as well as data using the old weighting procedure for families and the new definition for employed persons are available on request.

## Birthplace

52. From April 1991, labour force birthplace data are aggregated according to major groups of the Australian Standard Classification of Countries for Social Statistics (ASCCSS) (1269.0). The ASCCSS was developed by the ABS for use whenever demographic, labour and social statistics are classified by countries.
53. The ASCCSS major groups are based on the concept of geographic proximity. They differ from the country groups presented in this publication prior to April 1991. For example, African countries are now covered by 'The Middle East and North Africa' and 'Africa (excluding North Africa)', while Asia has been split into 'Southeast Asia', 'Northeast Asia' and 'Southern Asia'. Data for selected individual countries will continue to be available in this publication and comprehensively on microfiche.
54. From April 1992, the following amendments have been made to the content of Table 14: data for marricd females have been removed while data for 'Main English Speaking Countries' and 'Other Countries' have been included under the 'Born Outside Australia' heading. Birthplace data as previously published in this table will continue to be available on request. Historical data relating to 'Main English Speaking Countrics' are also available on request. For further information contact Heather Crawford on (06) 2526525.

## Additional data

55. Estimates for employed persons classified by industry, occupation and status of worker are available each February, May, August and November, and the following tables are published in issues of this publication for those months:
[^6]
## Semi-logarithmic graphs

56. Graphs on pages 1 and 2 have bcen drawn using a logarithmic vertical scale to aid comparisons of rates of growth in scries of differing magnitude. Equal distances on the vertical scale (over equal time periods) indicate equal rates of growth for graphs on the same page.

## TECHNICAL NOTES

A new sample for the LFS was phased in over the period September to December 1992. For information about the sample design see Information Paper: Labour Force Survey Sample Design (6269.0).

## Estimation procedure

2. The labour force estimates are derived from the population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

## Reliability of the estimates

3. Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The sampling error is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the estimates that would have been produced if all dwellings had been included in the surveys. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the estimate that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of sampling variability is the relative standard error which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a uscful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer also to the size of the estimate.
4. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding data, and errors made in processing the data. Inaccuracies of this kind are referred to as the non-sampling error and they may occur in any enumeration, whether it be a full count or a sample. It is not possible to quantify non-sampling error, but every effort is made to reduce it to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures. For the examples in paragraphs 9 and 11, it is assumed to be zero. In practice, the potential for non-sampling error adds to the uncertainty of the estimates caused by sampling variability.
5. Space does not allow for the separate indication of the standard errors of all estimates in this publication.

Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown in Table 1. Standard errors of other estimates and other monthly movements should be determined by using Tables A and B.
6. The size of the standard error increases with the level of the estimate, so that the larger the estimate the larger is the standard error. However, it should be noted that the larger the sample estimate the smaller will be the standard error in percentage terms. Thus, larger sample estimates will be relatively more reliable than smaller estimates.
7. As the standard errors in Table A show, the smaller the estimate the higher is the relative standard error. Very small estimates are subject to such high standard errors (relative to the size of the estimate) as to detract scriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.
8. The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. An indication of the magnitude of standard errors of monthly movements is given in Table B. The estimates of standard error of monthly movements apply only to estimates of movements between two consecutive months. Movements between corresponding months of consecutive quarters (quarterly movements), corresponding months of consecutive years (annual movements) and other non-consecutive months, will generally be subject to somewhat greater sampling variability than is indicated in Table B. Standard errors of quarterly movements can be obtained by multiplying the figures in Table A by 1.11 . Standard errors of all annual movements can be obtained by multiplying the figures in Table A by 1.3. When using Table A or Table B to calculate standard errors of movements, refer to the larger of the two estimates from which the movement is derived.
9. Examples of the calculation and use of standard errors are given below:
(a) Consider an estimate for Australia of 500,000 employed persons aged 15-19. By referring to Table $A$, in the row for an estimate of 500,000 and the column for Australia, a standard error of 9,000 is obtained. There are about two chances in three that the true value (the number that would have been obtained if the whole population had
been included in the survey) is within the range 491,000 to 509,000 . There are about ninetcen chances in twenty that the true value is in the range 482,000 to 518,000 .

