TABLES

Ranked Urban Centres

1	Total number of persons	6
2	Rate of population growth — 1991–1996	8
3	Proportion of males	10
4	Proportion of females	12
5	Proportion aged 0–14 years	14
6	Proportion aged 65 years and over	16
7	Proportion of family households with dependent children	18
8	Proportion of employed persons	20
9	Unemployment rate - persons aged 15 years and over	22
10	Occupied private dwellings	24
11	Median household income	26

ADDITIONAL INFORMATION

Explanatory notes	28
Appendix 1: list of Urban Centres	31
Appendix 2: census products and services	35
Glossary	38

P R E F A C E

This publication contains data from the 1996 Census of Population and Housing, and describes the characteristics of people in Australia and their housing arrangements. Similar publications are available for each State and Territory.

The data presented in this publication relate to where people were counted on census night, and therefore data for each geographical area includes visitors to that area but exclude those people who were away on census night. The publication uses the Urban Centre/Locality (UC/L) geographic classification which classify areas according to size of the population. The classification covers only part of Australia.

This publication presents only a selection of data from the full range of census variables. For further information about other census or Australian Bureau of Statistics (ABS) data refer to the Appendix or Directory of Census Statistics, 1996 (Cat. no. 2910.0). Concepts and definitions used in this publication, including UC/L, are explained in the Glossary and more detailed information is available in the Census Dictionary, 1996 (Cat. no. 2901.0).

ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

W. McLennan

SUMMARY OF FINDINGS

This publication presents, for a selected number of data items, the 200 Urban Centres (UCs) with the highest values for the data items shown in each table. Other publications in this series present information for every UC on a State by State basis.

PERSON AND HOUSEHOLD CHARACTERISTICS

POPULATION SIZE

There were four UCs recording populations above one million in 1996: Sydney (3,276,207), Melbourne (2,865,329), Brisbane (1,291,117) and Perth (1,096,829). Another six UCs recorded populations above 200,000 — Adelaide (978,100), Canberra-Queanbeyan (322,723), Gold Coast-Tweed Heads (311,932), Newcastle (270,324), Central Coast (227,657) and Wollongong (219,761) — with a further 50 recording populations above 20,000.

POPULATION GROWTH RATES

The fastest growing UCs (between 1991 and 1996) were generally those with population bases in the low thousands, and many were located either at the fringes of the large UCs or on the coastlines of New South Wales (NSW) and Queensland (Qld).

New South Wales

The highest rates of growth in NSW occurred along the coastal ribbon north of Sydney, in areas such as Suffolk Park in the far north (107.0%) (the fifth fastest growing UC in Australia), Bogangar (74.7%) and Pottsville Beach (53.7%). These areas also recorded high proportions of people aged 65 years and over (11.5%, 15.5% and 20.2% respectively).

Growth around Sydney was relatively more modest and was primarily concentrated in the south, including Thirlmere (52.4%), Appin (31.2%) and Buxton (28.7%).

Victoria

Apart from Seymour (103.8%) in the central north of Victoria, which was ranked the sixth fastest growing UC in Australia, most of the State's growth was concentrated close to Melbourne, including Carrum Downs (82.6%), Wonga Park (75.9%) and Pakenham (62.7%).

Queensland

Qld featured highly in terms of population growth rates overall, containing seven of the ten fastest growing UCs in Australia. Most of this growth occurred in commuter corridors on the outskirts of the major urban centres: Oxenford (132.1%) (the fastest growing UC in Australia) and Helensvale (128.3%) (both located near the Gold Coast); Morayfield (109.9%), Yaroomba (90.4%) and Mudjimba (85.8%) (near the Sunshine Coast); Highfields (94.0%) (near Toowoomba) and Karalee (83.8%) (west of Brisbane).

SUMMARY OF FINDINGS *continued*

.....

South Australia

Growth in South Australia (SA) was largely concentrated in commuter corridors around Adelaide: Nairne (82.0%) (to the east); and McLaren Vale (57.5%), Wilunga (39.3%) and Aldinga Beach (31.0%) (all to the south).

