## CHANGES TO THIS ISSUE

Following ongoing quality assurance work a number of data quality issues have been identified with table 37 - National capital accounts by sector and subsector. This table will be unavailable until further notice. However, capital account by sector will continue to be published as part of table 22 - flow of funds matrix.

## SIGNIFICANT EVENTS

During the March quarter 2011 the investment activity of some units have been confidentialised to maintain the anonymity of those units that have not yet given approval to publish their investment activity and in the case where they may be identifiable. Included are units impacted by the privatisation of four Government owned enterprises, life insurance institutions and listed other financial institutions. As a consequence of suppressing estimates directly impacted, it has been necessary to consequentially suppress other series in the affected table to preserve confidentiality. Statistics published in this issue reflect these changes.

The Central bank, banks, securitisers and bond market tables include estimates for internally securitised paper. Please refer to page 6 of the December quarter 2008 release for the ABS treatment of these securities.

## REVISIONS IN THIS ISSUE

There have been revisions back to June 2002 to previously published aggregates due to quality assurance work undertaken through a review of the compilation of the published estimates and through data providers to the ABS Survey of Financial Information, ABS Survey of International Investment and APRA administrative data sets. As a result there are a number of series breaks between March quarter 2002 and June quarter 2002. These series have yet to be backcasted to June quarter 1988, the beginning of the time-series. If you would like more details regarding these series, please contact us on our inquiries line.

#### *Summary*

Households' change in financial position was \$12.6b during the March quarter 2011. During the quarter, households borrowed a total of \$22.5b in the form of loans. On the asset side, net contributions to life insurance and pension fund reserves were \$19.9b. Householders' transactions in deposits were \$10.2b, other accounts receivable transactions were \$5.1b, while net claims on unfunded superannuation were \$2.4b. These were offset by sales of equities of \$1.1b.

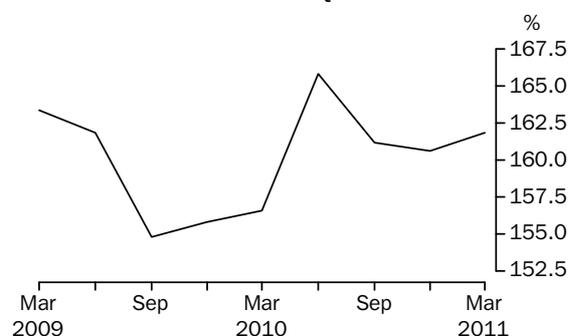

At the end of the quarter, households' stock of financial assets was \$2,651.3b. This was an increase of \$50.6b from the previous quarter, following net transactions of \$36.5b and valuation increases of \$14.1b. Major asset holdings were net equity in reserves of \$1,301.5b, deposits of \$646.6b, equities of \$279.2b and unfunded superannuation claims of \$259.8b.

#### *Household net borrowing and debt to liquid asset ratio*

Of the net \$22.5b loans borrowed by households during the March quarter 2011, bank loans accounted for \$24.9b. Loans from other depository corporations accounted for \$4.6b. These were offset by net repayment of \$5.5b loans to securitisers.

The graph below illustrates that the debt to liquid assets ratio at the end of March 2011 was at 161.9%, an increase of 1.2 percentage points on revised December 2010 data. The ratio was influenced by an increase of 1.6% in total outstanding household borrowings and an increase in total liquid assets of 0.8%. The major contributor to the increase in liquid assets was deposits which rose by 1.6%. This was partially offset by the decrease in equities which fell by 0.5%.

#### HOUSEHOLD DEBT TO LIQUID ASSETS RATIO

#### *Insurance and pension claims*

During the March quarter 2011, households' net equity in reserves of pension funds increased by \$33.6b, made up of \$20.7b in transactions and \$12.9b in valuation increases, bringing household net equity in pension funds to \$1,240.3b. Net equity in reserves of life insurance corporations increased by \$0.2b, made up of -\$0.8b transactions and \$1.0b valuation increases, bringing the household net equity in life insurance to \$60.1b. Net transactions in households' unfunded superannuation claims were \$2.4b and prepayments of premiums and claims against reserves in non-life insurance corporations were \$1.0b during the quarter.

### REST OF THE WORLD

#### *Summary*

Non-residents had net transactions of \$19.0b in Australian financial assets during the March quarter 2011, resulting in \$2,023.8b of Australian financial assets being held by non-residents, up \$30.3b from the revised December quarter 2010. Net transactions were \$19.0b and valuation increases were \$11.3b. The main contributors were net

## EXPLANATORY NOTES

### INTRODUCTION

**1** The Australian Financial Accounts (ABS Cat. No. 5232.0) contains financial profiles of each subsector of the economy and the market for each conventional financial instrument. There are also tables showing inter-sectoral financial transactions and measures of sectoral financial surpluses and deficits.