19 chances in 20 that the true value is in this range
(b) Consider estimates for females employed part time in Australia of $1,387,000$ in one monch and $1,400,000$ in the next month. This represents an upward movement of 13,000 . By referring to Table B for the larger estimate of $1,400,000$, a movement standard error of 9,800 is obtained (after applying lincar interpolation and rounding). Therefore, there are about two chances in threc that the true movement is in the range $+3,200$ to $+22,800$ and about nineteen chances in twenty that the true movement is in the range $-6,600$ to $+32,600$.

19 chances in 20 that the true movement is in this range.
10. The relative standard crrors of estimates of aggregate hours worked, average hours worked, average duration of unemployment, and median duration of unemployment are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the estimate (see Table A) and then multiplying the figure so obtained by the following relevant factors:

Aggregate hours worked: 1.2
A verage hours worked: 0.7
Average duration of unemployment: 1.3
Mcdian duration of unemployment: 2.0
The levels at which these and other labour force estimates have a relative standard error of 25 per cent are shown in Table C.
11. The following is an example of the calculation of standard errors where the use of a factor is required:

Consider a median duration of unemployment for Australia of 30 weeks, with an estimate of $1,000,000$ persons unemployed. Table A gives the standard error as 11,800 which is 1.2 per cent as a relative standard error. The factor of 2.0 (sce paragraph 10) is applied to the relative standard error of 1.2 per cent to obtain 2.4 per cent. Therefore the standard error for the median duration of unemployment is 2.4 per cent of 30 weeks, i.e about 1 weck. So there are two chances in three that the median duration of unemployment is between 29 and 31 weeks, and about nincteen chances in twenty that it is between 28 and 32 weeks.
12. Proportions and percentages (for example, unemployment rates) formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and denominator. The formula for the relative standard error (RSE) of a proportion or percentage is given below:

$$
\operatorname{RSE}(x / y)=\sqrt{[\operatorname{RSE}(x)]^{2}-[\operatorname{RSE}(y)]^{2}}
$$

13. Standard crrors contained in Tables $A$ and $B$ are designed to provide an average standard error applicable for all monthly labour force survey estimates. Analysis of the standard errors applicable to particular survey estimates has shown that the standard errors of estimates of employment are generally equivalent to those shown in Tables $A$ and $B$, while standard errors for estimates of unemployment and persons not in the labour force are approximately 3 per cent and 11 per cent respectively higher than those shown in the tables. Standard errors for capital cities are approximately the same as those for corresponding States. Standard errors of estimates of numbers of families are approximatcly the same as those for numbers of persons. Standard errors of estimates of persons born in Australia are approximately the same as those shown in Tables A and B. For aggregate estimates of persons born outside Australia the standard errors are about 14 per cent higher. The standard errors vary for individual countries of birth, but are on average about 7 per cent higher.

## SUPPLEMENTARY AND SPECIAL SURVEYS RELATING TO THE LABOUR FORCE

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time. The results of these surveys on labour force and related topics are published separately as shown below.

| Title of Publication Cat | Catalogue No. |
| :---: | :---: |
| Alternative Working Arrangements, Australia, March to May 1982, September to November 1986 | 6341.0 |

## GLOSSARY

Actively looking for work: Includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service noticeboards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

Aggregate hours worked: The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.

Attending school: Persons aged 15 to 19 who, during the reference week, were enrolled full time at secondary or high schools.

Attending tertiary educational institution full time: Pcrsons aged 15 to 24 who, during the reference week, were enrolled full time at a TAFE college, univesity, or other educational institution.

Average hours worked: Aggregate hours worked by a group divided by the number of persons in that group.

Average duration of unemployment: For a group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.

Birthplace: From April 1991, classified according to the Australian Standard Classification of Countries for Social Statistics (ASCCSS) (1269.0).