Western Australia

Population growth in Western Australia (WA) was concentrated around Perth. This included Golden Bay-Singleton (122.5%) (the third fastest growing UC in Australia), followed by Margaret River (65.0%), Byford (60.7%) and Mandurah (54.0%), which served both as a retirement/tourist destination and as a commuter town to Perth's southern industrial areas.

Tasmania

Apart from the holiday/retirement area of St Helens-Stieglitz (55.1%), the fastest growing UC in Tasmania, growth was largely concentrated around the major population centres of Hobart and Launceston. These included Legana (42.1%) and Hadspen (29.7%) near Launceston; and Dodges Ferry (34.0%) and Pontville (26.6%) near Hobart.

Territories

Palmerston, located south of Darwin, was the fastest growing UC (60.4%) in the Northern Territory (NT). Conversely, growth in the Australian Capital Territory (ACT) was much lower with Canberra-Queanbeyan (on the NSW/ACT border) recording a growth rate below 10%.

SEX

The areas containing the highest percentages of males were generally either holiday/ resort towns, or based on a particular industry. Examples of the former included Jindabyne (59.7%) and Perisher Village (58.0%). Examples of the latter included the mining areas of Leinster (67.5%), Leonora (61.8%), Roxby Downs (58.1%) and Weipa (57.1%). Areas with defence bases such as Forest Hill (60.1%), Woomera (57.6%) and Crib Point (57.3%) also had high proportions of males.

The distribution of UCs containing the highest proportions of females was similar to that of people aged 65 years or more, possibly reflecting women's longer average life expectancy. UCs with the highest percentage of females were Foster (55.7%), Milton (55.6%), Yarram (54.0%), Mullumbimby (53.9%) and Palmwoods (53.8%). The proportion of people aged 65 years and over in these areas ranged from 18.0% in Palmwoods to 27.3% in Milton.

AGE

Children (aged 0–14 years)

Areas with high proportions of children tended to be located outside of the major towns or cities, and were predominantly in Qld or NT (7 out of the top 10). The highest ranking UC was Berridale (42.9%) in NSW, while in Qld, the highest ranking UCs were the Indigenous communities of Woorabinda (41.0%), Yarrabah (40.4%) and Cherbourg (40.2%). In the NT the highest ranking UCs were the Indigenous communities of Port Keats (41.9%), Maningrida (39.4%) and Galiwinku (38.3%).

SUMMARY OF FINDINGS *continued*

Aged 65 years and over

Areas containing high proportions of people aged 65 years and over were overwhelmingly located along the NSW/Qld coastline.

Seven of the ten highest ranking UCs in Australia were located along the NSW coast: Iluka (36.7%), Camden Haven (36.4%), Harrington (34.2%), Dalmeny (33.7%), Merimbula (33.5%), Hawks Nest (33.1%) and Sussex Inlet (31.0%).

HOUSEHOLD TYPE

Family households with dependent children

The distribution of family households with dependent children was reasonably similar to the distribution of children (aged 0–14 years), with Galiwinku containing the highest proportion of such households (89.6%). Other high-ranking UCs were the Indigenous communities of Port Keats (84.1%), Maningrida (81.0%), Yarrabah (80.4%), Nguiu (74.1%) and Palm Islands (79.4%).

Lone person households

The proportions of lone person households tended to increase as the proportions of family households with dependent children decreased, which partially reflects different stages in the family life cycle. UCs with high proportions of lone person households also tended to have high proportions of people aged 65 years and over, many of whom were living by themselves.

Group households

UCs with the highest levels of group households tended to be tourist/coastal areas and/or associated with tertiary institutions. Examples of the former were Craiglie (12.0%), Cannonvale (10.5%), Airlie Beach (10.5%) and Byron Bay (10.1%). Examples of the latter were Churchill (10.3%), Gatton (8.5%), Lismore (7.8%) and Armidale (7.7%). In others such as Cairns (8%) these features were combined.

