<b>Short-term resident departures</b>			
Trend	295.6	0.6	..
Seasonally adjusted	301.0	3.1	..
Original	354.3	..	0.8

## KEY POINTS

### TREND ESTIMATES

- Trend estimates in this issue take into account the impact of recent world events. See paragraphs 21 and 22 of the Explanatory Notes for more detail.
- Short-term visitor arrivals continue to increase steadily with the trend estimate for September 2003 (423,900 movements) representing an increase of 0.7% compared to the previous month and followed an increase of 0.8% for July and August.
- Short-term resident departures also continue to increase steadily. The trend estimate for September 2003 (295,600 movements) represents an increase of 0.6% from the previous month and followed an increase of 0.7% for July and August.

### SEASONALLY ADJUSTED

- In seasonally adjusted terms short-term visitor arrivals for September (430,600 movements) increased by 9.3% compared to August 2003. This increase may be attributable to visitors and participants beginning to arrive for the 2003 Rugby World Cup.
- Short-term departures of Australian residents for September 2003 (301,000 movements) increased by 3.1% compared to August 2003. This monthly increase is the same as that experienced in August (3.1%).

### ORIGINAL ESTIMATES

- In original terms there were 385,600 short-term visitors to Australia in September 2003, an increase of 7.5 compared to September 2002 (358,600 movements).
- There were 354,300 short-term departures of Australian residents, an increase of 0.8% compared to September 2002 (351,600 movements).

## INQUIRIES

- For further information about these and related statistics, contact the National Information and Referral Service on 1300 135 070 or Olivia Agius on Canberra (02) 6252 5640.

# NOTES

## FORTHCOMING ISSUES

ISSUE	RELEASE DATE
October 2003	12 December 2003
November 2003	22 January 2004
December 2003	12 February 2004
January 2004	16 March 2004
February 2004	13 April 2004
March 2004	12 May 2004

## PRELIMINARY DATA

Preliminary estimates of short-term visitor arrivals for October 2003 will be available on the ABS website <http://www.abs.gov.au> on 14 November 2003. These estimates can be accessed by going to the home page and selecting Main Features (located under Statistical Products and Services) and then 34. Migration. Select *Short-term Visitor Arrivals to Australia, Preliminary* (cat. no. 3401.0.55.001).

## DATA NOTES

For data quality issues see appendix 2 (page 21).

This publication contains movement data. Care should be taken when interpreting this movement data as 'people'. See paragraph 5 of the Explanatory Notes for more detail.

Calculations of percentage and numeric change as shown in the Key Points and/or Main Features of this publication are based on unrounded data. See paragraph 11 of Explanatory Notes for more detail.

## CHANGES IN THIS ISSUE

There is no special article in this issue.

Trend estimates in this issue have been revised to take into account the impact of recent world events. See paragraphs 21 and 22 of the Explanatory Notes for more detail.

Australian Statistician

## MAIN FEATURES

### RUGBY WORLD CUP 2003

Seasonally adjusted estimates of short-term visitor arrivals for September 2003 were up 9% compared to the previous month. The increase appears to be a result of Australia hosting the 2003 Rugby World Cup with increases in arrivals from participating countries such as New Zealand, the United Kingdom and South Africa.

The Rugby World Cup is a one-off, non-seasonal event and hence its impact can be seen in the seasonally adjusted series. The trend series smoothes out such one-off events from the seasonally adjusted series, and reveals the underlying behaviour of the series without the influence of such events.

### SHORT-TERM VISITOR ARRIVALS

In original terms, the top ten source countries for short-term visitor arrivals for September 2003 and the percentage and numeric change compared to September 2002 are presented in the table below.

