#### **EXPLANATORY NOTES**

#### Introduction

The monthly Population Survey (which is described in *The Labour Force, Australia* (6203.0)) comprises the monthly labour force survey and supplementary topics. This publication contains some results of a supplementary survey run in association with the February 1985 labour force survey conducted throughout Australia.

2. Of the respondents to the labour force survey, those who fell within the scope of the supplementary survey were asked additional questions. This subset of respondents was asked about their highest educational qualifications. For persons with post-school qualifications, the information sought includes field of study, and for those who did not complete their schooling, it includes the age at which they left school.

#### Scope

3. The scope of this supplementary survey was the same as that used for the labour force survey (described in full in *The Labour Force, Australia* (6203.0)) except that it excluded students boarding at school, some patients in hospitals and sanatoria and inmates of jails, reformatories etc.

#### **Definitions**

- 4. Definitions of the principal labour force categories appearing in this publication are given in *The Labour Force, Australia* (6203.0), but it should be noted that there are slight differences in the estimates for some labour force categories shown in these publications. This is due to the different sizes of the samples used and the inability to obtain from a small number of persons the additional information required for the educational qualifications survey. Although the estimation procedures take account of these factors, estimates for some characteristics will be affected.
- 5. Persons with a post-school qualification are those who have left school and who answered 'Yes' to the question: 'Since leaving school have you obtained a certificate, diploma, degree or any other qualification?'
- 6. Classification of post-school qualifications. Respondents indicate which one of the following groups best describes their highest qualification:
  - (a) Degree: a bachelor degree (including honours), a graduate or post-graduate diploma, masters degree or a doctorate;
  - (b) Trade; technical or other certificate: completion of an approved trade/technician apprenticeship or training course, other certificate or diploma in secretarial or business studies, administration, teaching, nursing, etc.;
  - (c) Other: completion of other post-secondary education, e.g. adult education, preparatory/bridging course or hobby course.

- 7. Classification of field of study. Respondents with a degree; trade; or technical certificate qualification (i.e. (a) or (b) in paragraph 6) indicate the field of study for their highest qualification (see Table 7).
- 8. Highest level of secondary school available refers to the highest level of secondary schooling (or equivalent) offered by the education system at the time the respondent left school.
- 9. Still at school. Current school attendance is recorded only for persons aged fifteen to twenty years.
- 10. The unemployment/population ratio for any group is the number of unemployed persons expressed as a percentage of the civilian population in the same group.
- 11. Family status characteristics are explained in detail in The Labour Force, Australia (6203.0). It should be noted that they were not obtained for all persons included in the survey. Family information was not collected for the following persons (identified in tables as 'not family coded'):
  - (a) all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions);
  - (b) persons enumerated as visitors to, rather than usual residents of, private dwellings; and
  - (c) where it was not possible to obtain family information relating to all the usual residents of a household, e.g. where one member of the family was a member of the permanent defence forces and therefore outside the scope of the survey.

# Results of the survey

- 12. Additional tables available but not included in this publication are listed on page 19. A preliminary publication (6240.0) containing a summary of the results of the survey was released on 15 May 1985.
- 13. Results of similar surveys, the first conducted in February 1979, have been given in previous issues of this publication.

# Comparability of estimates

- 14. Educational attainment of persons not in the labour force is not available for the February 1979, 1980 and 1981 surveys which only covered persons in the labour force.
- 15. Estimates in this series are not strictly comparable with those from the population censuses due to differences in questions and coding methodology.

#### Reliability of the estimates

- 16. Estimates in this publication are subject to two sources of error:
  - (a) sampling error: since the estimates are based on information obtained from occupants of a sample

of dwellings, they may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical note.

(b) non-sampling error: inaccuracies may occur because of imperfections in reporting by interviewers and respondents and errors made in the coding and processing of data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

### Related publications

17. Other ABS publications which may be of interest include:

The Labour Force, Australia(6203.0)—issued monthly

Transition from Education to Work, Australia, May 1985 Preliminary (6241.0)

18. Current publications produced by the ABS are listed in the Catalogue of Publications, Australia(1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

#### Symbols and other usages

- subject to sampling variability too high for most practical uses. See paragraph 16 above.
- n.e.c. not elsewhere classified
  - .. not applicable
  - r revised
- 19. Because figures have been rounded, discrepancies may occur between sums of the component items and totals.