SUMMARY OF FINDINGS *continued*

.....

LABOUR FORCE CHARACTERISTICS (For Persons Aged 15 Years and Over)

EMPLOYMENT

Generally, UCs which recorded high percentages of employed people had developed around a particular industry. For example, the highest percentages of employed people were recorded in the holiday/resort areas of Thredbo Village (76.2%), Perisher Village (75.5%), Hamilton Island (69.6%) and Jindabyne (67.3%); and the mining areas of Leinster (65.9%) and Weipa (59.8%).

UNEMPLOYMENT RATE

The highest unemployment rates were recorded in Woorabinda (46.7%), Bridgewater-Gagebrook (32.9%), South Golden Beach (25.4%) and Seville (24.4%). In fact, 200 UCs recorded unemployment rates much higher than the Australian rate (9.1%).

SUMMARY OF FINDINGS *continued*

.....

OCCUPIED PRIVATE DWELLINGS

TENURE TYPE

As expected, the areas with the highest populations also had the highest numbers of occupied private dwellings (households), with Sydney ranking the highest (1,161,372). Melbourne was the only other UC to record over one million households (1,047,183).

UCs to record the highest proportions of owner-occupied dwellings included the mining area of Broken Hill (62.3%); Camden Haven (61.0%), Ulladulla (56.3%), St Georges Basin-Sanctuary Point (55.8%) and Maryborough (54.5%). Such areas also tended to record high proportions of people aged 65 years or over.

High proportions of rented dwellings were recorded in Blackwater (81.6), Bridgewater-Gagebrook (68.2%), Katherine (61.8%) and Karratha (57.8%).

MEDIAN HOUSEHOLD INCOME

The highest median weekly household incomes were recorded in the Qld UCs of Moranbah (\$2,000) and Dysart (\$1,708).

Other UCs to record high medians were holiday/resort areas, such as Perisher Village (\$1,133) and Thredbo Village (\$1,100); and the mining areas of Leinster (\$1,597) and Roxby Downs (\$1,244).

Housing loan repayments

Interestingly, there was not a strong relationship between high median household income and high housing loan repayments or rental payments. However, high housing loan repayments did show an apparent association with high rental payments.

UCs which recorded high median monthly housing loan repayments and weekly household income were Windsor Downs (\$1,300 and \$1,196), Hamilton Island (\$1,137 and \$968), Stanwell Park (\$1,133 and \$967) and Craiglie (\$1,083 and \$815).

Rent payments

UCs which recorded high median weekly rental payments and weekly household income were the holiday/resort UCs of Jindabyne (\$318 and \$848) and Hamilton Island (\$270 and \$968); and Windsor Downs (\$250 and \$1,196) and Galston (\$201 and \$1,002) on the outskirts of Sydney.

EXPLANATORY NOTES

.....

SCOPE AND COVERAGE

1 The 1996 Census of Population and Housing was held on 6 August 1996. The first census was held in 1911 and since 1961 a census has been taken every five years, a frequency which is specified in the *Census and Statistics Act 1905*. The objective of the Census is to measure accurately the number and key characteristics of people in Australia on census night, and the dwellings in which they live.

2 The Census aims to count every person who spent census night in Australia. This includes Australian residents in Antarctica and people in the Territories of Jervis Bay, Cocos (Keeling) Islands and Christmas Island. The other Australian External Territories, Norfolk Island and minor islands such as Heard and McDonald Islands, are outside the scope of the Australian Census. The only people who spend census night in Australia but are excluded from the Census are foreign diplomats and their families.

3 The Census includes people on vessels in or between Australian ports, on board long-distance trains, buses or aircraft and on oil or gas rigs off the Australian coast. People entering Australia before midnight on census night are counted while people leaving an Australian port for an overseas destination before midnight on census night are not. Visitors to Australia are included regardless of how long they have been in the country or how long they plan to stay. However, for people who intend to be in Australia less than six months only basic demographic data are available. The Census includes people camping out and the homeless.