#### SHORT-TERM VISITOR ARRIVALS, Major Source Countries—September 2003

	September 2003	September 2002	Numeric change	Percentage change
	'000	'000	'000	%
New Zealand	85.9	80.9	5.0	6.2
Japan	53.0	52.8	0.2	0.5
United Kingdom	43.3	39.6	3.7	9.3
United States of America	27.1	26.4	0.7	2.6
Singapore	19.1	17.4	1.7	9.7
Malaysia	18.3	15.8	2.5	16.1
China	15.0	12.9	2.1	16.2
Korea	14.4	10.7	3.7	34.5
Germany	11.9	11.6	0.4	3.1
Hong Kong (SAR of China)	9.3	9.3	—	0.3

— nil or rounded to zero (including null cells)

### SHORT-TERM VISITOR DEPARTURES

There were 359,700 short-term visitor departures in September 2003. With the exception of the Northern Territory and Tasmania, compared to September 2002, all states experienced an increase in overseas visitors. Victoria experienced the largest numeric increase (10,100 movements or 21%) compared to September 2002 and South Australia experienced the largest percentage increase (30% or 1,800 movements).

## MAIN FEATURES *continued*

### SHORT-TERM RESIDENT DEPARTURES

In original terms, the top ten destinations of short-term resident departures for September 2003 and the percentage and numeric change compared to September 2002 are presented in the table below.

#### SHORT-TERM RESIDENT DEPARTURES, Major Destinations—September 2003

	September 2003	September 2002	Numeric change	Percentage change
	'000	'000	'000	%
New Zealand	61.4	52.2	9.2	17.7
United Kingdom	35.6	33.5	2.1	6.3
United States of America	30.7	31.2	-0.5	-1.6
Indonesia	21.1	32.1	-11.0	-34.4
Fiji	16.3	12.7	3.6	28.3
China	15.7	17.1	-1.4	-8.4
Hong Kong (SAR of China)	12.6	11.7	0.9	8.0
Thailand	12.5	18.3	-5.8	-31.7
Italy	11.9	12.6	-0.7	-5.3
Singapore	11.8	12.6	-0.8	-6.3

### PERMANENT AND LONG-TERM MOVEMENTS

There were 9,010 permanent (settler) arrivals to Australia during September 2003, an increase of 19% (1,440 movements) compared to September 2002. Settlers born in the United Kingdom (20%) accounted for the largest proportion of permanent arrivals for September 2003. The second largest proportion of settlers were born in New Zealand (10%).

Care should be taken when using long-term arrivals data as it is known some individuals who travel multiple times in a year are counted each time they cross Australia's borders (see paragraph 5 of Explanatory Notes). Long-term arrivals in this publication are not an appropriate source of migration statistics. For further information refer to *Australian Demographic Statistics* (cat. no. 3101.0).

There were 3,990 Australian residents departing permanently from Australia during September 2003.

(b) Includes not stated/inadequately described.

(c) Includes vague responses which cannot be coded to any other category.

## EXPLANATORY NOTES

### INTRODUCTION

**1** This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 26).

### SOURCE OF THE STATISTICS

**2** Persons arriving in, or departing from, Australia provide information in the form of incoming and outgoing passenger cards (see appendix 1). Incoming persons also provide information in visa applications, apart from people travelling as Australian and New Zealand citizens. These and other information available to the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA) serve as a source for statistics of overseas arrivals and departures.

**3** In July 1998, DIMIA revised the incoming and outgoing passenger cards and associated procedures as well as computer systems. Following these changes, some questions on the passenger cards were not compulsory and answers to these questions were not checked by Customs officers. The question on marital status was deleted. Data on marital status is now derived from visa applications (only for certain visa classes) and is therefore not available for Australian or New Zealand citizens. The changes also affect the data for 'previous country of residence' which is imputed for Australian and New Zealand citizens. For more information see the May 1998 issue of this publication. Since July 1998, there have been additional minor changes to both incoming and outgoing passenger cards.

**4** From July 2001, DIMIA adopted a new passenger card processing system which involved electronic imaging of passenger cards and intelligent character recognition of the data stored in the images. This process has yielded several improvements to the processing of passenger card data, most notably the detailed information about missing values. There have also been several changes to data quality. Information on these changes appears in appendix 2.

