KEY POINTS

- Preliminary estimates indicate that there were 4,822,500 short-term visitor arrivals to Australia in 2002, a decrease of almost 1% compared to the same period in 2001. The main source countries for short-term visitor arrivals for this period were New Zealand (16%), followed by Japan (15%) and the United Kingdom (13%).
- The trend estimate for short-term visitor arrivals in December 2002 was 402,800, and decreased by just 0.3% over the previous month.
- During the eleven months to November 2002, 3,095,800 Australian residents departed overseas short-term, representing a decrease of just 0.4% from the number departing for the corresponding period in 2001. The main destinations were New Zealand (17%), the United Kingdom and the United States of America (9% respectively), followed by Indonesia (7%) and Thailand (5%).
- During the month of November 2002 there were 7,200 permanent arrivals. During the same period there were 3,600 permanent departures.
- The net gain from permanent and long-term migration during the eleven months to November 2002 was 132,200 people. This was 0.2% higher than the net gain for the eleven months to November 2001 (132,000) people.

DATA NOTES

For data quality and revision issues see Appendix 2 on page 20.

Final data for the corresponding period in 2001 has been provided for comparative purposes, replacing final 2000 data.

CHANGES IN THIS

A brief overview of short-term visitor arrivals in 2002 has been included in this issue (see Main Features on page 3). A more detailed examination of short-term visitor arrivals will be included in the January issue of *Overseas Arrivals and Departures, Australia, January 2003* (cat no. 3401.0), which will be released on 25 February 2003. This article will be called Short-term Visitor Arrivals, Year in Review.

TREND REVISIONS

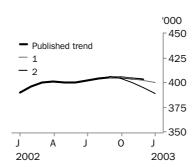

Each time new seasonally adjusted estimates become available, trend estimates of short-term arrivals are revised (see paragraphs 15 to 19 of the Explanatory Notes).

The example in the graph below shows an illustrative scenario and the consequent revision to previous trend estimates of visitor arrivals.

The seasonally adjusted estimate for:

- 1 December visitor arrivals is 2.90% higher than December, and
- **2** December visitor arrivals is 2.90% lower than December.

VISITOR ARRIVALS(p)

The percentage change of 2.90 was chosen because it represents the average absolute monthly percentage changes between months for visitor arrivals over the last four years.

Dennis Trewin Australian Statistician

SHORT-TERM MOVEMENTS

VISITOR ARRIVALS

Year in review

There were 515,300 short-term visitor arrivals to Australia during December 2002. This brought the total for the year ended December 2002 to 4,822,500, a decrease of 0.7% compared to the year ended December 2001. This is the second consecutive year in which a small decline in short-term visitor arrivals has been recorded. Over the past 20 years, however, short-term arrivals have increased five-fold.

The major source countries of short-term visitor arrivals to Australia during the year ended December 2002 were New Zealand (16% of all short-term visitor arrivals), Japan (15%), the United Kingdom (13%), the United States of America (9%) and Singapore (6%). These five main source countries were the same as in 2001, and together accounted for 58% of total visitor arrivals in 2002.

The only countries among the top ten to record an increase in short-term visitor arrivals compared to the same period in 2001 were China (21%), Korea (8%), Malaysia and Japan (each 6%) and the United Kingdom (3%). The largest decreases were for short-term visitor arrivals from Taiwan (a decrease of 12%) and Germany (down 8%), followed by New Zealand (down 5%) and Singapore and the United States of America (down 3.5 % and 3% respectively).

MAIN REASON FOR JOURNEY

Almost half of all short-term visitors to Australia during the eleven months to November 2002 stated on arrival that they had come here mainly for a holiday (2,104,300 or 49%). A further 16% (706,000) stated that they came to Australia mainly to visit friends or relatives, 10% (413,400) for business trips, 5% (212,100) for education purposes, 3% (124,900) for a convention or conference, and 2% (77,400) for employment purposes.

The most common reason stated by Australian residents departing overseas short-term during the eleven months to November 2002 was that they were taking a holiday (1,324,700 or 43%). A further 24% (742,400) were travelling mainly to visit friends or relatives, 17% (530,400) for business trips, 4% (131,300) for a convention or conference, 3% (94,000) for employment and 1% (39,600) for education purposes.