4 All private dwellings, except diplomatic dwellings, are included in the Census, whether occupied or unoccupied. Caravans in caravan parks, manufactured homes in manufactured home estates and self-care units in accommodation for the retired or aged are counted only if occupied. Occupied non-private dwellings, such as hospitals, prisons, and hotels are also included.

5 Details about the 1996 Census content, collection operations, confidentiality and privacy protection, processing and evaluation activities are contained in *1996 Census — Nature and Content* (Cat. no. 2008.0).

ABS POPULATION ESTIMATES

6 This publication contains population counts based on where people were counted on census night, which may not have been where they usually lived. However, the Census can provide person counts based on place of usual residence.

7 Official ABS population estimates (estimated resident population (ERP)) are also separately available from the ABS. The estimates are based on census counts which have been adjusted to:

- include people who were in Australia on census night but were missed in the Census;
- include Australian residents who were temporarily overseas on census night (these people were not within scope of the Census); and
- exclude overseas visitors counted in the Census who were not usual residents of Australia.

8 The adjusted census count is then updated quarterly using demographic statistics. These are statistics on births, deaths, and overseas and internal migration.

9 ABS population estimates are published in *Australian Demographic Statistics* (Cat. no. 3101.0), produced quarterly, and in *Population by Age and Sex, Australian States and Territories* (Cat. no. 3201.0) produced annually.

EXPLANATORY NOTES *continued*

.....

ABS POPULATION ESTIMATES *continued*

10 The ABS also provides projections (based on different assumptions as to future fertility, mortality and migration) of the resident population of Australia, States and Territories. These projections are published biennially in *Population Projections* (Cat. no. 3222.0).

DATA LIMITATIONS

11 Census data are subject to a number of inaccuracies resulting from errors by respondents or mistakes in collection or processing. Whilst many of these are corrected by careful processing procedures, some still remain. The effect of the remaining errors is generally slight, although it may be more important for small groups in the population. The main kinds of error to keep in mind are:

- *Partial non-response*: In some cases where an answer is not provided to a question an answer is imputed (often from other information on the form). In other cases a 'Not stated' code is allocated.
- *Processing error*: While such errors can occur in any processing system, quality management is used continuously to improve the quality of processed data, and to identify and correct data of unacceptable quality.
- *Random adjustment*: Table cells containing small values are randomly adjusted or suppressed to avoid releasing information about particular individuals, families, or households. The effects of these adjustments are statistically insignificant.
- *Respondent error*: Because processing procedures cannot detect or repair all errors made by people in completing the forms, some remain in final data.
- *Undercount*: Although the Census aims to count each person, there are some people who are missed and others are counted more than once. The data in this publication are not adjusted for the net undercount.

12 Further information on data quality is provided progressively in *Census Update* (Cat. no. 2902.0) and in *1996 Census Data Quality Working Papers*.

OVERSEAS VISITORS

13 Data for overseas visitors (who intend to be in Australia for less than six months) are restricted to age, sex and marital status. In this publication overseas visitors contribute only to the age, sex and total person counts.

CALCULATION OF PROPORTIONS

14 When calculating the proportion of the population with a particular characteristic, 'Not stated' responses are included in the denominator. For example, in the Summary of Findings, the proportion who are of indigenous origin has been calculated by dividing the number of persons who stated that they were of indigenous origin by the total population (including those who did not respond to the relevant question) and expressing the result as a percentage.

CALCULATION OF MEDIANS

15 A median is a measure of central tendency. It is a mid-value which divides a population distribution into two, with half the observations falling below it and half above it. Unlike averages (means), medians are not usually skewed by extreme observations.

EXPLANATORY NOTES *continued*

.....