### SCOPE

**5** The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages. Similarly, these statistics exclude those persons not travelling under standard visa conditions, that is, unauthorised arrivals.

### STATE AND TERRITORY CLASSIFICATION

**6** Following the 1992 amendment to the Acts Interpretation Act to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the state/territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands.

### COUNTRY CLASSIFICATION

**7** The classification of countries in this publication is the Australian Standard Classification of Countries for Social Statistics (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (cat. no. 1269.0).

**8** The statistics on country of birth, citizenship, residence or main destination have certain limitations because of reporting on passenger cards. For instance, United Kingdom includes England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea.

## EXPLANATORY NOTES *continued*

### ESTIMATION METHOD

**9** Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed. Sample standard errors can be found on page 26 of this publication.

**10** Since January 1997 variable sample skips have been used in the selection of records to be sampled. Separate skips are applied for each country of citizenship and the skips may vary for each processing month. Over a year about 3.5% of all short term movements are selected for sampling.

**11** The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. The sums of the components may not add to totals due to rounding. Analysis featured in the Key Points and Main Features of this publication is based on unrounded data. Calculations made on rounded data may differ to those published.

### CORRECTIONS AND IMPUTATIONS

**12** The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items. Information on non-response rates and data imputation appears in appendix 2.

**13** Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and main reason for journey.

### SEASONAL ADJUSTMENT AND TREND ESTIMATES

**14** Seasonally adjusted and trend estimates of short-term overseas visitor arrivals and short-term Australian resident departures are shown in tables 1 and 2 respectively.

**15** Seasonally adjusted estimates are derived by estimating and removing systematic calendar related effects from the original series. In the short-term visitor arrival and short-term resident departure series, these calendar related effects are known as seasonal (e.g. increased travel in December due to the Christmas holiday period) and trading day influences (arising from the varying length of each month and the varying number of Sundays, Mondays, Tuesdays, etc. in each month). Each influence is estimated by separate seasonal and trading day factors which, when combined, are referred to as the combined adjustment factors.

**16** From July 2003, concurrent seasonal adjustment methodology has been used to derive the combined adjustment factors. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent seasonal adjustment replaces the forward factor methodology used since seasonal adjustment of short-term visitor arrivals began in 1969 and short-term resident departures in 1976.

## EXPLANATORY NOTES *continued*

### SEASONAL ADJUSTMENT AND TREND ESTIMATES

**17** Concurrent adjustment can result in revisions each month to the seasonally adjusted estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. Although there is no specific Information Paper on concurrent adjustment to short-term visitor arrivals or resident departure, more detail on the method in general can be found in the information paper, *Introduction to Concurrent Seasonal Adjustment into the Retail Trade Series* (cat. no. 8514.0).

**18** Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of the Australian dollar relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation. Trend estimates take these irregular influences into account.

**19** The trend estimates of short-term overseas visitor arrivals and short-term Australian resident departures are derived by applying a 13-term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.

**20** While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring Trends* (cat. no. 1349.0), released 4 August 2003.

**21** Trend estimates in this issue have taken the impact of Severe Acute Respiratory syndrome (SARS), the Second Gulf War and recent terrorist threats into account. These impacts have been estimated as transitional effects on the original time series data, based on recent evidence of a recovery in short-term visitor arrivals and short-term resident departures. These estimates may be revised with the availability of additional time series data and further evidence of the continuing recovery. Details of the methods used in this exercise are available on request.

**22** A break in the trend series for short-term resident departures has been created because of the effect of the Bali bombing in Indonesia on 12 October 2002. This impact has been estimated as a permanent effect as the number of Australia residents departing to Indonesia has not yet shown evidence of a recovery. These estimates may be revised with the availability of additional time series data when evidence of a recovery is apparent.