MAIN STATE OF STAY

During the eleven months to November 2002, 42% of all short-term overseas visitors to Australia stated, at their time of departure, that they had spent most of their time in New South Wales. A further 28% had spent most of their time in Queensland, 15% in Victoria and 9% in Western Australia. Compared to the corresponding period in 2001, Tasmania recorded an increase of 19% in visitor numbers, whilst the the Northern Territory and the Australian Capital Territory both experienced a decrease of 5% in visitor numbers. Visitor numbers for the other states only changed slightly.

MAIN FEATURES

RESIDENT DEPARTURES

During November 2002 there were 251,100 short-term departures of Australian residents. This brought the total for the eleven months to November 2002 to 3,095,800, which remained relatively unchanged from the eleven months to November 2001.

The main destinations for Australian residents departing short-term during the eleven months to November 2002 were New Zealand (17% of all short-term resident departures), the United Kingdom and the United States of America (each 9%), Indonesia (7%) and Thailand (5%), followed by Singapore, Hong Kong, China and Fiji (each 4%).

During the eleven months to November 2002:

518,200 Australian residents mainly visited New Zealand, a decrease of 2% compared to the eleven months to November 2001;

290,700 Australian residents mainly visited the United Kingdom, an increase of 5%; 268,900 Australian residents mainly visited the United States of America, a decrease of 0.3%;

230,000 Australian residents mainly visited Indonesia, a decrease of 15%; 155,900 Australian residents mainly visited Thailand, an increase of 3%; 137,700 Australian residents mainly visited Singapore, a decrease of 6%; 121,800 Australian residents mainly visited Hong Kong, a decrease of 8%; 121,200 Australian residents mainly visited China, an increase of 27%; 116,200 Australian residents mainly visited Fiji, an increase of 41%; and 97,200 Australian residents mainly visited Malaysia, a decrease of 8%.

PERMANENT AND LONG-TERM MOVEMENTS

There were 7,200 permanent (settler) arrivals in Australia during November 2002. This brought the total for the eleven months to November 2002 to 82,100 (a decrease of 12% compared to the corresponding period in 2001). New Zealand was the main source country for settler arrivals in the eleven months to November 2002, with those born in New Zealand accounting for 16% of all permanent arrivals. The United Kingdom was the second largest source country for settlers, accounting for 11% of all permanent arrivals.

During November 2002 there were 3,600 permanent departures from Australia. This brought the total number of permanent departures for the eleven months to November 2002 to 44,600. This was 3% higher than during the eleven months to November 2001.

The total number of permanent and long-term arrivals for the eleven months to November 2002 (330,800) increased by 2% compared to the same period in 2001 (325,000). The number of permanent and long-term departures for the eleven months to November 2002 was 198,500, an increase of 3% compared to the eleven months to November 2001 (193,100). This brought the net gain from permanent and long-term movement for the eleven months to November 2002 to 132,200 people, remaining relatively unchanged from the corresponding period in 2001 (132,000).

INTRODUCTION

SOURCE OF THE STATISTICS

- **1** This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 23).
- **2** Persons arriving in, or departing from, Australia provide information in the form of incoming and outgoing passenger cards (see Appendix 1). Incoming persons also provide information in visa applications, apart from people travelling as Australian and New Zealand citizens. These and other information available to the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA) serve as a source for statistics of overseas arrivals and departures.
- **3** In July 1998, DIMIA revised the incoming and outgoing passenger cards and associated procedures as well as computer systems. Following these changes, some questions on the passenger cards were not compulsory and answers to these questions were not checked by Customs officers. The question on marital status was deleted. Data on marital status is now derived from visa applications (only for certain visa classes) and is therefore not available for Australian or New Zealand citizens. The changes also affect the data for 'previous country of residence' which is imputed for Australian and New Zealand citizens. For more information see the May 1998 issue of this publication. Since July 1998, there have been additional minor changes to both passenger cards.
- **4** From July 2001, DIMIA adopted a new passenger card processing system which involved electronic imaging of passenger cards and intelligent character recognition of the data stored in the images. This process has yielded several improvements to the processing of passenger card data, most notably the detailed information about missing values. There have also been several changes to data quality. Information on these changes appears in Appendix 2.
- **5** The preliminary estimates of visitor arrivals by country of residence (see table 6, page 9) are based on data from DIMIA's Travel and Immigration Processing System (TRIPS). The TRIPS system produces a limited range of data, including country of citizenship, which is used by ABS to produce preliminary estimates by country of usual residence. These preliminary estimates will be revised in the next issue of this publication, when final data is available. For more information see pages 3 and 4 of the June 1997 and the September 1998 issues of this publication.
- **6** The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages. Similarly, these statistics exclude those persons not travelling under standard visa conditions, such as 'boat people' and the 1999 intake of Kosovo refugees.

