Visitor arrivals				
Trend	392.4	-1.0		
Seasonally adjusted	387.4	-3.7		
Original	325.7		4,739.7	-6.4

### KEY POINTS

- There were 325,700 short-term visitor arrivals to Australia during June 2002.
- The trend estimate for short-term visitor arrivals decreased slightly in June 2002 (-1.0%) while the seasonally adjusted estimate decreased by 3.7%.
- The total number of short-term visitor arrivals for the twelve months to June 2002 amounted to 4.7 million, a decrease of 6.4% compared to the twelve months to June 2001 (5.1 million).
- New Zealand (16%) was the main source country of short-term visitor arrivals to Australia for the twelve months to June 2002, followed by Japan (14%) and the United Kingdom (13%).
- When compared to the twelve months to June 2001, the number of visitor arrivals in the twelve months to June 2002 decreased 9% from both New Zealand and Japan, while the number of visitors from the United Kingdom increased by 3%.

 For further information about these and related statistics, contact the National Information and Referral Service on 1300 135 070, or Catherine Owen on Canberra 02 6252 5640.

## N O T E S

FORTHCOMING ISSUES	There have been significant delays in the receipt of final Overseas Arrivals and Departures (OAD) data from August 2000 onwards from the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA). Because of the use of overseas arrivals and departures data in population estimates which affects State and Territory Government funding, DIMIA has given priority to processing passenger cards for July 2001 and subsequent months before finalising processing for earlier months - August 2000 through to June 2001.				
	The ABS has now published final monthly OAD data for July 2001 to March 2002. These data revise preliminary estimates published for those months and include other series not included in the preliminary release. Revised seasonally adjusted and trend estimates for this period will not be available until the full backlog of data has been processed.				
	Final data for other outstanding months will be published in quarterly compendiums. Preliminary estimates of short-term visitor arrivals will continue to be published monthly. Further information on the expected release of final OAD data will be updated on the Demography Theme page on the ABS website site <www.abs.gov.au>, then select Themes, then Demography, and in future issues of this publication.</www.abs.gov.au>				
CHANGES IN THIS ISSUE	This issue of 3401.0 contains preliminary estimates and some final figures of short-term visitor arrivals in August 2000 through to June 2002. Final data on short-term visitor arrivals, short-term resident departures and permanent and long-term movements is available for July to March 2002 only. The only tables included in this publication are 1 and 6 of the standard publication.				
TREND REVISIONS	Each time new seasonally adjusted estimates become available, trend estimates of short-term arrivals are revised (see paragraphs 14 to 17 of the Explanatory Notes).				
	The example in the graph below shows the illustrative scenario and the consequent revisions to previous trend estimates of visitor arrivals.				
	The seasonally adjusted estimate for:				
	<b>1</b> July visitor arrivals is 2.90% higher than June, and				
	<b>2</b> July visitor arrivals is 2.90% lower than June.				
	VISITOR ARRIVALS (p)				
	- Published trend  - 1  - 2  - 2  - 000  - 450  - 450  - 400  - 350  - 300  - 250				

The percentage change of 2.90 was chosen because it represents the average absolute monthly percentage changes between months for visitor arrivals over the last four years.

### SHORT-TERM MOVEMENTS

VISITOR ARRIVALS

There were an estimated 325,700 short-term visitor arrivals to Australia in June 2002 bringing the total number of visitor arrivals for the twelve months to June 2002 to 4.7 million, a decrease of 6% compared to the overseas visitor arrivals for the twelve months to June 2001 (5.1 million), a period which included the 2000 Olympic Games.

The major source countries of short-term visitor arrivals to Australia for the twelve months to June 2002 were New Zealand (16%), Japan (14%), the United Kingdom (13%), the United States of America (9%), Singapore (6%) and Korea and China (each 4%). By comparison, in the twelve months to June 2001, New Zealand (16%) was the main source country followed by Japan (14%), the United Kingdom (12%) and the United States of America (10%).

Comparing the twelve months to June 2002 to the corresponding period ended June 2001, there were increases in the number of short-term visitor arrivals from four out of the top ten source countries. They were China (15%), Korea (8%), and the United Kingdom and Singapore (each 3%).

