NOTES

ABOUT THIS PUBLICATION

This publication contains preliminary estimates of the resident population by age and sex in Statistical Local Areas of NSW at 30 June 2000.

FINAL ISSUE

This is the final issue of *Population by Age and Sex, State or Territory* (Cat. nos 3235.1–3235.8). In future years the age-sex data will be made available electronically in a SuperTABLE dataset or as companion data in AusStats. Data at all levels within the Australian Standard Geographical Classification main structure will be included, as well as Local Government Areas and Statistical Districts. The new companion data will also effectively replace *Estimated Resident Population by Age and Sex in Statistical Local Areas, State or Territory: Data on Floppy Disk* (Cat. nos 3227.1–3227.8).

SUMMARY OF FINDINGS

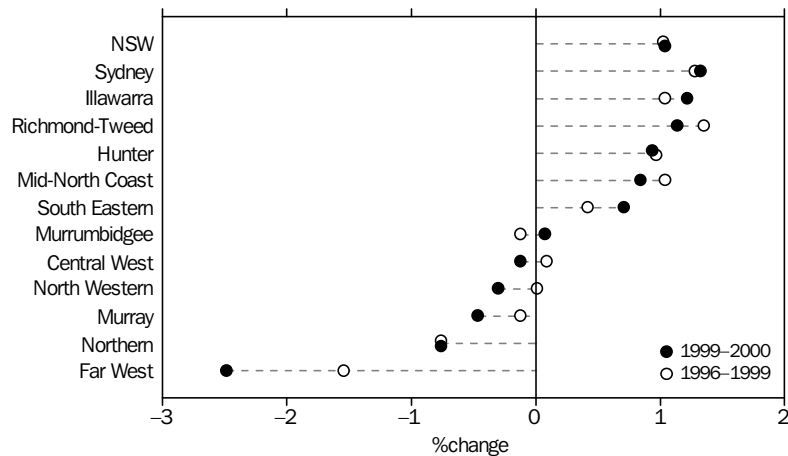

ESTIMATED RESIDENT POPULATION

The estimated resident population of NSW at 30 June 2000 was 6,463,455, which represented an increase of 66,752 persons above the 1999 estimates. The average annual growth rate for NSW was 1.0%, compared with 1.2% for Australia.

The Statistical Divisions (SDs) of NSW which experienced positive annual growth during 1999–2000 were Sydney (1.3%), Illawarra (1.2%), Richmond–Tweed (1.1%), Hunter (0.9%), Mid-North Coast (0.8%), South Eastern (0.7%), and Murrumbidgee (0.1%). In contrast, the SDs of Far West (-2.5%), Northern (-0.8%), Murray (-0.5%), North Western (-0.3%) and Central West (-0.1%) experienced negative growth during that period.

Graph F1 shows whether the percentage change in population over the last twelve months has been greater or lesser than the average annual change over the previous three years. The largest differences occurred in the SDs of Far West, Murray and North Western.

F1 PERCENTAGE CHANGE IN SD POPULATION — 1996–1999 and 1999–2000

The population of Sydney SD in June 2000 was 4,085,578, which was 53,634 more people than in 1999, and this represented 63.2% of the total NSW population. The ten fastest growing Statistical Local Areas (SLAs) in Sydney SD during 1999–2000 were Sydney–Remainder (12.8%), Camden (6.1%), Liverpool (4.4%), Hurstville (2.8%), Concord (2.8%), Wyong (2.6%), Holroyd (2.5%), Blacktown (2.4%), Baulkham Hills (2.4%) and Bankstown (2.4%). The SLAs which experienced net losses were Sydney–Inner (-0.4%), Marrickville (-0.3%) and Canturbury (-0.3%).

The Greater Metropolitan Region (GMR) is a planning region used by the NSW Department of Urban Affairs and Planning that includes the SDs of Sydney, Hunter and Illawarra. In June 2000, the population of the GMR was 5,051,712, which was 1.3% higher than in 1999, and 4.8% higher than in 1996. During 1999–2000, the fastest growing SLA in the GMR was Sydney–Remainder (12.8%), whilst the SLA with the largest negative growth was Merriwa (-1.5%).

SUMMARY OF FINDINGS *continued*

The majority of SLAs (89%) with populations of 10,000 or more persons experienced positive annual growth during 1999–2000, while many smaller SLAs (71%) with populations of less than 10,000 persons experienced negative annual growth. Table F2 below shows the fastest and slowest growing SLAs in each SD during 1999–2000.