SCOPE

EXPLANATORY NOTES

COUNTRY CLASSIFICATION

- **7** The classification of countries in this publication is the Australian Standard Classification of Countries for Social Statistics (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (cat. no. 1269.0).
- **8** The statistics on country of birth, citizenship, residence or main destination have certain limitations because of reporting on passenger cards. For instance, United Kingdom includes England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea.

STATE AND TERRITORY
CLASSIFICATION

9 Following the 1992 amendment to the *Acts Interpretation Act* to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the state/territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands.

ESTIMATION METHOD

- **10** Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
- **11** Since January 1997 variable sample skips have been used in the selection of records to be sampled. Separate skips are applied for each country of citizenship and the skips may vary for each processing month. Over a year about 3.5% of all short term movements are selected for sampling.
- **12** The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. The sums of the components may, due to rounding, not add exactly to totals.

CORRECTIONS AND IMPUTATIONS

- **13** The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items. Information on non-response rates and data imputation appears in Appendix 2.
- **14** Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and main reason for journey.

SEASONAL ADJUSTMENT AND TREND ESTIMATES

- **15** Original and seasonally adjusted short-term overseas visitor arrivals and short-term Australian resident departures are shown in tables 1 and 2 respectively. In the seasonally adjusted series, account has been taken of normal seasonal factors and trading day effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.
- 16 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of the Australian dollar relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.
- **17** The trend estimates for short-term overseas visitor arrivals and short-term Australian resident departures are shown in tables 1 and 2 respectively. These trend estimates are derived by applying a 13–term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.
- **18** While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring 'Trends'*, *an Overview* (cat. no. 1348.0).
- **19** Due to the non-sequential processing of data in 2000–2002, final seasonally adjusted and trend estimates for short-term Australian resident departures, are not yet available and have therefore not been included in Table 2 in this issue. These estimates will be made available in a forthcoming issue
- **20** Users of these statistics may also wish to refer to the following ABS publications:
 - Australian Demographic Statistics (cat. no. 3101.0)—issued quarterly
 - Migration, Australia (cat. no. 3412.0)—issued annually
 - Tourism Indicators, Australia (cat. no. 8634.0)—issued quarterly.
- **21** Related statistics are also published by the Department of Immigration and Multicultural and Indigenous Affairs, the Department of Transport and Regional Services and the Bureau of Tourism Research.
- **22** Current publications and other products produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (cat. no. 1101.0). The Catalogue is available from any ABS office or the ABS web site <www.abs.gov.au>. The ABS also issues a daily *Release Advice* on the web site which details the products to be released in the week ahead.

RELATED PUBLICATIONS

EXPLANATORY NOTES

ADDITIONAL STATISTICS AVAILABLE

23 As well as the statistics included in this and related publications, other relevant unpublished data are available for the following variables:

Citizenship (Nationality)

Country of birth

Age (Date of birth)

Sex

Marital status (not available for Australian or New Zealand citizens)

Category of travel

Permanent migrant

Previous/future country of residence

State of intended address/lived

Overseas visitor

Intended/actual length of stay

Main reason for journey

Country of residence

State of intended address/in which most time spent

Australian residents

Intended/actual length of stay overseas

Country spent/intend to spend most time abroad

State or territory of intended address/state or territory lived

Occupation (not available for short-term movements)

Country of embarkation/disembarkation

Airport/Port of arrival/departure

Arrival/departure date

Intention to live in Australia for next 12 months (not available for short-term movements)

24 This publication draws extensively on information provided by DIMIA. This continued cooperation is very much appreciated; without it, the statistics published would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

Australian resident

Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.

Category of movement

Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main *categories of movement*:

- permanent movements
- long-term movements
- short-term movements.

A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.

Country of residence

Country of residence refers to the country in which travellers regard themselves as living or as last having lived.

Intended length of stay

On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'.

Long-term arrivals

Long-term arrivals comprise:

- overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and
- Australian residents returning after an absence of 12 months or more overseas.

Long-term departures

Long-term departures comprise:

- Australian residents who intend to stay abroad for 12 months or more (but not permanently); and
- overseas visitors departing who stayed 12 months or more in Australia.

Main destination

Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.

Main reason for journey

On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their purpose of journey. From September 1994, all statistics relating to *main reason for journey* have been published using the following categories:

- convention/conference
- business
- visiting friends/relatives
- holiday
- employment
- education
- other

In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business visitor'.

