TREND ESTIMATES

The trend estimate for short-term visitor arrivals to Australia during October 2004 (437,700 movements) increased by 0.2% compared with September 2004. This followed monthly increases of 0.4% for August and 0.3% for September 2004.

- Currently, short-term visitor arrivals are 3.0% higher than when the series last troughed in March 2004 (424,800 movements).
- During October 2004, short-term resident departures (365,800 movements) increased by 0.4% compared with the previous month and followed increases of 0.6% for both August and September 2004.
- Short-term resident departures have recorded steady growth over the past year, however, recent estimates indicate this growth rate is slowing. Compared with October 2003 (311,500 movements), short-term resident departures are up by 17.5%.

SEASONALLY ADJUSTED ESTIMATES

- The seasonally adjusted estimate for short-term visitor arrivals during October 2004 (434,300 movements) decreased by 0.2% compared with September 2004. This followed decreases of 0.2% for August and 0.3% for September 2004.
- Short-term resident departures for October 2004 (371,600 movements) increased by 0.6% compared with September 2004 and followed a decrease of 2.0% for August and an increase of 4.3% for September 2004.

ORIGINAL ESTIMATES

• In original movement terms, there were 449,900 short-term visitor arrivals to Australia and 350,600 short-term resident departures from Australia during October 2004.

MAIN FEATURES

SHORT-TERM VISITOR ARRIVALS

The following table presents the top ten source countries (based on original estimates) for short-term visitor arrivals during October 2004. Seasonally adjusted and trend estimates are also presented for these countries, along with the trend percentage change compared with September 2004 and October 2003.

SHORT-TERM VISITOR ARRIVALS, Major Source Countries—October 2004

| | Trend | Seasonally Adjusted | Original | Sep 04 to Oct 04 | Oct 03 to Oct 04 |
|--------------------------|-------|------------------------|----------|---------------------|---------------------|
| | '000 | '000' | '000' | Trend % change | Trend % change |

(a) Not available for publication, due to break in the trend series from December 2003

TRAVEL BETWEEN NEW ZEALAND AND AUSTRALIA CONTINUES TO RISE

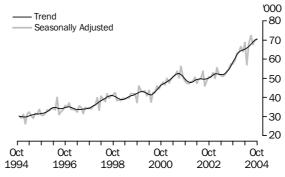

According to recent trend estimates, the number of short-term visitor arrivals from New Zealand has increased on a monthly basis since March 2003, although over the last two months the rate of increase has slowed. Currently, short-term visitor arrivals from New Zealand (88,500 movements for October 2004) are 36% higher than when the series last troughed in February 2003 (65,200 movements).

TRAVEL BETWEEN NEW ZEALAND AND AUSTRALIA CONTINUES TO RISE continued

Steady growth in the number of short-term resident departures to New Zealand has been recorded since May 2003. During October 2004 there were 70,600 short-term departures to New Zealand, up 36% when compared with when the series last troughed in April 2003 (51,900 movements).

NEW ZEALAND

PERMANENT AND LONG-TERM MOVEMENTS

There were 9,700 permanent (settler) arrivals into Australia during October 2004, an increase of 20% when compared with October 2003 (8,100 movements). Settlers born in the United Kingdom accounted for the largest proportion (16%) followed by New Zealand (13%) and China (10%).

Statistics on overseas arrivals and departures relate to the number of movements of travellers rather than the number of travellers. Therefore, care should be taken when using long-term arrivals data as it is known some individuals who travel multiple times in a year are counted each time they cross Australia's borders (see paragraph 5 of the Explanatory Notes). Long-term arrivals in this publication are not an appropriate source of migration statistics. For further information refer to *Australian Demographic Statistics* (cat. no. 3101.0).

There were 4,590 Australian residents departing permanently from Australia during October 2004, an increase of 19% when compared with October 2003 (3,850 movements).

