

Child Care

Australian Capital Territory

June 1999

LIST OF TABLES

USE OF CHILD CARE

- 3 Type of care, age
- 5 Type of care, selected demographic characteristics
- 6 Type of care, weekly hours of care
- 7 Type of care, number of weekdays care used

COST OF CHILD CARE

- 12 Weekly cost of care, type of care
- 13 Weekly family income, type of care

DEMAND FOR CHILD CARE

- 17 Whether (additional) formal care required, age

WORK AND CHILD CARE

- 25 Type of care, labour force status of parents
- 30 Work arrangements used to care for children

Explanatory Notes

Technical note on data reliability

Explanatory Notes

Introduction

1 This publication contains results from the Child Care Survey conducted throughout Australia in June 1999. It is a continuation of a series of surveys on this topic, conducted since 1969. The previous survey was in March 1996. The major aim of the survey was to collect data on the use of, and demand for, child care for children aged less than 12 years. Information was also collected on the use and non-use of the Childcare Rebate and the working arrangements and income of parents with children under 12.

Scope and Coverage

2 The Child Care Survey was conducted as a supplement to the Monthly Population Survey (MPS). The survey covered rural and urban areas of all States and Territories of Australia. The survey is based on a multi-stage area sample of private dwellings (houses, flats etc.) and non-private dwellings (hospitals, hotels etc.). The MPS is described more fully in *Labour Force, Australia* (6203.0). The survey excluded:

- members of the Australian permanent defence forces;
- certain diplomatic personnel of overseas governments, customarily excluded from censuses and surveys;
- overseas residents in Australia; and
- members of non-Australian defence forces (and their dependents) stationed in Australia.

3 It also excluded persons living in remote and sparsely settled parts of Australia. The exclusion of these persons will only have a minor impact on any aggregate estimates that are produced for individual States and Territories, with the exception of the Northern Territory where such persons account for about 20% of the population.

4 Information for the Child Care Survey was collected only from private dwellings with children under 12 years of age resident in the selected dwelling. Visiting children were excluded. Children residing in non-private dwellings such as hospitals, motels and gaols were also excluded from the Child Care Survey but included in the MPS.

Collection Methodology

5 Information was obtained through interviews conducted over a two-week period between 12 and 24 June 1999. Data collected on the use of child care related to the week prior to interview.

6 The full range of child care information was collected for a maximum of two children in each household. Information was obtained from an adult who permanently resided in the selected household and was either the child's parent, step-parent or guardian.

7 In households with more than two children aged under 12, two children were randomly selected and the complete set of child care information was collected for them. A reduced set of information was collected for any 3rd, 4th and 5th children in

the households. For the 6th and subsequent children (if any) only age and sex data were collected. This sampling methodology differs from previous surveys where a complete set of child care information was collected for all children resident in a selected household.

8 The complete set of child care information was collected for approximately 10,100 children (after removing non-respondents). The reduced data set was collected for a further 1,200 children.

Changes between surveys

9 Some changes were made in the survey content between 1996 and 1999.

New questions were asked about location of the child's long day care centre or preschool. These questions covered where the service was located, whether this was the preferred location and if not, what was the preferred location.

New questions were asked about the reason/s for increasing/decreasing the amount of care used.

The 1999 survey separately identified an expanded range of informal care providers. This included grandparents and parents living elsewhere, both of whom were previously included in the category other relative.

In 1996 questions were asked about care arrangements used to look after sick children. These questions were not asked in 1999.

In addition, some minor changes were made to questionnaire layout and wording.

Childcare Cash Rebate

10 The Childcare Rebate (CR), formerly the Childcare Cash Rebate, scheme pays families a percentage of their work-related child care costs regardless of income and assets. The amount payable depends on the number of children receiving care for work-related purposes, the total cost of that care net of any Childcare Assistance the family may have received, and family income. For families with a taxable income of \$70,000 or less (plus \$3,000 for each child after the first), the weekly rebate is 30% of child care costs in excess of \$20.50, up to a maximum of \$28.95 for one child and \$64.05 for more than one child. If taxable family income is more than \$70,000 (plus \$3,000 for each child after the first), the rebate is 20% of child care costs in excess of \$20.50, up to a maximum of \$19.30 for one child and \$42.70 for more than one child.

The Catalogue and Release Advice are available from any ABS office.

