CHANGES IN THIS ISSUE

Several changes, which are consequent on the implementation of new international statistical standards in the Australian national accounts, were firstly introduced in the September quarter 1998 issue of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0). These changes, also incorporated in this issue, are:

- the introduction of annually-reweighted, chain Laspeyres volume measures to replace the former constant price estimates of goods and services;
- the estimation of services credits and debits to include estimates for imputed financial intermediation services indirectly measured (FISIM) on Australia's cross-border deposits with and loans from financial intermediaries. The net FISIM estimates included in the balance on goods and services, which reclassify components of contractual interest flows to services, are completely offset within the current account by offsetting adjustments to investment income. The amounts are not large; and
- the reclassification of Central Borrowing Authorities (CBAs) from the general government sector to the financial corporations sector. Therefore, commencing with this issue the cross-border financial transactions and international investment position (IIP) of the CBAs are included in the 'other sectors' category in most tables. However, in tables 17, 22, 25 and 59, which present foreign debt transactions, levels and the associated investment income flows, a separate subsector for CBAs is shown within the public financial corporations sector.

This issue also includes a new table, table 26, providing both the currency and residual maturity of foreign debt for the latest financial year.

INTRODUCTION

ABOUT THE PUBLICATION

Balance of Payments and International Investment Position, Australia (Cat. no. 5363.0) is an annual publication presenting statistics on Australia's international accounts: its balance of payments and international investment position statistics. It is primarily a reference document, and more timely estimates are available in various monthly and quarterly publications listed in the Explanatory Notes under Related Products and Services.

Included in the publication is an analysis of the latest annual statistics together with a commentary on trends in the major aggregates, comprehensive tables, as well as some explanatory notes.

The statistics are generally presented as time series for the years 1992–93 to 1997–98 inclusive, together with more detail for 1997–98, particularly for country breakdowns.

With two exceptions, the statistics in this issue are consistent with those published in the December quarter 1998 issue of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0). The levels of direct investment equity assets held abroad have been revalued upwards for all the years up to 1995–96; and the business and personal components of travel services credits for 1997–98 reflect revisions published in the February 1999 issue of *International Trade in Goods and Services, Australia* (Cat. no. 5368.0).

RELATIONSHIP BETWEEN BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT STATISTICS

Balance of payments statistics and international investment position statistics are closely related.

The Australian *balance of payments* is a statistical statement designed to provide a systematic record of economic transactions between residents of Australia and residents of other countries (non-residents of Australia). The balance of payments statement is divided into a current account, a capital account and a financial account.

The *current account* records transactions between Australian residents and residents of other countries in goods, services, income and current transfers.

The *capital account* covers capital transfers (such as migrants' funds) and the acquisition/disposal of non-produced, non-financial assets.

The *financial account* shows transactions in foreign financial assets and liabilities. The primary split is by functional type of capital (direct investment, portfolio investment, other investment and reserve assets) further split into assets and liabilities (where appropriate). Within the asset and liability categories, details are presented of instrument and, in some cases, sectors.

RELATIONSHIP BETWEEN BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT STATISTICS *continued*

The *international investment position* records the levels of Australia's foreign financial assets and liabilities. The investment position at the end of a period reflects the foreign financial asset and liability positions at the start of the period, and the financial transactions, which increase and decrease these assets and liabilities, together with the non-transaction changes due to exchange rate effects, other price effects and changes in the volume of these assets and liabilities that are not due to transactions.

Both balance of payments and international investment position statistics are derived from common data sources and use the same conceptual framework.

Transactions included in international investment position statistics are equivalent to the transactions measured in the financial account of the balance of payments.

As the balance of payments accounts are only concerned with transactions, the levels of foreign financial assets and liabilities and changes in those levels not due to financial transactions are excluded from the scope of these accounts. They are, however, captured in the international investment position summary table, which can be viewed as a reconciliation table, reconciling the changes in the levels of Australia's international assets and liabilities with financial transactions in the balance of payments.

The income accrued on Australian investment abroad and foreign investment in Australia is recorded in the income item of the current account (credits and debits respectively).

The following diagram illustrates the relationship between balance of payments and international investment position statistics.

ANALYSIS OF RESULTS

AUSTRALIA'S BALANCE OF PAYMENTS

CURRENT ACCOUNT

The current account deficit for 1997–98 increased \$5.6 billion (32%) to \$23.3 billion, compared with 1996–97. As a result, the current account deficit as a percentage of Australia's Gross Domestic Product (GDP) rose from 3.3% in 1996–97 to 4.1 % in 1997–98.