STATISTICALThe above presentation of movements in estimates does not take into account whetherSIGNIFICANCEthe change in movement is statistically significant. Care should be taken when
interpreting the impact of numeric and/or percentage change. Please see the Standard
Errors section on page 31 for more detail.

SEASONALLY ADJUSTED AND TREND ESTIMATES

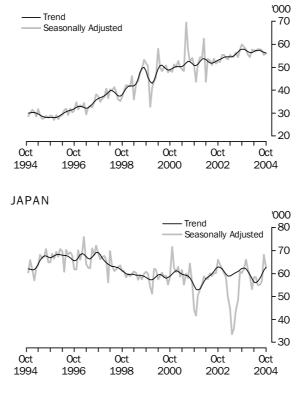

INTRODUCTION

Seasonally adjusted and trend estimates add to the understanding of OAD statistics. Seasonally adjusted estimates allow users to analyse short-term irregular impacts on the series, while trend estimates provide a better method to analyse and monitor the underlying direction of OAD. In most cases, the trend series is the best source of information on the long-term direction of these statistics.

SHORT-TERM VISITOR ARRIVALS Selected Source Countries

The graphs presented below illustrate the impact of the 2003 Rugby World Cup on arrivals from the United Kingdom in the later half of 2003, and the significant impact of SARS on arrivals from Japan.

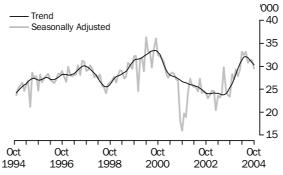

UNITED KINGDOM

SHORT-TERM RESIDENT DEPARTURES Selected destinations

The recent upward trend in departures of Australian residents to the United States of America appears to have peaked and has been in decline since July 2004. Similarly, departures to the United Kingdom are also in decline.

Note: Components may not sum to totals due to rounding. See paragraph 12 of Explanatory Notes.

EXPLANATORY NOTES

| INTRODUCTION | 1 This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 28). |
|---------------------------------------|--|
| SOURCE OF THE STATISTICS | 2 Persons arriving in, or departing from, Australia provide information in the form of incoming and outgoing passenger cards (see Appendix 1). Incoming persons also provide information in visa applications, apart from people travelling as Australian and New Zealand citizens. These and other information available to Department of Immigration and Muliticultural and Indigenous Affairs (DIMIA) serve as a source for statistics of overseas arrivals and departures (OAD). |
| | 3 In July 1998, DIMIA revised the incoming and outgoing passenger cards and associated procedures as well as computer systems. Following these changes, some questions on the passenger cards were not compulsory and answers to these questions were not checked by Customs officers. The question on marital status was deleted. Data on marital status is now derived from visa applications (only for certain visa classes) and is therefore not available for Australian or New Zealand (NZ) citizens. The changes also affect the data for 'previous country of residence' which is imputed for Australian and NZ citizens. For more information see the May 1998 issue of this publication. Since July 1998, there have been additional minor changes to both incoming and outgoing passenger cards. |
| | 4 From July 2001, DIMIA adopted a new passenger card processing system which involved electronic imaging of passenger cards and intelligent character recognition of the data stored in the images. This process has yielded several improvements to the processing of passenger card data, most notably the detailed information about missing values. There have also been several changes to data quality. Information on these changes appears in Appendix 2. |
| SCOPE | 5 The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages. Similarly, these statistics exclude those persons not travelling under standard visa conditions, that is, unauthorised arrivals. |
| STATE AND TERRITORY CLASSIFICATION | 6 Following the 1992 amendment to the <i>Acts Interpretation Act</i> to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the state/territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands. OAD data for Other Territories is not available prior to February 1995. |
| COUNTRY CLASSIFICATION | 7 The classification of countries in this publication is the Standard Australian Classification of Countries. For more detailed information refer to the ABS publication <i>Standard Australian Classification of Countries</i> (SACC) (cat. no. 1269.0). 8 The statistics on country of birth, citizenship, residence or main destination have |
| | certain limitations because of reporting on passenger cards. For instance, United Kingdom includes England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea. |