Of the top ten source countries for short-term visitor arrivals during the twelve months to June 2002:

744,500 short-term visitors came from New Zealand, a decrease of 9% compared to the twelve months to June 2001;

663,100 came from Japan, a decrease of 9%;

626,900 came from the United Kingdom, an increase of 3%;

424,500 came from the United States of America, a decrease of 14%;

289,500 came from Singapore, an increase of 3%;

180,600 came from Korea, an increase of 8%;

174,400 came from China, an increase of 15%;

154,300 came from Malaysia, a decrease of 0.4%;

137,800 came from Germany, a decrease of 7%;

99,800 came from Taiwan, a decrease of 21%.

INTRODUCTION	<b>1</b> This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 21).
SOURCE OF THE STATISTICS	<b>2</b> Persons arriving in, or departing from, Australia provide information in the form of incoming and outgoing passenger cards (see Appendix 1). Incoming persons also provide information in visa applications, apart from people travelling as Australian and New Zealand citizens. These and other information available to the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA) serve as a source for statistics of overseas arrivals and departures.
	<b>3</b> In July 1998, DIMIA revised the incoming and outgoing passenger cards and associated procedures as well as computer systems. Following these changes, some questions on the passenger cards were not compulsory and answers to these questions were not checked by Customs officers. The question on marital status was deleted. Data on marital status is now derived from visa applications (only for certain visa classes) and is therefore not available for Australian or New Zealand citizens. The changes also affect the data for 'Previous country of residence' which is imputed for Australian and New Zealand citizens. For more information see the May 1998 issue of this publication. Since July 1998, there have been additional minor changes to both passenger cards.
	<b>4</b> The preliminary estimates of visitor arrivals by country of residence (see table 6, page 5) are based on data from DIMIA's Travel and Immigration Processing System (TRIPS). The TRIPS system produces a limited range of data, including country of citizenship, which is used by ABS to produce preliminary estimates by country of usual residence. These preliminary estimates will be revised in the next issue of this publication, when final data is available. For more information see pages 3 and 4 of the June 1997 and the September 1998 issues of this publication.
SCOPE	<b>5</b> The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages. Similarly, these statistics exclude those persons not travelling under standard visa conditions, such as 'boat people' and the 1999 intake of Kosovo refugees.
COUNTRY CLASSIFICATION	<b>6</b> The classification of countries in this publication is the <i>Australian Standard Classification of Countries for Social Statistics</i> (ASCCSS). For more detailed information refer to the ABS publication <i>Australian Standard Classification of Countries for Social Statistics</i> (Cat. no. 1269.0).
	<b>7</b> The statistics on country of birth, citizenship, residence or main destination have certain limitations because of reporting on passenger cards. For instance, United Kingdom includes England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea.

. . . . . . . . . .

STATE AND TERRITORY CLASSIFICATION	<ul> <li>8 Following the 1992 amendment to the <i>Acts Interpretation Act</i> to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands.</li> </ul>
ESTIMATION METHOD	<b>9</b> Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
	<b>10</b> Since January 1997 variable sample skips have been used in the selection of records to be sampled. Separate skips are applied for each country of citizenship and the skips may vary for each processing month. Over a year about 3.5% of all short term movements are selected for sampling.
	<b>11</b> The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.
CORRECTIONS AND IMPUTATIONS	<b>12</b> The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items.
	<b>13</b> Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay,

country in which most time will be spent and main reason for journey.

SEASONAL ADJUSTMENT AND TREND ESTIMATES **14** Original and seasonally adjusted short-term overseas visitor arrivals are shown in Table 1. In the seasonally adjusted series, account has been taken of normal seasonal factors and trading day effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.

**15** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of \$A relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

**16** The trend estimates for short-term overseas visitor arrivals are shown in Table 1. These trend estimates are derived by applying a 13–term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.