Technical Notes on Data Reliability

Estimation procedure

1 Estimates obtained from the survey were derived using a complex ratio estimation procedure which ensures that they conform to an independently estimated distribution of the population by age, sex and State. Estimates of the distribution of households by State and number of persons were also used to improve the estimation procedure.

Reliability of the Estimates

2 Estimates provided in this publication are subject to non-sampling and sampling errors.

Non-sampling error

3 Non-sampling errors may arise as a result of errors in the reporting, recording or processing of the data and can occur even if there is a complete enumeration of the population. These errors can be introduced through inadequacies in the questionnaire, non-response, inaccurate reporting by respondents, errors in the application of survey procedures, incorrect recording of answers, and errors in data entry and processing.

4 It is difficult to measure the size of non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey and from question to question. However, every effort is made in the design of the survey and development of survey procedures to minimise the effects of these errors.

Sampling error

5 Sampling error is the error which occurs by chance because the data were obtained from a sample, not the entire population.

Standard error of estimates

6 One measure of the variability of estimates which occurs as a result of sampling is the *standard error* (SE). This measures the extent to which an estimate might have varied by chance because only a sample of households was included. There are about two chances in three that a survey estimate is within one standard error of the figure that would have been obtained if all dwellings had been included, and about 19 chances in 20 that it is within two standard errors. That is, there are 19 chances in 20 that the true estimate is in the range:

$x - 2SE(x)$ to $x + 2SE(x)$
(where x is the estimate)

7 The SE of an estimate may be obtained from the tables below.

Relative standard errors

8 The SE can also be expressed as a percentage of the estimate and this is known as the *relative standard error* (RSE). While the SE increases as the size of the

estimate increases, the RSE will decrease so that larger estimates are relatively more reliable than smaller ones.

9 The RSE is determined by dividing the SE of an estimate $SE(x)$ by the estimate x and expressing it as a percentage. That is:

$$RSE(x) = SE(x) \times (100/x)$$

10 Proportions and percentages formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and the denominator. The formula for the RSE of a proportion or percentage is:

$$RSE(x/y) = \text{SQRT}\{[RSE(x)]^2 - [RSE(y)]^2\}$$

11 Only estimates with RSE less than 25% are regarded as sufficiently reliable for most purposes. However, estimates and percentages with larger RSE have been included in this publication, preceded by * (RSE between 25% and 50%) or ** (RSE greater than 50%) to indicate that they should only be used with caution.

Glossary

(Additional) formal care

Additional formal care required in the last four weeks for children already using formal care, and formal care required in the last four weeks for children who did not currently use any.

Area of usual residence

State Capital Cities comprises the Statistical Divisions of Sydney, Melbourne, Brisbane, Adelaide, Perth and Hobart. Note that Darwin and Canberra are *excluded* from this category.

Balance of Australia comprises all areas outside the capital cities mentioned above, plus Canberra and Darwin.

Before and after school care program

A type of formal care available to school-aged children before and/or after school hours.

Brother/sister care

Informal care by the child's brothers or sisters, including step brothers or sisters.

Child care arrangements

Relates to those types of care described as formal and informal.

Childcare Rebate (CR)

The Childcare Rebate, formerly the Childcare Cash Rebate, scheme pays families a percentage of their work-related child care costs. It is funded by the Department of Health and Family Services and paid through Medicare offices.

Children

All children under 12 years of age in scope for the survey.

Cost of care

Money paid by parent(s) for a child to attend child care (including no cost) in the reference week.

Eligible children for the CR

Children who used work-related care for which their parent(s) paid, where the total fees for work-related care for the family were at least \$20.50 per week and the family had not already received the maximum weekly rebate allowable.

Family

For the purpose of this publication, a family consists of one or two parents and one or more children under 12 years of age, regardless of whether older children or other relatives are also usually resident.

Family day care

A type of formal care offered in private homes by registered carers, available for a full day to children of all ages.

Family type

Refers to one-parent or couple families.

Family income

Total income received from all sources by the child's parent/guardian and his/her spouse/partner (if any).

Father

The natural, adopted or step father of the child; or the male legal guardian of the child; or the spouse or de facto partner of the mother.

Formal care

Regulated care away from the child's home. The main types of formal care are before and after school care, long day care, family day care, occasional care and preschool. Total formal care comprises formal care only and combinations of formal and informal care.

Full-time/part-time workers

Full-time workers are employed persons who usually work 35 hours or more a week and others who, although they usually work less than 35 hours a week, worked 35 hours or more during the reference week.

