PREFACE

This edition of the Catalogue of Publications and Products lists titled products released by the Australian Bureau of Statistics (ABS) between 1 January 2001 and 31 December 2004, and those expected to be released before the end of 2005. The Catalogue can be accessed through the ABS web site <<http://www.abs.gov.au>>.

The Catalogue is a comprehensive reference to the statistical information published from ABS collections. It provides reference information such as product title and reference year, and also provides a brief description of the content of each product. The release medium of the product — printed publication, floppy disk, CD-ROM or online service — is also indicated.

Suggestions for improvements to the catalogue, or queries on matters not itemised in detail — such as the availability of data on special interest topics and unpublished statistics — should be directed to the National Information and Referral Service. The address and telephone number are shown on the inside back cover.

HOW TO ACCESS ABS INFORMATION

VISIT OUR WEB SITE

Updated daily, the ABS web site <<http://www.abs.gov.au>> provides statistics on many aspects of Australia and Australians and includes main features of most ABS publications, available free online.

Highlights include:

Statistical Products and Services

- Main Features — Free summary findings from most ABS publications
- Australia Now — A comprehensive statistical summary for all aspects of Australia
- Themes — A topic based entry point to ABS statistics

Recent Releases

- Key National Indicators — Australia's economic and social indicators
- Consumer Price Indexes, Australia — Free summary data from the latest quarter

Information on Releases

- Main Economic Indicators — Release dates for the next six months
- Week Ahead — List of all products to be released in the next week

Census

- 2001 Census Releases and Information

Education Resources

- Statistics for Students — Sections on The Nation, The Land, The People and Economy and Business
- For School Teachers — CensusAtSchool, Education news, Teaching tools and Classroom activities
- Statpak Online — A catalogue of ABS products selected for relevance to the curriculum

E-commerce Facilities

- Take advantage of our handy e-commerce facilities, which allow for quick, easy, and secure purchase of ABS products online, using your credit card.

AUSSTATS, THE ABS ONLINE SUBSCRIPTION SERVICE

AusStats is a web based information service providing you with the ABS' full product range (both free and charged material) online. Available by subscription only, AusStats allows you to conveniently access:

- All ABS publications from 1998 onwards in Adobe Acrobat format (.pdf)
- Over 2,000 spreadsheets
- Multidimensional datasets in SuperTABLE format
- Census Basic Community Profiles to the Statistical Local Area (SLA) level in excel spreadsheet format
- Summary information including Main Features, Release Advices & Australia Now and extensive linking between related information.

OTHER ACCESS

ABS information is also available through libraries, over the telephone or through the ABS Information Service. Please see the inside back cover of this catalogue for further details.

HOW TO ACCESS ABS INFORMATION *continued*

PRINT ON DEMAND

ABS statistics are predominantly released in electronic format on the ABS web site. Due to decreasing demand, only a small number of publications are printed. The list of printed titles is subject to review and it will continue to decrease. However, where a title is published only electronically, a copy can be supplied in print format on request. This print on demand service is available via the e-commerce facilities on the ABS web site or by phoning the National Information Service on 1300 135 070.

CHANGES TO THE ABS CATALOGUE NUMBERING SYSTEM

The ABS is progressively introducing a new product numbering system to address deficiencies in the existing system, particularly in relation to electronic and previously uncatalogued releases.

The new numbering system will be based on the concept of Product Families, each Family consisting of a suite of related outputs with varied content, e.g. the range of outputs may include Statistical Publications, Information Papers, Time Series Tables and so on.

Each Product Family will be represented by a unique 5 digit number and the outputs contained within the Family will be distinguished by an extension to that number.

All currently catalogued products have been assigned a new product number in preparation for the transition to the new numbering system later in the year. These new product numbers are included in this edition of the Catalogue. As far as possible, existing product numbers have been converted to a 5 digit number simply by removing the decimal point (e.g. 6401.0 has been converted to 64010) but some new numbers will change significantly (e.g. 4902.0 will translate to 41021). For reference purposes, a concordance of old product numbers and their equivalent new product numbers is published on pages 269 to 303 of this Catalogue.

INTRODUCTION

INTRODUCTION

The ABS is Australia's official statistical organisation. Its main function is to provide government and the community with a high quality, objective and responsive national statistical service.

THE CATALOGUE OF PUBLICATIONS AND PRODUCTS

The Catalogue of Publications and Products 2005 refers to titled products which the ABS has issued since 1 January 2001 or expects to release before the end of 2005. In some cases, for example where products are part of a current series, information on earlier issues has been included.

The Catalogue is divided into five parts.

Part 1 — CONSULTANCY SERVICES

This introduces the various consultancy services provided by the ABS, such as: flexible data delivery; thematic maps; survey and sample design; data analysis; data management; methodological reviews; tender evaluation; and statistical training.

Part 2 — NATIONAL PRODUCTS

This part comprises a list of products that provide information referring to the whole of Australia. Many national products contain separate statistics for states and territories as components of Australian totals, and can be used for comparing state and territory figures. Products are arranged in sequence by ABS catalogue number. (See page xv for an explanation of ABS catalogue numbers).

Part 3 — STATE AND TERRITORY PRODUCTS

This is a list of products that provides information about a particular state or territory. These products contain more detailed information than is provided in similar national publications, and in some cases they provide a finer geographic breakdown. Products are arranged in sequence by ABS catalogue number after being separated into state and territory as indicated by the fifth digit of the number. (See page xv for an explanation of ABS catalogue numbers).

Part 4 — CATALOGUE NUMBERING SYSTEM

All catalogued products have been assigned a new product number in preparation for the transition to the new numbering system later in the year. For reference purposes, a listing of old product numbers and their equivalent new product numbers is published to enable conversion between the two systems.

Part 5 — INDEXES

As there are in the order of 775 publications and products introduced in this catalogue, a number of different indexes are included to assist in locating the data required. (See table of contents for page numbers). The indexes are:

- Directories, catalogues and guides - A comprehensive listing of directories, catalogues and guides issued by the ABS on particular topics.
- Information and technical papers - This index contains a listing of information and technical papers produced by the ABS on the availability, collection and format of statistics.
- Occasional and professional papers - Occasional papers are prepared by individual ABS officers and provide accounts of ABS development or research work, and analyses of an experimental nature.
- Releases by medium - Some releases are available from the ABS either on floppy disk or CD-ROM.

INTRODUCTION *continued*

- Feature articles - A list of feature articles which have been published in ABS publications since 1 January 2001. Feature articles appear in some publications frequently and in others only occasionally. They examine statistical issues of particular interest or complexity.
- Census products - For convenience, all Census of Population and Housing products are listed together in catalogue number order.
- Titles - This index comprises a complete list of publication and product titles in alphabetic order.
- Subject index - This index, lists ABS publications and products that are available pertaining to a specific subject of interest. It has not, however, been possible to include exhaustive lists of subjects for the Australian and State year books. While the most significant references for all year book publications are given in this index, each publication contains a more detailed index of its own.

COPYRIGHT

Requests and inquiries concerning reproduction and rights in this publication should be addressed to: The Manager, Intermediary Management, Australian Bureau of Statistics, Locked Bag 10, Belconnen, Australian Capital Territory 2616, by telephone (02) 6252 6998, fax (02) 6252 7102 or email <intermediary.management@abs.gov.au>.

In all cases, the ABS must be acknowledged as the source when reproducing or quoting any part of an ABS publication or other product.

PRICES

This edition of the Catalogue of Publications and Products does not contain product prices. The number of products available free of charge via the ABS web site <<http://www.abs.gov.au>> is growing and in the case of priced products, prices are regularly reviewed and fixed in accordance with the latest Commonwealth Cost Recovery Guidelines.

For up to date pricing information on all products please refer to the Catalogue of Publications and Products on the ABS web site <<http://www.abs.gov.au/ausstats/abs@.nsf/cat>> or contact the National Information Service on 1300 135 070.

INFORMATION ON ABS RELEASES

Release Advices are posted daily on the ABS web site <<http://www.abs.gov.au>>. Information on expected releases is also available through the ABS online service, AusStats (1405.0.55.001).

ANNUAL REPORTS

The Australian Bureau of Statistics Annual Report (latest issue 2003–04) reports on the operations of the ABS.

The Australian Statistics Advisory Council Annual Report (latest issue 2003–04) outlines the functions and activities of the Council.

The Australian Bureau of Statistics Forward Work Program (latest issue 2005–2006 to 2007–2008), which is produced annually, describes for each ABS program the objectives, outputs, main medium term developments and resources used. To obtain a copy please telephone the National Information and Referral Service on 1300 135 070 or visit the ABS web site <<http://www.abs.gov.au>>.

INTRODUCTION *continued*

THE ABS CATALOGUE NUMBERING SYSTEM

Five-digit Code

The system consists of either a five-digit or ten-digit code.

Printed publications usually have a five-digit code.

The first digit defines a broad subject group as follows:

- 1 General
- 2 Census of Population and Housing
- 3 Demography
- 4 Social Statistics
- 5 National Accounts, International Trade and Finance
- 6 Labour Statistics and Prices
- 7 Agriculture
- 8 Secondary Industry and Distribution
- 9 Transport, Tourism

The second digit specifies a subgroup of the broad subject group. Refer to the Contents on page iii for details of the subgroups.

The third and fourth digits are serial numbers which are permanently allocated to publications within categories formed by the first two digits. An allotted number will remain unchanged provided the contents of a publication remain essentially the same.

The fifth digit, after the full stop, represents the state or territory covered by the statistics. The codes for each state and territory are:

- 0 Australia
- 1 New South Wales
- 2 Victoria
- 3 Queensland
- 4 South Australia
- 5 Western Australia
- 6 Tasmania
- 7 Northern Territory
- 8 Australian Capital Territory
- 9 External Territories

Products containing Australia-wide information (fifth digit: 0) are listed in Part 2 — National Products, pages 9–187. Products containing information pertaining to a specific state or territory (fifth digit: 1–9) are listed in Part 3 — state and territory products, pages 189–267.

Example:

ABS cat. no. 3311.2

1st digit: 3 = Demography

2nd digit: 3 = Vital statistics

3rd & 4th digits: 11 = Serial numbers

5th digit: 2 = Victoria

Title of publication = Demography, Victoria

This product is listed in Part 3 — State and Territory Products, page 207.

INTRODUCTION *continued*

Ten-digit Code

Products other than printed publications generally have a ten-digit code with the sixth and seventh digits together indicating the medium of release. For lists of ABS products released on either CD-ROM or floppy disk, refer to the releases by medium index on pages 309–310.

NOTE: Publications and products may have multiple listings when they have significant reference to more than one subgroup. For example Directory of Census Statistics (2910.0) is listed in subgroup 11: Directories, Catalogues and Guides (page 12) and subgroup 29: Census Reference Products and Services (page 48).

1. CONSULTANCY SERVICES

CONSULTANCY SERVICES

Part 1 describes the various consultancy services provided by the Australian Bureau of Statistics.

1. CONSULTANCY SERVICES

CONSULTANCY SERVICES

The Australian Bureau of Statistics (ABS) will make a valuable addition to your research team.

When you need to engage professional, timely and objective statistical consultancy services first consider the range of services available from the ABS. The ABS houses Australia's largest and most comprehensive range of statistical data and has a wide range of expertise on hand to help you with your information and statistical needs.

This expertise can be found in the form of:

- demographers
- mathematical statisticians
- national and international accountants
- geographers
- professional librarians
- survey designers
- time series and seasonal adjustment analysts
- experts in all ABS social and economic statistics.