**17** While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring 'Trends', an Overview* (Cat. no. 1348.0).

# **18** Users of these statistics may also wish to refer to the following ABS publications:

Australian Demographic Statistics (Cat. no. 3101.0)—issued quarterly

- Migration, Australia (Cat. no. 3412.0)—issued annually
- Tourism Indicators, Australia (Cat. no. 8634.0)—issued quarterly.
- Demography working paper 2001/7 Statistical requirements for Overseas Arrivals and Departures Data at September 2001

**19** Related statistics are also published by the Department of Immigration and Multicultural and Indigenous Affairs, the Department of Transport and Regional Services and the Bureau of Tourism Research.

**20** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. Both are available from any ABS office or the ABS website.

ADDITIONAL STATISTICS AVAILABLE	<b>21</b> As well as the statistics included in this and related publications, other relevant unpublished data are available for the following variables:

### GLOSSARY

. . . . . . . . . . . .

Australian resident	Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.
Category of movement	Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main <i>categories of movement</i> : <ul> <li>permanent movements</li> </ul>
	<ul><li>long-term movements</li><li>short-term movements.</li></ul>
	A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
Country of residence	Country of residence refers to the country in which travellers regard themselves as living or as last having lived.
Intended length of stay	On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay overseas'.
Long-term arrivals	Long-term arrivals comprise:
	<ul> <li>overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and</li> <li>Australian residents returning after an absence of 12 months or more overseas.</li> </ul>
Long-term departures	Long-term departures comprise:
	<ul> <li>Australian residents who intend to stay abroad for 12 months or more (but not permanently); and</li> <li>overseas visitors departing who stayed 12 months or more in Australia.</li> </ul>
Main destination	Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.

### GLOSSARY

. . . . . . . . . . . .

Main reason for journey	On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their main reason for journey. From September 1994, all statistics relating to <i>main reason for journey</i> have been published using the following categories: <ul> <li>convention/conference</li> <li>business</li> <li>visiting friends/relatives</li> <li>holiday</li> <li>employment</li> <li>education</li> <li>other</li> </ul>
	In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business visitor'.
State/Territory of address/lived	Overseas visitors are asked on arrival in Australia for their State of intended address. On departure from Australia overseas visitors are asked the State where they spent most time. Australian residents are asked on departure for the State in which they live/lived. Residents returning to Australia are asked for their State of intended address.
Overseas Arrivals and Departures (OAD)	Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).
Permanent arrivals	Permanent arrivals (settlers) comprise:
	<ul> <li>travellers who hold migrant visas (regardless of stated intended period of stay);</li> <li>New Zealand citizens who indicate an intention to settle; and</li> <li>those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).</li> <li>This definition of settlers is used by the Department of Immigration and Multicultural Affairs. Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the Department of Immigration and Multicultural Affairs.</li> </ul>
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.
Short-term arrivals	<ul> <li>Short-term arrivals comprise:</li> <li>overseas visitors whose intended stay in Australia is less than 12 months; and</li> <li>Australian residents returning after an absence of less than 12 months overseas.</li> </ul>
Short-term departures	<ul> <li>Short-term departures comprise:</li> <li>Australian residents who intend to stay abroad for less than 12 months; and</li> <li>overseas visitors departing who stayed less than 12 months in Australia.</li> </ul>

### STANDARD ERRORS

### RELIABILITY OF ESTIMATES

**1** Estimates based on a sample are subject to sampling variability i.e. they may differ from those that would be obtained from full enumeration.

**2** The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error of the estimate expressed as a percentage of the estimate.

**3** It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following tables of standard errors and relative standard errors give an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

#### APPROXIMATE STANDARD ERRORS ON ESTIMATES FOR STRATIFIED SAMPLE

Estimated number of persons		ERM RE OR ARRIVAL RALIAN RESIDENTS <i>Relative</i> standard error		OR DEPARTURE	TOTAL ARRIVALS DEPARTU Standard error	
	no.	%	no.	%	no.	%
10 000	550	6	490	5	550	6
5 000	450	9	330	7	410	8
2 000	280	14	230	11	250	13
1 000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

**4** An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.

**5** The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.

### STANDARD ERRORS

RELIABILITY OF ESTIMATES continued

**6** The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.

**7** An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 1994 and January 1995 are 1,500 and 750 respectively. The difference between the 1994 and 1995 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately 266 ( $1.4 \times 190$ ), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.