AGE DISTRIBUTION

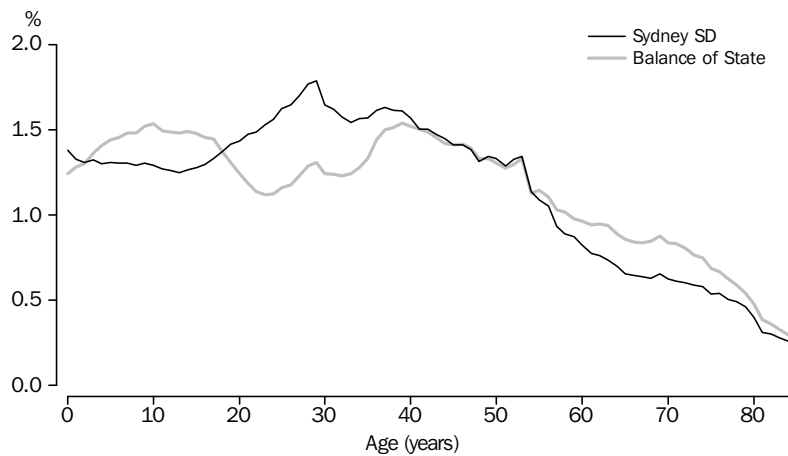

The twelve month period to June 2000 saw the continued ageing of the population of NSW. In June 2000, people aged 65 years or more constituted 12.8% of the NSW population, compared to 12.5% in 1995. While the proportion of older residents in NSW continues to increase, the proportion of younger people continues to decline. In June 2000 the proportion of children aged under 15 years in NSW was 20.4%, compared to 21.3% in 1995.

F3 PERCENTAGE OF POPULATION IN AGE GROUPS

The age distribution of the population varies throughout NSW. As shown by Graph F4 below, Sydney SD has a lower proportion of children and a higher proportion of persons aged 20 to 40 years, compared to the Balance of State. Sydney SD also has a lower proportion of people aged 55 years and over compared to the Balance of State.

F4 AGE DISTRIBUTION — 2000

SUMMARY OF FINDINGS *continued*

MEDIAN AGE

The median age of the population is the age at which half the population is younger than that age, and half the population is older. The median age of the NSW population in June 2000 was 34.8 years for males and 36.2 years for females. Since 1995, the median age of males and females in NSW has increased 1.4 years for both males and females.

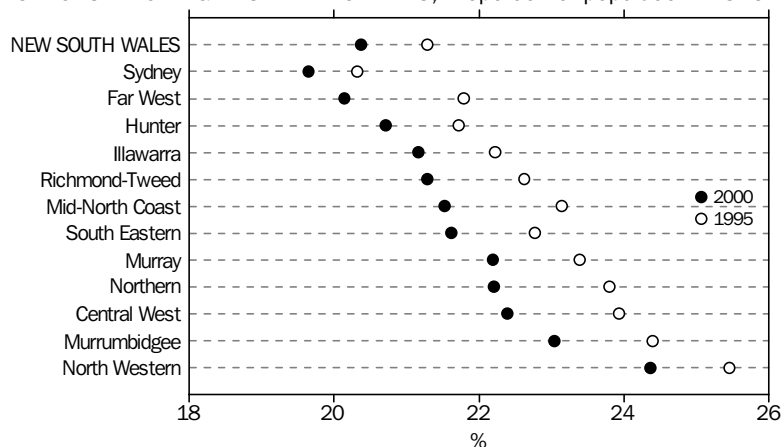

In June 2000, Mid–North Coast SD had the highest median age for males (39.5 years) and females (40.5 years), while Murrumbidgee had the lowest median age for males (33.9 years) and females (35.1 years).

POPULATION AGED UNDER 15 YEARS

In June 2000, there were 1,316,711 children in NSW, representing 20.4% of the State's population. Graph F5 below shows that the proportion of children in all SDs declined between 1995 and 2000. In June 2000, Sydney SD had the lowest proportion of children (19.7%) of all the SDs in NSW. Within Sydney SD, the SLAs with the lowest proportion of children were Sydney Inner (7.9%), Sydney–Remainder (8.1%), South Sydney (8.6%), North Sydney (9.8%) and Leichhardt (12.4%). The SLAs within Sydney SD with the highest proportion of children were Campbelltown (26.0%), Camden (25.2%), Wollondilly (25.0%), Blacktown (24.9%) and Hawkesbury (24.6%).