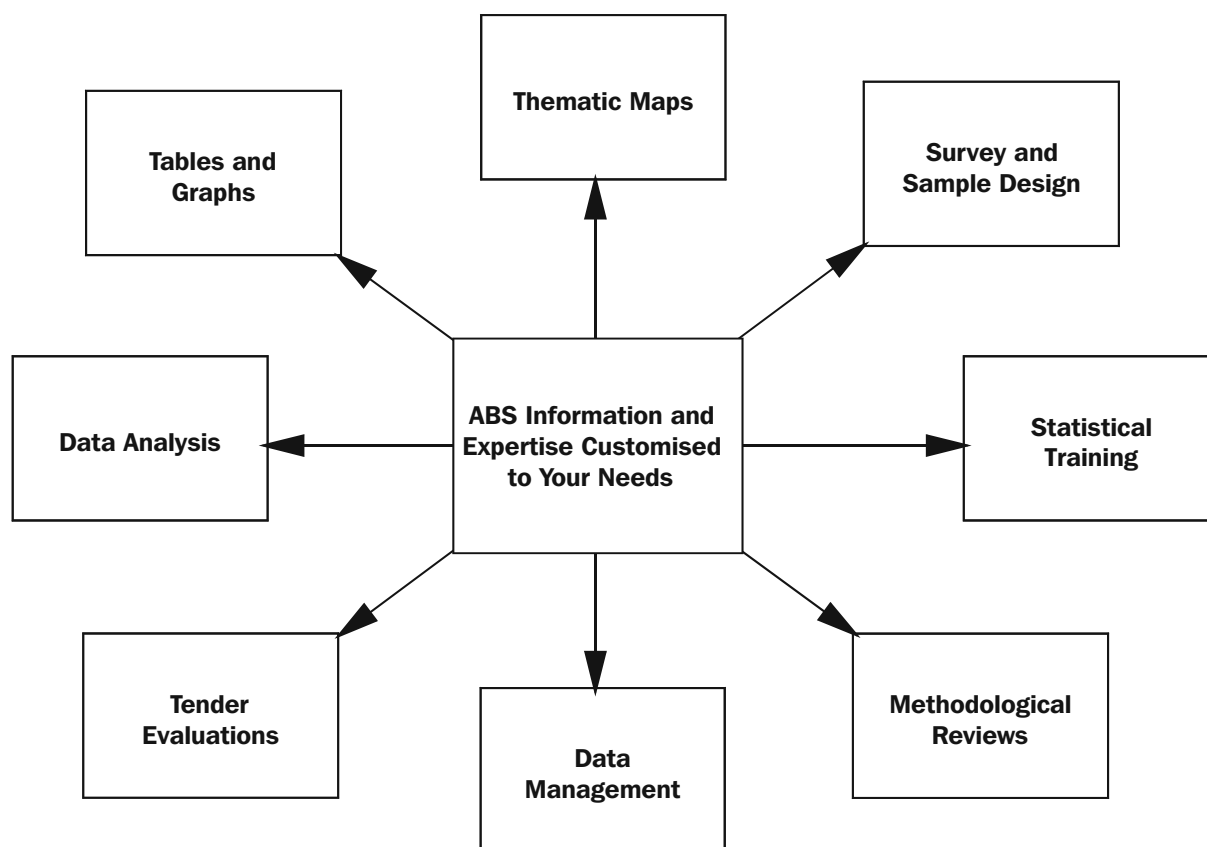

Our consultants will assist you by accessing the full range of ABS information including published and unpublished statistics on industry and business, agriculture, international trade, finance, population census, health, welfare and much more.

In addition, our consultants can analyse data for you as well as model or massage it to help meet your information needs. However, if the data does not exist we can provide methodological advice on how you can obtain it.

We can tailor our service to your needs, time frame and budget, to provide you with a range of solutions.

Consultancy Services*

Tables and Graphs

Most data from the ABS are delivered in tabular format, either in hardcopy or electronically. Standard publications and products have fixed formats. However, customised consultancies can most often be delivered in whatever tabular or graphical format is required.

As not all ABS data are published in our standard publications, customised tables and graphs can be produced to provide access to a wider range of information than is covered in the publications.

Tables of data show the precise estimate for each statistic while graphs are useful to see trends over time or the difference in magnitude between variables. The ABS also has the flexibility to download most datasets as flat files so you can import them into your own database or spreadsheet packages and create your own tables and graphs as needed.

1. CONSULTANCY SERVICES

Thematic Maps

Often it is difficult to identify geographical patterns when data are presented in tables. Mapping data allows for an immediate visual impact or interpretation of the data. For example, you may wish to 'see' areas with high concentrations of young people, or manufacturing businesses, or population density.

The advantage of visual impact means mapping lends itself to presentational or promotional purposes, as well as analytical purposes.

ABS data can also be mapped with data from your own organisation. This will help you draw connections between general population or business characteristics and the characteristics of your own organisation. Alternatively, you may wish to show locations of facilities or outlets on a map of ABS data.

If you have a geographic focus, then it is wise to consider the benefits of mapping ABS data using our consultancy services.

Survey and Sample Design

ABS Statistical Consultants have extensive survey and sample design experience. They can provide advice on conducting a survey, and can help you undertake components of your survey.

The following details the services we can provide:

Project definition

- assisting in defining your survey's objectives and methodological requirements.

Survey design

- defining your population to be surveyed;
- deciding which list of the population should be used;
- identifying how much sample; and how to select your sample;
- considering what is the level of accuracy and confidence required about your results;
- advising on how to extrapolate from the sample survey to the population;
- presenting your results in a report; and
- determining the survey cost; the components; and the timetable.

Questionnaire design

- questions to include and how to ask them;
- the best structure of the questions and how they should be presented; and
- questionnaire testing.

Data collection

- is data collection required Are there data sources already available that can be used?
- how to collect the information: telephone, interview or mail?

Data processing

- ensuring you have good quality data by editing and validating.

Analysing the results

- preparing tabulations, cross-tabulations and graphical presentations; and
- undertaking a range of more complex analytical techniques such as regression modelling.

1. CONSULTANCY SERVICES *continued*

Statistical Training

If you are designing a survey, concerned about data quality or have only basic data analysis techniques, then the ABS Statistical Consultancy Service can provide you with the tools and skills to help.

Our expert and experienced consultants provide a range of training in designing questionnaires, samples, surveys, analysing data and managing the survey process. Our courses provide you with the knowledge as well as practical skills in these techniques.

Courses are offered in most states and territories, and can be tailored to your specific needs. Our current course content includes:

- Basic Survey Design
- Principles of Questionnaire Design
- Focus Group Techniques
- Basic Statistical Analysis
- Introduction to Sampling Techniques
- Turning Data into Information

Course participants receive a range of supporting notes and material, and we also offer hands-on computer-based training for teaching the numerous analysis techniques.

A number of major organisations have benefited from engaging our training services, including the Commonwealth Government, State, Territory and Local Governments, libraries, government-funded and nonprofit organisations.

Methodological Reviews

Our statistical consultants can undertake reviews of methodologies and prepare reports which examine:

- the feasibility of a range of methodological options for conducting a survey;
- your methodological proposal for conducting a survey, or analysing data; and
- your analysis of data and its accuracy.

Data Management

ABS Statistical Consultants can assist with the organisation of data into a statistical framework by advising on standards, suitable arrangements, objectives and input and output requirements.

Tender Evaluations

ABS Statistical Consultants can assist in evaluating the statistical and analytical content of your tenders or in the preparation of components of your tenders. In this situation, ABS cannot be a party submitting a tender.

1. CONSULTANCY SERVICES

Data Analysis

ABS Statistical Consultants are qualified statisticians with experience in simple analysis techniques to produce means and measures of spread, as well as more complex analytical techniques including:

- describing the relationships between a number of variables (regression analysis) - we can develop the optimal regression model or we can apply your model to our data;
- summarising a large amount of data (factor analysis) - a technique which summarises a large amount of related information into a few useful factors;
- grouping sub-populations (cluster analysis) - can be used in this situation to provide groupings of sub-populations that behave similarly with respect to a number of variables;
- testing the differences between a number of populations (analysis of variance) - for example, ABS Consultants can test the difference in average annual kilometres travelled between different vehicle types (cars, station wagons, taxis, motorcycles, utilities, panel vans, etc.);
- adjusting historical data to determine trends and forecasts (time series analyses); and
- standardisation — often the comparison of a social indicator over time, or between different areas, is spoilt by the influence of another variable which is moving independently. The effect of this variable can be neutralised by standardisation. For example, eliminating the effect of different age compositions on death rates for several states and territories is called age standardisation.

Contact the ABS Consultancy Team Today

A limited amount of ABS information that is readily and quickly available can be provided free. However, most consultancies are provided on a fee-for-service basis.

Contact the ABS National Information and Referral Service for referral to our consultants (see contact details on the back of this publication).

Visit the ABS web site <<http://www.abs.gov.au>> where you will be able to find a range of ABS information, and lodge a request.

2. NATIONAL PRODUCTS

NATIONAL PRODUCTS

Part 2 lists national printed publications and other products. Note that many of these contain statistics at the state and territory level. However, all state and territory specific publications and products are shown in Part 3.

1101.0

Catalogue of Publications and Products

11010RG

New Product Number

Annual; first issue: April 1967; latest issue: 2005; 364 pp; ISSN: 1032-805X

Previously: Catalogue of Publications, Australia (ISSN: 1032-805X)

Lists publications and other major products and services available from the ABS released in the current reference year and the four previous years. Separated into national and state products, a brief description (abstract) of the contents of each item is given, as well as details of frequency, date of first issue, number of pages and ISSN or ISBN.

Information is provided on ABS data available on request and the availability of customised services. A title index, releases by medium index for non-printed products and a subject index are also included.

NOTE: Also available for browsing on the ABS web site: <<http://www.abs.gov.au>>.

1124.0

Publications Released in [Year] on CD-ROM

11240PB

New Product Number

Discontinued; Annual; first issue: 1994; final issue: 2001; CD-ROM; ISSN: 1442-813X

Contains electronic copies of all the printed publications produced by the ABS in a calendar year. Publications are provided in Portable Document Format (PDF). The software accurately reproduces the look and feel of the printed publications. The Historical Publications on CD-ROM is an HTML based product which allows you to access on your desktop each ABS publication when you need it. It's just like having your own personal librarian.

1140.0

Directory of Electricity, Gas, Water and Sewerage Statistics

11400DM

New Product Number

Irregular; first and latest issue: 2001; 152 pp; ISBN: 0 642 47704 3

Contains comprehensive information on sources of electricity, gas, water and sewerage statistics (ANZSIC Subdivisions 36-37) in the public and private sectors. For each identified collection, the directory provides information on the method of collection, data details, geographic coverage, frequency of data availability and other information to help the reader identify the type of statistics available and how to access them. The directory provides useful indexes to help find the information about specific collections.

1142.0

Directory of Agricultural and Rural Statistics

11420DM

New Product Number

Triennial; first and final issue: 2001; 228pp; ISSN: 1443-8453

Previously: Directory of Agricultural and Rural Statistics (ABS cat.no. 7217.0)

Contains comprehensive information on sources of agricultural and rural statistics in the public and private sectors. For each identified data source, the directory provides information on the method of collection, data details, geographic coverage, frequency of publication and other information to help the reader identify the type of statistics available and how to access them.

1143.0.55.001

11430DM

New Product Number

Directory of Culture and Leisure Statistics — Web Site Version

Irregular; first and latest issue: 2002; Electronic publication

Provides a reference to sources of culture and leisure data. Directory entries provide information about the scope, frequency, history and extent of data available from each collection, and the major publications that use data from the collection. The directory is a web based product.