### RELATED PUBLICATIONS

**23** Users of these statistics may also wish to refer to the following ABS publications:

- *Short-term Visitor Arrivals to Australia, Preliminary* (cat. no. 3401.0.55.001) — issued monthly
- *Australian Demographic Statistics* (cat. no. 3101.0) — issued quarterly
- *Migration, Australia* (cat. no. 3412.0) — issued annually

**24** Related statistics are also published by the Department of Immigration and Multicultural and Indigenous Affairs, the Department of Industry, Tourism and Resources and the Bureau of Tourism Research.

**25** Current publications and other products produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (cat. no. 1101.0). The Catalogue is available from any ABS office or the ABS web site <[www.abs.gov.au](http://www.abs.gov.au)>. The ABS also issues a daily Release Advice on the web site which details the products to be released in the week ahead.

## EXPLANATORY NOTES *continued*

### ADDITIONAL STATISTICS AVAILABLE

**26** As well as the statistics included in this and related publications, other relevant unpublished data are available for the following variables:

- Citizenship (Nationality)
- Country of birth
- Age (Date of birth)
- Sex
- Marital status (not available for Australian or New Zealand citizens)
- Category of travel
- Permanent migrant
  - Previous/future country of residence
  - State of intended address/lived
- Overseas visitor
  - Intended/actual length of stay
  - Main reason for journey
  - Country of residence
  - State of intended address in which most time spent
- Australian residents
  - Intended/actual length of stay overseas
  - Country spent/intend to spend most time abroad
  - State or territory of intended address/state or territory lived
- Occupation (not available for short-term movements)
- Country of embarkation/disembarkation
- Airport/Port of arrival/departure
- Arrival/departure date
- Intention to live in Australia for next 12 months (not available for short-term movements)

### REFORMATTED PUBLICATION

**27** As a result of a dissemination review for Overseas Arrival and Departure Statistics, outlined in the *ABS Demography Working Paper 2003/4 — A New Dissemination Strategy for Overseas Arrival and Departure Statistics*, a number of changes were introduced in the May 2003 and June 2003 issues. Changes included the removal of preliminary data for short-term visitor arrivals, a new table structure and a reformatting of the time periods in tables 3 to 8. For more detail about these changes, refer to the following issues of this publication;

- May (Preliminary) 2003 — released 25 June 2003
- May 2003 — released 24 July 2003
- June 2003 — released 11 August 2003

### ACKNOWLEDGEMENTS

**28** This publication draws extensively on information provided by DIMIA. This continued cooperation is very much appreciated; without it, the statistics published would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

Outgoing passenger card used from July 2003.

## APPENDIX 2 DATA QUALITY ISSUES

SCANNING AND IMAGING	<p>The introduction of a new passenger card processing system from July 2001 has meant that information is now available on the frequency and impact of data item imputation. Much of this information has not been available previously. Additionally, the move to a new processing system has also given rise to new data quality issues directly associated with scanning and imaging.</p>
DEFECTIVE CARDS	<p>There are a small number of unreadable or damaged passenger cards for each month. ABS receives the count of these cards from the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA) by movement direction, box type and port of clearance. The information on these cards is then physically processed by the ABS and included in the estimates presented here.</p>
DURATION OF STAY	<p>From July 1998 DIMIA are able to determine the actual length of stay for departing overseas visitors and arriving Australian residents which was previously collected from information on intended length of stay supplied on the arrival and departure card by the passenger. This new method had resulted in a change in data distribution with the number of passengers staying for one year exactly declining significantly when compared with movements prior to July 1998.</p> <p>The introduction of the new passenger card processing system from July 2001 has shown further evidence of rounding to exactly one year in intended duration of stay/travel as reported by visitors arriving in Australia and Australian residents departing the country. To reflect the historical movement patterns, the records with a reported duration of exactly one year are allocated to short-term and long-term. For visitors, 75% of such records are allocated to short-term and 25% to long-term. The ratio is 67:33 for residents departing Australia.</p>
TRIPS AND MATCHING OF MOVEMENTS ON THE SECOND LEG OF TRAVEL	<p>Each month there are records for long-term residents returning to Australia and long-term visitors departing Australia which could not be matched with DIMIA's Travel and Immigration Processing System (TRIPS) records. Records have been created directly from TRIPS for records that did not match with a passenger card and then added to the ABS processing system.</p>
NEW ZEALAND CITIZENS	<p>Under the Trans-Tasman Agreement, New Zealand (NZ) citizens are not required to have a visa to travel to Australia. As a result, on arrival in Australia their visa documentation cannot be used to determine whether they are either a permanent migrant or a temporary visitor, or an Australian resident returning from New Zealand. DIMIA believes that a substantial proportion of holders of NZ passports tick Box A (migrating to Australia) each time they arrive in the country, causing an overcount of NZ migrants entering Australia.</p> <p>The following edits were applied to correct the overcounting of NZ migrants:</p> <p><i>July 2001 to June 2002</i></p> <p>With the introduction of the new processing system from July 2001, DIMIA coded all NZ citizen arrivals who had ticked Box A and had been to Australia previously (based on immigration records) to resident returning (Box C). If these people were visitors previously, this recoding had the effect of incorrectly reducing the number of NZ migrants whilst at the same time incorrectly increasing the number of NZ citizen returning residents. This problem was overcome by moving the NZ citizens that have been changed by DIMIA from Box A to Box C back to Box A.</p>