Dependants. All family members under 15 years of age; all family members aged 15 to 19 attending school or aged 15 to 24 autending a tertiary educational institution full time, except those classified as husbands, wives, sole parents or other family heads.

Duration of unemployment: The period from the time a person began looking for work or was stood down, to the end of the reference weck. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full time for two wecks or more to the end of the reference week.

Employed: Persons aged 15 and over who, during the reference week:
(a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employces, employers and sclf-employed persons); or
(b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
(c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference weck; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
(d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

Employment/population ratio: For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 and over in the same group.

Family: Two or more related persons (relationship includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, logether with any persons having any of the following relationships to them:
(a) sons or daughters of any age, if not married and with no children of their own present;
(b) other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
(c) any children under 15 years of age who do not have a parent present.

## Family head:

(a) Any person without a spouse present, but with a son or daughter aged under 15 present; or
(b) persons without a spouse present, without a son or daughter aged under 15 present, but with a son or daughter aged 15 or over present (provided that the son or daughter has no spouse, son or daughter of his/her own present); or
(c) where a family has no person falling into either of these categories, the family head is generally defined to be the eldest person in the family.

No family head is determined for a married-couple family.
Former workers: Unemployed persons who have previously worked full time for two weeks or more but not in the past two ycars.

Full-time workers: Employed persons who usually worked 35 hours or more a woek (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Household: A group of one or more persons in a private dwelling who consider themselves to be separate from other persons (if any) in the dwelling, and who make regular provision to take meals separately from other persons, i.e. at different times or in different rooms. Lodgers who receive accommodation but not meals are treated as scparate households. Boarders who receive both accommodation and meals are not treated as separate households. A household may consist of any number of families and non-family members.

Industry: Classified according to the Australian Standard Industrial Classification (ASIC) 1983 (1201.0 and 1202.0).

Job leavers: Unemployed persons who have worked full time for two weeks or more in the past two years and left that job voluntarily, that is, because of unsatisfactory work arrangements/pay/hours; the job was scasonal, temporary or a holiday job and they left that job to return to studies; their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties; or any other reasons.

Job losers. Unemployed persons who have worked full ume for two weeks or more in the past two years and left that job involuntarily, that is: were laid off or retrenched from that job; left that job because of their own ill-health or injury; the job was seasonal, temporary or a holiday job and they did not leave that job to retum to studies; or their last job was running their own business and the business closed down because of financial difficulties.

Labour force: For any group, persons who were employed or unemployed, as defined.

Labour force status: A classification of the civilian population aged 15 and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Living alone: A person who is the sole member of a houschold..

Long-term unemployed: Persons unemployed for a period of 52 wecks or more.

Main English Speaking Countries: The United Kingdom, Ireland, South Africa, Canada, the United States of America and New Zcaland.

Marital status: Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not-married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usually lived in the household.

Married-couple families: Families in which there are two married persons and these persons are husband and wife. Sce Marital status.

Median duration of unemployment: The duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is bclow it.

Not a member of a family: A person who is not related to any other member of the houschold in which they are living.

Not in the labour force: Persons who were not in the categorics employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanendly unable to work, persons in institutions (hospitals, gaols, sanatoriums, etc.), trainee teachers, members of contemplative religious orders, and persons whose only activity during the reference weck was jury scrvice or unpaid voluntary work for a charitable organisation.

Occupation: Classified according to the Australian Standard Classification of Occupations (ASCO) 1986 (1222.0).

One-parent families: Families in which there is a family head together with at least one dependent son or daughter of his/her own.

Other families: Families which are not married-couple familics or one-parent families, as defined. They include families in which there is a parent with only non-dependent children present, and families in which there is no parent, for example a family head living with a brother or sister.

Participation rate: For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group. Participation rates for persons classified by birthplace are calculated using population estimates which exclude those in institutions. Participation rates for persons classified by school or tertiary educational institution attendance are calculated using population estimates which include those in institutions.

Part-lime workers: Employed persons who usually worked less than 35 hours a week and who did so during the reference weck.

