## NOTES

**ABOUT THIS PUBLICATION** This publication contains preliminary estimates of the resident population by age and sex in Statistical Local Areas (SLAs), Statistical Subdivisions (SSDs), Statistical Divisions (SDs), Local Government Areas (LGAs) and Statistical Districts in Queensland at 30 June 1999.

**RELATED PUBLICATIONS** Estimates of the resident population (total persons) for each SLA in Queensland at 30 June 2000 will be published in *Regional Population Growth, Australia, 1999–2000* (Cat. no. 3218.0), to be released in January 2001.

## SUMMARY OF FINDINGS

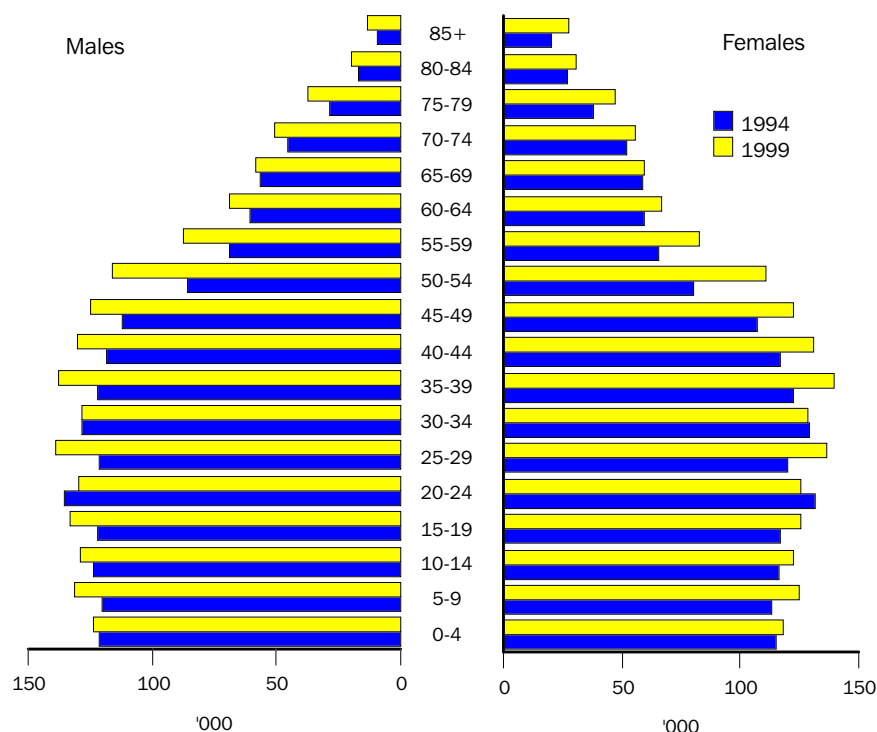

### POPULATION

The preliminary estimate of the resident population of Queensland at 30 June 1999 was 3,512,356 persons, a rise of 58,879 (1.7%) since 30 June 1998. This is lower than the average annual growth rate of 2.0% experienced by Queensland in the five years from 1994 to 1999. Natural increase was the largest component of population growth (24,500) in 1998–99, followed by net interstate migration (17,200) and net overseas migration (17,100).

The Queensland population is continuing to age, with the median age of the population rising to 34.2 years at 30 June 1999, up from 34.0 years 12 months earlier and 32.7 years at 30 June 1994. This aging trend is due to the lower than replacement fertility rate (1.8) for Queensland women. Queensland continues to have a lower median age than for Australia as a whole (34.9 years).

Over the five years to 30 June 1999 the number of children (aged less than 15 years) increased by 5.5%, the number of persons aged 15–64 years grew by 11.2% and the number of persons aged 65 years and over increased by 13.5%. Over the past twenty years, the number of people aged 85 years and over has increased by 179.3%, from 14,604 in 1979 to 40,795 in 1999, compared with a total population growth of 58.6% over the same period.

ESTIMATED RESIDENT POPULATION, By Age Group—30 June, 1994 and 1999

## SUMMARY OF FINDINGS *continued*

### POPULATION DISTRIBUTION

Queensland's population is concentrated in the south-eastern corner of the State in the Statistical Divisions (SDs) of Brisbane and Moreton, which have 45.6% and 19.2% of the population, respectively. The mainly pastoral areas in the west of the State are sparsely populated, with the North West, South West and Central West SDs collectively containing only 2.1% of the State's population.