#### **SUMMARY OF FINDINGS**

There were an estimated 11,696,100 persons in the civilian population aged 15 years or over in February 1985. Of these, 34.0 per cent (3,975,500 persons) had obtained a post-school qualification, 62.0 per cent (7,251,500 persons) were without post-school qualifications, and 4.0 per cent (469,200 persons) were still at school.

Of the persons who had obtained post-school qualifications, 20.5 per cent (816,400) had a degree or equivalent, 76.0 per cent (3,022,800) had obtained a trade; technical or other certificate qualification, and 3.4 per cent (136,300) had obtained some other post-school qualification. The corresponding proportions in February 1984 were 19.4 per cent, 78.1 per cent and 2.5 per cent respectively.

Of the persons in the February 1985 survey who had not obtained post-school qualifications, 1,328,800 had attended the highest level of secondary school available, and 5,871,400 had left school early (1,665,500 left school aged 16 years or over and 4,206,000 left school at age 15 years or under).

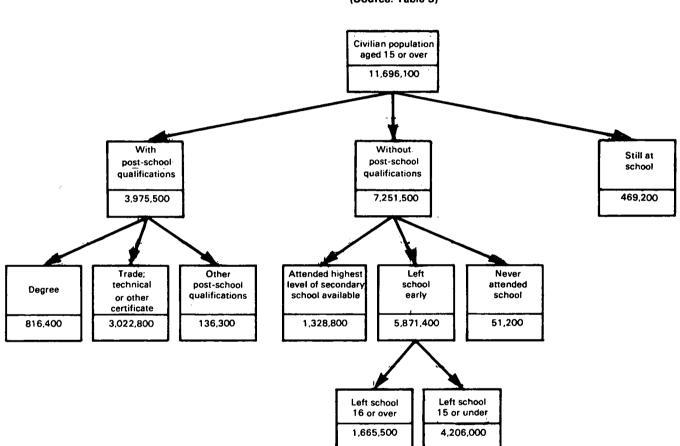

DIAGRAM 1. CIVILIAN POPULATION,: EDUCATIONAL ATTAINMENT (Source: Table 3)

Females and older persons were less likely to possess post-school qualifications. Of females aged 25-34 years, 41.5 per cent had post-school qualifications. This proportion steadily decreased with age with only 16.6 per cent of females aged 55 and over possessing post-school qualifications. For males a similar pattern emerged though the proportions were much higher, the corresponding figures being 52.2 per cent of 25-34 year old males and 32.9 per cent of males aged 55 and over.

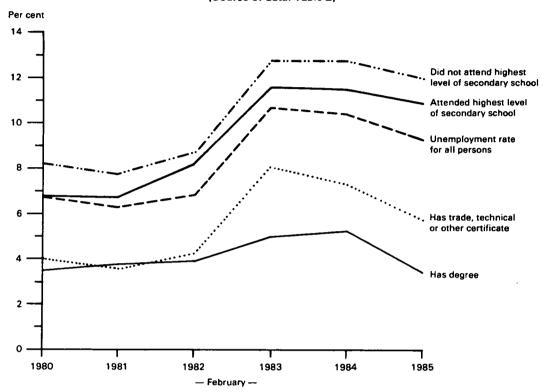

### **Educational Attainment of the Labour Force**

Over the period February 1980 to February 1985 significant changes occurred in the relative proportions of each of the different types of educational qualifications attained by persons in the labour force. The proportion of persons who left school aged 15 years or under decreased from 33.9 per cent of the labour force to 27.2 per cent. The proportion of persons with trade; technical or other certificate qualifications rose from 29.1 per cent of the labour force in February 1980 to 32.3 per cent in February 1984 then fell to 31.5 per cent in February 1985. The proportion of persons with a degree increased from 6.7 per cent to 9.5 per cent over the period to February 1985.

## **Unemployment rates**

The unemployment rate for all persons fluctuated over the period February 1980 to February 1985, but dropped significantly from 10.4 per cent in February 1984 to 9.3 per cent in February 1985. Corresponding decreases were recorded for all categories of educational attainment.