## APPENDIX 2 DATA QUALITY ISSUES *continued*

July 2002 onwards

From July 2002, DIMIA has introduced a new edit system to ensure accurate Permanent Arrivals of New Zealand citizens statistics. Where the person ticks Box A on his/her passenger card (first arrival as a migrant) the record is verified by checking previous entries and related passenger card records and if the person is previously recorded as a migrant or resident then they will be counted as returning residents. This will result in more accurate recording of New Zealand citizens who are migrating to Australia as against those who are residents returning.

### NON-RESPONSE

#### **A1** NON-RESPONSE RATES PRIOR TO IMPUTATION (a)—September 2003

<i>OAD Variables</i>	<i>Incoming</i>	<i>Outgoing</i>
	%	%
Citizenship (Nationality)	0.1	—
Country of Birth	1.3	1.0
Age (Date of birth)	—	—
Sex	0.1	—
Marital Status(b)	35.9	46.2
Category of travel	1.4	0.8
Permanent migrant		
Previous/future country of residence	17.3	12.2
Overseas visitor		
Intended/actual length of stay	4.2	1.5
Main reason for journey	5.2	..
Australian residents		
Actual/intended time away from Australia	1.1	5.2
Main reason for journey	..	4.5
Occupation(c)	6.0	5.1
Country of embarkment/disembarkment	3.0	2.4
Whether intend to live in Australia for next 12 months	23.9	..

(a) Non-response rates are unweighted.

(b) Not available for Australian or New Zealand citizens.

(c) Not available for short-term movements.

### INTENDED LENGTH OF STAY/TIME AWAY FROM AUSTRALIA

Non-response rates are available for these data items from November 1998. For data prior to November 1998, imputation carried out as part of processing by DIMIA has prevented reliable estimation of non-response rates for these two data items.

### MAIN REASON FOR JOURNEY

Before the introduction of the redesigned passenger card in July 1998, 5% of short-term visitor arrivals, on average, were recorded as having a reason for journey of 'Other' or 'Not Stated'. This percentage rose to 14% for July, 16% in August and 29% in September 1998 as a result of processing problems. These problems have now been addressed by DIMIA, with the percentage of 'Other' and 'Not Stated' dropping in October 1998 to 8% and 7% in November 1998.

From the January 1999 issue of this publication, published figures (table 3 in this publication) referencing these three months have been revised. The revised data were calculated by estimating the number of persons responding 'Other / Not Stated' using past trends for each country of citizenship and proportionally allocating any persons in excess of the estimated 'Other / Not Stated' total amongst the remaining categories. 'Not Stated' rates are now separately available from February 1999 onwards.