Main state/territory of stay

Overseas visitors are asked on departure for the name of the state or territory in which they spent the most time.

Overseas Arrivals and Departures (OAD)

Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).

Permanent arrivals

Permanent arrivals (settlers) comprise:

- travellers who hold migrant visas (regardless of stated intended period of stay);
- New Zealand citizens who indicate an intention to settle; and
- those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).

This definition of settlers is used by the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA). Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and DIMIA.

Permanent departures

Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.

Short-term arrivals

Short-term arrivals comprise:

- overseas visitors whose intended stay in Australia is less than 12 months;
- Australian residents returning after an absence of less than 12 months overseas.

Short-term departure

Short-term departures comprise:

- Australian residents who intend to stay abroad for less than 12 months; and
- overseas visitors departing who stayed less than 12 months in Australia.

STANDARD ERRORS

RELIABILITY OF ESTIMATES

- **1** Estimates based on a sample are subject to sampling variability i.e. they may differ from those that would be obtained from full enumeration.
- **2** The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.
- **3** It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following table of standard errors and relative standard errors gives an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

APPROXIMATE STANDARD ERRORS ON ESTIMATES FOR STRATIFIED SAMPLE

SHORT-TERM SHORT-TERM TOTAL
DEPARTURE OR ARRIVAL ARRIVAL OR DEPARTURE ARRIVALS OR
OF AUSTRALIAN RESIDENTS OF OVERSEAS VISITORS DEPARTURES......

Estimated		Relative		Relative		Relative
number of	Standard	standard	Standard	standard	Standard	standard
persons	error	error	error	error	error	error
		0/		01		0.4
	no.	%	no.	%	no.	%
				_		_
10 000	550	6	490	5	550	6
5 000	450	9	330	7	410	8
2 000	280	14	230	11	250	13
1 000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

- **4** An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.
- **5** The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.
- $\bf 6$ The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.
- **7** An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 1994 and January 1995 are 1,500 and 750 respectively. The difference between the 1994 and 1995 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately 266 (1.4 x 190), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.

APPENDIX 1 — PASSENGER CARDS(a)

Incoming passenger card • Austra PLEASE COMPLETE IN ENGLISH Family/surname Given names Passport number Flight number or name of ship Intended address in Australia	YOU MUST ANSWER EVERY QUESTION – IF UNSURE, Are you bringing into Australia: 1. Goods that may be prohibited or subject to restrictions, such as medicines, steroids, firearms, weapons of any kind or illicit drugs? 2. More than 1125ml of alcohol or 250gm of tobacco products? 3. Goods obtained overseas or purchased duty or tax free in Australia with a combined total price of more than AUD\$400, including gifts? 4. Goods/samples for business/commercial use? 5. AUD\$10,000 or more in Australian or foreign currency equivalent? 6. Food of any type – includes dried, fresh, preserved, cooked, uncooked – anything you can eat or cook? 7. Wooden articles, parts of plants, traditional medicines or herbs, seeds, bulbs, straw, nuts?	Yes
Do you have any criminal conviction/s? Yes \(\square\)	8. Animals, parts of animals and products in contact with animals including equipment, eggs, biologicals, specimens, birds, fish, insects, coral, shells, bees, bee products, pet food? 9. Soil, or articles with soil attached, i.e. sporting equipment, shoes, etc? 10. Have you visited a farm outside Australia in the past 30 days? 11. Have you been in Africa or South America in the last 6 days? DAY MONTH YEAR	Yes No Yes No Yes No Yes No TURN OVER THE CARD English

(a) Incoming card used from November 1999. Outgoing card used from July 2000 when a new question on currency was added to the reverse side. See paragraph 3 of the Explanatory Notes for information on passenger card changes.

SCANNING AND IMAGING

The introduction of a new passenger card processing system from July 2001 has meant that information is now available on the frequency and impact of data item imputation. Much of this information has not been available previously. Additionally, the move to a new processing system has also given rise to new data quality issues directly associated with scanning and imaging.

DEFECTIVE CARDS

There are a small number of unreadable or damaged passenger cards for each month. ABS receives the count of these cards from the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA) by movement direction, box type and port of clearance. The information on these cards is then physically processed by the ABS and included in the estimates presented here.

DURATION OF STAY

From July 1998 DIMIA are able to determine the actual length of stay for departing overseas visitors and arriving Australian residents which was previously collected from information on intended length of stay supplied on the arrival and departure card by the passenger. This new method had resulted in a change in data distribution with the number of passengers staying for one year exactly declining significantly when compared with movements prior to July 1998.