CALCULATION OF MEDIANS *continued*

- 16** There are several issues to be aware of:
- The categories 'Not stated', 'Overseas visitor', and 'Not applicable' are not included in the population distribution when calculating medians.
 - If a median falls into a category that has a text only label then the median is set to zero. For this publication this is only relevant to the calculation of median household income, as the income classification includes the categories 'Nil income' and 'Negative income'.
 - If the median is calculated on a classification containing ranges and a range is open-ended and the median falls within that category, the median is set to the number in the label. For example, in the calculation of the median household income, if the median falls in the last range \$2,000 or more, \$2,000 is allocated as the median.

UNADJUSTED DOLLARS

- 17** The 1991 Census dollar values for Median Household Income, Median Housing Loan Repayments and Median Rent paid have not been adjusted into 1996 dollars.

SYMBOLS AND OTHER USAGES

APPENDIX 2 CENSUS PRODUCTS AND SERVICES

.....

There is a wide range of products and services developed from the 1996 Census of Population and Housing, details of which are listed in brief below. For more detailed information on the 1996 Census range of products and services, please refer to the *Directory of Census Statistics, 1996* (Cat. no. 2910.0), or call our Client Services Officers in your State or Territory (refer to the telephone numbers listed on the back page of this publication).

CENSUS REFERENCE PRODUCTS

Census Dictionary

The *Census Dictionary, 1996* (Cat. no. 2901.0) is a comprehensive reference guide to the concepts and terms used in the 1996 Census of Population and Housing. It includes a complete listing of the 1996 Census classifications and a glossary of census terms.

How Australia Takes a Census

How Australia Takes a Census, 1996 (Cat. no. 2903.0) provides information about the history of the Census, the planning process and the way in which the Census is conducted.

Geographic classifications and codes

Statistical Geography: Volume 1 — Australian Standard Geographical Classification (ASGC), July 1996 (Cat. no. 1216.0) provides information about the names and codes of the Geographic Areas used in the 1996 Census.

1996 Census Statistical Local Area maps

These reference maps show the Statistical Local Areas (SLA) from the 1996 Census. Each map shows the boundary of an SLA and the Collection District (CD) boundaries contained within.

Digital Boundaries

All of the census boundaries are available electronically in industry formats through a range of secondary providers.

CENSUS DATA PRODUCTS

Estimated Resident Population

The ERP is the official population figure and is based on adjusting the results of the Census to provide more accurately the numbers of people usually living in an area.

Two publications containing ERP data, based on 1996 Census figures are:

- *Australian Demographic Statistics, December Quarter 1996* (Cat. no. 3101.0); and
- *Regional Population Growth, Australia, 1996* (Cat. no. 3218.0).

Selected characteristics

This series of publications contains data and commentary on various person, family and dwelling characteristics from the 1996 Census at selected geographic levels. There are three publications in the series:

- *Census of Population and Housing: Selected Social and Housing Characteristics for Statistical Local Areas* (Cat. nos 2015.0–8) (released 15 July 1997)
- *Census of Population and Housing: Selected Characteristics for Urban Centres and Localities* (Cat. nos 2016.0–7) (released 29 Jan 1998); and
- *Census of Population and Housing: Selected Family and Labour Force Characteristics for Statistical Local Areas* (Cat. nos 2017.0–8), (indicative release date: March 1998).

Community Profile series

The series *Census of Population and Housing: Community Profiles* (Cat. no 2020.0) provide detailed and comprehensive census characteristics of people, families and dwellings for small areas. This series is available for all standard census geographic areas, and is available in hardcopy and electronic formats.

The series comprises six community profiles:

- *Basic Community Profile* contains 32 tables of detailed data covering dwelling, household and family topics. This profile is available for all standard census Geographic Areas, Commonwealth and State Electoral Divisions, Postal Areas, and Suburbs, for the States/Territories and Australia.
- *Time Series Community Profile* contains 21 tables of variables from the Basic Community Profile comparing data from the 1986, 1991 and 1996 Censuses where the classifications are comparable.
- *Usual Residents Profile* contains 25 tables based on the usual residents of SLAs. This is the only community profile based on place of usual residence.
- *Expanded Community Profile* contains 41 tables available for SLAs and larger areas, comprising more detailed versions of some of the basic profile tables, plus new tables.
- *Working Population Profile* contains 17 tables of labour force and related characteristics of people who work and are counted in SLAs within the journey to work study areas — usually capital cities.
- *Summary Indigenous Profile* contains selected characteristics of Indigenous people in two tables which are available at the Indigenous Location level.
- *Detailed Indigenous Profile* contains selected characteristics of Indigenous people in 26 tables which are available for Indigenous Areas, Aboriginal and Torres Strait Island Regions, States and Territories.