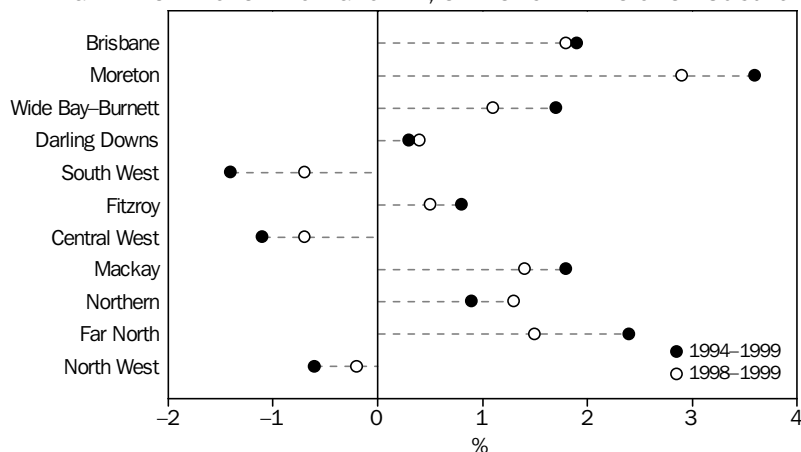

#### Growing Local Government Areas

In the twelve months to 30 June 1999 the City of Brisbane and the City of the Gold Coast increased by 1.9% and 3.4% respectively. Growth within the City of Brisbane was experienced predominantly in the fringe SLAs in the south-west. This area experienced continued high growth of young families in new housing estates. Unit developments near the Brisbane CBD have led to volatility in the size and growth rates of inner city SLAs, as evidenced by the inner city SLA of Fortitude Valley — Inner which exhibited a spectacular growth rate of 446% due to its small population base.

### POPULATION CHANGE

The SDs which experienced the highest average annual percentage growth between 1998 and 1999 were Moreton (2.9%), Brisbane (1.8%) and Far North (1.5%). The western SDs have all experienced population decline, with the 1998–99 average annual population change for the South West, Central West and North West SDs being –0.7%, –0.7% and –0.2% respectively. In most SDs the average annual rate of growth (or decline) was lower for the 1998–1999 period than for the 1994–1999 period.

AVERAGE ANNUAL POPULATION GROWTH, STATISTICAL DIVISIONS—30 June

### SEX RATIO

The sex ratio (male population per 100 female population) for Queensland at 30 June 1999 was 100.2, which was slightly lower than the sex ratio at 30 June 1994 (100.4), and higher than the sex ratio for Australia (99.1). At 30 June 1999 Brisbane, Darling Downs and Moreton SDs had the lowest sex ratios, with 97.9, 98.6 and 98.9 respectively. The sex ratios of the remaining eight SDs exceeded the State sex ratio of 100.2, with the highest being 118.5 in the North West SD. This is due to a combination of higher fertility and the composition of the labour force within the region. Age group sex ratios at 30 June 1999 for 0–14 years, 15–64 years and 65 years and over were 105.4, 102.1 and 81.6 respectively. The low ratio for 65 years and over is a reflection of women having longer lifespans.

## SUMMARY OF FINDINGS *continued*

### AGE STRUCTURE

#### Dependency Ratio

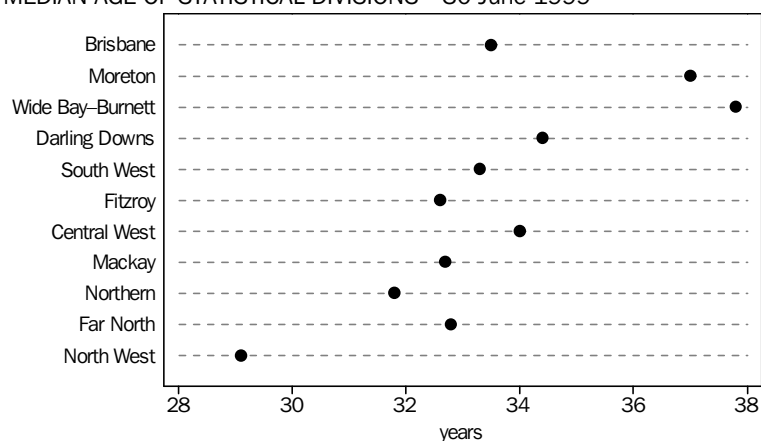

The dependency ratio (number of children aged 0–14 years and persons aged 65 years and over per 100 persons aged 15–64 years) was 48.6 for Queensland, down from 48.9 in 1998. Queensland had a lower dependency ratio at 30 June 1999 than for the whole of Australia (49.1), and has declined from a dependency ratio of 50.0 for the State at 30 June 1994. In 1999, Wide Bay–Burnett (58.1) and Darling Downs (55.7) continued to record the highest dependency ratios. This is partly a reflection of the substantial numbers of retirees residing within these statistical divisions. The Brisbane and Far North SDs recorded the lowest dependency ratios with 45.8 and 46.1, respectively.

#### Median Age

In the 12 months to June 1999 Queensland continued to have the third lowest median age (34.2 years) of all States and Territories, which was slightly lower than for the whole of Australia (34.9 years). Queensland has experienced 20% growth in median age over the last twenty years, increasing from 28.4 years in 1979.

Within Queensland, Wide Bay–Burnett and Moreton SDs had the highest median ages of 37.8 years and 37.0 years respectively, both well above the median age for the whole of Queensland. North West SD had the lowest median age at 29.1 years, which was more than 2 years below any other SD in Queensland and was similar to the median age for the Northern Territory of 28.6 years at 30 June 1999.