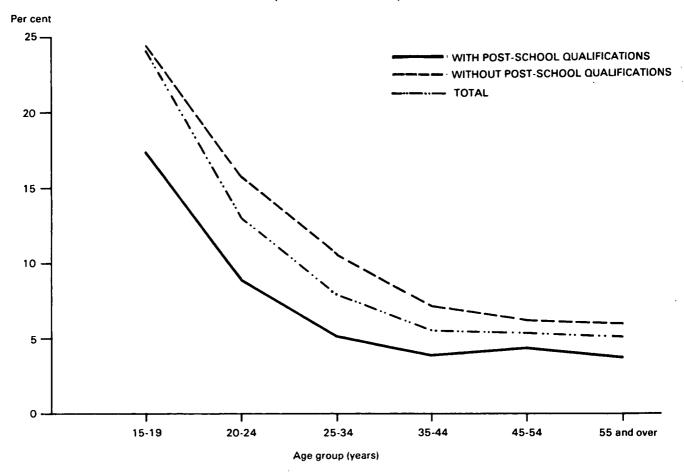

DIAGRAM 2. CIVILIAN POPULATION: EDUCATIONAL ATTAINMENT, UNEMPLOYMENT RATES, FEBRUARY 1980 TO FEBRUARY 1985
(Source of data: Table 2)

For a given level of educational attainment the unemployment rate decreases as age increases. For those persons without post-school qualifications the unemployment rate of 15-19 year olds is 1½ times that of 20-24 year olds and double that of 25-34 year olds. A similar pattern occurs for those persons with post-school qualifications.

The large unemployment rate of persons still at school (27.2 per cent) distorts the overall unemployment rate for the 15-19 year age group. An alternative measure is the unemployment/population ratio. The unemployment/population ratio for 15-19 year olds is still significantly larger than the ratio for any other age group.

DIAGRAM 3. CIVILIAN POPULATION: EDUCATIONAL ATTAINMENT, AGE AND UNEMPLOYMENT RATES, FEBRUARY 1985 (Source of data: Table 4)

# **Duration of Unemployment**

The average duration of current unemployment varied according to educational qualifications; for all unemployed persons the average duration of current unemployment was 44.6 weeks, significantly higher than the 41.9 weeks recorded in February 1984. However, the median duration of unemployment dropped from 19.8 weeks in February 1984 to 16.8 weeks in February 1985. Corresponding changes in both medians and averages were recorded for all categories of educational attainment, except for those who attended the highest level of secondary school available—their average duration of unemployment fell from 35.6 weeks to 29.0 weeks.

## Persons Not in the Labour Force

Of the 1,309,500 males and 3,136,700 females not in the labour force, most (61.3 per cent for males, 76.1 per cent for females) were without post-school qualifications in February 1985. (The corresponding proportions were 60.9 per cent and 74.7 per cent respectively in February 1984.) Similar proportions were recorded across all age groups except for 15-19 year olds (where the great majority, 76.3 per cent, were still at school).

Just over half of all females (52.1 per cent) who were not in the labour force left school aged 15 years or under, compared with 45.7 per cent for males. (The corresponding figures in 1984 were 51.7 per cent and 46.0 per cent respectively.)

#### ADDITIONAL TABLES

The following is a list of additional tables of results from the survey which are available to users on request. These tables show a selection of estimates on an Australia-wide basis. Tables dissaggregated by State/Territory and other tables may also be available. All tables are dissected by sex.

#### Civilian population aged 15 years and over

Educational attainment, age and marital status

Educational attainment, marital status and labour force status at February 1985

Educational attainment, age and family status

Educational attainment, age and labour force status at February 1985

Educational attainment, labour force status at February 1985, age and educational institution attended during 1984 (for persons aged 15-25 years)

Educational attainment, labour force status at February 1985, birthplace and period of arrival (for persons born overseas)

Educational attainment, age, birthplace and period of arrival (for persons born overseas)

Educational attainment, family status, birthplace and period of arrival (for persons born overseas)

Main field of study (for persons with a degree qualification), birthplace and period of arrival (for persons born

Main field of study (for persons with a trade, technical or other certificate qualification), birthplace and period of arrival (for persons born overseas)

Main field of study (for persons with a trade, technical or other certificate qualification), labour force status at February 1985, age and occupation (if any)

Main field of study (for persons with a degree qualification), age and marital status

Main field of study (for persons with a trade, technical or other certificate qualification), age and marital status