| COUNTRY CLASSIFICATION continued | 9 A large number of short-term residents departing state Europe as their main destination on the passenger card. These responses are grouped into inadequately described, unless otherwise indicated. |
|--|--|
| ESTIMATION METHOD | 10 OAD statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed. Sample standard errors can be found on page 31 of this publication. |
| | 11 Since January 1997 variable sample skips have been used in the selection of records to be sampled. Separate skips are applied for each country of citizenship and the skips may vary for each processing month. Over a year about 3.5% of all short-term movements are selected for sampling. |
| | 12 The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. The sums of the components may not add to totals due to rounding. Analysis featured in the Key Points and Main Features of this publication is based on unrounded data. Calculations made on rounded data may differ to those published. |
| CORRECTIONS AND IMPUTATIONS | 13 The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age, state and country of stay/residence are also imputed by reference to other related items. Information on non-response rates and data imputation appears in Appendix 2. |
| | 14 Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and main reason for journey. |
| SEASONAL ADJUSTMENT AND TREND ESTIMATES | 15 Seasonally adjusted and trend estimates of short-term overseas movements are shown in tables 1, 2, 3, 4, 7 and 8. |
| | 16 Seasonally adjusted estimates are derived by estimating and removing systematic calendar related effects from the original series. In the short-term visitor arrival and short-term resident departure series, these calendar related effects are known as seasonal (e.g. increased travel in December due to the Christmas holiday period) and trading day influences (arising from the varying length of each month and the varying number of Sundays, Mondays, Tuesdays, etc. in each month). Each influence is estimated by separate seasonal and trading day factors which, when combined, are referred to as the combined adjustment factors. |
| | 17 From July 2003, concurrent seasonal adjustment methodology has been used to derive the combined adjustment factors. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent seasonal adjustment replaces the forward factor methodology used since seasonal adjustment of short-term visitor arrivals began in 1969 and short-term resident departures in 1976. |

EXPLANATORY NOTES continued

SEASONAL ADJUSTMENT AND TREND ESTIMATES continued

18 Concurrent adjustment can result in revisions each month to the seasonally adjusted estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. Although there is no specific Information Paper on concurrent adjustment to short-term visitor arrivals or resident departure, more detail on the method in general can be found in the *Information Paper: Introduction of Concurrent Seasonal Adjustment into the Retail Trade Series* (cat. no. 8514.0).

19 Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of the Australian dollar relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation. Trend estimates take these irregular influences into account.

20 The trend estimates of short-term overseas visitor arrivals and short-term Australian resident departures are derived by applying a 13-term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.

21 While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring Trends* (cat. no. 1349.0).

22 A break in the trend series for short-term resident departures from October 2002 has been created because of the effect of the Bali bombing (12 October 2002). This break in trend series has been created both for short-term resident departures to Indonesia and to all short-term resident departures. Another break in the trend series has been introduced from December 2003 in total short-term resident departures and those to Indonesia because of a change in the underlying level of the original series. This change indicates a return to the trend levels experienced prior to the Bali bombing.

23 An improved correction method has been implemented in the seasonal adjustment process, to remove the effects of Chinese New Year from the seasonally adjusted estimates. Chinese New Year often falls in February but on some occasions falls in January. The movement of Chinese New Year between the boundary of January and February can cause biased seasonally adjusted and trend estimates. The previous correction method for Chinese New Year assumed that all of the activity due to the holiday fell in the month in which it started. However, it has been shown that the occurrence of Chinese New Year causes an increase in activity leading up to the holiday period and then a gradual decrease in activity during the holiday period. A proximity correction method has been implemented, which assumes a quadratic increase in activity in the seven days leading up to the holiday and then a quadratic decrease in activity in the six days after the date of Chinese New Year. This method is similar to that used for Easter proximity corrections (Zhang, McLaren, Leung, 2001, *Australian Journal of Statistics*, Volume 43, No. 3).