1144.0

11440DM

New Product Number

Directory of Mining Statistics — Electronic Publication

Irregular; first and latest issue: 2002; 220 pp; ISBN: 0 642 47882 1

Contains comprehensive information on sources of mining statistics in the public and private sectors. For each identified collection, the directory provides information on the method of collection, data details, geographic coverage, frequency of data availability and other information to help the reader identify the type of statistics available and how to access them. The directory provides useful indexes to help find the information about specific collections.

2910.0

29100DM

New Product Number

Directory of Census Statistics

Irregular; first issue: 6 August 1991; latest issue: 2001; Electronic delivery; ISBN: 0 642 47839 2

Previously: 1991 Census — A Guide to Products and Services (ISBN: 0 642 166226)

Assists those interested in accessing information from the wealth of statistics collected in the Census of Population and Housing. The directory contains a description of the range of publications, electronic products, maps and consultancy services available from the 2001 Census. These products and services are to be progressively released between 2002 and 2003 as the detailed data becomes available. A brief description (abstract) of the contents of each item is provided, as well as details of the geographic coverage, price, availability by medium and ordering information.

NOTE: See also ABS cat. no. 2914.0.30.001.

2914.0.30.001

29140DM

New Product Number

Census of Population and Housing: Census Guide

Irregular; first issue: 2001; latest issue: 2001; CD-ROM; ISBN: 0 642 47853 8

A reference CD-ROM designed specifically for use with 2001 Census data. It includes the Census Dictionary, Directory of Census Statistics, Information and Technical Papers, sample Community Profile data and release demonstrations of electronic products such as CDATE. A simple and intuitive interface presented for users to access the information and web site links also made available.

12 - CLASSIFICATIONS AND WORK MANUALS

1209.0

Information Paper: Mesh Blocks

12090IP

New Product Number

Single Issue; first and latest issue: 2003; 30 pp; ISBN: 0 642 47967 4

This paper proposes the development of a new micro level geographical unit, the Mesh Block, which it is hoped will become the basic building block of all statistical, political and administrative geography in Australia. While in practice confidentiality will place some limits on flexibility conceptually all statistical data could be collected at the Mesh Block level and then aggregated and disseminated on whatever combination of Mesh Blocks best suited the individual user or individual analysis.

NOTE: See also ABS cat. no. 1216.0.

1216.0

Australian Standard Geographical Classification (ASGC) - Electronic Publication

12160CL

New Product Number

Annual; first issue: June 1985; latest issue: July 2005 is expected to be released in 2005; Electronic delivery; ISSN: 1441-1814

Previously: Statistical Geography: Volume 1 - Australian standard Geographical Classification (ASGC) (ISSN: 1325-1619)

A classification system, designed and maintained by the ABS, which divides Australia into geographical areas for the purpose of collecting and disseminating statistics. The 2004 edition is the 22nd edition since the ASGC was devised in 1984. It provides details of the statistical geographical areas effective at 1 July 2004 and also maps of these areas.

NOTE: ASGC structures are available on floppy disk (ABS cat.no. 1216.0.15.001) in code and label format, for each edition. For further information, please telephone Canberra on (02) 6252 5426.

1218.0

Standard Economic Sector Classifications of Australia (SESCA)

12180CL

New Product Number

Irregular; first issue: 1987; latest issue: 2002; 64 pp; ISBN: 0 642 47883 X

Previously: Standard Institutional Sector Classification of Australia (SISCA)

Contains the SISCA and the associated classifications which are used in the compilation and publication of national accounts and related statistics. Some examples of the associated classifications are the public/private, level of government, state of jurisdiction, resident/non-resident, International Monetary Fund functional and direct investor/other investor classifications.

1220.0

ASCO — Australian Standard Classification of Occupations, Second Edition

Information Paper: A Guide to Interpreting Time Series — Monitoring Trends

13490IP

New Product Number

Irregular; first and latest issue: 2003; Electronic delivery; ISBN: 0 642 54286 4

This information paper explains why, in ABS publications, the main features and commentaries sections concerning most time series are increasingly emphasising the trend series rather than the seasonally adjusted or original data. It also explains how these trend estimates are obtained as well as how they may be used more effectively for informed decision making. It indicates that these trend estimates are the better guide to the substantive movements in series, and are generally more suitable for most business planning decisions and policy advice.

New Product Number

Irregular; first issue: September 1993; latest issue: 1999–2000; Electronic delivery;
ISSN: 1320-5099

The Working Paper series presents ABS research in the fields of econometrics, time series and statistics. The series is intended to make the results of current research within the ABS available to other interested parties. The aim is to present research or analysis of an experimental nature so as to encourage discussion and comment. Working papers are of a technical nature and are directed towards a technically orientated audience. While any one working paper focuses on the results of a single research topic, the series canvasses a diverse range of ABS work.

The most recently published working papers include:

- Experimental Estimates of the Distribution of Household Wealth;
- Diagnostic Measures for Comparing Direct and Aggregative Seasonal Adjustments;
- Seasonal Adjustment: Comparison of Philosophies and Adjusting for an Easter Proximity Effect; and

Measures of Australia's Progress

13700PB

New Product Number

Biennial; first issue: 2002; latest issue: 2004; 196 pp; ISSN: 1445-7121

Considers some of the key aspects of progress side by side and discusses how they are linked with one another. It does not purport to measure every aspect of progress that is important. Nor does it consider all of the many different ways in which parts of Australia or groups of Australians are progressing. But it does provide a national summary of many of the most important areas of progress, presenting them in a way which can be quickly understood by all Australians. It informs and stimulates public debate and encourages all Australians to assess the bigger picture when contemplating progress.

13740IP

New Product Number

Single Issue; first and latest issue: 1995 to 2001; 4 pp; ISBN: 0 642 47835 X

Presents an analysis of administrative data from the Department of Family and Community Services (FaCS) on income support payments. The data is sourced from the Longitudinal Data Set compiled by FaCS from Centrelink administrative systems.

The use of administrative data on income support recipients increases the range and quality of data available for small regional areas. This paper highlights the range of data available and quality issues related to the data. It also discusses issues relating to concordance of postcode based income support data to Australian Standard Geographic Classification (ASGC). Sample outputs of the FaCS income support data are presented.

Population and Housing has been used to present some perspectives on the characteristics of women in employment in urban, rural and regional Australia.

In recent years economic pressures from global, as well as local, influences have had a significant impact on the availability and nature of employment in many rural and regional areas. Women throughout regional Australia contribute substantially to their regional economies through their participation in the labour force, yet they face considerably different employment considerations and opportunities than do women in urban areas.

This paper provides an insight into the different employment conditions experienced by women in regional Australia by examining characteristics such as age, employment status, income, qualifications and industry of employment. The data is presented using the geographic classification "Section of State" which enables comparisons in employment patterns across major urban cities, medium townships, small townships and rural areas of Australia.

Remote Access Data Laboratory

Other; first and latest issue: 2003; Electronic delivery

The Remote Access Data Laboratory (RADL) is an on-line database query system that enables users to run statistical queries on ABS Confidentialised Unit Record Files (CURFs) via a secure web site link. The service has been developed in order to allow access to ABS CURF data at a level of detail beyond that which can be provided on CD-ROM. These new CURFs, only available via the RADL, are called Expanded. CURFs available on CD-ROM are called Basic.

CURFs accessed through the RADL remain within the ABS computing environment, and return statistical output to users through the submission of appropriate SAS or SPSS batch queries. Strict limits apply to these queries to prevent access to large numbers of unit records, or large output files.

14 - ON-LINE ELECTRONIC SERVICES *continued*

The RADL service has features which reduce the risk of identification of unit records within CURFs including:

- automated checking of code and results to ensure output is within specified limits;
- monitoring and auditing of user activity; and
- manual checking and clearance of output which may present a confidentiality risk.

The ABS provides clients with CURF specific test files to enable pre-submission testing of code.

NOTE: There is an administration fee to change access from the mode of delivery; originally purchased to another mode of access OR to add the additional mode of access.

Census of Population and Housing: Basic Community Profile

20010TB

New product number

Five Yearly; first and latest issue: 2001; Various media

Community Profiles are a set of standard tables which contain key social, demographic and economic characteristics of people, families and dwellings. The Profiles, which form the core of many Census products, are available for Australian Standard Geographic Classification (ASGC) areas and other standard Census geographic areas. They are an economical way of obtaining a statistical picture of a community and making comparisons between different areas or different population groups - an excellent tool for research and planning.

The Community Profile Series will be available in hardcopy or electronically with a selected range of tables available via the Internet. Electronic versions of the Community Profiles will continue to be provided with free windows-based manipulation software which allows users to view, select and print data. It is anticipated that 2001 Census Profiles will be available in formats suitable for use with a range of spreadsheets and databases.

The Series comprise:

- Basic Community Profile
- Indigenous Profile
- Time Series Profile
- Usual Residents Profile
- Expanded Community Profile
- Working Population Profile

The Basic Community Profile (BCP) will contain 33 tables which will be available for all Australian Standard Geographic Classification areas from Collection District (CD) level to total Australia, and Census-specific geographic areas including CD-derived postal areas, suburbs and state and Commonwealth Electoral Divisions. The BCP will again be issued in two releases.

Additional questions on the 2001 Census form will provide information about people's ancestry, their use of personal computers at home and Internet use. New tables using these variables will be included in the 2001 BCP.

NOTE: Community Profiles are available on the ABS Website, or through the ABS Consultancy Service.

The Indigenous Profile (IP) will be released in two stages and contain 29 tables reflecting the key characteristics of persons, families and dwellings. Comparisons with the non-Indigenous population are provided for the majority of tables. The IP will be available for Indigenous geography, with some tables available for Indigenous Locations, and others available for Indigenous Areas, Aboriginal and Torres Strait Islander Commission (ATSIC) Regions. It will also be available for Main ASGC geography comprising Statistical Local Areas and their aggregates.

Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Australia

20330CL
New product number

Five Yearly; first issue: August 1996; latest issue: August 2001; CD-ROM

Socio-Economic Indexes for Areas 2001 (SEIFA 2001) is a product developed especially for those interested in the assessment of the welfare of Australian communities. The

ABS has developed indexes to allow ranking of regions/areas, providing a method of determining the level of social and economic well-being in that region.

The four indexes are:

- Index of Advantage\Disadvantage
- Index of Disadvantage
- Index of Economic Resources
- Index of Education and Occupation

These indexes show where the affluent (as opposed to just high income earning) live; where disadvantaged (as opposed to the unemployed) live; and where the highly skilled and educated (as opposed to the tertiary educated people) live.

SEIFA 2001 provides information and rankings for a wide range of geographic areas.

This product is separately available for each state and territory and Australia.

Census of Population and Housing: Census Basics, Australia

20405PB

New product number

Five Yearly; first issue: 2001; latest issue: 2001; CD-ROM

Census Basics is a CD-ROM product containing 2001 Census Basic Community Profile (BCP) data, down to Collection District (CD) level, and digital boundaries in MapInfo Interchange format (.mid/.mif). A simple Excel viewer tool is also provided to view the data files. Census Basics is available for purchase for all of Australia or for individual states and territories.

This product has been introduced for the 2001 Census for several purposes:

- for use with existing database or analysis systems (e.g. geographic information systems, other mapping or tabulation software) where the sophisticated functionality provided by other Census products, including CDATA is not required;

- for use as a simple viewing tool to display a formatted BCP for a single geographic area or a simple custom area aggregate without manipulation or other functionality.