Outside of Sydney SD, all SDs in NSW except Far West SD had a higher proportion of children when compared to the total NSW level. The SLAs, outside of Sydney SD, with the lowest proportion of children aged under 15 years were Newcastle–Inner (8.8%), Unincorporated Far West (15.1%), Newcastle–Remainder (17.6%), Evans–Pt B(17.6%) and Rylstone (17.8%). The SLAs with the highest proportion of children were Brewarrina (30.9%), Cobar (27.8%), Bourke (27.4%), Windouran (27.1%) and Carrathool (26.8%).

SUMMARY OF FINDINGS *continued*

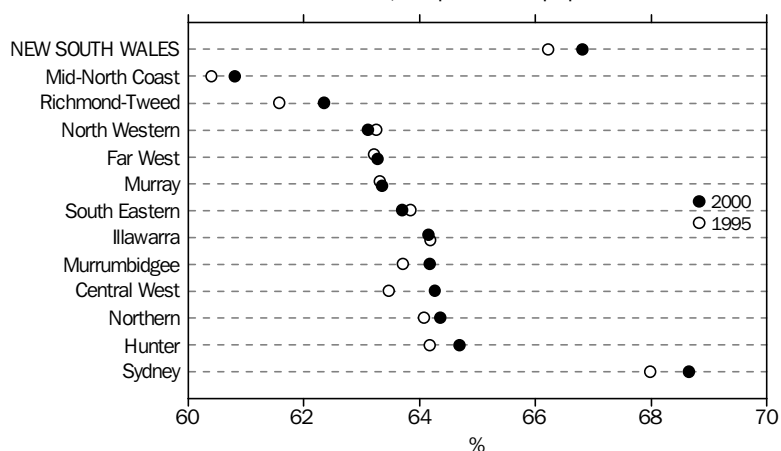

POPULATION AGED 15–64 YEARS

People aged 15–64 years made up 66.8% of the resident population of NSW. Graph F6 shows that the SDs of Central West, Richmond-Tweed and Sydney have experienced the greatest change in the proportion of their population aged 15–64 years between 1995 and 2000.

In June 2000, people aged 15–64 years made up 68.7% of the population in Sydney SD. In all other SDs however, the proportion of the population in this age group was lower than the total NSW level. Within Sydney SD, the SLAs with the lowest proportion in this age group were Wyong (60.1%), Gosford (61.7%), Bankstown (64.8%), Blue Mountains (65.8%) and Hurstville (66%). The SLAs with the highest proportion in this age group were Sydney–Remainder (86.7%), Sydney–Inner (83.3%), South Sydney (81.6%), North Sydney (78.5%) and Leichhardt (77.9%).

Outside Sydney SD, the SLAs with the lowest proportion of 15–64 year olds were Great Lakes (56.7%), Tweed–Pt A (57.9%), Eurobodalla (58.3%), Berrigan (58.5%) and Hastings (58.5%). The SLAs with the highest proportion of people aged 15–64 years, outside Sydney SD, were Newcastle–Inner (80%), Unincorporated Far West (75.6%), Yarrawlumla–Pt A (71.8%), Evans–Pt B (71.7%) and Yarrawlumla–Pt B (70.5%).

F6 POPULATION AGED 15–64 YEARS, Proportion of population in SDs — at 30 June

POPULATION AGED 65 YEARS AND OVER

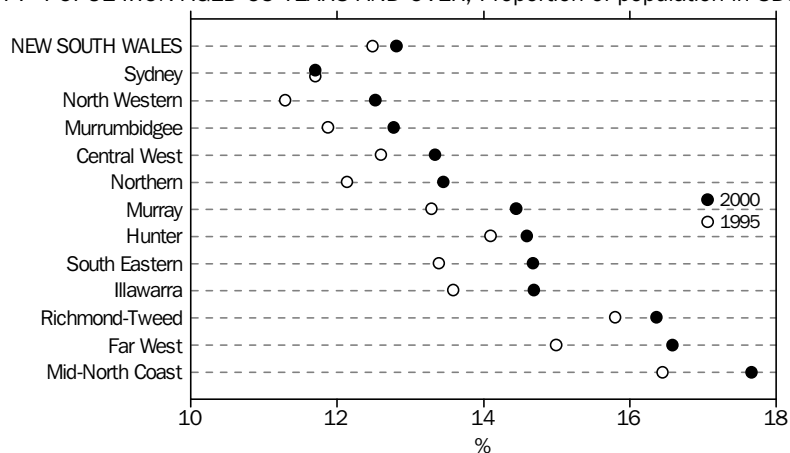

In June 2000, there were an estimated 828,807 people aged 65 years and over in NSW, representing 12.8% of the population. Graph F7 shows that for all SDs except Sydney SD, the proportion of people aged 65 years and over showed an increase between 1995 and 2000.