MEDIAN AGE OF STATISTICAL DIVISIONS—30 June 1999

#### Children

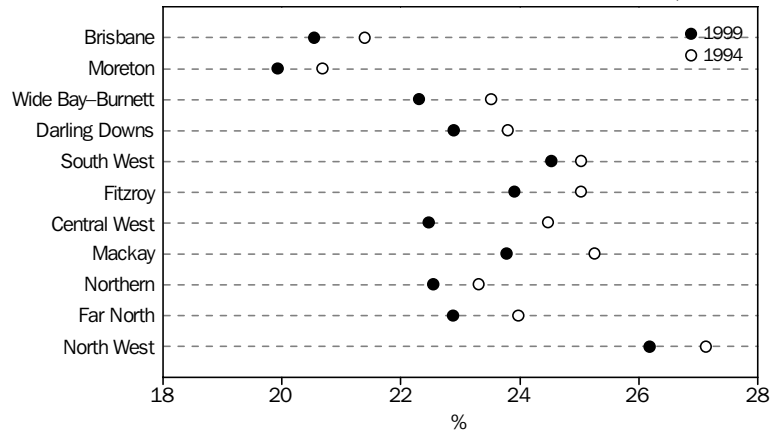

Children (aged under 15 years) numbered 748,949 in 1999, an increase of 4,153 over 1998. Although the number of children has increased, the proportion of children has decreased, from 22.3% of Queensland's population in 1994 to 21.3% in 1999. The proportion of children decreased in all SDs over this period.

In 1999, the lowest proportion of children occurred in the Moreton (19.9%) and Brisbane (20.6%) SDs. The highest proportions of children were found in the North West and South West SDs with 26.2% and 24.5%, respectively. Shires where the proportion of children exceeded 30% were Torres, Burke and Aurukun.

**SUMMARY OF FINDINGS** *continued*

Children cont.

PROPORTION OF CHILDREN IN STATISTICAL DIVISIONS—30 June, 1994 and 1999

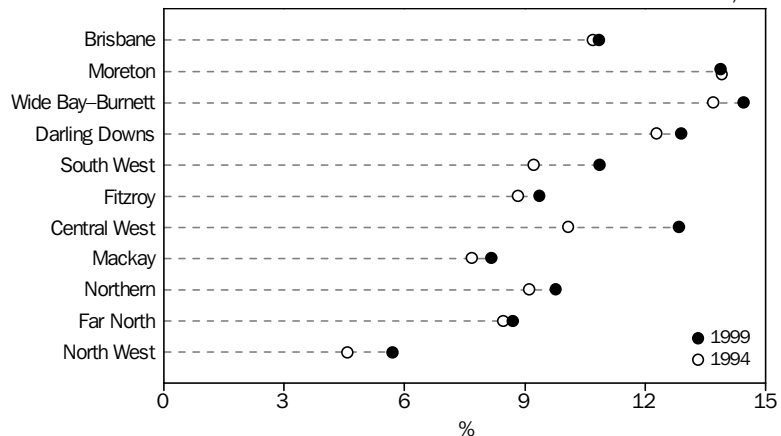

Aged Persons

Persons aged 65 years or more numbered 399,426 in 1999, an increase of 8,880 persons since 1998. The proportion of aged persons increased from 11.0% in 1994 to 11.4% in 1999.

In 1999, the lowest proportions of persons aged 65 years or more occurred in the North West (5.7%) and Mackay (8.2%) SDs. The highest proportions of aged persons occurred in the Wide Bay-Burnett and Moreton SDs (14.5% and 13.9%, respectively) while the Brisbane SD recorded 10.8%. All the SDs except Moreton experienced an increase in the proportion of aged persons since 30 June 1994, with Central West SD up from 10.1% to 12.8% in the five year period.