Census of Population and Housing: Ageing in Australia

20480PB

New product number

Irregular; first and latest issue: 2001; 120 pp; ISBN: 0 642 47900 3

Providing an ageing focus on 2001 Census data, this publication will be a useful resource for agencies with ageing policy responsibilities, researchers and the Australian community generally. While a major focus is on the number and characteristics of older Australians, i.e. persons aged 65 years and over, it also explores the ageing process in Australia by examining other age cohorts including mature age workers and the very old as well as examining trends over time by comparing with data from previous Censuses. Topics covered include population structure, geographic distribution, mobility, indigenous status, birthplace and ancestry, language, religion, families and households, type of housing, housing costs, labour force participation, hours worked, income, transport, education, and use of computers and the Internet. In each chapter, data are presented in tabular, graphic and textual form, mainly at a national level, with a limited number of tables and maps at a more detailed geographic level.

20550PB

New product number

Single Issue; first and latest issue: 2001; 108 pp; ISBN: 0 642 47931 3

To provide a better understanding of the changes within rural Australia, particularly in the farm sector and the implications for resource management. While rural adjustment trends are well documented in other countries such as Canada and the United States, this is not so in Australia. The project will explore methods of combining socio-economic data of persons and households from the Population Census with agricultural activity data from farms as collected by the Agricultural Census to help provide some answers.

2001 Census: Ancestry - Detailed Paper (03/01b)

29330TN

New product number

Single Issue; first and latest issue: 2001; ISBN: 0 642 48074 5; Electronic publication

The focus of this detailed paper is ancestry - a question that has only been asked in two Australian Censuses: in 1986 and 2001. Between those years, significant research, testing and refinement have resulted in the 2001 question content and format shown in Section 2.3 2001 Census question format.

This detailed paper analyses ancestry data quality in terms of question design, field operations, and processing issues, with a particular focus on areas that underperformed in 2001 and require further improvement. To provide a comparative measure, this paper makes regular statistical references to 1986 data. Together, information from the two snapshots provides an insight into the changing backgrounds of the Australian population. Differences between question phrasing, coding, or the classification structure have been noted.

A complementary Census Paper, titled 2001 Census: Ancestry - First and Second Generation Australians (03/01a) (ABS cat no. 2932.0) is also available.

2001 Census: Computer and Internet Use (03/03)

29350TN

New product number

Single Issue; first and latest issue: 2001; ISBN: 0 642 48076 1; Electronic publication

Questions about the use of computers and the Internet were introduced into the Census for the first time in 2001. This paper contains information about how various stages in the development and processing of the 2001 Census might have impacted on the data from these questions. Trends in the use of personal computers and the Internet are explored, and non-response rates are cross-classified with variables such as age, sex and

state of enumeration. Data from the 2001 Census on the use of personal computers and the Internet is compared to data collected from two ABS Surveys. Particular attention is given to data quality issues and comparability. Finally, recommendations are made for questions about information technology use in future censuses.

2001 Census: Income (03/04)

29360TN

New product number

Single Issue; first and latest issue: 2001; ISBN: 0 642 48077 X; Electronic publication

This paper examines the quality of income data from the 2001 Census and follows similar analyses to those provided in previous Census Working Papers examining income data quality: 96/1 (1991) and 00/04 (1996). In these papers data quality is addressed by examining changes in collection or processing procedures, as well as format and sequencing changes to the income question. Analyses of key indicators such as non-response rates, intercensal changes, and comparisons with other sources of income data, provide an indication of data quality. The three comparison sources used in this paper are 1996 Census data, the 1999-2000 Survey of Income and Housing Costs (SIHC), and 1999-2000 Taxation Statistics. Finally, this paper provides suggestions for possible improvements in form design and processing, which could result in higher data quality outcomes for the 2006 Census.

This paper focuses on the data quality of the Census questions used to derive Labour Force Status and follows similar analyses to those provided in previous Census Working Papers examining Labour Force Status data quality: 99/2 (1996) and 94/1 (1991). Information is presented about how various stages in the development and processing of the 2001 Census might have impacted on the data from these questions. Analyses of key indicators such as non-response rates, intercensal changes, and comparisons with the Labour Force Survey provide an indication of data quality. Finally, this paper provides suggestions for possible improvements in form design and processing, which could result in higher data quality outcomes for the 2006 Census.

New product number

Single Issue; first and latest issue: 2001; ISBN: 0 642 48079 6; Electronic publication

This paper focuses on the data quality of the Census question on occupation and contains information about how various stages in the development and processing of the 2001 Census might have impacted on the data from these questions. Improvements are reported in data quality measures (such as non-response, level of coding, discrepancy rates and automatic coding rates) when compared to the 1996 Census. Data from the 2001 Census on the question on Occupation are compared with the 2001 Labour Force Survey, finding similar results and mirroring the relationship reported in 1996. Finally, this paper provides suggestions for possible improvements in form design and processing, which could result in higher data quality outcomes for the 2006 Census.

Census Working Paper (00/3): Census Data Quality - Industry

29390TN

New product number

Irregular; first issue: 1996; latest issue: 2001; ISBN: 0 642 48039 7; Electronic publication

The objective of this paper is to provide an evaluation of the quality of industry data collected in the 1996 Census. This paper contains information about question design for industry data in the 1996 Census and previous censuses; a description of procedures used to code data to the Australian and New Zealand Standard Industrial Classification (ANZSIC); an analysis of the level of undefined coding allocated during the Census and a comparison with undefined coding allocated during the 1991 Census. Further analyses examine the coding discrepancies recorded by the quality management system in 1996. The paper also compares 1996 Census industry data to the August 1996 Labour Force Survey industry data and describes the 2001 Census industry coding.

New product number

Irregular; first and latest issue: 2001; Electronic delivery

The objective of this paper is to provide an evaluation of the quality of Industry Sector data collected in the 2001 Census. The paper examines the processing and coding procedures used to derive Industry Sector, to assess their impact on the data. It also provides further analyses of the data using other census variables such as labour force status and industry of employment as well as other quality indicators such as non-response rates, intercensal changes and comparisons with other data sources. In addition it looks at quality issues with the Community Development and Employment Program data.

The paper concludes with recommendations for possible improvement to processing and coding of Industry Sector for the 2006 Census.

29420TN

New product number

Single Issue; first and latest issue: 2001; ISBN: 0 642 48040 0; Electronic publication

This paper focuses on the data quality of the Census questions relating to the highest non-school qualifications completed and follows similar analyses to those provided in previous Census Working Papers examining data quality: 00/2 (1996) and 94/2 (1991).

Information is presented about how various stages in the development and processing of the 2001 Census might have impacted on the data from these questions. In addition, information on the effect of implementation of a new classification system, the Australian

Standard Classification of Education, is presented. Analyses of key indicators such as non-response rates, frequency of inadequately described responses, intercensal changes, and comparisons with the 2001 Survey of Education and Work provide an indication of data quality.

Finally, this paper provides suggestions for possible improvements in form design and processing, which could result in higher data quality outcomes for the 2006 Census.

Irregular; first and latest issue: September 2004; Electronic delivery

This working paper is the second Demography working paper released in 2004. The ABS adjusts short-term overseas arrivals and departures (OAD) statistics to account for seasonal and irregular influences. This working paper explains the key differences between original, seasonally adjusted and trend estimates and how they are derived by the ABS. It also discusses the benefits and disadvantages of some of the commonly used measures of OAD behaviour and provides guidelines for interpreting OAD time series.

Irregular; first and latest issue: 1991 to 2001; Electronic delivery

This working paper is the third Demography working paper released in 2004.

Using a new demographic method, this paper calculates the consistency of Indigenous death registrations for the 1991-1996 and 1996-2001 intercensal periods relative to population estimates at the beginning and end of each five year period. A consistency

factor, assumed to be constant at each age group, is applied to the observed age-specific death rates which are then used for the calculation of experimental Indigenous life tables.

Demography Working Paper 2001/1 - Estimating July to December 2000 Net Overseas Migration

31230RP

New product number

Irregular; first and latest issue: 2000; ISBN: 0 642 48021 4; Electronic publication

This publication is part of the Demography Working Paper series. The working paper provides discussion on estimating July to December 2000 net overseas migration figures. Estimates of the Australian population are generated on a quarterly basis by adding natural increase and net overseas migration to the population at the beginning of each period. Net overseas migration accounts for around half of population growth at the national level and comprises permanent and long-term (i.e. 12 months or more) arrivals to Australia, permanent and long-term departures from Australia; and an adjustment to reflect changes in travel intentions between short-term and long-term movements ("category jumping").

For the June 2000 estimated resident population (ERP), net overseas migration in 1999-2000 contributed 0.5% of the total population. Persons arriving in, or departing from, Australia provide information in the form of incoming and outgoing passenger cards. Incoming persons also provide information in visa applications, apart from people travelling as Australian and New Zealand citizens. These and other information available to the Department of Immigration and Multicultural Affairs (DIMA) serve as a source of statistics on overseas migration.

DIMA is in the process of implementing an automated passenger card processing system which will be used for all movements after July 2000. However, data from the automated system will not be provided in time for the Australian Statistician's "before 10 June" determination of the 31 December 2000 population as required under the A New Tax System (Commonwealth-State Financial Arrangements) Act 1999.

Demography Working Paper 2001/2 - Aboriginal and Torres Strait Islander Mortality: Evaluation of Experimental Indigenous Life Tables

31240RP

New product number

Irregular; first and latest issue: 2000; ISBN: 0 642 48022 2; Electronic publication

This publication is part of the Demography Working Paper series. The assessment in Deaths, Australia 1999 (ABS, 2000b) that from 1990-92 to 1997-99 there appears to be some improvement in the life expectancy of indigenous people in South Australia, Western Australia and the Northern Territory may not be correct. As outlined in appendix 1 of this publication, two sets of experimental indigenous life tables were produced. One set was based on the actual number of registered deaths and the other set was based on adjusted deaths. The adjusted deaths took into account the estimated under-coverage of indigenous deaths in each state/territory. These undercoverage estimates were based on experimental estimates and projections of the populations which in turn used 1991-96 experimental indigenous life tables. In evaluation of the experimental life tables, it was realised that the 1990-92 to 1997-99 life expectancy calculations replicated the 1991-96 life expectancy values with slight modification which was due to the varying age distribution of registered deaths in the time periods in question. Hence, the adjusted life expectancy estimates cannot be validly interpreted as reduction in indigenous mortality over time. On the other hand, there is an apparent improvement in the experimental observed life expectancy estimates although much uncertainty applies to them.

3125.0

Demography Working Paper 2001/3 - Improving Household Estimates

31250RP

New product number

Irregular; first and latest issue: 2001; ISBN: 0 642 48023 0; Electronic publication

This publication is part of the Demography Working Paper series. Estimates of the number of resident households are produced quarterly by the ABS. The estimates are based on the household population series (that is, the estimated resident population (ERP) that usually lives in private dwellings), to which propensities to form households are applied. While national household estimates have been reliable, the data have been volatile at the state, part of state, and household composition levels. Household composition refers to the combinations of persons aged 0 to 14 with persons aged 15 or more. In response to requests to improve this series, the ABS has improved the method of household estimation. This paper examines the underlying data problems, and demonstrates how the new series is an improvement on the previous method.

3126.0

Demography Working Paper 2001/4 - Issues in Estimating the Indigenous Population

31260RP

New product number

Irregular; first and latest issue: 2001; ISBN: 0 642 48024 9; Electronic publication

This publication is part of the Demography Working Paper series. The ABS has been involved in producing experimental estimates of the Australian Aboriginal and Torres Strait Islander (indigenous) population since 1994 when it published Experimental Estimates of the Aboriginal and Torres Strait Islander Population, 1986-1991 (ABS, 1994; ABS, 1998a). It included estimates for 1986. Subsequently a 1991-1996 issue of this publication was released. Estimates were published at the state (including territory) level and, for June 1996, at the Aboriginal and Torres Strait Islander Commission (ATSIC) region level. Estimates of the Torres Strait Islander population at June 1996 have been published in Australian Demographic Statistics, June Quarter 2000 (ABS, 2000b).