## APPENDIX 2 DATA QUALITY ISSUES *continued*

### STATE WHERE SPENT MOST TIME

For the months of August 1998, September 1998 and October 1998, data entry problems experienced by DIMIA caused an overstatement of the Northern Territory as the main state of stay with a corresponding understatement for the remaining states and territories. These numbers have returned in November 1998 to levels more comparable with previous years, with DIMIA indicating that they have instigated data quality procedures to address this issue.

From the January 1999 issue of this publication, published figures (table 7 in this publication) referencing these months have been revised. The revised data were calculated by estimating the number of persons indicating the Northern Territory as their main state of stay using past trends and proportionally allocating any persons in excess of these estimates amongst the remaining states and territories.

With the introduction of the new processing system from July 2001, DIMIA have provided the ABS with data on all missing values of state of stay and state of usual residence. These missing values are now imputed.

### DATA IMPUTATIONS

Data was imputed for non-response for state of stay/residence. For state of stay, non-responses were imputed at the category of traveller and state of clearance level. Non-response rates for state of stay are presented in the table below:

#### **A2** DISTRIBUTION OF NON-RESPONSE RATES FOR STATE OF STAY BY CATEGORY OF TRAVELLER(a)—September 2003

<i>Category of traveller</i>	<i>September</i>
	%
Permanent arrivals — settlers	5.7
Long-term residents returning	1.9
Long-term visitors arriving	3.8
Short-term residents returning	0.2
Short-term visitors arriving	5.6
Residents departing permanently	3.8
Long-term residents departing	3.3
Long-term visitors departing	11.2
Short-term residents departing	1.3
Short-term visitors departing	6.5

(a) Non-response rates are weighted.

Non-responses for country of stay and country of usual residence were imputed in two stages. In the first stage, records with country of stay/residence missing were set to country of disembarkation/embarkation if a response was available. In the second stage, for remaining records where country of stay/residence was missing, values were imputed at the category of traveller, reason for journey and country of citizenship level based on responses to other cards within each subgroup. Accordingly, the level of records with data for country of stay/residence not stated has been minimised.

#### *Change in approach to non-response state of stay for long-term visitor departures*

A new procedure applied before imputation of non-response state of stay for long-term visitor departures. The procedure has two aspects. First, it detects non-response of state of stay for long-term visitor departures and then looks to the other outgoing passenger card boxes (box E and F on the outgoing passenger card) for a state of stay response. If no response is found, the procedure then looks for a response on the arrival card (which can be obtained by matching the arrival and departure card via a unique person identifier). Second, in the case of a correction of the box marked by a passenger (eg. a visitor marks a resident box) the state of stay will be transferred with the record or if it is still a non-response, the arrivals card will be sourced. If both these steps fail to identify a state of stay, the record then proceeds to imputation.

## APPENDIX 2 DATA QUALITY ISSUES *continued*

Country of stay

Table A3 below presents the percentage of records with country of stay/residence missing as supplied by DIMIA and prior to imputation.

### **A3** COUNTRY OF STAY/RESIDENCE NON-RESPONSE RATES BY PASSENGER CARD BOX TYPE(a)—September 2003

<i>Box type</i>	<i>September</i>
	%
A: Migrating permanently to Australia	17.3
B: Visitor or temporary entrant	3.2
C: Resident returning to Australia	7.2
D: Visitor of temporary entrant departing	11.3
E: Australian resident departing temporarily	1.6
F: Australian resident departing permanently	12.2

(a) As on initial data supplied by DIMIA.

Table A4 shows the non-response rates for country of stay/residence following the application of the first stage of imputation.

### **A4** COUNTRY OF STAY/RESIDENCE NON-RESPONSE RATES BY CATEGORY OF TRAVELLER(a)(b)—September 2003

<i>Category of traveller</i>	<i>September</i>
	%
Permanent arrivals — settlers	4.5
Long-term residents returning	0.8
Long-term visitors arriving	0.1
Short-term residents returning	0.7
Short-term visitors arriving	0.3
Residents departing permanently	1.0
Long-term residents departing	0.1
Long-term visitors departing	0.9
Short-term residents departing	0.2
Short-term visitors departing	0.2

(a) Following imputation based on country of disembarkation/embarkation.