CDATA96

Census of Population and Housing: CDATA96 (Cat. nos 2019.0–8) is a CD-ROM product which provides a large volume of tabulated census data, digital boundaries and base map data. It includes software capable of producing tables, maps and graphs of the data.

KEYDATA

Census of Population and Housing: CENSUS KEYDATA, Australia (Cat. no. 2023.0.30.001) is a CD-ROM product which provides access to 1996 Census Community Profiles, Classification Counts data and Digital Boundaries, using a specially encrypted CD-ROM.

Classification Counts

Census of Population and Housing: Classification Counts (Cat. no 2022.0) provides frequency counts for 1996 Census variables in complete classificatory detail, for every State, Territory and capital city.

Census Household Sample File

Census of Population and Housing: 1996 Census Household Sample File (Cat. no. 2037.0) provides a comprehensive unit record database of census characteristics, containing a sample of private households and associated persons, and persons in non-private dwellings.

Social Atlas Series

The *Social Atlas* (Cat. nos 2030.1–8) publications feature colour maps of the key social, demographic and economic characteristics of each capital city.

APPENDIX 2 CENSUS PRODUCTS AND SERVICES *continued*

.....

Australia in Profile — A Regional Analysis

Census of Population and Housing: Australia in Profile — A Regional Analysis (Cat. no. 2032.0) provides commentary and data on a number of key social indicators from the 1996 Census, with the focus on regional distributions and comparisons.

CONSULTANCY SERVICES

The following census specific services are available:

Thematic Profile Service

The *Thematic Profiles Service* provides profiles on request, covering the themes of the Family, Young People, Older People and Ethnicity, on a variety of media.

Customised Profile Service

The *Customised Profiles Service* provides community profile data tailored to your needs on a variety of media.

Customised Tables Service

The *Customised Tables (Matrix) Service* provides detailed cross-classified tables tailored to your needs on a variety of media.

Customised Geographic Data Reports Service

The *Customised Geographic Data Reports Service* provides tabular geographic data which relate specifically to the census Geographic Areas and their characteristics (e.g. area).

Customised Mapping Service

Through the *Customised Mapping Service* you are able to purchase both Customised Thematic Maps and Customised Reference Maps on request.

GLOSSARY

.....

General descriptions of terms and concepts used in this publication are provided below. Tables are also footnoted where applicable for additional clarity. Detailed definitions of classifications and concepts are available in the *Census Dictionary, 1996* (Cat. no. 2901.0).

Dependent child A dependent child is an individual who is either a child under 15 or a dependent student, which is any child under 15 years of age, or aged 15–24 years who is a full-time student, in a family. To be regarded as a child the individual can have no partner or child of his/her own usually resident in the same household.

Dwelling A dwelling is a building or structure in which people live. This can be a building, such as a house; part of a building, such as a flat; or it can be a caravan or tent, humpy or park bench. Houses under construction, derelict houses, vacant tents, or converted garages, are not counted in the Census.

There are private and non-private dwellings.

A *private dwelling* is normally a house, flat, part of a house, or even a room; but can also be a house attached to, or rooms above, shops or offices; an occupied caravan or unit in a caravan park or craft in a marina; occupied dwelling in a Manufactured Home Estate; occupied self-care unit in Accommodation for the Retired or Aged; a houseboat; or tent if it is standing on its own block of land. An occupied caravan situated on a residential allotment is also classed as a private dwelling. Private dwellings can be either occupied or unoccupied.