Seasonally adjusted series: A time series of estimates with the estimated effects of normal seasonal variation removed. Sce paragraphs 33 and 34 of the Explanatory Notes for more detail.

Sole parent: The head of a one-parent family.
State capital cities: The areas determining the six State capital cities are the Statistical Divisions for those capital cities defined in the Australian Standard Geographical Classification (ASGC) Manual, Edition 2.1 (1216.0).

Status of worker: Employed persons classified by whecher they were employers, self-employed persons, wage and salary earners (employces), or unpaid family helpers.

Trend series: A smoothed seasonally adjusted series of estimates. See paragraphs 35 to 38 of the Explanatory Notes for more detail.

Unemployed: Persons aged 15 and over who were not employed during the reference weck, and:
(a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference weck and:
(i) were available for work in the reference weck, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
(ii) were waiting to start a new job within four weeks from the end of the reference weck and would have started in the reference weck if the job had been available then; or
(b) were waiting to be called back to a full-ime or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

Unemployed persons classified by industry and occupation: Unemployed persons who had worked full time for two wecks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.

Unemployed looking for first full-time job: Unemployed persons looking for full-time work who had never worked full time for two weeks or more.

Unemployed looking for first job: Unemployed persons who had never worked full time for two weeks or more.

Unemployed looking for full-time work: Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

Unemployed looking for part-time work: Unemployed persons who had actively looked for part-time work only, or were to resume a part-lime job, from which they had been stood down.

Unemployment rate: For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

## APPENDIX

## SEASONAL REANALYSIS OF MONTHLY LABOUR FORCE SURVEY ESTIMATES

## EXPLANATORY NOTES

This appendix contains tables of original, seasonally adjusted and trend monthly labour force series for Australia and the six States and tables of original and trend series for the Northern Territory and the Australian Capital Territory for the period January 1987 to February 1993. The seasonally adjusted and trend estimates back to 1978 have been revised following the annual reanalysis which takes account of an additional 12 months' original data. Minor revisions only have been made to the scries prior to January 1987. Selected series are available on PC-AUSSTATS back to 1978.
2. Seasonally adjusted series. As happens with all seasonally adjusted series, the seasonal factors are reviewed when a further year's estimates become available. Generally, additional estimates provide information about recent changes in the seasonal pattern and consequently the adjustment factors are revised (as they have been for this publication). It follows that the seasonally adjusted estimates in the following tables are likely to be revised at the next annual revicw.
3. The seasonally adjusted estimates still reflect the sampling and non-sampling crrors to which the original figures are subject. Furthermore, the seasonal adjustment process does not attempt to remove the effect of random influences (such as industrial disputes) on the estimates.
4. For Australia, seasonally adjusted estimates for persons have been obtained by the addition of the independently adjusted series for males and females. The adjusted scries for males (females) looking for full-time work are the addition of adjusted estimates for those aged 15 to 19 and for those aged 20 and over. Scasonally adjusted estimates for males (females) looking for part-time work are then added to the above estimates to obtain seasonally adjusted estimates of total unemployed. Adjusted estimates for employed persons are the aggregation of independently adjusted series for persons employed full time and for persons employed part time. The full-time employment series is oblained by aggregating the series for full-time workers aged 15 to 19 and those aged 20 and over. The adjusted estimates for the labour force are the addition of the adjusted series for the employed and unemployed. Seasonally adjusted unemployment rates have been produced using seasonally adjusted unemployment data and the seasonally adjusted labour force. Participation rates have been adjusted using scasonally adjusted labour force data and population estimates.
5. For the six States, seasonally adjusted estimates for persons have been obtained by the addition of the independently adjusted series for males and females. The adjusted estimates for the labour force are the addition of
the adjusted series for the employed and unemployed. Seasonally adjusted unemployment rates have been produced using seasonally adjusted unemployment data and the seasonally adjusted labour force. Participation rates have been adjusted using seasonally adjusted labour force data and population estimates.
6. Further information concerning the method of adjustment used in the revised series and other information on the seasonal adjustment process was included in the 1983 issue of Seasonally Adjusted Indicators, Australia (1308.0).
7. Scasonally adjusted labour force data are published monthly in The Labour Force Australia, Preliminary (6202.0) as well as in this publication (see Tables 2 and 8). These estimates are also available on PC-AUSSTATS, PC-Telestats, floppy disk and from the Time Series Data on magnetic tape and microfiche (1311.0).
8. Seasonally adjusted quarterly labour force data for the period August 1966 to November 1977 are published in The Labour Force, Australia, Historical Summary, 1966 to 1984 (6204.0). That publication also contains information on the method of adjustment of these estimates and on the relationship between quarterly and monthly seasonally adjusted series.
9. Trend series. As explained in paragraphs 35 and 36 of the Explanatory Notes, when a 13 -term Hendersonweighted moving average is applied to a seasonally adjusted series, a trend series results which can be used to analyse the underlying behaviour of the series over time. This is because the smoothing technique reduces the impact of the residual/irregular influences which cause variability in the series.
10. For Australia, trend estimates for persons have been obtained by the addition of the independently calculated series for males and females. The trend series for males (females) looking for full-time work are the addition of trend estimates for those aged 15 to 19 and for those aged 20 and over. Trend estimates of males (females) looking for part-time work are then added to the above estimates to obtain estimates of total unemployment. Trend estimates for the employed are the aggregation of independently calculated series for persons employed full time and persons employed part time. The full-time employment series is obtained by aggregating the series for full-time workers aged 15 to 19 and those aged 20 and over. The trend estimates for the labour force are the addition of the trend series for employment and unemployment. Trend unemployment rates have been produced using trend unemployment data and the trend
labour force estimates. Participation rates have been calculated using trend labour force data and population estimates.
11. For the six States and the two Territories, trend estimates for persons have been obtained by the addition of the independently calculated series for males and females. The trend estimates for the labour force are the addition of the trend series for the employed and unemployed.