(b) Non-response rates are weighted.

SEPTEMBER 1998  
PROCESSING

A problem was experienced in the processing of OAD data for movement dates between 6 September 1998 and 16 September 1998, following the introduction of changes to DIMIA's input processing system. This problem may affect in the order of 10% of all September records used in estimation and result in incorrect details for citizenship, date of birth, sex and country of birth.

PERMANENT ARRIVALS  
DURING 1998

The number of permanent arrivals during July to December 1999 were revised in October 2000, as advised by DIMIA.

SEPTEMBER 1999  
PROCESSING

September 1999 overseas arrivals and departures data are revised for movements from, and to, China (excl. SARs and Taiwan) and Hong Kong (SAR of China) in respect of three variables: country of birth, country of citizenship and country of residence/stay. Changes to 'country of birth' and 'country of citizenship' have been made from data supplied by DIMIA. Changes to 'country of residence/stay' have been made by assuming the average proportion of country of birth to country of residence/stay for migrants from China (excl. SARs and Taiwan) and Hong Kong (SAR of China) in September 1995 to September 1998.

## APPENDIX 2 DATA QUALITY ISSUES *continued*

### SEPTEMBER QUARTER 2000 PROCESSING

A processing error has been identified which affected the distribution of short-term resident departures by reason for journey for the months of August and September 2000. Affected data have been re-processed, and a revised copy of table 3 for the September quarter 2000 has been reissued in the October to December 2000 edition of this publication.

### CHANGE TO PROCESSING OF INTENDED LENGTH OF STAY

There is evidence to suggest that when completing the intended length of stay question on the incoming passenger card (Box B), some passengers are entering their arrival/departure date or their birth date rather than their intended length of stay.

From August 2003 a rule has been applied to the data processing system stating that if all three elements are complete (years, months and days), then the intended length of stay is to be coded to a non-response. The ABS currently assigns 'not stated' duration as a short-term movement, however a review of this procedure will be undertaken in the near future.

This procedure changes the prior data processing system which reads only the years from the field on the passenger cards. The previous data processing system could be adding to overestimation of the number of long-term visitor arrivals. This new procedure is to be implemented from September 2003.

## TECHNICAL NOTE TREND REVISIONS

### EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

**1** The most recent trend estimates for short-term visitor arrivals and short-term resident departures, are likely to be revised when the next month's seasonally adjusted estimates become available. To assist readers of this publication in analysing short-term movement trends, the approximate effect of two possible scenarios on the previous trend estimate of short-term visitor arrivals and resident departures are presented below.

#### Visitor arrivals

- 1 The October seasonally adjusted estimate of visitor arrivals is 3.2% higher than September.
- 2 The October seasonally adjusted estimate of visitor arrivals is 3.2% lower than September.

#### Resident departures

- 1 The October seasonally adjusted estimate of resident departures is 3.0% higher than September.
- 2 The October seasonally adjusted estimate of resident departures is 3.0% lower than September.

**2** The percentage changes of 3.2 for visitor arrivals and 3.0 for resident departures were chosen because they represent the average absolute monthly percentage change for visitor arrivals and resident departures over the last ten years, respectively.

**3** Under concurrent seasonal adjustment, the most recent seasonally adjusted and trend estimates are likely to be revised when original estimates for subsequent months become available. The trend revision is a combined result of the revision of the seasonally adjusted estimates and the revision derived from the use of asymmetric moving averages as future data become available. ABS research shows that about 75% of the total revision to the trend estimate at the current end of the time series is due to the use of different asymmetric moving averages when the original estimate for the next time period becomes available. To assess the reliability of the trend estimate at the current end, the "what-if" chart presents trend estimates under two different scenarios for the next time period. The chart shows only the impact due to the changes of the asymmetric moving averages and does not include the unknown impact of revision to seasonal factor estimates that would arise when the original estimate for the next time period becomes available.