Older people represented 11.7% of the population in Sydney SD. The SLAs with the lowest proportions of older people were Sydney–Remainder (5.2%), Campbelltown (5.8%), Penrith (6.7%), Liverpool (6.9%) and Blacktown (7.2%). The highest proportions of older people within Sydney SD were found in the SLAs of Wyong (17.9%), Gosford (17.1%), Rockdale (15.9%), Hunter's Hill (15.7%) and Hurstville (15.6%).

SUMMARY OF FINDINGS *continued*

Nine of the eleven SDs outside Sydney SD had a higher proportion of people aged 65 years and over when compared to the total NSW level. Outside of Sydney SD, the SLAs with the lowest proportion of people in this age group were Yarrawlumla–Pt A (6.6%), Cobar (8.2%), Singleton (8.3%), Bourke (8.4%) and Queanbeyan (8.4%). The SLAs with the highest proportion of people aged 65 years and over, outside Sydney SD, were Great Lakes (25%), Tweed–Pt A (23.7%), Barraba (22.9%) Eurobodalla (22.4%) and Maclean (21.8%).

F7 POPULATION AGED 65 YEARS AND OVER, Proportion of population in SDs — at 30 June

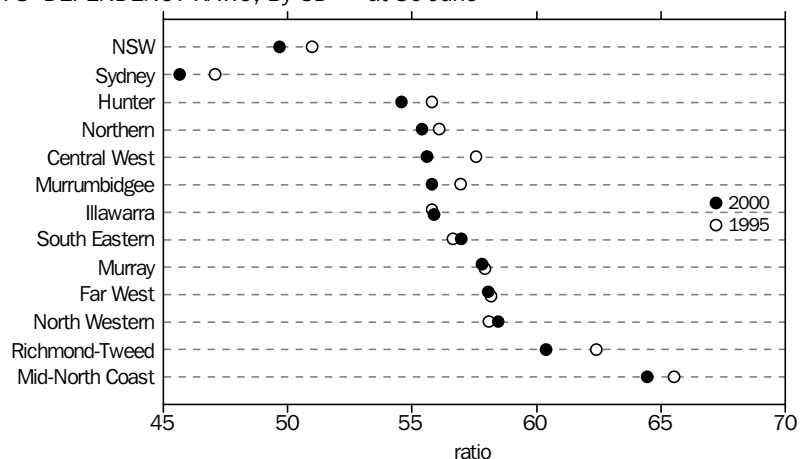

SUMMARY OF FINDINGS *continued*

DEPENDENCY RATIO

In NSW the dependency ratio at June 2000 was 49.7, compared to 51.0 in 1995 (see graph F9). The dependency ratio is a measure of the 'independent' population aged 15–64 years in comparison to the 'dependent' population aged under 15 years and 65 years and over.

A reduced value for the dependency ratio indicates that there is more population of working age to support the population of non-working age. Sydney SD recorded the lowest dependency ratio (45.7), while Mid-North Coast SD had the highest dependency ratio (64.5).

SUMMARY OF FINDINGS *continued*

SEX RATIO

At June 2000, the sex ratio for NSW was 98.9 males for every 100 females. However, due to the longer life expectancy of females, the sex ratio decreased with age. Amongst people aged 65 years and over, the sex ratio was 77.8 males for every 100 females, while for those aged 85 years and over it was 43.7 males for every 100 females (see graph F10).

F9 SEX RATIO, Males per 100 females, By age — 2000

The sex ratio of males to females varied across NSW. In 2000 the SDs of Richmond-Tweed (97.5), Mid-North Coast (97.5), Illawarra (98.4), Northern (98.6), Hunter (98.8), Sydney (98.8) and Far West (99.3) had a lower number of males than females, while the SDs of North Western (102.6), Murrumbidgee (101.1), Central West (101.1), South Eastern (101.0) and Murray (100.8) had a lower number of females than males.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains preliminary estimates at June 2000 of the resident population by age and sex in Statistical Local Areas (SLAs) of NSW.