Experimental projections of the indigenous population have also been published at the state level in the 1991-2001 and 1996-2006 issues of Experimental Projections of the Aboriginal and Torres Strait Islander Population (ABS, 1996; ABS, 1998b). Projections, which involve a series of assumptions about future trends in fertility, mortality, migration and the propensity to identify indigenous origin on census forms, provide the best indication of post-censal populations in the absence of post-censal population estimates.

Estimates of the indigenous population are 'experimental' in that the estimates are affected by changes in the propensity of people to identify as being of indigenous origin on census forms and satisfactory data on births, deaths and migration are not generally available. 'Experimental' reflects the uncertainty involved. The principal focus of this paper is on estimates for 1991-1996 based on the 1996 Census.

31270RP

New product number

Irregular; first and latest issue: 2001 to 2006; ISBN: 0 642 48025 7; Electronic publication

This publication is part of the Demography Working Paper series. This report contains a review of possible sources for the Australian Bureau of Statistics' (ABS) internal migration estimates for the period 2001-2006. It is an update of Demography Working Paper 96/1 - Evaluation of Administrative Data Sources for Use in Quarterly Estimation of Interstate Migration Between 1996 and 2001. The characteristics of each data source have been assessed against criteria which define ideal internal migration data characteristics and are detailed in separate sections of this report.

Demography Working Paper 2001/6 - Rebasing Australia's Demographic Estimates Using The 2001 Census Of Population And Housing

31280RP

New product number

Irregular; first and latest issue: 2001; ISBN: 0 642 48026 5; Electronic publication

This publication is part of the Demography Working Paper series. This paper describes changes to the method that was applied in 1996 and describe the planned output from the 2001 Census rebasing cycle. The completion of the 2001 Census of Population and

Housing allows estimation of Australia's resident population using this new source. These estimates (for 30 June of the census year) can be compared with the alternative estimates already produced by updating the previous census date estimate (using births, deaths and migration data). The difference between these two estimates is called the "intercensal error". Of these two estimates, the first is customarily adopted as the true estimate - that is, the true estimate at the census year is the one based on that year's census, not the one carried forward from the previous census. To overcome the break in continuity that this would entail, all population estimates updated from the previous census are then revised. This entire exercise (estimates at 30 June of census year and quarterly estimates back to September of previous census) is known as "rebased", as the population estimates are determined from a new base - the most recent census. Rebased is applied to estimates of Australia's population, that of each of the states (which here include the Northern Territory and the Australian Capital Territory), and that of each Statistical Local Area (SLA).

31290RP

New product number

Irregular; first and latest issue: 2001; ISBN: 0 642 48027 3; Electronic publication

This publication is part of the Demography Working Paper series. This document outlines statistical requirements for overseas arrivals and departures data and covers the major uses, item justification and outward passenger card. The outward passenger card is specifically addressed, as questions on the justification for such card have been raised in the context of a proposal to combine Australian and New Zealand passenger cards.

Information provided by incoming and outgoing passenger cards currently represents the major source of overseas arrivals and departures data.

Demography Working Paper 2001/8 - Incorporating Unauthorised Arrivals into Population Estimates

31300RP

New product number

Irregular; first and latest issue: 2001; ISBN: 0 642 48028 1; Electronic publication

This publication is part of the Demography Working Paper series. It is proposed to incorporate unauthorised arrivals into population estimates from the release of the 2001 Census-based population estimates onwards. Unauthorised arrivals are proposed to be included after they have been in Australia for 12 months, or at the time of their release (or escape) into the community, whatever is earlier. Unauthorised arrivals who are removed from Australia within 12 months will not be included in population estimates. While the number of unauthorised arrivals is relatively small, there has been a sharp increase in such arrivals in recent years. Their inclusion in population estimates will assist in maintaining the accuracy of these estimates.

3134ORP

New product number

Irregular; first and latest issue: 2001; ISBN: 0 642 48032 X; Electronic publication

This publication is part of the Demography Working Paper series. The ABS release Population, Australian States and Territories, September 2002, contained final estimates of net undercount in the 2001 Census of Population and Housing. In the Census, some people are missed and some are counted more than once. Usually, more people are missed than are over-counted. The difference between the census count and the true population is called the net undercount of the Census.

Table 1 provides the net undercount, net undercount rate and standard error of the rate for Australia and each state and territory. Further information will be released in 2940.0 - Information Paper: Census of Population and Housing, Data Quality — Undercount.

NOTE: Information on net undercount in the 1996 Census of Population and Housing including a technical note on sampling errors associated with statistics from the Post Enumeration Survey is available in 2940.0 - Information Paper: Census of Population and Housing, Data Quality — Undercount, (1996 issue).

31350RP

New product number

Irregular; first and latest issue: 2002 to 2101; ISBN: 0 642 48033 8; Electronic publication

This publication is part of the Demography Working Paper series. The Demography Section of the Australian Bureau of Statistics (ABS) has commenced work on the 2002-2101 population projections for Australia, the states and territories, and for each capital city and balance of state/territory. It is proposed that the projections for Australia go out to the year 2101 while the state/territory and the capital city/balance of state/territory projections go out to 2051.

The ABS uses the cohort-component method for these projections, which requires various assumptions to be made on future levels of fertility, mortality, overseas migration and interstate migration. This method begins with a base population for each sex by single years of age and advances it year by year by applying these assumptions.

The process of developing the population projection assumptions involves consultation with various individuals and government departments with an interest in population issues, at both the national and state/territory level, to ensure their general relevance to users of projections.

3319.0.55.001

Information Paper: Multiple Cause of Death Analysis

43191IP

New product number

Irregular; first and latest issue: 1997 to 2001; Electronic delivery

Mortality data is one of the most basic tools of public health analysis. Analysis of mortality data commonly focuses on the examination of a single, underlying cause of death. However, data is now available relating to other conditions which contributed to a person's death. Deaths data which include both the underlying and contributory causes of death are known as Multiple Cause of Death (MCD) data. ABS has multiple cause of death data currently available for years 1997-2001. MCD data is particularly useful in examining chronic conditions such as heart disease or diabetes, which commonly appear in conjunction with other conditions. As Australia's population ages, increasing the death rates due to chronic conditions, MCD analysis will become increasingly relevant.

This publication investigates the potential of MCD data, by analysing several important associated causes of death. These include ischaemic heart disease and diabetes, and suicide and substance use. A range of analytical techniques for multiple cause analysis are discussed, including descriptive analysis, ratios of observed to expected joint frequencies, and odds ratios. The limitations of MCD data are also discussed. Technical information on the definitions and methods employed are included in an appendix.

Census of Population and Housing: Ageing in Australia

20480PB

New product number

Irregular; first and latest issue: 2001; 120 pp; ISBN: 0 642 47900 3

Providing an ageing focus on 2001 Census data, this publication will be a useful resource for agencies with ageing policy responsibilities, researchers and the Australian community generally. While a major focus is on the number and characteristics of older Australians, i.e. persons aged 65 years and over, it also explores the ageing process in Australia by examining other age cohorts including mature age workers and the very old as well as examining trends over time by comparing with data from previous Censuses. Topics covered include population structure, geographic distribution, mobility, indigenous status, birthplace and ancestry, language, religion, families and households, type of housing, housing costs, labour force participation, hours worked, income, transport, education, and use of computers and the Internet. In each chapter, data are presented in tabular, graphic and textual form, mainly at a national level, with a limited number of tables and maps at a more detailed geographic level.

4102.0

Australian Social Trends

41020PB

New product number

Annual; first issue: 1994; latest issue: 2005; 212 pp; ISSN: 1321-1781

Presents statistical analysis and commentary on a wide range of current social issues. The 30 plus articles are organised into eight chapters, representing the following broad areas of interest: population; family and community; health; education and training; work; economic resources; and housing, as well as a chapter of articles covering other areas of social concern. Each chapter is supported by a set of summary tables including key social indicators which provide an overview of social change over the past decade, as well as how social conditions differ across Australian states and territories. A set of international tables also compares Australia with 17 other nations.

The style of the report is clear, focused and easy to read. Effective use is made of summary tables and graphics to highlight key information. The annual series, as it builds up over time, will provide an invaluable historical perspective of social change in Australia.

New product number

Biennial; first and latest issue: 2002; 128 pp; ISSN: 1446-3121

Replaces: Education and Training in Australia (ABS cat.no. 4224.0)

Presents a suite of approximately 40 indicators which covers the spectrum of education and training in Australia. The indicators are based on national level data and are aligned to a recently developed framework for education and training statistics 'Measuring Learning in Australia, a suggested framework for Education and Training statistics'. The framework provides a structure to organise education and training statistics, and within this publication the indicators are grouped into context, resources (human and financial), participation, and outputs and outcomes. A wide range of both ABS and non-ABS statistics are used in the indicators, covering schools, higher education, vocational education and training, and training activities. Each individual indicator includes commentary, tables and/or graphs to describe the data. It also contains some data which will enable international comparisons for some of the indicators. This publication aims to be an easy to understand reference for anyone interested in education and training in Australia.

Child Care Arrangements Survey, Australia, Confidentialised Unit Record File on CD Rom

44440CF

New product number

Irregular; first issue: 1984; latest issue: 1999; CD-ROM

This is a confidentialised and simplified version of the file used to store the data collected in the 1999 Child Care Survey. See the 1999 issue of publication 4402.0, Child Care Australia, for details of this collection. The data in the CURF differs from the data used by the ABS to generate published statistics in two respects. Firstly, the CURF data has been confidentialised to ensure that it is not possible to identify individual respondents. This process involves removing some data items and collapsing selected categories of others. This is done in such a way that the loss of accuracy and introduction of distortion is minimized. Secondly, the data file has been simplified by converting it from a hierarchical to a flat format and removing data items which were duplicated across different hierarchical levels.

The resulting data file contains one record for each of the fully responding selected children (9,831) each of which contains 94 data items. The CURF also includes metadata files and documentation to enable users to read the data into their analysis software of choice. Users can then analyse the data using any method supported by their software, including cross tabulation and correlative analyses.

NOTE: The 1984 Child Care Arrangements Survey CURF (CC84) has 17,871 records with 133 data items. The 1993 Child Care Survey CURF (CC93) has 13,490 records with 53 data items. The 1996 Child Care Survey CURF (CC96) has 11,419 records with 83 data items.

Child Care Survey, Australia, Expanded Confidentialised Unit Record File

44440CF

New product number

Irregular; first and latest issue: June 1999; Electronic delivery

The Expanded 1999 Child Care Survey CURF is only available through the Remote Access Data Laboratory (RADL).

An Expanded Confidentialised Unit Record File (CURF) from the 1999 Child Care Survey.

The survey collects statistics on the use of, and demand for child care for children under 12 years of age in Australia. Also presents data on the use of the Child Care Benefit and working arrangements of parents with children under 12 years.

Users are able to tabulate, manipulate and analyse data to their individual specifications.

Steps to confidentialise the dataset are taken to ensure integrity of data, optimise its content and maintain confidentiality of respondents. They include removing any information that might uniquely identify an individual, reducing the level of detail for some items and collapsing some categories.

The CURF includes metadata files and documentation to enable users to read the data into SAS or SPSS software. Users can then analyse the data using any method supported by SAS or SPSS, including cross tabulation and correlative analyses.