## STANDARD ERRORS

### RELIABILITY OF ESTIMATES

Estimates based on a sample are subject to sampling variability that is, they may differ from those that would be obtained from full enumeration.

The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.

It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following table of standard errors and relative standard errors gives an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

### APPROXIMATE STANDARD ERROR ON ESTIMATES FOR STRATIFIED SAMPLE

<i>Estimated number of persons</i>	SHORT-TERM ARRIVAL OR DEPARTURE OF AUSTRALIAN RESIDENT		SHORT-TERM ARRIVAL OR DEPARTURE OF OVERSEAS VISITOR		TOTAL ARRIVAL OR DEPARTURE	
	<i>Standard error</i>	<i>Relative standard error</i>	<i>Standard error</i>	<i>Relative standard error</i>	<i>Standard error</i>	<i>Relative standard error</i>
	no.	%	no.	%	no.	%
10000	550	6	490	5	550	6
5000	450	9	330	7	410	8
2000	280	14	230	11	250	13
1000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.

The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.

The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.

## STANDARD ERRORS *continued*

---

### RELIABILITY OF ESTIMATES *continued*

An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 2002 and January 2003 are 1,500 and 750 respectively. The difference between the 2002 and 2003 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately 266 ( $1.4 \times 190$ ), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.

## GLOSSARY

<b>Australian resident</b>	Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.
<b>Category of movement</b>	<p>Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main categories of movement:</p> <ul style="list-style-type: none"><li>■ permanent movements</li><li>■ long-term movements</li><li>■ short-term movements.</li></ul> <p>A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.</p>
<b>Country of residence</b>	Country of residence refers to the country in which travellers regard themselves as living or as last having lived.
<b>Intended length of stay</b>	On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'.
<b>Long-term arrivals</b>	<p>Long-term arrivals comprise:</p> <ul style="list-style-type: none"><li>■ Overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and</li><li>■ Australian residents returning after an absence of 12 months or more overseas.</li></ul>
<b>Long-term departures</b>	<p>Long-term departures comprise:</p> <ul style="list-style-type: none"><li>■ Australian residents who intend to stay abroad for 12 months or more (but not permanently); and</li><li>■ Overseas visitors departing who stayed 12 months or more in Australia.</li></ul>
<b>Main destination</b>	Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.
<b>Main reason for journey</b>	<p>On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their purpose of journey. From September 1994, all statistics relating to main reason for journey have been published using the following categories:</p> <ul style="list-style-type: none"><li>■ convention/conference</li><li>■ business</li><li>■ visiting friends/relatives</li><li>■ holiday</li><li>■ employment</li><li>■ education</li><li>■ other</li></ul> <p>In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business visitor'.</p>
<b>Overseas Arrivals and Departures (OAD)</b>	Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).

## GLOSSARY *continued*

---

<b>Permanent arrivals</b>	<p>Permanent arrivals (settlers) comprise:</p> <ul style="list-style-type: none"><li>■ travellers who hold migrant visas (regardless of stated intended period of stay);</li><li>■ New Zealand citizens who indicate an intention to settle; and</li><li>■ those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).</li></ul> <p>This definition of settlers is used by the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA). Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and DIMIA.</p>
<b>Permanent departures</b>	<p>Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.</p>
<b>Short-term arrivals</b>	<p>Short-term arrivals comprise:</p> <ul style="list-style-type: none"><li>■ overseas visitors whose intended stay in Australia is less than 12 months; and</li><li>■ Australian residents returning after an absence of less than 12 months overseas.</li></ul>
<b>Short-term departure</b>	<p>Short-term departures comprise:</p> <ul style="list-style-type: none"><li>■ Australian residents who intend to stay abroad for less than 12 months; and</li><li>■ overseas visitors departing who stayed less than 12 months in Australia.</li></ul>
<b>State where spent most time</b>	<p>Overseas visitors are asked on departure for the name of the state or territory in which they spent the most time. This differs from 'state of clearance' which is available on request.</p>

## FOR MORE INFORMATION . . .