24 For a detailed discussion and analysis of OAD time series estimates, see the *ABS Demography Working Paper 2004/2 – Interpretation and Use of Overseas Arrivals and Departures Estimates* (cat. no. 3106.0.55.002), available on the ABS web site.

| | 27 Current publications and other products produced by the ABS are listed in the <i>Catalogue of Publications and Products</i> (cat. no. 1101.0). The Catalogue is available from any ABS office or the ABS web site <http: www.abs.gov.au="">. The ABS also issues a daily Release Advice on the web site which details the products to be released in the week ahead.</http:> |
| ADDITIONAL STATISTICS AVAILABLE | 28 As well as the statistics included in this and related publications, other relevant unpublished data are available for the following variables: Citizenship (Nationality) Country of birth Age (Date of birth) Sex Marital status (not available for Australian or New Zealand citizens) Category of travel Permanent migrant Previous/future country of residence State of intended address/lived Overseas visitor Intended/actual length of stay Main reason for journey Country of residence State or territory of intended address on arrival State or territory in which most time spent on departure Australian residents Intended/actual length of stay overseas Country spent/intend to spend most time abroad State or territory of intended address/state or territory lived Occupation (not available for short-term movements) Country of embarkation/disembarkation Airport/Port of arrival/departure Arrival/departure date Intention to live in Australia for next 12 months (not available for short-term movements) |
| REFORMATTED PUBLICATION | 29 A number of changes were introduced in the August 2004 issue of this publication. Changes included the introduction of four new tables (tables 3, 4, 7 and 8), a new table structure and a reformatting of the time periods presented in tables 3 to 12. The key figures, key points and main features were also redesigned to give more focus to trend estimates. For more detail about these changes, refer to the Demography Theme Page on the ABS web site. |
| ACKNOWLEDGMENTS | 30 This publication draws extensively on information provided by DIMIA. This continued cooperation is very much appreciated; without it, the statistics published would not be available. Information received by the ABS is treated in strict confidence as required by the <i>Census and Statistics Act 1905</i> . |

APPENDIX 2 DATA QUALITY ISSUES

.

.

.

| SCANNING AND IMAGING | The introduction of a new passenger card processing system from July 2001 has meant that information is now available on the frequency and impact of data item imputation. Much of this information has not been available previously. Additionally, the move to a new processing system has also given rise to new data quality issues directly associated with scanning and imaging. |
|---|---|
| DEFECTIVE CARDS | There are a small number of unreadable or damaged passenger cards for each month. ABS receives a count of these cards from the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA) by movement direction, box type and port of clearance. The information on these cards is then physically processed by the Australian Bureau of Statistics (ABS) and included in the estimates presented here. |
| DURATION OF STAY | From July 1998 DIMIA is able to determine the actual length of stay for departing overseas visitors and arriving Australian residents which was previously collected from information on intended length of stay supplied on the arrival and departure card by the passenger. This new method had resulted in a change in data distribution with the number of passengers staying for one year exactly declining significantly when compared with movements prior to July 1998. |
| | The introduction of the new passenger card processing system from July 2001 has shown further evidence of rounding to exactly one year in intended duration of stay/travel as reported by visitors arriving in Australia and Australian residents departing the country. To reflect the historical movement patterns, the records with a reported duration of exactly one year are allocated to short-term and long-term. For visitors, 75% of such records are allocated to short-term and 25% to long-term. The ratio is 67:33 for residents departing Australia. |
| TRIPS AND MATCHING OF MOVEMENTS ON THE SECOND LEG OF TRAVEL | Each month there are records for long-term residents returning to Australia and long-term visitors departing Australia which could not be matched with DIMIA's Travel and Immigration Processing System (TRIPS) records. Records which did not match with a passenger card have been created directly from TRIPS and added to the ABS processing system. |
| NEW ZEALAND CITIZENS | Under the Trans-Tasman Agreement, New Zealand (NZ) citizens are not required to have a visa to travel to Australia. As a result, on arrival in Australia their visa documentation cannot be used to determine whether they are either a permanent migrant or a temporary visitor, or an Australian resident returning from New Zealand. DIMIA believes that a substantial proportion of holders of NZ passports tick Box A (migrating to Australia) each time they arrive in the country, causing an overcount of NZ migrants entering Australia. |
| | The following edits were applied to correct the overcounting of NZ migrants: |
| July 2001 to June 2002 | With the introduction of the new processing system from July 2001, DIMIA coded all NZ citizen arrivals who had ticked Box A and had been to Australia previously (based on immigration records) to resident returning (Box C). If these people were visitors previously, this recoding had the effect of incorrectly reducing the number of NZ migrants whilst at the same time incorrectly increasing the number of NZ citizen returning residents. This problem was overcome by moving the NZ citizens that have been changed by DIMIA from Box A to Box C back to Box A. |

