- (a) Basin not assessed for oil
- (b) No change in any assessments
- (c) No change between 1993–96 assessments
- (d) No unrisks assessment, as oil known to occur in basin
- (e) Political change is seabed boundary with Indonesia & Zone of Cooperation
- (f) Bowen/Surat first assessed as combined basin in 1996
- (g) No change between 1987–93 assessments
- (h) 1987 unrisks, 1996 risks (as oil discovered), so direct comparison invalid
- (i) Bremer first assessed in 1993
- (j) No unrisks assessment of basin—1987 unrisks assessment only
- (k) The most important factor in Carnarvon is drilling results (good & bad)
- (l) Cooper 1993 assessment subsequently regarded as too pessimistic
- (m) 1987 assessed as oil equivalents, 1993 assessed as gas equivalents
- (n) Negative drilling results main factor in Eromanga
- (o) Different geological strata assessed in 1987 & 1993 is main factor
- (p) Gippsland now a 'mature' basin, most of its oil has already been discovered
- (q) Only the Eyre Sub-basin was assessed, deeper water areas not yet assessed
- (r) First unrisks assessment was 1993: small risk that all oil has now been found
- (s) Non-drilling geological information main reason for change

- (a) No change in any assessments
- (b) No change between 1993–96 assessments
- (c) First unrisks assessment was in 1993: risk that all gas has known been found
- (d) No unrisks assessment, as gas known to occur in basin
- (e) Political change is seabed boundary with Indonesia & Zone Of Cooperation
- (f) Bowen/Surat first assessed as combined basin in 1996
- (g) Disappointing exploration results reason for lower assessments post 1987
- (h) 1987 unrisks, 1996 risks (as gas discovered), so direct comparison invalid
- (i) No change between 1987–93
- (j) Bremer first assessed in 1993
- (k) No unrisks 1987, later risk is that gas all found, and this lowers 1993 risks
- (l) No risks assessment of basin—1987 unrisks only
- (m) The most important factor in Carnarvon is drilling results (good & bad)
- (n) Cooper 1993 assessment subsequently regarded as too pessimistic
- (o) 1987 assessed as oil equivalents, 1993 assessed as gas equivalents
- (p) First Euromanga gas assessment in 1996
- (q) Different geological strata assessed in 1987 & 1993 is main factor
- (r) Only the Eyre Sub-basin was assessed, deeper water areas not yet assessed
- (s) Basin assessed for gas
- (t) No unrisks 1993 & 1996 assessments, as gas discovered in Otway post 1987—and this increases later assessments
- (u) Non-drilling geological information main reason for change