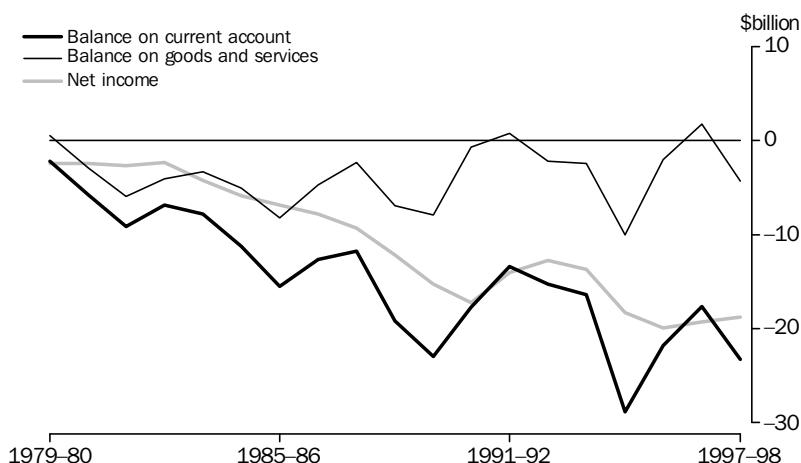

The increase in the current account deficit was largely caused by:

- a turnaround of \$5.0 billion, to a deficit of \$3.5 billion, in the goods balance; and
- a turnaround of \$1.1 billion, to a deficit of \$0.8 billion, in the services balance.

This was partly offset by a decrease of \$0.5 billion, to \$18.8 billion, in the net income deficit.

The year to year change in the current account balance largely reflects fluctuations in the balance on goods and services, particularly the balance on goods. However, as can be seen in the graph below, the level of the net income deficit has had a major impact on the actual level of the current account deficit, especially since the early 1980s.

CURRENT ACCOUNT, MAJOR AGGREGATES

In the ten years from 1987–88 to 1997–98, the current account balance has widened by \$11.5 billion, from a \$11.7 billion deficit to a \$23.3 billion deficit. The widening deficit is due to the growing net income deficit, which increased \$9.6 billion, and a turnaround, from a surplus to a deficit, of \$4.8 billion in net goods. This was partly offset by a decrease of \$2.8 billion in the net services deficit.

When analysed by country, Australia's largest current account surpluses in 1997–98 were with Japan (\$4.5 billion), Republic of Korea (\$3.0 billion), Hong Kong (\$2.9 billion), New Zealand (\$2.3 billion) and Taiwan (\$1.8 billion). Its largest current account deficits were with USA (\$17.2 billion), UK (\$8.5 billion), Germany (\$4.3 billion), France (\$1.7 billion) and Sweden (\$1.7 billion). A deficit was also recorded with the category for international capital markets (\$3.1 billion), being net interest accruing on securities issued on these markets and for which country details are not available.

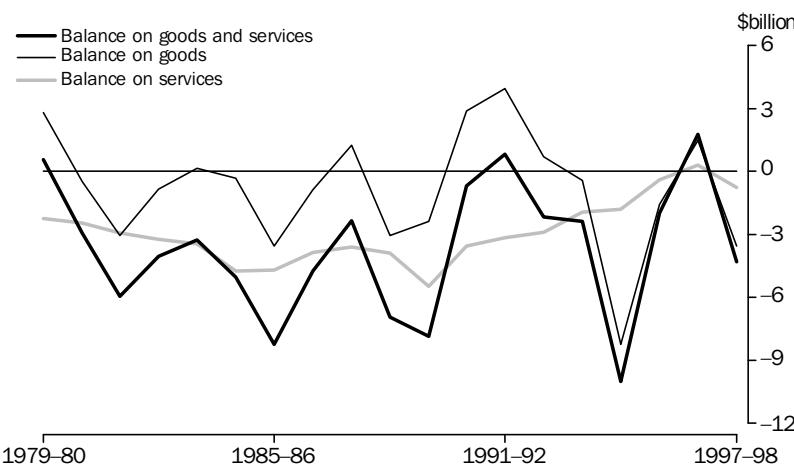

ANALYSIS OF RESULTS *continued*

GOODS AND SERVICES

Goods and services for 1997–98 recorded a deficit of \$4.3 billion, a turnaround of \$6.1 billion on the \$1.8 billion surplus recorded in 1996–97.

In the ten years from 1987–88 to 1997–98, the *balance on goods and services* has generally been in deficit, reaching a record deficit of \$10.0 billion in 1994–95. There have been surpluses only in 1991–92 (\$0.8 billion) resulting from a goods surplus and 1996–97 (\$1.8 billion) when both goods and services were in surplus.

GOODS AND SERVICES

Goods and services credits (ie exports) rose \$8.9 billion (8%) in 1997–98, to \$114.2 billion. *Goods credits* rose \$7.6 billion (9%), while *services credits* rose \$1.3 billion (5%).