PROPORTION OF AGED PERSONS IN STATISTICAL DIVISIONS—30 June, 1994 and 1999

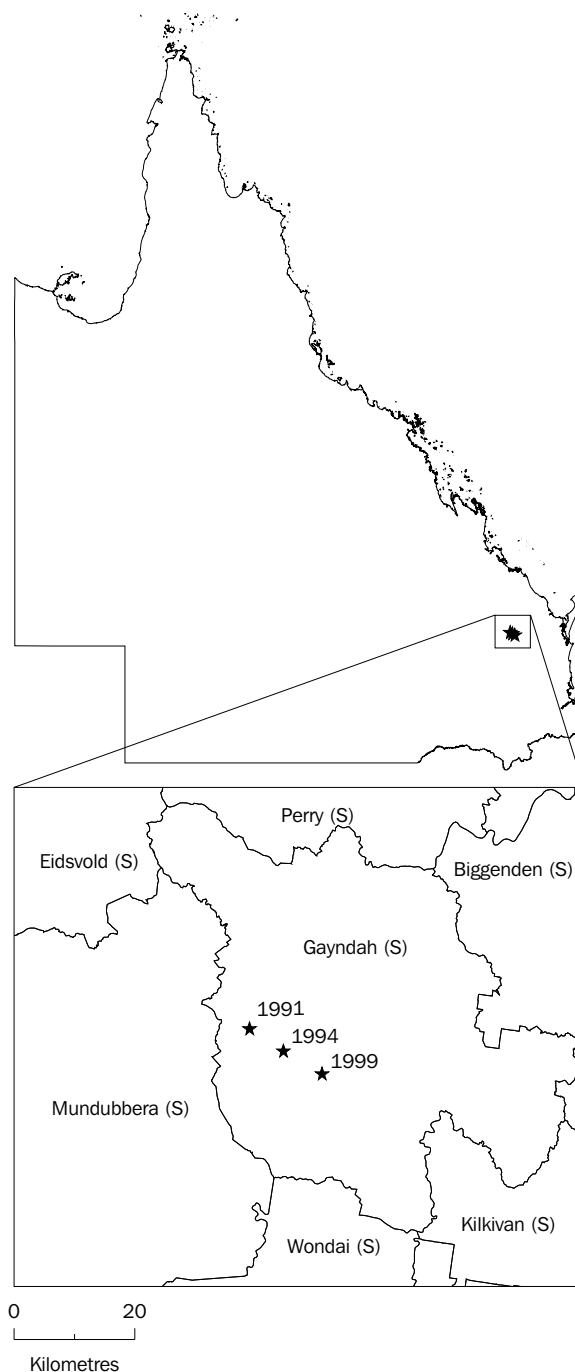

## SUMMARY OF FINDINGS *continued*

### CENTRE OF POPULATION

The centre of population is one measure to describe the spatial distribution of the population. This point marks the average latitude and longitude in which the population live. The centre of population in 1999 was situated in the LGA of Gayndah (S) in south eastern Queensland. The centre of population has shifted 14.1 km towards the south east since 1991. This is a result of both the faster population growth along the coast and the decline of the rural population within Queensland, and reflects the continuing concentration of population in the south east corner of the State.

#### CENTRE OF QUEENSLAND POPULATION, 30 June 1999

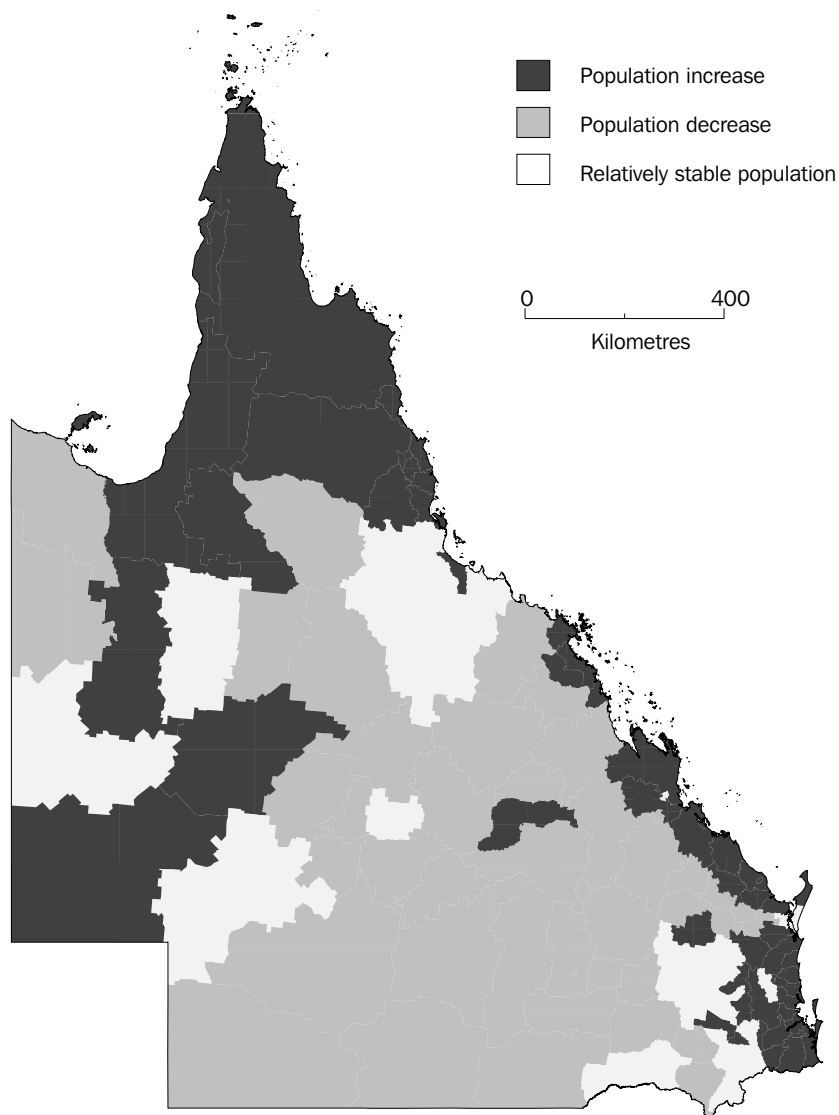

## SUMMARY OF FINDINGS *continued*

### REGIONAL POPULATION CHANGE

Although the State of Queensland experienced population increase between 1994 and 1999, not all regions in Queensland increased in population size. There were 56 Local Government Areas (LGAs) that increased in population size (average annual growth rate  $>0.5\%$ ), while 42 LGAs experienced population loss (average annual growth rate  $<-0.5\%$ ) and 28 LGAs remained relatively unchanged (average annual growth rate between  $-0.5\%$  and  $0.5\%$ ). LGAs experiencing population growth were predominantly located along the coastline, and in and around capital cities. Some sparsely populated LGAs in the north and west of the State also experienced population growth. On the other hand, the main areas of population decline were the rural and regional areas of Queensland. At a regional level, while natural increase does vary between regions, the main determinant of regional population change in Queensland is migration, especially internal migration.