Non-private dwellings are those dwellings not included above, which provide a communal or transitory type of accommodation. These dwellings include hotels, motels, guest houses, prisons, religious and charitable institutions, defence establishments, hospitals and other communal dwellings. Only occupied non-private dwellings are included in the Census.

Employed Employed people are those aged 15 years or more who, during the week prior to census night, worked for payment or profit; who had a job from which they were on leave or otherwise temporarily absent; were on strike or stood down temporarily; or worked as unpaid helpers in a family business.

Family household A family household is defined by the ABS as two or more persons, one of whom is at least 15 years of age, who are related by blood, marriage (registered or de facto), adoption, step or fostering, and who are usually resident in the same household.

The basis of a family is formed by identifying the presence of either a couple relationship, lone parent-child relationship or other blood relationship. Some households therefore, contain more than one family. Due to processing limitations a maximum of three families can be coded to a household.

Full-time/part-time employment This variable is based on the number of hours worked in all jobs held by employed people during the week before census night. It excludes any time off but includes any overtime or extra time worked:

Part-time workers: employed people who worked up to 34 hours; and

Full-time workers: employed people who worked 35 hours or more.

-
- Household** A household is a group of people who usually reside in the same private dwelling.
- Income** People aged 15 years or more are asked to state their usual gross weekly income, which is the income before tax, superannuation, health insurance, or other deductions are made. Gross income includes family allowance, family allowance supplement, pensions, unemployment benefits, student allowances, maintenance (child support), superannuation, wages, salary, overtime, dividends, rents received, interest, business or farm income (less operation expenses) and worker's compensation.
- Household income is the sum of the personal incomes of each resident present in the dwelling.
- Indigenous** A person is defined to be of Indigenous origin if he or she identifies himself or herself as of Aboriginal and/or Torres Strait Islander origin.
- Industry (of employment)** This variable describes the industries in which employed people (aged 15 years and over) work, and is coded to the *Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993* (Cat. no. 1292.0).
- Labour force** The labour force comprises employed and unemployed people.
- Lone person household** A person who usually lives alone in a private dwelling.
- Occupation (of main job)** This variable describes the main job held by employed people (aged 15 years and over) during the week prior to census night, and is coded using the *ASCO — Australian Standard Classification of Occupations, Second Edition* (Cat. no. 1220.0)
- Overseas-born** Overseas-born people are those who state that they were born in a country other than Australia, including those born at sea.
- Student** A student is an individual who attends a secondary or tertiary educational institution on a full-time/part-time basis.
- Unemployed** Unemployed people are those who, during the week prior to census night, did not have a job but were actively looking for work (either full-time or part-time) and were available to start work.
- Unemployment rate** The unemployment rate is the number of unemployed persons expressed as a percentage of the labour force.
- Urban Centre** See definition under Urban Centre/Locality

Urban Centre/Locality This geographical structure is defined by the 1996 Census edition of the Australian Standard Geographical Classification. Population counts (place of enumeration) from the latest census are used to define the UC/L Structure, which means this classification structure is only current at the time of the Census.

The UC/L classification groups census CDs to form defined areas according to population size criteria. In broad terms an UC is a population cluster of 1,000 or more people, while a Locality is a population cluster of between 200 and 999 people. The delimitation criteria for UC/Ls are based on those developed in 1965 by Dr G. J. R. Linge.

For statistical purposes, people living in UCs are classified as urban, while those in Localities are classified as rural. As the UC/L Structure relates to CDs within defined areas only, the Structure, in aggregate, does not cover all of Australia.

When UCs cross State or Territory boundaries, the separate portions are uniquely identified and reported in their relevant State/Territories.

More information about definitions, a full description of the method of delimitation of UC/Ls as well as a listing of UC/L Codes and Labels may be found in *Statistical Geography: Volume 3 — Australian Standard Geographical Classification (ASGC) Urban Centres/Localities, 1996* (Cat. no. 2909.0).