APPENDIX 2 DATA QUALITY ISSUES continued

.

| July 2002 onwards | From July 2002, DIMIA has introduced a new ed Arrivals of NZ citizens statistics. Where the perso (first arrival as a migrant) the record is verified b passenger card records and if the person is prev then they will be counted as returning residents recording of NZ citizens who are migrating to Au residents returning. | on ticks Bo y checking iously reco . | MAIN REASON FOR JOURNEY | Before the introduction of the redesigned passenger card in July 1998, 5% of short-term visitor arrivals, on average, were recorded as having a reason for journey of 'Other' or 'Not Stated'. This percentage rose to 14% for July, 16% in August and 29% in September 1998 as a result of processing problems. These problems have now been addressed by DIMIA, with the percentage of 'Other' and 'Not Stated' dropping in October 1998 to 8% and 7% in November 1998. | | | | | | | |
| | From the January 1999 issue of this publication, referencing these three months have been revise estimating the number of persons responding 'C each country of citizenship and proportionally a estimated 'Other / Not Stated' total amongst the are now separately available from February 1999 | ed. The rev Other / Not Ilocating an remaining | ised data were of Stated' using pa by persons in ex | calculated by ast trends for cess of the | | | | |

| STATE WHERE SPENT MOST TIME | For the months of August 1998, September 1998 and October 1998, data entry problems experienced by DIMIA caused an overstatement of the Northern Territory as the main state of stay with a corresponding understatement for the remaining states and territories. These numbers have returned in November 1998 to levels more comparable with previous years, with DIMIA indicating that they have instigated data quality procedures to address this issue. |
|--------------------------------|--|
| | From the January 1999 issue of this publication, published figures (table 11 in this issue) referencing these months have been revised. The revised data were calculated by estimating the number of persons indicating the Northern Territory as their main state of stay using past trends and proportionally allocating any persons in excess of these estimates amongst the remaining states and territories. |
| | With the introduction of the new processing system from July 2001, DIMIA has provided the ABS with data on all missing values of state of stay and state of usual residence. These missing values are now imputed. |
| DATA IMPUTATIONS | Data was imputed for non-response for state of stay/residence. For state of stay, non-responses were imputed at the category of traveller and state of clearance level. Non-response rates for state of stay are presented in the table below: |

| | October 2004 |
|---------------------------------|-----------------|
| Category of traveller | % |
| Permanent arrivals – settlers | 5.5 |
| Long-term residents returning | 1.2 |
| Long-term visitors arriving | 3.8 |
| Short-term residents returning | 0.2 |
| Short-term visitors arriving | 6.2 |
| Residents departing permanently | 3.0 |
| Long-term residents departing | 2.8 |
| Long-term visitors departing | 5.2 |
| Short-term residents departing | 1.9 |
| Short-term visitors departing | 7.3 |
| | |

(a) Non-response rates are weighted.

Non-responses for country of stay and country of usual residence were imputed in two stages. In the first stage, records with country of stay/residence missing were set to country of disembarkation/embarkation if a response was available. In the second stage, for remaining records where country of stay/residence was missing, values were imputed at the category of traveller, reason for journey and country of citizenship level based on responses to other cards within each subgroup. Accordingly, the level of records with data for country of stay/residence not stated has been minimised.