#### POPULATION CHANGE, Local Government Areas—30 June 1994–99

# FEATURE ARTICLE HISTORY OF BIRTHS

## INTRODUCTION

The Feature Article component of this publication appears here for the first time. This year a History of Births in Queensland and Queensland's Indigenous Population are the topics for analysis.

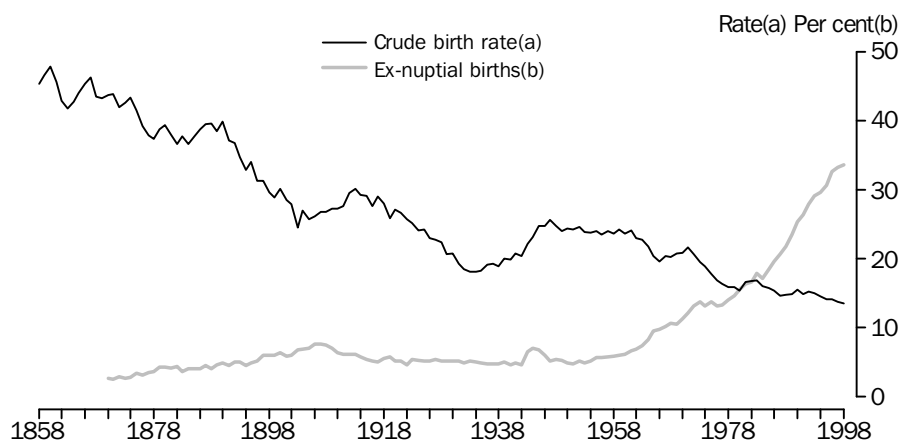

## HISTORY OF BIRTHS

The Total Fertility Rate is the usual measure for examining births in a population. However due to the limited availability of accurate historical data on births, the crude birth rate has been used as the measure for analysis in this instance.

Crude birth rates have followed a downward trend in Queensland since records were first kept. From around 47 births per 1,000 population in 1859, the crude birth rate had fallen to just over 13 births per 1,000 population by 1998. Crude birth rates have fallen during periods of economic depression (1890s and 1930s) and risen following major wars. Crude birth rates remained relatively high during the post-World War II period and well into the 1960s, reflecting both economic prosperity and a 'boom' in marriages at this time. Birth rates in the 1980s were at their lowest level in history; even lower than the years of the Great Depression, and have continued a downward trend in the 1990s.

The proportion of ex-nuptial births (births outside of marriage) has shown a significant inclination to rise against the overall trend to fewer births. For many years ex-nuptial births represented less than 5% of total births, but rose to over 7% in the immediate post-Federation period. Rates fell again through the intervening decades until a dramatic rise associated with World War II. There are a number of possible causes of this rise including war service delaying marriages. Since the early 1960s, changing social values have meant childbirth outside marriage and couples not marrying carry less of a social stigma. In 1998 ex-nuptial births represented over one third of all births in Queensland.

CRUDE BIRTH RATE (a) AND PROPORTION OF EX-NUPTIAL BIRTHS(b), QLD

(a) Number of live births per 1,000 population.  
(b) Proportion of total births that were ex-nuptial.

# FEATURE ARTICLE INDIGENOUS POPULATION

## POPULATION DATA

This section uses experimental high series projections of Queensland's Indigenous (Aboriginal and Torres Strait Islander) population as at 30 June 1999. The projection series includes certain assumptions about the Indigenous population, for example that the increase in people identifying as Indigenous evidenced in the 1996 census is a trend which will continue. For explanations and references to these and other significant Indigenous statistics issues, please see the Explanatory Notes.

## POPULATION STRUCTURE

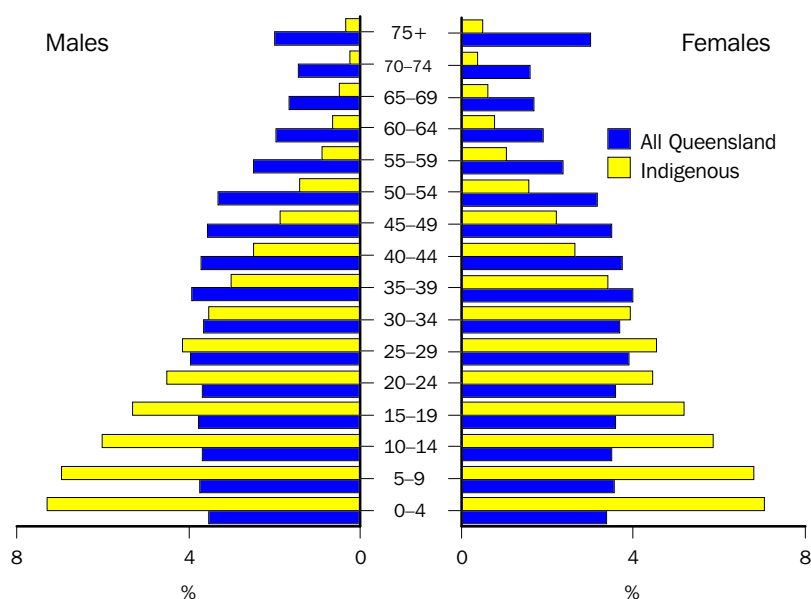

Around 27.4% of Australia's Indigenous population were projected to reside in Queensland as at 30 June 1999, the second largest proportion after New South Wales (29.9%).