The introduction of the new passenger card processing system from July 2001 has shown further evidence of rounding to exactly one year in intended duration of stay/travel as reported by visitors arriving in Australia and Australian residents departing the country. To reflect the historical movement patterns, the records with a reported duration of exactly one year are allocated to short-term and long-term. For visitors, 75% of such records are allocated to short-term and 25% to long-term. The ratio is 67:33 for residents departing Australia.

ON THE SECOND LEG OF TRAVEL

TRIPS AND MATCHING OF MOVEMENTS Each month there are records for long-term residents returning to Australia and long-term visitors departing Australia which could not be matched with DIMIA's Travel and Immigration Processing System (TRIPS) records. Records have been created directly from TRIPS for records that did not match with a passenger card and then added to the ABS processing system.

NEW ZEALAND CITIZENS

Travellers on New Zealand (NZ) passports do not need a visa to enter Australia. As a result, on arrival in Australia their visa documentation cannot be used to determine whether they are either a permanent migrant or a temporary visitor, or an Australian resident returning from New Zealand. DIMIA believes that a substantial proportion of holders of NZ passports tick Box A (migrating to Australia) each time they arrive in the country, causing an overcount of NZ migrants entering Australia. To correct the overcounting of NZ migrants, with the introduction of the new processing system from July 2001, DIMIA coded all NZ citizen arrivals who had ticked Box A and had been to Australia previously (based on immigration records) to resident returning (Box C). If these people were visitors previously, this recoding had the effect of incorrectly reducing the number of NZ migrants whilst at the same time incorrectly increasing the number of NZ citizen returning residents. This problem was overcome by moving the NZ citizens that have been changed by DIMIA from Box A to Box C back to Box A. DIMIA are currently investigating methods to allocate NZ citizens to the correct category of travel.

NON-RESPONSE

A1. NON-RESPONSE RATES PRIOR TO IMPUTATION. NOVEMBER 2002(a)

November..... OAD variables Incoming Outgoing Citizenship (Nationality) 0.1 1.3 Country of birth 0.7 Age (Date of birth) Sex Marital Status(b) 49.8 59.9 Category of travel 2.1 1.4 Permanent migrant Previous/future country of residence 22.3 11.5 Overseas visitor Intended/actual length of stay 4.2 2.5 Main reason for journey 6.6 Australian residents Actual/intended time away from Australia 1.5 5.0 5.3 Main reason for journey Occupation(c) 8.4 7.1 Country of embarkation/disembarkation

next 12 months

Whether intend to live in Australia for

INTENDED LENGTH OF STAY / TIME AWAY FROM AUSTRALIA

MAIN REASON FOR JOURNEY

Non-response rates are available for these data items from November 1998. For data prior to November 1998, imputation carried out as part of processing by DIMIA has prevented reliable estimation of non-response rates for these two data items.

41.4

Before the introduction of the redesigned passenger card in July 1998, 5% of short-term visitor arrivals, on average, were recorded as having a reason for journey of 'Other' or 'Not Stated'. This percentage rose to 14% for July, 16% in August and 29% in September 1998 as a result of processing problems. These problems have now been addressed by DIMIA, with the percentage of 'Other' and 'Not Stated' dropping in October 1998 to 8% and 7% in November 1998.

From the January 1999 issue of this publication, published figures (table 3 in this publication) referencing these three months have been revised. The revised data were calculated by estimating the number of persons responding 'Other / Not Stated' using past trends for each country of citizenship and proportionally allocating any persons in excess of the estimated 'Other / Not Stated' total amongst the remaining categories. 'Not Stated' rates are now separately available from February 1999 onwards.

⁽a) Non-response rates are unweighted.

⁽b) Not available for Australian or New Zealand citizens.

⁽c) Not available for short-term movements.

STATE IN WHICH MOST TIME WAS SPENT

For the months of August 1998, September 1998 and October 1998, data entry problems experienced by DIMIA caused an overstatement of the Northern Territory as the main state of stay with a corresponding understatement for the remaining states and territories. These numbers have returned in November 1998 to levels more comparable with previous years, with DIMIA indicating that they have instigated data quality procedures to address this issue.

From the January 1999 issue of this publication, published figures (table 8 in this publication) referencing these months have been revised. The revised data were calculated by estimating the number of persons indicating the Northern Territory as their main state of stay using past trends and proportionally allocating any persons in excess of these estimates amongst the remaining states and territories.