Change in approach to non-response state of stay for long-term visitor departures

STATE WHERE SPENT MOST

A new procedure has been applied before imputation of a non-response to state of stay for long-term visitor departures. The procedure has two aspects. First, it detects non-response of state of stay for long-term visitor departures and then looks to the other outgoing passenger card boxes (box E and F on the outgoing passenger card) for a state of stay response. If no response is found, the procedure then looks for a response on the arrival card (which can be obtained by matching the arrival and departure card via a unique person identifier). Second, in the case of a correction of the box marked by a passenger (e.g. a visitor marks a resident box) the state of stay will be transferred with the record or if it is still a non-response, the arrivals card will be sourced. If both these steps fail to identify a state of stay, the record then proceeds to imputation.

.

Country of stay

Table A3 below presents the percentage of records with country of stay/residence missing as supplied by DIMIA and prior to imputation.

A3 COUNTRY OF STAY/RESIDENCE NON-RESPONSE RATES BY PASSENGER CARD BOX TYPE(a)

October

| | 2004 |

| | (b) Non-response rates are weighted. |
| SEPTEMBER 1998 PROCESSING | A problem was experienced in the processing of OAD data for movement dates between 6 September 1998 and 16 September 1998, following the introduction of changes to DIMIA's input processing system. This problem may affect in the order of 10% of all September records used in estimation and result in incorrect details for citizenship, date of birth, sex and country of birth. |
| PERMANENT ARRIVALS DURING 1999 | The number of permanent arrivals during July to December 1999 were revised in October 2000, as advised by DIMIA. |
| SEPTEMBER 1999 PROCESSING | September 1999 overseas arrivals and departures data are revised for movements from, and to, China (excl. SARs and Taiwan) and Hong Kong (SAR of China) in respect of three variables: country of birth, country of citizenship and country of residence/stay. Changes to 'country of birth' and 'country of citizenship' have been made from data supplied by DIMIA. Changes to 'country of residence/stay' have been made by assuming the average proportion of country of birth to country of residence/stay for migrants from China (excl. SARs and Taiwan) and Hong Kong (SAR of China) in September 1995 to September 1998. |
| PROCESSING PERMANENT ARRIVALS DURING 1999 SEPTEMBER 1999 | (a) Following imputation based on country of disembarkation/embarkation. (b) Non-response rates are weighted. A problem was experienced in the processing of OAD data for movement dates between 6 September 1998 and 16 September 1998, following the introduction of changes to DIMIA's input processing system. This problem may affect in the order of 10% of all September records used in estimation and result in incorrect details for citizenship, date of birth, sex and country of birth. The number of permanent arrivals during July to December 1999 were revised in October 2000, as advised by DIMIA. September 1999 overseas arrivals and departures data are revised for movements from, and to, China (excl. SARs and Taiwan) and Hong Kong (SAR of China) in respect of thre variables: country of birth, country of citizenship and country of residence/stay. Change to 'country of birth' and 'country of citizenship' have been made from data supplied by DIMIA. Changes to 'country of birth to country of residence/stay for migrants from China (excl. SARs) |

.

| SEPTEMBER QUARTER 2000 PROCESSING | A processing error was identified which affected the distribution of short-term resident departures by reason for journey for the months of August and September 2000. Affected data was re-processed, and a revised copy of table 3 for the September quarter 2000 was reissued in the supplement October to December 2000 issue of this publication. |
|--|--|
| CHANGE TO PROCESSING OF INTENDED LENGTH OF STAY | There is evidence to suggest that when completing the intended length of stay question on the incoming passenger card (Box B), some passengers are entering their arrival/departure date or their birth date rather than their intended length of stay. |
| | From September 2003 a rule has been implemented to the data processing system stating that if all three elements are complete (years, months and days), then the intended length of stay is to be coded to a non-response. The ABS currently assigns 'not stated' duration as a short-term movement, however a review of this procedure will be undertaken in the near future. |
| | This procedure changes the prior data processing system which read only the years from the field on the passenger cards. The previous data processing system could have added |