Indigenous and Total Queensland population pyramids illustrate a dramatically younger profile of the Indigenous population in Queensland, displaying features such as high fertility and early mortality which are typical of population structures in developing countries.

Three-quarters of Queensland's Indigenous population were projected to be under 35 years of age as at June 30 1999, while around three-quarters of the total Queensland population were aged 50 years and under. Children (persons under 15 years) comprised 40% of the Indigenous population, nearly twice the proportion of children in the total Queensland population (21.3%).

In tandem with the youthful profile of the Indigenous population is a trend of fewer aged persons. Persons aged 65 years and over constituted 2.3% of the total Indigenous male population and 2.9% of Indigenous females. The higher proportion of females reflects this group's relatively longer life expectancy. Persons aged 65 years and over constituted 2.6% of all Indigenous persons, substantially less than the comparative figure of 11.4% for the total Queensland population.

QUEENSLAND INDIGENOUS AND TOTAL POPULATION, By Age Group—1999

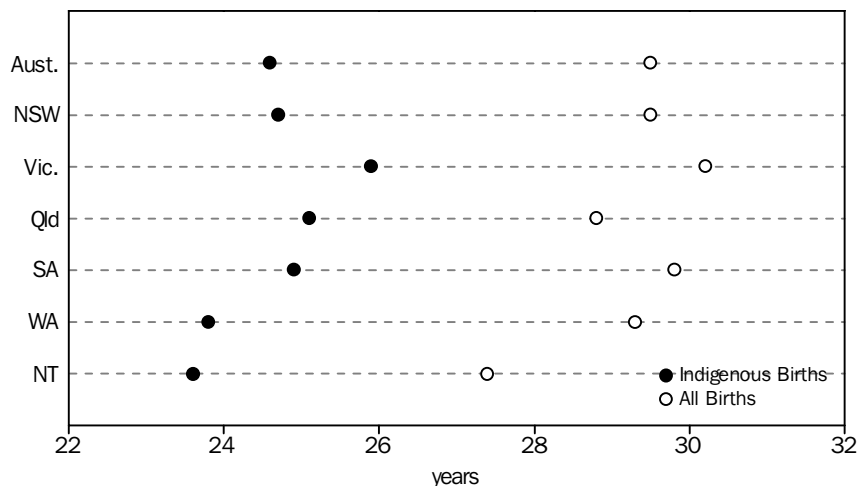

BIRTHS

In 1998, Indigenous women in Queensland had the highest fertility rate of any State or Territory, at an average of 2.3 babies per woman. This rate was higher than total fertility rates for all women in Queensland (1.8) and for all Australian Indigenous women (2.2). Of the 47,046 births registered in Queensland during 1998, 3,085 (6.6%) were registered as Indigenous.

The median age of Indigenous Queensland mothers was 25.1 years in 1998, compared with a median age of 28.8 years for all Queensland mothers. This was older than the median age of all Australian Indigenous mothers (24.6 years) and the second oldest median age of all States and Territories, after Victoria (25.9 years).

# EXPLANATORY NOTES

---

## INTRODUCTION

**1** This publication contains the preliminary estimates of the age and sex distribution of the resident population of Statistical Divisions (SDs), Statistical Subdivisions (SSDs), Statistical Local Areas (SLAs), local Government Areas (LGAs) and Statistical Districts in Queensland at 30 June 1999.

**2** The estimated resident population (ERP) is the official ABS estimate of the Australian population.

## METHODOLOGY

**3** The total population of each SLA is based on results of the 1996 Population Census and calculated for post-census dates by a linear regression model which uses independent indicators of population change such as dwelling approvals, medicare enrolments and dwelling approvals. These intercensal estimates of the resident population are revised each time a population census is taken.

**4** The age and sex estimates were prepared using the cohort component method. Post-censal age distributions were obtained by advancing the age and sex estimates for 30 June 1996 to the next age, subtracting deaths and adding births and net estimated inter-regional and overseas migration. Inter-regional and overseas migration was estimated from analysis of arrivals and departures data and individual SLA profiles derived from the 1996 Census.

**5** After each Census final estimates for the preceding intercensal period are calculated by incorporating an additional adjustment (intercensal discrepancy) to ensure that the total intercensal increase at each age agrees with the difference between the estimated resident population at the two respective census dates.

**6** The estimated resident population of an area includes the residents of prisons and other long-term institutions. There are two prison populations in Queensland which were previously not included in their correct SLA. The June 1999 estimate of resident population for Caboolture (S) — Pt B includes for the first time the prisoners within the Woodford Correctional Institution. Prisoners within the Townsville Correctional Centre, were previously miscoded to SLAs throughout Queensland. This situation has been corrected in the resident population estimates for June 1999, when 520 prisoners were added to the SLA of Stuart–Roseneath.

**7** A detailed explanation of the concept of estimated resident population, as adopted by the Australian Bureau of Statistics (ABS) for official population estimates, is contained in the ABS Information Paper: *Population Estimates: Concepts, Sources and Methods, 1995* (Cat. no. 3228.0).