Part-time workers are employed persons who usually work less than 35 hours a week and who did so during the reference week.

Grandparent care

Informal care by the child's grandmother or grandfather.

Hours of care

Number of hours a child attended child care in the reference week.

Hours worked

Number of hours actually worked by the child's parent(s) in the reference week.

Informal care

Non-regulated care, arranged by a child's parent/guardian, either in the child's home or elsewhere. It comprises care by (step) brothers or sisters, care by grandparents, care by other relatives (including a parent living elsewhere) and care by other (unrelated) people such as friends, neighbours, nannies or baby-sitters. It may be paid or unpaid. Total informal care comprises informal care only and combinations of informal and formal care.

Long day care centre

Regulated, centre-based care which is available to children between birth and school age for the full day. Centres are usually open for most of the year.

Median

The value which divides the population into two equal parts, one falling below the value and one above.

Mother

The natural, adopted or step mother of the child; or the female legal guardian of the child; or the spouse or de facto partner of the father.

Occasional care

Regulated care which is generally available to children between birth and school age for short periods of time to allow parents to shop, attend appointments, or to take brief breaks from parenting.

Other formal care

Any other non-home-based formal care whose primary function is the care of children for short periods of time eg facilities available at a fitness centre to care for the child while the parent participates in the centre's activities.

Other person care

Informal care by people who are not related to the child such as family friends, babysitters, nannies or neighbours.

Other relative care

Informal care by relatives of the child excluding (step) brothers and sisters, and grandparents. It includes care by the child's other parent living elsewhere as well as care by in-laws and ex-wives/husbands of the parent interviewed.

Preschool

A type of formal care generally available in school hours during school terms for children from three years of age (younger children are sometimes accepted) up to the school starting age. Children usually have fixed attendance times. Also known as kindergarten in some States.

Reason CR not claimed

The main reason parent(s) had not claimed or did not intend to claim the Childcare Rebate for eligible children. Such reasons included not aware of the rebate, carer not registered, not worth the trouble and assumed ineligible, for example because income was thought to be too high or received other government assistance.

Reason used care/reason required (additional) formal care

Respondents were asked to identify all reasons and the main reason.

Work-related reasons include working, looking for work and studying/training for work.

Personal reasons include study or training not related to work, shopping, entertainment, social or sporting activities, giving parents a break/time alone, caring for relatives, visiting doctor, or undertaking voluntary/community activities.

Beneficial for child reasons include good for child and preparation for school.

Take-up rate (for CR)

The proportion of eligible children whose parent(s) claimed or intended to claim the Childcare Rebate.

Work arrangements

Arrangements, such as flexible working hours, permanent part-time work, shiftwork, job sharing or working at home, normally used by employed parents to assist them to care for their child(ren).

In addition to the statistics provided in this publication, the ABS can produce upon request customised tables presenting any of the following information included in the survey. Inquiries should be made to the contact person shown on the front cover of this publication. Information collected in the survey included:

DEMOGRAPHIC ITEMS

Number of children aged under 12 in family
Sex of child
Age of child
Country of birth of child
Year of arrival of child
Whether language other than English spoken at home
Main language spoken at home
School attendance
Labour force status of each parent and both parents combined
Weekly hours worked by each parent
Total income of each parent and both parents combined
Main source of income
Family type
Area of usual residence

CHILD CARE ARRANGEMENTS

Type of child care arrangements used in the past week
Days of attendance in the past week
Hours of child care in the past week
Time of day in the past week (before and after school care only)
Location of care in the past week (before and after school care only)
Provision of out of hours and school holiday care (long day care and preschool only)
Reasons for choice of care centre (long day care and preschool only)
Preferred location of care centre (long day care and preschool only)
Cost of child care in the past week
Reasons for use of child care in the past week
Change in use of child care in the past 12 months
Main reason for change in use of child care in the past 12 months
Attendance at vacation care program in the past 12 months (children attending school only)
Work arrangements normally used to assist with care of children
Whether assistance received from the Childcare Assistance Scheme

CHILDCARE REBATE (CR)

Whether CR was claimed
Main reason for not claiming
Type of child care for which CR was claimed

DEMAND FOR (ADDITIONAL) FORMAL CARE

Type of (additional) formal care required
Number of days (additional) formal care required
Main reason for requiring/not requiring (additional) formal care
Main reason (additional) formal care not available
Main reason for not using (additional) formal care if available