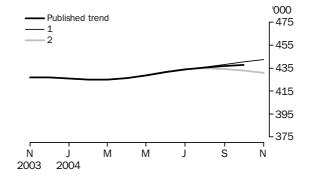

the field on the passenger cards. The previous data processing system could have added to overestimation of the number of long-term visitor arrivals.

TECHNICAL NOTE TREND REVISIONS

EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

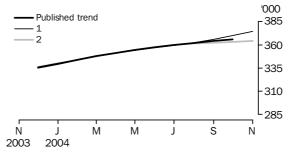

1 The most recent trend estimates for short-term visitor arrivals and short-term resident departures are likely to be revised when the next month's seasonally adjusted estimates become available. To assist readers of this publication in analysing short-term movement trends, the approximate effect of two possible scenarios on the previous trend estimate of short-term visitor arrivals and resident departures are presented below. Visitor arrivals

- 1 The September seasonally adjusted estimate of visitor arrivals is 3.2% higher than August.
- 2 The September seasonally adjusted estimate of visitor arrivals is 3.2% lower than August.

Resident departures

- 1 The September seasonally adjusted estimate of resident departures is 3.0% higher than August.
- 2 The September seasonally adjusted estimate of resident departures is 3.0% lower than August.

(a) Break in the trend series from December 2003.

2 The percentage changes of 3.2 for visitor arrivals and 3.0 for resident departures were chosen because they represent the average absolute monthly percentage change for visitor arrivals and resident departures over the last ten years, respectively.

3 Under concurrent seasonal adjustment, the most recent seasonally adjusted and trend estimates are likely to be revised when original estimates for subsequent months become available. The trend revision is a combined result of the revision of the seasonally adjusted estimates and the revision derived from the use of asymmetric moving averages as future data become available. ABS research shows that about 75% of the total revision to the trend estimate at the current end of the time series is due to the use of different asymmetric moving averages when the original estimate for the next time period becomes available. To assess the reliability of the trend estimate at the current end, the 'what-if' chart presents trend estimates under two different scenarios for the next time period. The chart shows only the impact due to the changes of the asymmetric moving averages and does not include the unknown impact of revision to seasonal factor estimates that would arise when the original estimate for the next time period becomes available.

STANDARD ERRORS

RELIABILITY OF ESTIMATES

Estimates based on a sample are subject to sampling variability, that is, they may differ from those that would be obtained from full enumeration.

The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.

It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following table of standard errors and relative standard errors gives an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