### Net Interstate Migration

**8** Estimates of interstate migration since June 1986 have been derived from latest census data on interstate movement in the preceding one year and unidentified information on interstate changes of addresses advised to the Health Insurance Commission in the process of administering Medicare.

## RELIABILITY

**9** In recognition of the inherent inaccuracy involved in population estimation, population figures over 1,000 in the text are rounded to the nearest hundred, and figures less than 1,000 are rounded to the nearest ten. While unrounded figures are provided in tables, accuracy to the last digit is not claimed and should not be assumed.

## EXPLANATORY NOTES *continued*

---

### AVERAGE ANNUAL RATE OF GROWTH

**10** The average annual rate of population growth,  $r$ , is calculated as a percentage using the formula below, where  $P_0$  is the population at the start of the period,  $P_n$  is the population at the end of the period and  $n$  is the length of the period between  $P_n$  and  $P_0$  in years.

$$\left[ \left( \frac{P_n}{P_0} \right)^{\frac{1}{n}} - 1 \right] \times 100$$

### GEOGRAPHIC BOUNDARIES

**11** The geographic areas used in this publication are defined in the *Australian Standard Geographical Classification (ASGC), 1999* (Cat. no. 1216.0).

### ACKNOWLEDGMENT

**12** ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published in the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

### POPULATION PROJECTIONS

**13** The ABS compiles and publishes *Population Projections 1997 to 2051* (Cat. no. 3222.0). The ABS can also prepare ad hoc population projections. Further details regarding the population projections service may be obtained by calling the National Information Service on 1300 135 070 or the ABS Small Area Population Unit on Adelaide (08) 8237 7385.

### INDIGENOUS POPULATION PROJECTIONS

**14** Projections of the Aboriginal and Torres Strait Islander (Indigenous) population are referred to as experimental because of the experimental nature of the base population and deficiencies in the quality of Indigenous births, deaths and migration data involved in deriving population projections assumptions. The high series projections used in this publication assume a change in propensity to identify as Indigenous on a Census form, based on the increase in the Indigenous population observed between the 1991 and 1996 Censuses which cannot be attributed to natural increase. The low series projections, not used in this publication, assume no change in propensity to identify.

Other Indigenous population projections assumptions are: female fertility rates decline annually by 1% and male paternity rates are constant; mortality is constant over the projection period; net interstate movements are constant; and zero net overseas migration, with no arrivals or departures, occurs throughout the projection period.

For further details refer to *Experimental Projections of the Aboriginal and Torres Strait Islander Population, 30 June 1996 to 30 June 2006* (Cat. no. 3231.0)

### CENTRE OF POPULATION

**15** In this publication the centre of population is defined as the average latitude and longitude of the population. This calculation involves weighting the coordinates of the centre of each SLA by the SLA's ERP, then taking the mean across all of Queensland. A similar measure is known as the Demographic Centre of Australia, which is the median latitude and longitude of the population. This measure has the effect of discounting the effect distant populations have on the result.

### RELATED PUBLICATIONS

**16** Other publications which may be of interest include:

*Occasional Paper: Population Issues, Indigenous Australians* (Cat. no. 4708.0)

*Population by Age and Sex, Australian States and Territories*  
(Cat. no. 3201.0)

*Projections of the Populations of Australia, States and Territories, 1997 to 2051*  
(Cat. no. 3222.0)

*Regional Population Growth, Australia, 1998–99* (Cat. no. 3218.0)

**17** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (Cat. no. 1101.0). The ABS also issues on Tuesdays and Fridays a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

### ELECTRONIC MEDIA

**18** Data from this publication are also available electronically:

*Estimated Resident Population by Age and Sex in Statistical Local Areas, Queensland: Data on Floppy Disk* (Cat. no. 3227.3).

### UNPUBLISHED STATISTICS

**19** The ABS also has other unpublished statistics available including ERP age/sex data by single year of age. Inquiries should be made to the National Information Service on 1300 135 070.

## GLOSSARY

---

- Indigenous** This term encompasses persons of Aboriginal and/or Torres Strait Islander descent who identify as being of Aboriginal and/or Torres Strait Islander origin and are accepted as such by the community with which they associate.
- Crude birth rate** The crude birth rate is the number of live births registered during the calendar year, per 1,000 estimated resident population at 30 June of that year.
- Dependency ratio** The dependency ratio relates to the number of children aged 0–14 years and persons aged 65 years and over per 100 persons aged 15–64 years.
- Estimated resident population (ERP)** Estimated resident population data are estimates of the Australian population obtained by adding to the estimated population at the beginning of each period the components of natural increase (on a usual residence basis) and net overseas migration. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each census, estimates for the preceding intercensal period are revised by incorporating an additional quarterly adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two respective census dates.
- Estimates of the resident population are based on adjusted (for underenumeration) census counts by place of usual residence, to which are added the number of Australian residents estimated to have been temporarily overseas at the time of the census.
- The concept of estimated resident population links people to a place of usual residence within Australia. Usual residence is that place where each person has lived or intends to live for six months or more in a reference year.
- Geographic areas** The tables in this publication are at the levels of Statistical Local Area, Statistical District, Statistical Division and Local Government Area, as defined by the 1999 edition of the Australian Standard Geographical Classification (ASGC).
- *Legal Local Government Areas (LGAs)*. These areas are the spatial units which represent the geographical areas of incorporated local government councils and incorporated community government councils (CGCs) where the CGC is of sufficient size and statistical significance. The various types of LGAs are cities (C), areas (A), rural cities (RC), towns (T), shires (S), district councils (DC) and municipalities (M).
  - *Statistical Districts (S Dists)*. These consist of selected, significant, predominantly urban areas in Australia which are not located within a Capital City SD. S Dists enable comparable statistics to be produced about these selected urban areas.
  - *Statistical Divisions (SDs)*. These consist of one or more SSDs. The divisions are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region, under the unifying influence of one or more major towns or cities.
  - *Statistical Local Areas (SLAs)*. These geographical areas are, in most cases, identical with, or have been formed from a division of, whole LGAs. In other cases, they represent unincorporated areas. In aggregate, SLAs cover the whole of a State or Territory without gaps or overlaps. In some cases legal LGAs overlap statistical subdivision boundaries and therefore comprise two or three SLAs. Where a particular LGA is substantially different from other LGAs in terms of size and economic significance, or in terms of user needs for statistics, the LGA may be split into two or more SLAs. For example, the City of Brisbane covers a large area and is split into 162 SLAs generally based on suburbs.