**2** Financial accounts of various types – which are also called flow of funds statistics – are published by many Organisation for Economic Cooperation and Development (OECD) countries, including the United States of America (from 1945), the United Kingdom (from 1952) and Canada (from 1962). In Australia, the Reserve Bank produced annual flow of funds accounts for the reference years 1953-54 to 1988-89. The final edition of these was published in the Reserve Bank's Bulletin for November 1989. The Australian Bureau of Statistics (ABS) has published quarterly estimates commencing with experimental estimates of inter-sectoral financial transactions for the March and June quarters 1989. From the June 1998 reference quarter, the financial accounts dataset was produced according to a revised international standard, the System of National Accounts, released in 1993 (SNA93) under the auspices of five international organisations: Commission of the European Communities – Eurostat, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations, and World Bank.

### CONCEPTS, SOURCES AND METHODS

**3** From the September 2009 reference quarter the financial accounts dataset has been produced according to the SNA08. There are significant conceptual differences between the SNA93-based ABS Financial Accounts and the SNA08 Financial Accounts (see Information Paper: cat. no. 5232.0.55.003). The dataset prior to September 2009 has been converted to the revised standard and backcast to June 1988 (stocks data) and September quarter 1988 (transactions data).

**4** Australian National Accounts: Concepts, Sources and Methods (cat. no. 5216.0) provides detailed descriptions of the concepts, data sources and methodologies used in compiling the Australian national accounts, including the financial accounts, on an SNA93 basis. More detailed explanations can be obtained from the contact on the front cover of this publication. An updated version (SNA08) is due out in 2010.

### STOCK AND FLOW CONCEPTS

**5** Tables 1 to 21 and 23 to 33 present balance sheet data at market prices at the end of each calendar quarter. Balance sheet data are also known as stock, level or position data. These tables also now show net inter-sectoral financial transactions during the quarters. These are flow data. In this publication, the net transactions or flows are defined as active dealing in a financial instrument.

### THE CLASSIFICATION OF INSTITUTIONAL SECTORS AND SUBSECTORS

**6** The institutional sectors are based on the Standard Economic Sector Classifications of Australia, 2008 (cat.no. 1218.0) and are the same as the sectors used in national income and expenditure accounts.

**7** The basic unit that is classified by sector is the institutional unit, which is defined as an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and transactions with other entities.

### SOURCES OF DATA

**8** Most of the financial data in this publication are derived from statistical surveys conducted by the ABS and from information collected by the Australian Prudential Regulation Authority (APRA). Some other data sources are used, particularly for valuation adjustments.

**9** The quarterly sectoral capital accounts in the flow of funds matrices are prepared using a variety of indicators to dissect annual estimates based on survey data. Some of the indicators used are known to be of poor quality; these are footnoted in tables to note the quality concerns and should be used with caution.

## EXPLANATORY NOTES *continued*

### COMPILATION METHODS

**10** The levels (stock) tables are prepared by gathering together balance sheet information from various sources and selecting the better estimates. A choice is often possible because different data sources provide alternative or counterpart measures of the same item. For example, borrowing by state owned non-financial corporations will be reported by the state central borrowing authorities or Treasuries as assets and by the non-financial corporations as liabilities. The subsector aggregates derived from these data do not agree because the ABS does not survey all state owned non-financial corporations. In this case, the data from the central borrowing authorities and Treasuries are therefore used to estimate both the asset and liability aspects of these borrowings.

**11** In some cases, transactions data are directly collected. In other cases transactions must be derived from the difference in consecutive levels. These net financial transactions are derived by taking the difference between closing and opening levels of balance sheet items and, where possible, eliminating changes on the balance sheet caused by valuation effects such as exchange rate movements.

### ACCOUNTING BASIS

**12** SNA08 states explicitly that the national accounts should record transactions on an accrual basis (as opposed to a cash or 'due for payment' basis), to reflect the time when economic value is transferred rather than when cash relating to the transaction is paid or falls due for payment. For practical reasons complete implementation of accrual accounting throughout the national accounts is not yet possible. Some areas where accrual accounting has not been adopted include:

- accrual of household income tax; and
- accrual of certain employee entitlements, including recreation and long service leave.

**13** In these statistics tradeable securities, which include shares listed on the Australian Stock Exchange (ASX) and debt securities traded on organised markets, are valued at market prices.

**14** Other securities are assigned estimated market values. For example, equity not listed on ASX is valued on the basis of value of total assets of the enterprise in question less the value of any repayable liabilities.

**15** Deposits, loans and other accounts payable/receivable are recorded at their face value.

**16** Net equity of pension funds in life office reserves are valued on the basis of market value of total assets (including non financial assets) of the funds less any repayable liabilities..