The Expanded CURF is only available through the Remote Access Data Laboratory (RADL) and contains more variables and more detailed data for selected variables than the Basic CURF. An information paper explaining data content, technical details and conditions of use is available on the ABS web site and via the 'Information by' link on the RADL home page. For more information, see Access to ABS CURFs at www.abs.gov.au.

NOTE: Basic CURFs have been released on CD-ROM for the 1993, 1996 and 1999 Child Care Surveys (ABS cat.no. 4444.0.30.001). An Expanded 2002 Child Care Survey CURF survey is also available (ABS cat.no. 4444.0.55.003).

Recorded Crime - Victims, Australia

45100PB

New product number

Annual; first issue: January to December 1993; latest issue: 2004 is expected to be released in 2005; 44 pp; ISSN: 1329-203X

Previously: National Crime Statistics (ISSN: 1320-6532)

Contains uniform national crime statistics relating to a selected range of offences that have become known to and recorded by police. The statistics provide indicators of the level and nature of recorded crime in Australia and a basis for measuring change over time.

National crime statistics are compiled on a victim basis and measure the number of victims for each offence category rather than the breaches of criminal law. This publication provides a breakdown of the offences by victim details (age of victim, sex of victim, relationship of offender to victim) and includes type of location, use of weapon, and outcome of police investigations statistics. As the national collection progressively expands, future publications will provide additional details on reported offences.

NOTE: Companion tables with detailed state/territory information are available separately. See also: ABS cat.no. 4519.0.

4512.0

Corrective Services, Australia

45120PB

New product number

Quarterly; first issue: March 1998; 40 pp; ISSN: 1440-5997

Contains national information on persons in custodial corrective services in Australia. Monthly information is presented for each state and territory. Statistics are presented by open and secure custody and periodic detention, for all prisoners and for Indigenous prisoners. Information is also presented on prisoner numbers by legal status (sentenced or unsentenced), and by sentence type. The number of sentenced receptions, the number of federal prisoners in each state and territory, information on numbers received into custody, and number of persons serving community-based corrective service orders are also included.

Previously: Australian Criminal Courts (ISSN: 1325-541X)

Provides nationally comparable data showing the number of defendants dealt with by the higher (Supreme and Intermediate) and lower (Magistrates) criminal courts, details on the characteristics of those defendants (such as age and sex), and outcomes associated with adjudicated defendants (including penalty type and quantum) by the type of offence committed. Information is presented for each state or territory (including the aggregate total for Australia) and for each court level (including the aggregate total for higher courts combined).

4517.0

Prisoners in Australia

45170PB
New product number

Annual; first issue: 2000; latest issue: 2003; 60 pp; ISSN: 1444-710X

Contains national information on prisoners who were in custody on 30 June each year. The statistics are derived from information collected by the ABS from corrective services agencies in each state and territory. Details are provided on the number of people in correctional institutions (including people on remand), imprisonment rates, most serious offence and sentence length. A range of information is also presented on prisoner characteristics (age, sex, indigenous status) and on the type of prisoner (all prisoners, sentenced prisoners, and unsentenced prisoners (remandees)).

NOTE: Prior to the 2000 reference period, the data was presented as an annual report for the Corrective Services Ministers' Council by the National Corrective Services Statistics Unit. Companion tables with detailed state/territory information are available separately.

45250PB

New product number

New issue; Single Issue; first and latest issue: 2004 is expected to be released in 2005; 52 pp; ISBN: 0 642 47977 1

The National Criminal Justice Statistical Framework (NCJSF) discusses the various connections across the main sectors of the criminal justice system and identifies some of the key counting units (such as "person" and "criminal incident") and data variables that characterise its main aspects. The Framework aims to support integration of criminal justice data between the different, interconnecting sectors of the criminal justice system as well as across the states and territories of Australia. It achieves this by promoting comparability of data both within and between jurisdictions. By using common definitions and standards across service areas and jurisdictions, a common language is created that facilitates a shared understanding of the criminal justice system and the populations that flow through it.

New product number

Annual; first issue: May 1992; latest issue: March 2005 is expected to be released in 2005; 80 pp; ISSN: 1324-9029

This publication presents information on environmental behaviour and practices of Australian households. Three environmental themes are rotated over three years: energy use and conservation, waste management and transport use, and water use and conservation. Data are collected from households and individuals via the ABS' monthly population survey.

This 2005 edition focuses on "Energy use and conservation". It covers a range of issues including sources of energy and fuel used in the dwelling, insulation, heating and cooling and greenpower. The number and usage of household appliances are also included.

Results from similar past surveys (1994, 1999 and 2002), where applicable, have been included in the publication for purposes of comparison.

Australia's Environment: Issues and Trends

46130PB

New product number

Annual; first issue: 2001; latest issue: 2003; 204 pp; ISSN: 1443-7155

Presents a broad selection of environmental statistics and information which illustrate topical environmental issues. The subject matter will vary in each issue, as new environmental issues emerge or more current data sources become available. While ABS data forms a core component of the statistical information, data from other government agencies, international organisations, industry, and individual researchers is also included. Value is added to these widely sourced datasets by bringing them together and analysing their import for selected environmental issues.

Each issue of the publication will explore some of the relationships that exist between our use of the natural environment in Australia for socioeconomic benefit and the impacts that some of these activities have on our ecology and stocks of natural resources. The publication aims to meet the information needs of a general readership.

Detailed Energy Statistics, Australia

46480PB

New product number

Single Issue; first and latest issue: 2001–02; Electronic delivery

The Energy Survey 2001-02 collected information on energy use across the non-household sectors of the domestic Australian economy. It covered a range of energy and fuel types including electricity, natural gas, petroleum products, coal and renewable energy. The survey also collected information on the supply of petroleum products, electricity and natural gas, and the associated conversion, transmission and distribution losses. Energy use data is available at a national and state level; supply data is available at a national level. The survey only collected data on Australian domestic production and use of energy.

This supply and use information will be reconciled and balanced by the Australian Bureau of Agricultural and Resource Economics (ABARE) and the ABS.

This publication replaces, and contains more data than, the original publication, Energy Statistics, Australia (ABS cat.no. 4649.0.55.001).

Health Risk Factors, Australia

43120PB

New product number

Irregular; first issue: 2001; latest issue: 2001; 80 pp; ISBN: 0 642 47917 8

Health risk factors are any characteristic of a population that are associated with higher rates of illness or injury. They are responsible for a considerable amount of disease and disability among the Australian population (Mathers, Vos & Stevenson, 1999) as well as significant economic costs. However, many risk factors are modifiable suggesting that benefits in population health can be achieved following improvements to risk factor status.

This publication presents findings from the 2001 National Health survey in relation to several behavioural risk factors (smoking, physical activity, body mass, inadequate fruit and vegetable consumption and alcohol consumption) as well as biomedical risk factors (high cholesterol and high blood pressure). The prevalence of each risk factor is analysed with respect to age, sex and other socio-demographic variables, such as labour force status and level of educational attainment. In addition, data demonstrating the associations between each risk factor and certain chronic diseases are presented.

Occasional Paper: Vaccination Coverage in Australian Children - ABS Statistics and the Australian Childhood Immunisation Register (ACIR)

43130PB

New product number

Irregular; first and latest issue: 2001; Electronic delivery

Immunisation coverage among Australian children is an important public health issue. If a sufficiently large proportion of children have been immunised against a particular infectious disease, then the potential for that disease to spread in the population is greatly reduced. Measuring general immunity, however, is complex, and what is generally measured instead is compliance with vaccination schedules. This type of data was collected by the ABS in 1989-90, 1995 and 2001 and has been collected by the Australian Childhood Immunisation Register (ACIR) since 1996. This paper provides an insight into ABS estimates of compliance to national vaccination schedules, dating back to 1989-90. Statistics from ABS surveys and the ACIR are compared and key differences in methods are made clear. There is also analysis of the trend over time for vaccination coverage of Australian children using ABS data from 1989-90, 1995 and 2001, including comparisons with ACIR estimates where relevant.

Occasional Paper: Measuring Dietary Habits in the 2001 National Health Survey, Australia

43140IP

New product number

Irregular; first and latest issue: 2001; ISBN: 0 642 48069 9; Electronic delivery

Good nutrition can enhance quality of life and contribute to better health outcomes. This has been recognised by both the Commonwealth and State governments who have all identified the need to monitor and assess Nutrition. Recent government policies such as Eat Well Australia and the Australian Guide to Healthy Eating provide a strong mandate for the collection of information on Nutrition. In 1995, the Australian Bureau of Statistics in conjunction with the then Commonwealth Department of Health and Family Services conducted the National Nutrition Survey (NNS). Information from the 24 hour dietary recall, Food Frequency Questionnaire and the questions on eating habits and patterns have provided national benchmark information on the nutrition of the Australian population. Subsequent to the National Nutrition Survey, the priority is to measure food habits that are indicative of diet quality such as usual fruit and vegetable intake, using short dietary questions.

The primary focus will be changes in the methodology for the short dietary questions in the move from a self-enumeration form in 1995 NNS to a personal interview in the 2001 National Health Survey; and the development of new questions on deliberate intake of folate fortified foods and beverages. Results from the short dietary questions in both

surveys will be examined with discussion of the impact of the methodological and contextual changes. Issues of data quality and interpretation will also be discussed.

Occasional Paper: Long-term Health Conditions — A Guide To Time Series Comparability From The National Health Survey, Australia

43160IP

Irregular; first and latest issue: 2001; Electronic delivery

New product number

Long-term health conditions has been identified as a key area of interest among clients undertaking time-series analysis. This publication will provide users with a resource to assist in making NHS inter-survey comparability for long-term conditions across the 1989-90, 1995 and 2001 surveys. While the 2001 NHS is deliberately the same or similar in many ways to the 1995 NHS (and in part to the 1989-90 NHS), there are important differences in survey methodology and content, definitions, classification, etc. These differences will affect the degree to which data are directly comparable between the surveys, and hence the interpretation of apparent changes over the period from 1989-90 to 2001. This paper presents standardised rates for an extensive list of long-term conditions, and describes the methodological approach used in each survey to 'capture' the data. Issues of coding and classification will also be addressed.

Information Paper: Use of the Kessler Psychological Distress Scale in ABS Health Surveys, Australia

43170IP

Irregular; first and latest issue: 2001; ISBN: 0 642 48070 2; Electronic delivery

New product number

The Kessler Psychological Distress Scale - 10 (K10) is a scale of non-specific psychological distress. It was developed by Professors Ron Kessler and Dan Mroczek, as a short dimensional measure of non-specific psychological distress in the anxiety-depression spectrum, for use in the US National Health Interview Survey.

In Australia, national level information on psychological distress using the K10 was first collected in the Survey of Mental Health and Well-being of Adults (SMHWB) conducted by the Australian Bureau of Statistics (ABS) in 1997. The SMHWB was an initiative of, and funded by, the Commonwealth Department Of Health and Family Services as part of the National Mental Health Strategy. The K10 was included in the ABS 2001 National Health Survey (NHS) as it proved to be a better predictor of depression and anxiety disorders than the other short, general measures used in the 1997 SMHWB.

This publication provides information on the use of the K10 in ABS health surveys. Some alternative scoring methods are outlined and some snapshot and time series comparisons are made between ABS and Australian State surveys.

The Health of Older People, Australia

Irregular; first and latest issue: 2001; Electronic delivery

With current interest in policy issues related to the ageing of the Australian population, older people aged 65 years and over are becoming a group of interest particularly in terms of health service availability and use, and disability. In addition, the ability, or otherwise, of older people to fund their own health costs is becoming increasingly important as the population ages and the proportion of people of working age

decreases. The purpose of this paper is to outline the health status of older people, particularly in relation to long-term conditions, health service use, and disability, as well as private health insurance status, employment status and income range. Where possible, trends will be analysed over time.