The main destinations for *goods credits* in 1997–98 were: Japan (20%), USA (9%), Republic of Korea (7%), New Zealand (6%) and Taiwan (5%). The main destinations for *services credits* were: USA (15%), Japan (12%), UK (9%), New Zealand (7%) and Singapore (6%).

Goods and services debits (ie imports) rose \$15.0 billion (14%) in 1997–98, to \$118.5 billion. *Goods debits* rose \$12.6 billion (16%), while *services debits* rose \$2.3 billion (10%).

The main source countries for *goods debits* in 1997–98 were: USA (21%), Japan (14%), UK (6%), China (6%), Germany (6%) and Republic of Korea (4%). The main source countries for *services debits* were: USA (21%), UK (14%), New Zealand (5%), Japan (5%), Hong Kong (5%) and Singapore (5%).

INCOME

The *net income* deficit fell \$0.5 billion (3%) in 1997–98 to \$18.8 billion. A \$1.0 billion increase (4%) in *income debits* was more than offset by a \$1.5 billion increase (18%) in *income credits*.

ANALYSIS OF RESULTS *continued*

INCOME *continued*

In the ten years from 1987–88 to 1997–98, the net income deficit has increased \$9.6 billion, from \$9.2 billion to \$18.8 billion. *Income credits* have risen \$6.2 billion, while *income debits* have risen \$15.8 billion.

The main countries from which income credits accrued in 1997–98 were: USA (28%), UK (16%) and New Zealand (6%).

The main countries to which income debits accrued in 1997–98 were: USA (23%), UK (22%) and Japan (9%). Income debits also accrued to international capital markets (11%) for which country details are not available.

CURRENT TRANSFERS

The *net current transfers* deficit rose \$0.1 billion (54%) in 1997–98 to \$0.2 billion. Current *transfers credits* rose \$0.3 billion (8%) to \$3.8 billion, while *current transfers debits* rose \$0.3 billion (9%), to \$3.9 billion.

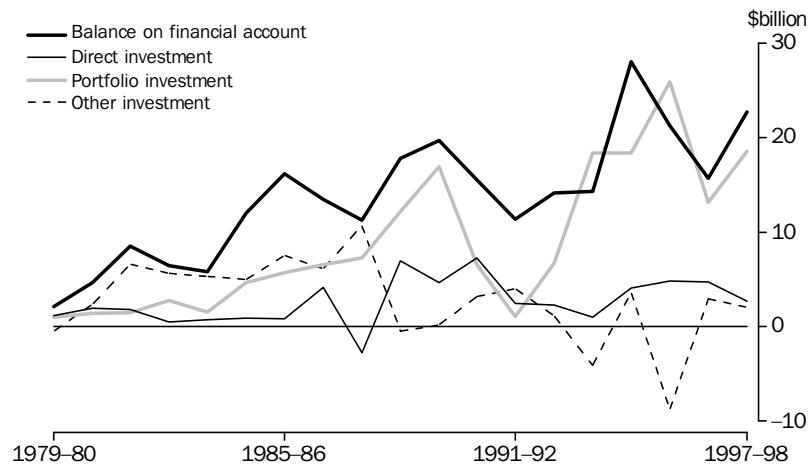

CAPITAL ACCOUNT

The *balance on capital account* for 1997–98 recorded a surplus of \$1.1 billion, down \$0.2 billion (14%) from 1996–97. *Capital transfers credits* fell \$0.1 billion (6%), while *capital transfers debits* rose \$0.1 billion (11%) from 1996–97.

FINANCIAL ACCOUNT

The *balance on financial account* for 1997–98 recorded a net inflow (surplus) of \$22.8 billion, with a large net inflow on equity (\$23.2 billion) and a slight net outflow on debt (\$0.5 billion). The result was up \$7.1 billion on the net inflow recorded in 1996–97, with an increase of \$19.8 billion in net inflow on equity only partly offset by a \$12.7 billion turnaround in net debt, from a net inflow to a net outflow.

FINANCIAL ACCOUNT, MAJOR AGGREGATES

ANALYSIS OF RESULTS *continued*

FINANCIAL ACCOUNT *continued*

Direct investment net inflow fell by \$2.0 billion (43%) in 1997–98 to \$2.7 billion. The net outflow on *Australian direct investment abroad* rose by \$0.7 billion (12%) to \$6.4 billion, while the net inflow of *direct investment in Australia* fell \$1.4 billion (13%) to \$9.1 billion.

Portfolio investment net inflow rose \$5.4 billion (41%) to an inflow of \$18.6 billion in 1997–98. *Other investment* net inflow fell \$0.9 billion (30%) to an inflow of \$2.1 billion in 1997–98. *Reserve assets* recorded a net outflow of \$0.6 billion, down \$4.6 billion on 1996–97.