With the introduction of the new processing system from July 2001, DIMIA have provided the ABS with data on all missing values of state of stay and state of usual residence. These missing values are now imputed.

SEPTEMBER 1998 PROCESSING

A problem was experienced in the processing of OAD data for movement dates between 6 September 1998 and 16 September 1998, following the introduction of changes to DIMIA's input processing system. This problem may affect in the order of 10% of all September records used in estimation and result in incorrect details for citizenship, date of birth, sex and country of birth.

DATA IMPUTATIONS

Data was imputed for non-response for state of stay/residence. For state of stay, non-responses were imputed at the category of traveller and state of clearance level. Non-response rates for state of stay are presented in the table below:

A2. DISTRIBUTION OF NON-RESPONSE RATES FOR STATE OF STAY BY CATEGORY OF TRAVELLER, NOVEMBER 2002(a)

Category of traveller	November
•••••	%
Permanent arrivals—settlers	5.4
Long-term residents returning	1.3
Long-term visitors arriving	5.8
Short-term residents returning	0.3
Short-term visitors arriving	7.6
Residents departing permanently	4.1
Long-term residents departing	4.0
Long-term visitors departing	27.3
Short-term residents departing	2.2
Short-term visitors departing	9.2
• • • • • • • • • • • • • • • • • • • •	

(a) Non-response rates are weighted.

Non-responses for country of stay and country of usual residence were imputed in two stages. In the first stage, records with country of stay/residence missing were set to country of disembarkation/embarkation if a response was available. In the second stage, for remaining records where country of stay/residence was missing, values were imputed at the category of traveller, reason for journey and country of citizenship level based on responses to other cards within each subgroup. Accordingly, the level of records with data for country of stay/residence not stated has been minimised.

DATA IMPUTATIONS CONTINUED

Table A3 below presents the percentage of records with country of stay/residence missing as supplied by DIMIA and prior to imputation.

A3. COUNTRY OF STAY/RESIDENCE NON-RESPONSE RATES BY PASSENGER CARD BOX TYPE, NOVEMBER 2002(a)

Box type	November
• • • • • • • • • • • • • • • • • • • •	• • • • • • • •
	%
A: Migrating permanently to Australia	22.3
B: Visitor or temporary entrant	9.4
C: Resident returning to Australia	7.8
D: Visitor or temporary entrant departing	14.3
E: Australian resident departing temporarily	2.1
F: Australian resident departing permanently	11.5
• • • • • • • • • • • • • • • • • • • •	• • • • • • • •

Table A4 shows the non-response rates for country of stay/residence following the application of the first stage of imputation.

A4. COUNTRY OF STAY NON-RESPONSE RATES BY CATEGORY OF TRAVELLER, NOVEMBER 2002(a)(b)

•••••	• • • • • • • • •
Category of traveller	November
• • • • • • • • • • • • • • • • • • • •	• • • • • • • • •
	%
Permanent arrivals—settlers	4.6
Long-term residents returning	1.2
Long-term visitors arriving	1.0
Short-term residents returning	1.1
Short-term visitors arriving	1.0
Residents departing permanently	0.9
Long-term residents departing	0.1
Long-term visitors departing	0.8
Short-term residents departing	0.4
Short-term visitors departing	0.5

⁽a) Following imputation based on country of disembarkation/embarkation.

(a) As on initial data supplied by DIMIA.

SEPTEMBER 1999 PROCESSING

September 1999 overseas arrivals and departures data are revised for movements from, and to, China (excl. SARs and Taiwan) and Hong Kong (SAR of China) in respect of three variables: country of birth, country of citizenship and country of residence/stay. Changes to 'country of birth' and 'country of citizenship' have been made from data supplied by DIMIA. Changes to 'country of residence/stay' have been made by assuming the average proportion of country of birth to country of residence/stay for migrants from China (excl. SARs and Taiwan) and Hong Kong (SAR of China) in September over the last 4 years (1995 to 1998).

PERMANENT ARRIVALS DURING 1999

The number of permanent arrivals during July to December 1999 have been revised in table 1 and table 4 as advised by DIMIA.

SEPTEMBER QUARTER 2000 PROCESSING

A processing error has been identified which affected the distribution of short-term resident departures by reason for journey for the months of August and September 2000. Affected data have been re-processed, and a revised copy of table 3 for the September quarter 2000 has been reissued in the October to December 2000 edition of this publication.

⁽b) Non-response rates are weighted.