The type of long-term conditions to be included are likely to be arthritis, osteoporosis, diabetes, hypertension and injuries. Other issues such as mental health, including dementia, and the use of pharmaceuticals may also be included. Analysis will take into account rural/remote differences where possible for some of the health issues and state/territory analysis.

Information Paper: Foreign Direct Investment Data Collection: Overcoming Hurdles and Obstacles in FDI Measurement and Collection

53700IP

New product number

Single Issue; first and latest issue: 2003; Electronic delivery

Foreign Direct Investment statistics in Australia are collected and disseminated by the Australian Bureau of Statistics as part of the compilation of a full set of Balance of Payments (BOP) and International Investment Position (IIP) accounts. This is in contrast with the practice in many countries where BOP and IIP statistics are collected and compiled by the central bank. This paper describes the broad framework within which international investment data are collected and compiled in Australia and covers some of the more detailed definitions and interpretations of foreign direct investment, differentiates direct from portfolio investment and provides an interpretation of some of the terms and definitions in the international standards.

NOTE: This paper describes data contained in the publication Balance of Payments and International Investment Position, Australia (ABS cat.no. 5302.0).

Experimental Estimates, Regional Wage and Salary Earner Statistics, Australia - Electronic Delivery

56730PB

New product number

Irregular; first issue: 1995-96 and 1996-97; latest issue: 1995-96 to 1999-00; Electronic delivery

The original paper publication (released in July 2002) contained experimental estimates of the total number of wage and salary earners and their average wage and salary income for Local Government Areas, Statistical Local Areas, Statistical Subdivisions and Statistical Divisions in each state and territory of Australia for the years 1995-96 to 1998-99.

Estimates for the total Metropolitan and Non-Metropolitan areas by state and territory were also included. Since that publication, a range of other data have been produced for the wage and salary earner population - including cross tabulations by variables such as sex, age, occupation, wage and salary income and total income. There are 14 tables available for each year in the period 1995-96 to 1999-2000, with the intention to add subsequent years as the data becomes available. All these tables are companion data to the publication and are available as tables from the ABS web site. The statistics presented have been compiled from information provided to the Australian Taxation Office in individual income tax returns and are part of an ABS initiative to increase the availability of regional or small area statistical information through the use of administrative data held by other government agencies.

Australian Labour Market Statistics

61050PB

New product number

Quarterly; first issue: April 2003; 88 pp; ISSN: 1446-540X

Replaces: Labour Force, Australia (ABS cat.no. 6203.0)

This publication is the flagship release for all ABS labour statistics. It draws together data from a range of sources, mostly ABS household and business surveys, to provide an overall picture of the labour market. The key purpose of this publication is to raise awareness of the data available, so that users will be able to use it more effectively.

It contains tables for core data items, presenting the most recent data available at a particular date (rather than relating to a particular reference period). It is also able to be used to announce the release of supplementary surveys and infrequent surveys. Note that, in addition to a brief article in this publication, these would also have separate releases, which would not be delayed by the release in this publication.

The publication is also used to release annual data on Indigenous labour force status, and annual supplementary measures of labour underutilisation. It includes a range of feature articles, both analytical and technical, which will assist users in understanding and interpreting the data and will also promote the range of data available from the ABS labour statistics program. It will be used to announce any changes to labour series or releases.

The publication contains brief explanatory notes, outlining each data source, but referring to the relevant releases, and to Labour Statistics: Concepts, Sources and Methods 6102.0, for more detail.

Information Paper: Measures of Labour Underutilisation

62960IP

Single Issue; first issue: 2001; latest issue: 2002; 52 pp; ISBN: 0 642 47832 5

New product number

The number of unemployed persons and the unemployment rate are widely used as measures of the extent of underutilisation of labour resources in the economy. While the ABS continues its commitment to producing employment statistics based on internationally accepted definitions, it also recognises that the headline unemployment rate cannot satisfy all the purposes for which such data are required.

The ABS provides a wide range of data on available labour resources and the extent of labour utilisation. Supplementary measures based on these data can be used to give a broader perspective on the meaning and measurement of unemployment and underutilised labour. In particular, measures are available of underemployment and of persons who, although not currently economically active, have some of the characteristics of the unemployed (i.e. persons marginally attached to the labour force).

This information paper discusses ABS measures of labour underutilisation and proposes four indicators of labour underutilisation. It also identifies and discusses population groups, within the wider groups of unemployed, underemployed and marginally attached persons, that were used to develop these indicators.

Employee Earnings, Benefits and Trade Union Membership, Australia

63100PB
New product number

Annual; first issue: August 1975; latest issue: August 2004 is expected to be released in 2005; 72 pp; ISSN: 1442-0171

Contains information from three survey topics: weekly earnings of employees, core employment benefits and trade union members. Weekly earnings data shows the distribution of weekly earnings of all wage and salary earners classified by full-time/part-time employees, employees with or without leave entitlements, sector, hours worked and hours paid. Core employment benefits data includes information relating to sick leave, annual leave, long-service leave, maternity/paternity leave and superannuation coverage. Information about the level of trade union membership is also provided. For each of these topics estimates can be cross-classified by demographics such as state, sex, age, marital status, birthplace; and by labour force characteristics such as industry of main job and occupation of main job.

NOTE: From the August 1998 issue, the publication title has been changed to reflect the permanent inclusion of data relating to employment benefits and trade union membership. The August 1997 issue also contains information about core employment benefits, and trade union membership. Data for August 1994 and August 1995 are available as a standard data service (ABS cat.no. 6310.0.40.001).

Regarding the three survey topics covered by this publication, weekly earnings data have been collected annually since 1975, except in 1996. Core employment benefits data have been collected annually since 1983. From 1983 to 1992 the survey collected a broader range of non-wage employment benefits. These are now collected on an irregular basis, with the full survey in August 1999 and again in August 2004. Information about the level of trade union membership in Australian was first collected in 1982, then two-yearly from 1986 to 1990, and annually from 1992.

64260PB

New product number

Discontinued; Quarterly; first issue: June 2000; final issue: March 2001; 16 pp;
ISSN: 1444-125X

Replaced by: Producer Price Indexes, Australia (ABS cat.no. 6427.0)

Presents producer price index numbers for the supply of commodities (goods and services) to the Australian economy in a "stage of production" (SOP) framework as discussed in Information Paper: Producer Price Index Developments, ABS cat.no. 6422.0 released on 25 March 1999. The indexes cover both domestically produced and imported commodities, individually and in aggregate, and represent an alternative arrangement of largely existing ABS producer price index series.

This publication is the first release of new economy-wide price measures designed to support the study of inflation, compiled within the statistical framework outlined in the 1997 Information Paper: An Analytical Framework for Price Indexes in Australia, ABS cat.no. 6421.0. A further publication dealing with Domestic Final Purchases is planned for release in 2001.

NOTE: See also ABS cat.no. 6428.0.

Firstly, economy-wide indexes are presented within a Stage of Production (SOP) framework, followed by a set of partial, stand-alone measures relating to specific industry sectors of the economy (selected manufacturing, construction, mining and service industries)

6428.0

Information Paper: Price Index of Domestic Final Purchases, Australia

64280IP

New product number

Single Issue; first and latest issue: 2001; 40 pp; ISBN: 0 642 47781 7

Introduces experimental index numbers for a new economy-wide Price Index of Domestic Final Purchases. It represents the last major element of the system of price indexes articulated in the earlier Information Paper: An Analytical Framework for Price Indexes in Australia 6421.0. The focus of this system of indexes is on the analysis of inflation.

The experimental Domestic Final Purchases index is intended to complement other available indexes, in particular the Stage of Production Producer Price Indexes, the Wage Cost Index and the Export Price Index.

The system of complementary indexes is designed to enhance the means of studying price transmission processes in the Australian economy by providing analysts with measures which are presented from the perspectives of both producers and purchasers.

Consumer Price Index: Concordance with Household Expenditure Classification, Australia

64460CL

New product number

Irregular; first and latest issue: September 2000; Electronic delivery

The Household Expenditure Survey (HES) is the major source of data used to derive weights for the Consumer Price Index (CPI). In deriving these weights the detailed commodity items identified in the HES must be mapped to the CPI expenditure classes. This spreadsheet provides the concordance between the expenditure classes of the 14th series CPI (introduced in respect of the September quarter 2000) and the Household Expenditure Classification (HEC) at the 10 digit level used for the 1998-99 HES.

Australian Business Register Counts of Single Business Locations, ANZSIC Industry Division by Postcode

81360TB

New Product Number

Irregular; first issue: October 2000; latest issue: June 2001; Electronic delivery

Population for this data set is all single location ABNs registered and active for GST on the ABR as at June 2001, ie data excludes multi location entities and businesses not both registered and active for GST. Data in this table is suppressed if less than 5 ABNs are contributing to that cell or the publication of the cell would identify the contents of another cell with less than 5 ABNs. It is not possible to aggregate postcodes into larger areas apart from states and Australia using this data. This data set can provide counts of ABNs by postcode in Australia or counts of ABNs by postcode within a state or counts of ABNs by states in Australia. Industry classification in this table is restricted to ANZSIC Division. Approximately 1,000,000 non-employed ABNs on the ABR in June 2001 were not ANZSIC coded. Where this is the case, the ANZSIC Division has been determined from which tick box the business marked in the industry description tick box on the ABR registration form. Turnover size range is the sizing variable used in this data set.

88018PB
New Product Number

Annual; first issue: September 2000; latest issue: 2005 is expected to be released in 2005; 24 pp; ISSN: 1443-5063

Contains details of Internet activity facilitated by Internet Service Providers (ISPs) in Australia. It includes characteristics and location of ISP customers and their Internet usage, and the nature of related telecommunications infrastructure. Broad level statistics include the number of business and private Internet subscribers, the number and types of accounts offered by ISPs, the volume of traffic through ISPs to Internet subscribers, the number of lines providing Internet connectivity to subscribers, subscriber to infrastructure ratios etc.

The annual frequency of the collection provides an indication of the growth/rationalisation of ISPs and the number of Australians and Australian businesses obtaining access to the Internet through ISPs. It also indicates movements in the type and amount of infrastructure available to provide connectivity to the Internet.

NOTE: The frequency of this publication reduced from quarterly to half yearly with the release of the September 2001 issue and from half yearly to annually with the release of the March 2005 issue.

Australian Bureau of Statistics Business Register, Counts of Businesses - Summary Tables

81610PB
New Product Number

New issue; Annual; first and latest issue: June 2004 is expected to be released in 2005; Electronic delivery

This publication presents summary counts of business characteristics of Australian businesses. Data includes ANZSIC Division and Subdivision, Type of Legal Organisation (TOLO), Standard Institutional Sector Classification of Australia (SISCA), employment status and employment size ranges.

Data presented also identifies whether businesses have operations in one or more states/territories, the number of states/territories businesses operate and in which states/territories businesses operate.

An ANZSIC Division breakdown for Australian states and territories is also provided. These tables are based on the state of the main business address. Therefore, where a business operates in more than one state or territory, that business is categorised to the state or territory of the main business address.

Employment size ranges are non-employed, small (0-19), medium (20-199) and large (200+). The actual number of employees is not available.

The data presented in the tables have been confidentialised to ensure no individual business entity can be identified.