ESTIMATED RESIDENT POPULATION

2 The estimated resident population (ERP) is the official Australian Bureau of Statistics (ABS) estimate of the Australian population.

3 The ERP of an area (State, SLA, etc.) is the estimate of the number of persons who usually reside in that area irrespective of where they were at the date of the estimate.

METHODOLOGY

4 The total population of each SLA is based on results of the 1996 Census of Population and Housing. Post-Census population estimates are calculated with a linear regression model which uses independent indicators of population change such as dwelling approvals and Medicare enrolments. However, as no direct measure of population movement for SLAs is available, the indicators may give an incomplete picture. Therefore, it should be noted that all intercensal estimates will be subject to revision when final results are available from the 2001 Census.

5 Post-censal estimates of the age and sex distributions of SLA populations are made by updating the age/sex profile at the Census using annual births (by sex), deaths (by age and sex) and a derived age and sex profile of migration. While annual data on births by sex and deaths by age and sex are available for each SLA, data on migration into and out of SLAs for post-censal years are not available, and have to be derived indirectly.

6 After each Census, final estimates for the preceding intercensal period are calculated by incorporating an adjustment (intercensal discrepancy) to ensure that the total intercensal increase at each age agrees with the difference between the estimated resident population at the two respective census dates.

7 A detailed explanation of the concept of, and of method of calculating, the ERP is contained in the ABS Information Paper *Population Estimates: Concepts, Sources and Methods* (Cat. no. 3228.0).

STATISTICAL AREAS OF NSW

8 This publication contains data presented according to the Australian Standard Geographical Classification (ASGC) and incorporating changes brought about by the (State) *Local Government Act 1993* to the titles of local government areas (LGAs). Under this classification, statistical areas are defined as follows:

EXPLANATORY NOTES *continued*

- *Statistical Local Areas (SLAs)*. These geographical areas are, in almost all cases, identical with, or have been formed from a division of, whole local government areas (LGAs) as defined under the (State) *Local Government Act 1993* and comprising cities (C) and areas (A)—prior to this Act these areas were known as cities (C), municipalities (M) and shires (S). In other cases, they represent areas which are unincorporated under the Act. In aggregate, SLAs cover the whole of the State without gaps or overlaps. In some cases LGAs overlap statistical subdivision boundaries and therefore comprise two SLAs (Part A and Part B) or three SLAs in the case of Cabonne (A) (Part A, Part B and Part C). Separate estimates for these LGAs are shown in table 2.
- *Statistical Subdivisions (SSDs)*. These consist of one or more SLAs and form the intermediate size spatial unit for the presentation of regional data.
- *Statistical Divisions (SDs)*. These consist of one or more SSDs. Where SSDs are not shown, SLAs are ordered alphabetically within SDs. The divisions are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region, under the unifying influence of one or more major towns or cities.

9 Further information concerning statistical areas is contained in the publication *Australian Standard Geographical Classification* (Cat. no. 1216.0).

BOUNDARY CHANGES

10 For the purposes of this publication, all data refer to bounded areas as defined at 1 July 2000 and as incorporated in ASGC 2000.

11 A list of name changes, amalgamations and boundary changes of SLAs and other statistical areas of NSW, from 1 July 1999 to 30 June 2000, is contained in the Appendix.

ROUNDING

12 Estimates for each age and sex category are shown to the nearest unit without rounding, although **accuracy to this level is not claimed and should not be assumed**. This procedure is consistent with 1987 to 1996 age and sex estimates, and is applied because rounding of small cells could result in substantial year to year fluctuations owing to the rounding process rather than an actual population change.

13 Population estimates in previous publications have been rounded as follows:

- All areas in Sydney SD have been rounded to the nearest 50 persons;
- For the remainder of NSW, the SLA and subdivision totals have been rounded to the nearest 10 persons;
- Statistical division totals have been rounded to the nearest 50 persons.
- The State total has been rounded to the nearest 100 persons.

ABS DATA AVAILABLE ON REQUEST

14 In some cases, the ABS can also make data available on request. This information may be made available in one or more of the following forms: floppy disk, CD Rom, photocopy, computer printout, clerically-extracted tabulation. Generally, a charge is made for providing data on request. Inquiries should be made as shown in the inquiries section at the front of this publication.