APPROXIMATE STANDARD ERROR ON ESTIMATES FOR STRATIFIED SAMPLE

| | | | SHORT-TEF | RM | | |
|------------------------|---------------------|----------|------------------|----------|---------------|----------|
| | SHORT-TERM | ARRIVAL | ARRIVAL O | R | | |
| | OR DEPARTURE OF | | DEPARTURE OF | | TOTAL ARRIVAL | |
| | AUSTRALIAN RESIDENT | | OVERSEAS VISITOR | | OR DEPARTURE | |
| | | Relative | | Relative | | Relative |
| | Standard | standard | Standard | standard | Standard | standard |
| Estimated number of | error | error | error | error | error | error |
| movements | no. | % | no. | % | no. | % |
| 5,000,000 | 13 296 | 0.3 | 9 334 | 0.2 | 11 417 | 0.2 |
| 4,000,000 | 12 052 | 0.3 | 8 436 | 0.2 | 10 349 | 0.3 |
| 3,000,000 | 10 613 | 0.4 | 7 403 | 0.2 | 9 113 | 0.3 |
| 2,000,000 | 8 866 | 0.4 | 6 156 | 0.3 | 7 612 | 0.4 |
| 1,000,000 | 6 506 | 0.7 | 4 488 | 0.4 | 5 582 | 0.6 |
| 500,000 | 4 761 | 1.0 | 3 268 | 0.7 | 4 082 | 0.8 |
| 100,000 | 2 283 | 2.3 | 1 559 | 1.6 | 1 951 | 2.0 |
| 50,000 | 1 656 | 3.3 | 1 131 | 2.3 | 1 413 | 2.8 |
| 10,000 | 778 | 7.8 | 535 | 5.4 | 660 | 6.6 |
| 5,000 | 560 | 11.2 | 387 | 7.7 | 473 | 9.5 |
| 2,000 | 361 | 18.0 | 252 | 12.6 | 304 | 15.2 |
| 1,000 | 258 | 25.8 | 182 | 18.2 | 216 | 21.6 |
| 750 | 224 | 29.9 | 159 | 21.2 | 188 | 25.0 |
| 500 | 184 | 36.8 | 131 | 26.2 | 153 | 30.7 |
| 400 | 165 | 41.2 | 118 | 29.5 | 137 | 34.3 |
| 300 | 143 | 47.7 | 103 | 34.3 | 119 | 39.7 |
| 200 | 117 | 58.6 | 85 | 42.4 | 97 | 48.6 |
| 100 | 83 | 83.0 | 61 | 61.0 | 69 | 68.5 |
| | | | | | | |

An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 1,000, then the standard error on this estimate is 258 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 742 and 1,258 and nineteen chances in twenty that it will lie between 484 and 1,516.

The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 5,000,000 the relative standard error will be less than 0.3%.

The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.

STANDARD ERRORS continued

RELIABILITY OF ESTIMATES continued

An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Germany during February 2003 and February 2004 are 7,500 and 10,000 respectively. The difference between the 2003 and 2004 figure is 2,500 and the standard errors on these estimates are approximately 461 and 535. The standard error on the difference is approximately 749 (1.4 x 535), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 1,002 and 3,998.

.

GLOSSARY

| Australian resident | Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards. |
|-------------------------|--|
| Category of movement | Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main categories of movement: permanent movements long-term movements. |
| | A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year. |
| Country of residence | Country of residence refers to the country in which travellers regard themselves as living or as last having lived. |
| Intended length of stay | On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'. |
| Long-term arrivals | Long-term arrivals comprise: overseas visitors who intend to stay in Australia for 12 months or more (but not permanently) Australian residents returning after an absence of 12 months or more overseas. |
| Long-term departures | Long-term departures comprise: Australian residents who intend to stay abroad for 12 months or more (but not permanently) overseas visitors departing who stayed 12 months or more in Australia. |
| Main destination | Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time. |
| Main reason for journey | On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their purpose of journey. From September 1994, all statistics relating to main reason for journey have been published using the following categories: • convention/conference • business • visiting friends/relatives • holiday • employment • education • other. In tabulations of data collected before September 1994, the 'Other' category included 'In transit' and the 'Holiday' category included both 'Student vacation' and 'Accompanying |
| Overseas Arrivals and | business visitor'. |
| Departures | Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted). |

GLOSSARY continued

| Permanent arrivals | Permanent arrivals (settlers) comprise: travellers who hold migrant visas (regardless of stated intended period of stay) New Zealand citizens who indicate an intention to settle those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens). |
|-----------------------------|---|
| | This definition of settlers is used by the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA). Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and DIMIA. |
| Permanent departures | Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country. |
| Short-term arrivals | Short-term arrivals comprise:overseas visitors whose intended stay in Australia is less than 12 monthsAustralian residents returning after an absence of less than 12 months overseas. |
| Short-term departure | Short-term departures comprise:Australian residents who intend to stay abroad for less than 12 monthsoverseas visitors departing who stayed less than 12 months in Australia. |
| State where spent most time | Overseas visitors are asked on departure for the name of the state or territory in which they spent the most time. This differs from 'state of clearance' which is available on request. |