Australian Bureau of Statistics Business Register, Counts of Businesses - Industry by Main State by Employment Size Ranges

81610TB
New Product Number

New issue; Annual; first issue: June 2004; latest issue: 2004 is expected to be released in 2005; Electronic delivery

These data are sourced from the Australian Bureau of Statistics Business Register. This product presents counts of business by Industry (all ANZSIC levels), by the main state of business operations and employment size ranges.

For the majority of businesses, the main state of business operations is based on the main business address. However, for the remainder, the main state refers to the state or territory with the highest number of payees. Where a business operates in more than one state or territory, that business is only categorised to its main state or territory.

Employment size ranges are non-employed, small (0-19), medium (20-199) and large (200+). The actual number of employees is not available.

The data presented in the tables have been confidentialised to ensure no individual business entity can be identified.

For information on scope and coverage, please refer to the explanatory notes.

Framework for Australian Tourism Statistics - Electronic Delivery

86349DM

New product number

Irregular; first and latest issue: 2003; Electronic delivery

The Framework for Australian Tourism Statistics provides guidelines which encourage consistency and compatibility in the collection and publication of tourism statistics in Australia. It provides a "common language" for all users and collectors of tourism statistics. The use of a "common language" in all collections will increase the value of the available data by enabling compatibility and comparability of results from all tourism statistics collections.

Tourism Region Maps and Concordance Files, Australia

95030CL

New product number

Annual; first issue: 2003; latest issue: 2004 is expected to be released in 2005; Electronic delivery

The ABS and other organisations publish tourism data by Tourism Regions. This product provides maps and concordance files for Tourism Regions for each state and the Northern Territory. Tourism Regions represent groups of Statistical Local Areas (SLAs). SLAs are a small spatial unit of the Australian Standard Geographical Classification (ASGC). The ASGC is updated each year. The concordance files provide Tourism Region names and their corresponding SLA names and codes. Any changes to Tourism Regions in one year are applied to products issued from the March quarter reference period in the following year.

Presents colour maps of the key social, demographic and economic characteristics of Sydney, at the time of the 2001 Census. The maps are easy to interpret as the distribution of the data are represented by different colours or shadings. A brief commentary explaining the main features and characteristics also accompanies each map.

The Social Atlas series has a common core set of maps including population, ethnicity, education, families, income, labour force and dwellings. Each Social Atlas also includes maps that highlight any unique attributes pertaining to that particular capital city.

2033.1.30.001

Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), New South Wales

20331CL
New product number

Five Yearly; first issue: August 1996; latest issue: 2001; CD-ROM

Socio-Economic Indexes for Areas 2001 (SEIFA 2001) is a product developed especially for those interested in the assessment of the welfare of Australian communities. The ABS has developed indexes to allow ranking of regions/areas, providing a method of determining the level of social and economic well-being in that region.

The four indexes are:

- Index of Advantage/Disadvantage
- Index of Disadvantage

- Index of Economic Resources
- Index of Education and Occupation

These indexes show where the affluent (as opposed to just high income earning) live; where disadvantaged (as opposed to the unemployed) live; and where the highly skilled and educated (as opposed to the tertiary educated people) live.

SEIFA 2001 provides information and rankings for a wide range of geographic areas.

This product is separately available for each state and territory and Australia.

2044.1.30.001

Census of Population and Housing: CDATA 2001 — Quickbuild, New South Wales

20402DS

New product number

Five Yearly; first and latest issue: 2001; CD-ROM

CDATA 2001 - Quickbuild contains reduced GIS software functionality when compared to that available in CDATA 2001 - Full GIS, but with complete access to all statistical and boundary data. Users are able to quickly select the geography and data they need to produce reports, thematic maps, graphs or data views. CDATA 2001 - Quickbuild allows for the export of statistical data for use in other applications.

CDATA 2001 - Quickbuild includes a basic base map layer containing major roads, rivers and railways. The more complex GIS facilities such as SQL, importing of external data, geocoding and point creation is not available in CDATA 2001 - Quickbuild. However, the ABS offers an upgrade path for users of this product to upgrade to the full GIS version at a later stage.

2045.1.30.001

Census of Population and Housing: Census Basics, New South Wales

20405PB

New product number

Five Yearly; first issue: 2001; latest issue: 2001; CD-ROM

Census Basics is a CD-ROM product containing 2001 Census Basic Community Profile (BCP) data, down to Collection District (CD) level, and digital boundaries in MapInfo Interchange format (.mid/.mif). A simple Excel viewer tool is also provided to view the data files. Census Basics is available for purchase for all of Australia or for individual states and territories.

This product has been introduced for the 2001 Census for several purposes:

- for use with existing database or analysis systems (e.g. geographic information systems, other mapping or tabulation software) where the sophisticated functionality provided by other Census products, including CDATA is not required; and
- for use as a simple viewing tool to display a formatted BCP for a single geographic area or a simple custom area aggregate without manipulation or other functionality.

Quarterly; first issue: September 2001; 60 pp; ISSN: 1445-6710

Replaces: Monthly Summary of Statistics (ABS cat.no. 1303.2)

State and Regional Indicators, Victoria (SRIV) is a quarterly publication that contains recently released statistical information about the whole of Victoria. Data is sourced from ABS and non-ABS collections. It provides measures according to a triple bottom line of economic, social and environment elements.

Most chapters contain a mix of tables, charts and commentary, to provide a basic analysis of recent movements in key economic, social and environmental data. Data is presented for varying geographic classifications, including, Victoria; Melbourne and the Balance of Victoria; down to Local Government Area for some series. The aim of the publication is to provide a picture of the situation of Victoria and enable comparison, both over time and between regions.

Core data, such as Estimated Resident Population, State Final Demand, Labour Force Statistics, Price Indexes, Building Approvals, Air Quality, and Water Storage Volumes is complemented by periodic annual data including the Condition of Main Roads, Recorded Crime Offences, Life Expectancy at Birth, Government Owned Housing Stock and others.

As the information is sourced from a wide variety of collections, care needs to be taken when analysing the data as time periods, definitions, methodologies, scope and coverage may differ from table to table. Advice is provided in the publication on such matters.

Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Victoria

20332CL

New product number

Five Yearly; first issue: August 1996; latest issue: 2001; CD-ROM

Socio-Economic Indexes for Areas 2001 (SEIFA 2001) is a product developed especially for those interested in the assessment of the welfare of Australian communities. The ABS has developed indexes to allow ranking of regions/areas, providing a method of determining the level of social and economic well-being in that region.

The four indexes are:

- Index of Advantage\Disadvantage

- Index of Disadvantage
- Index of Economic Resources
- Index of Education and Occupation

These indexes show where the affluent (as opposed to just high income earning) live; where disadvantaged (as opposed to the unemployed) live: and where the highly skilled and educated (as opposed to the tertiary educated people) live.

SEIFA 2001 provides information and rankings for a wide range of geographic areas.

This product is separately available for each state and territory and Australia.

Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), South Australia

20334CL

New product number

Five Yearly; first issue: August 1996; latest issue: 2001; CD-ROM

Socio-Economic Indexes for Areas 2001 (SEIFA 2001) is a product developed especially for those interested in the assessment of the welfare of Australian communities. The ABS has developed indexes to allow ranking of regions/areas, providing a method of determining the level of social and economic well-being in that region.

The four indexes are:

- Index of Advantage\Disadvantage
- Index of Disadvantage
- Index of Economic Resources
- Index of Education and Occupation

These indexes show where the affluent (as opposed to just high income earning) live; where disadvantaged (as opposed to the unemployed) live: and where the highly skilled and educated (as opposed to the tertiary educated people) live.

SEIFA 2001 provides information and rankings for a wide range of geographic areas. This product is separately available for each state and territory and Australia.

Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Western Australia

Five Yearly; first issue: August 1996; latest issue: 2001; CD-ROM

Socio-Economic Indexes for Areas 2001 (SEIFA 2001) is a product developed especially for those interested in the assessment of the welfare of Australian communities. The ABS has developed indexes to allow ranking of regions/areas, providing a method of determining the level of social and economic well-being in that region.

The four indexes are:

- Index of Advantage/Disadvantage
- Index of Disadvantage
- Index of Economic Resources
- Index of Education and Occupation

These indexes show where the affluent (as opposed to just high income earning) live; where disadvantaged (as opposed to the unemployed) live; and where the highly skilled and educated (as opposed to the tertiary educated people) live.

SEIFA 2001 provides information and rankings for a wide range of geographic areas. This product is separately available for each state and territory and Australia.

Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Tasmania

20336CL

New product number

Five Yearly; first issue: August 1996; latest issue: 2001; CD-ROM

Socio-Economic Indexes for Areas 2001 (SEIFA 2001) is a product developed especially for those interested in the assessment of the welfare of Australian communities. The ABS has developed indexes to allow ranking of regions/areas, providing a method of determining the level of social and economic well-being in that region.

The four indexes are:

- Index of Advantage\Disadvantage
- Index of Disadvantage
- Index of Economic Resources
- Index of Education and Occupation

These indexes show where the affluent (as opposed to just high income earning) live; where disadvantaged (as opposed to the unemployed) live: and where the highly skilled and educated (as opposed to the tertiary educated people) live.

SEIFA 2001 provides information and rankings for a wide range of geographic areas. This product is separately available for each state and territory and Australia.

Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Australian Capital Territory

20338CL

New product number

Five Yearly; first issue: August 1996; latest issue: 2001; CD-ROM

Socio-Economic Indexes for Areas 2001 (SEIFA 2001) is a product developed especially for those interested in the assessment of the welfare of Australian communities. The ABS has developed indexes to allow ranking of regions/areas, providing a method of determining the level of social and economic well-being in that region.

The four indexes are:

- Index of Advantage\Disadvantage
- Index of Disadvantage
- Index of Economic Resources
- Index of Education and Occupation

These indexes show where the affluent (as opposed to just high income earning) live; where disadvantaged (as opposed to the unemployed) live: and where the highly skilled and educated (as opposed to the tertiary educated people) live.

SEIFA 2001 provides information and rankings for a wide range of geographic areas. This product is separately available for each state and territory and Australia.

2044.8.30.001

Census of Population and Housing: CDATA 2001 — Quickbuild, Australian Capital Territory

20402DS

New product number

Five Yearly; first and latest issue: 2001; CD-ROM

CDATA 2001 - Quickbuild contains reduced GIS software functionality when compared to that available in CDATA 2001 - Full GIS, but with complete access to all statistical and boundary data. Users are able to quickly select the geography and data they need to produce reports, thematic maps, graphs or data views. CDATA 2001 - Quickbuild allows for the export of statistical data for use in other applications.

CDATA 2001 - Quickbuild includes a basic base map layer containing major roads, rivers and railways. The more complex GIS facilities such as SQL, importing of external data, geocoding and point creation is not available in CDATA 2001 - Quickbuild. However, the ABS offers an upgrade path for users of this product to upgrade to the full GIS version at a later stage.

2045.8.30.001

Census of Population and Housing: Census Basics, Australian Capital Territory

20405PB

Five Yearly; first issue: 2001; latest issue: 2001; CD-ROM

New product number

Census Basics is a CD-ROM product containing 2001 Census Basic Community Profile (BCP) data, down to Collection District (CD) level, and digital boundaries in MapInfo Interchange format (.mid/.mif). A simple Excel viewer tool is also provided to view the data files. Census Basics is available for purchase for all of Australia or for individual states and territories.

This product has been introduced for the 2001 Census for several purposes:

- for use with existing database or analysis systems (e.g. geographic information systems, other mapping or tabulation software) where the sophisticated functionality provided by other Census products, including CDATA is not required; and
- for use as a simple viewing tool to display a formatted BCP for a single geographic area or a simple custom area aggregate without manipulation or other functionality.