Main field of study (for persons with a degree qualification) and family status

Main field of study (for persons with a trade, technical or other certificate qualification) and family status

Main field of study (for persons with a degree qualification), marital status and labour force status at February 1985 Main field of study (for persons with a trade, technical or other certificate qualification), marital status and labour force status at February 1985

#### **Employed persons**

#### Persons who attended an educational institution during 1984 (aged 15-25 years only)

Type of institution attended, whether attended full-time or part-time, whether attended full-year or part-year, marital status and age

Type of institution attended, whether attended full-time or part-time, whether attended full-year or part-year, labour force status at February 1985 and age

Type of institution attended, whether attended full-time or part-time, whether attended full-year or part-year, family status and age

Type of institution attended, whether attended full-time or part-time, whether attended full-year or part-year, birthplace and period of arrival (for persons born overseas)

Type of institution attended, whether attended full-time or part-time, whether attended full-year or part-year, marital status and labour force status at February 1985

Type of institution attended, educational attainment and labour force status at February 1985

Type of institution attended, educational attainment and occupation (if any)

Type of institution attended, educational attainment and industry (if any) Whether attended full-year or part-year, occupation (if any) and marital status

Whether attended full-year or part-year, industry (if any) and marital status

Age, family status, birthplace and period of arrival (for persons born overseas)

#### Persons not in the labour force

Educational attainment and age

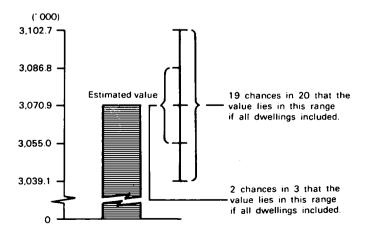

### **TECHNICAL NOTE**

#### **Estimation procedure**

The estimates are derived from the population survey by use of a ratio estimation procedure which ensures that the estimates conform to an independently estimated distribution of the population for each capital city and remainder of State by age and sex, rather than to the corresponding distribution within the sample itself.

#### Reliability of the estimates

- Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability; that is, they may differ from the figures that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimate.
- 3. Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors for general application is given on the following page. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these figures will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.
- 4. An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. From Table 1 the estimated number of persons in the labour force with post-school qualifications is 3,070,900. Since this estimate is between 2,000,000 and 5,000,000 the standard error for Australia will be between 14,200 and 19,100 in the standard error table and can be approximated as 15,900 (rounded to the nearest 100). Therefore there are about two chances in three that the value that would have been produced if all dwellings had

been included in the survey will fall in the range 3,055,000 to 3,086,800 and about nineteen chances in twenty that the value will fall within the range 3,039,100 and 3,102,700. This example is illustrated in the diagram.

- 5. As can be seen from the standard error table, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, estimates less than the lowest levels shown in the standard error table have not been published. Although figures for these small components can in some cases be derived by subtraction, they should not be regarded as reliable.
- 6. Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. The formula for the relative standard error (RSE) of a proportion is given below:

RSE 
$$(x/y) = \sqrt{[RSE(x)]^2 - [RSE(y)]^2}$$

- 7. Considering the example from paragraph 4 above, the 3,070,900 persons in the labour force with post-school qualifications represent 77.2 per cent of the 3,975,500 persons in the total population who had post-school qualifications. The standard error for 3,957,500 is approximately 17,400 so the relative standard error is 0.4 per cent. The relative standard error for 3,070,900 is 0.5 per cent. Applying the above formula, the relative standard error of the proportion is  $\sqrt{(0.5)^2 (0.4)^2}$  or 0.3 per cent, giving a standard error for the proportion (77.2 per cent) of 0.2 percentage points. Therefore, there are about two chances in three that the proportion for persons with post-school qualifications is between 77.0 per cent and 77.4 per cent and nineteen chances in twenty the proportion is within the range 76.8 per cent to 77.6 per cent.
- 8. Published figures may also be used to estimate the difference between two survey estimates (of numbers or percentages). Such a figure is itself an estimate and is therefore subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

SE 
$$(x-y) = \sqrt{[SE(x)]^2 + [SE(y)]^2}$$

While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations, it is expected to provide a good approximation for all differences likely to be of interest in this publication.

9. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in the coding and processing of data. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or a sample.

# STANDARD ERRORS OF ESTIMATES