Trend unemployment rates have been produced using trend unemployment data and the trend labour force estimates. Participation rates have been calculated using trend labour force data and population estimates.
12. Trend series are published monthly in The Labour Force, Australia, Preliminary (6202.0) as well as in this publication (see Tables 3 and 9), on PC-Ausstats, PC-TELESTATS and on floppy disk.

## INFORMATION PAPER: QUESTIONNAIRES USED IN THE LABOUR FORCE SURVEY

This recently released information paper provides users of labour force data with information about the Labour Force Survey questionnaire.

The paper features information on:

- changes to the questionnaire since 1960 ;
- who is included in the Survey;
- definitions used in the Survey;
- guidelines to following the questionnaire.

The paper also includes a copy of the current questionnaire. :

Information Paper: Questionnaires Used in the Labour Force Survey (Catalogue No. 6232.0) Free Issue

The ABS will shortly be releasing data from two surveys conducted in October 1992 which provide information on the retirement and retirement intentions of persons aged 45 and over.

The Retirement survey provides information on the number and characteristics of persons aged 45 and over who had retired from full-time work. A range of information is available, featuring:

- Retirement scheme membership
- Age at retirement
- Main source of income at retirement

The Retirement Intentions survey provides information for persons aged 45 and over who intended to retire:

- Retirement scheme membership
- Age intended to retire
- Expected main source of income and housing arrangements

Comprehensive socio-demographic data, and time series comparisons are available for both surveys.

## Retirement and Retirement Intentions, Australia, October 1992

(Catalogue No. 6328.0)
$\$ 12.70$

## For more information ...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below for contact details).

## Information Consultancy Service

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

## Electronic Data Services

A growing range of our data is available on electronic media. Selections of the most frequently requested data are available, updated daily, on DISCOVERY (Key *656\#). Our PC TELESTATS service delivers major economic indicator publications ready to download into your computer on the day of release. Our PC AuSstats service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on our electronic data services, contact Information Services in any of our Offices on the numbers below.

## Bookshops and Subscriptions

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free on 008020608 Australia wide.