- *Statistical Subdivisions (SSDs)*. These are of intermediate size, between SIAs and SDs. In aggregate, they cover the whole of Australia without gaps or overlaps. They are defined as socially and economically homogeneous regions characterised by identifiable links between the inhabitants. In the non-urban areas and SSD is characterised by identifiable links between the economic units within the region, under the unifying influence of one or more major towns or cities.

Further information concerning statistical areas is contained in *Australian Standard Geographical Classification (ASGC), 1999* (Cat. no. 1216.0).

<b>Infant mortality rate</b>	The number of deaths of children under one year of age in a calendar year per 1,000 live births in the same calendar year.
<b>Intercensal discrepancy</b>	After each census, estimates for the preceding intercensal period are provided by incorporating an additional quarterly adjustment to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two respective census dates. For a detailed description see the ABS information paper <i>Population Estimates: Concepts, Sources and Methods</i> (3228.0).
<b>Life expectancy</b>	Life expectancy refers to the average number of additional years a person of a given age and sex might expect to live if the age-specific death rates of the given period continued throughout his or her lifetime.
<b>Median age</b>	The age at which half the population is older and half is younger. A median is a measure of central tendency. It is a mid value which divides a population distribution into two, with half the observations falling below it and half above. Unlike averages (means) medians are not usually skewed by extreme observations.
<b>Natural increase</b>	Excess of births over deaths.
<b>Net interstate migration</b>	The difference between the number of persons who have changed their place of usual residence by moving into a given State or Territory and the number who have changed their place of usual residence by moving out of that State or Territory. This difference may be either positive or negative.
<b>Net overseas migration</b>	Net overseas migration is net permanent and long-term overseas migration plus an adjustment for the net effect of category jumping. This net effect may be either positive or negative.
<b>Nuptiality</b>	Nuptiality relates to the marital status of persons and the events such as marriages, divorces and widowhood. Confinements and births are identified as being nuptial where the father registered was married to the mother at the time of birth, or where the husband died during pregnancy. Confinements and children of Indigenous mothers considered to be tribally married are classified as nuptial. Other confinements, and the children resulting from them, are classified as ex-nuptial whether or not both parents were living together at the time of birth.
<b>Population growth</b>	For Queensland, population growth is the sum of natural increase, net overseas migration, net interstate migration and an allowance for intercensal discrepancy.
<b>Sex ratio</b>	The sex ratio relates to the number of males per 100 females.

## GLOSSARY *continued*

---

- Replacement fertility** Replacement level fertility is the number of babies a woman would need to have over her reproductive life span to replace herself and her partner. Given the current mortality of women up to age 49, replacement fertility is 2.1.
- Total fertility rate** The sum of age-specific birth rates (live births at each age of mother per female population of that age). It represents the number of children a woman would bear during her lifetime if she experience current age-specific fertility rates at each age of her reproductive life.

## FOR MORE INFORMATION...

- INTERNET** [www.abs.gov.au](http://www.abs.gov.au) the ABS web site is the best place to start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a statistical profile.
- LIBRARY** A range of ABS publications is available from public and tertiary libraries Australia-wide. Contact your nearest library to determine whether it has the ABS statistics you require, or visit our web site for a list of libraries.
- CPI INFOLINE** For current and historical Consumer Price Index data, call 1902 981 074 (call cost 75c per minute).
- DIAL-A-STATISTIC** For the latest figures for National Accounts, Balance of Payments, Labour Force, Average Weekly Earnings, Estimated Resident Population and the Consumer Price Index call 1900 986 400 (call cost 75c per minute).

### INFORMATION SERVICE

Data which have been published and can be provided within five minutes are free of charge. Our information consultants can also help you to access the full range of ABS information—ABS user pays services can be tailored to your needs, time frame and budget. Publications may be purchased. Specialists are on hand to help you with analytical or methodological advice.

- PHONE** **1300 135 070**
- EMAIL** **[client.services@abs.gov.au](mailto:client.services@abs.gov.au)**