The largest net outflows of Australian investment abroad in 1997–98 were to USA (\$10.4 billion), Germany (\$0.9 billion) and Hong Kong (\$0.7 billion). The largest net withdrawal of Australian investment was from Japan (\$6.1 billion) and UK (\$0.9 billion).

The largest net inflows of foreign investment in Australia in 1997–98 came from USA (\$11.7 billion), UK (\$9.8 billion) and New Zealand (\$2.9 billion). The largest withdrawals of investment (net outflows) were recorded for Hong Kong (\$2.4 billion) and Japan (\$2.1 billion).

INTERNATIONAL INVESTMENT POSITION

NET INTERNATIONAL INVESTMENT POSITION

Australia's *net international investment position* at 30 June 1998 was a net foreign liability of \$322 billion. In the past decade, Australia's net foreign liabilities have risen by \$194 billion, from \$128 billion at 30 June 1988.

NET FOREIGN DEBT

At 30 June 1998, Australia's *net foreign debt* was \$226 billion (or 70% of *net foreign liabilities*) compared to \$99 billion (or 77%) recorded a decade earlier.

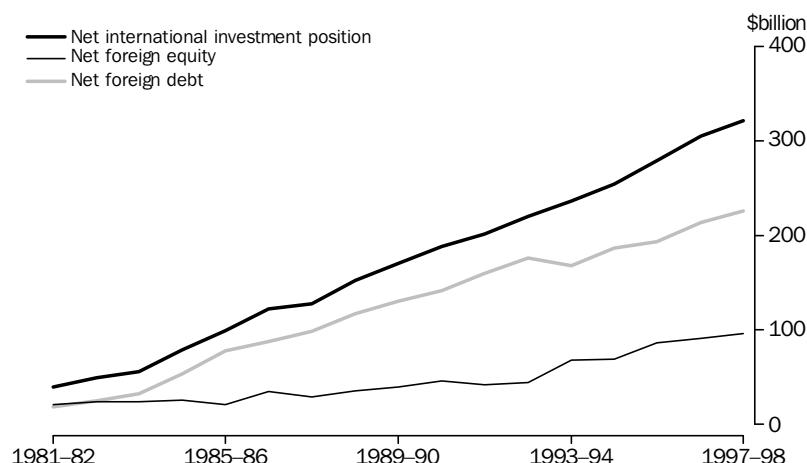

The *public sector* was still a net debtor to the rest of the world, with a net debt of \$54 billion, at 30 June 1998. The 1997–98 level is up \$19 billion (55%) on the foreign debt level a decade earlier. However the public sector net foreign debt was down \$14 billion on 1996–97, with \$9 billion of their liabilities to the rest of the world being repaid (or traded back to Australian resident holders) and net new credit of nearly \$3 billion being advanced by the public sector to the rest of the world.

The *private sector*'s level of net foreign debt was \$172 billion, up \$26 billion on 1996–97 and up \$108 billion on the level a decade earlier.

NET FOREIGN EQUITY

Australia's *net equity liabilities* were \$96 billion (or 30% of *net foreign liabilities*) at 30 June 1998, compared to \$29 billion (23%) recorded a decade earlier.

INTERNATIONAL INVESTMENT POSITION, BY INSTRUMENT OF INVESTMENT

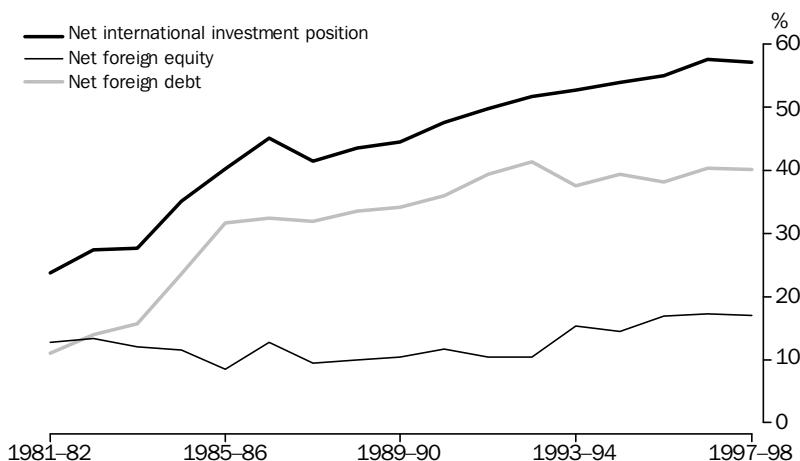

ANALYSIS OF RESULTS *continued*

RATIO OF NET INTERNATIONAL INVESTMENT POSITION TO GROSS DOMESTIC PRODUCT

The ratio of *net international investment position to Gross Domestic Product—GDP*—was 57% at 30 June 1998, while the corresponding ratios for *net foreign debt* and *net foreign equity* were 40% and 17% respectively. A decade earlier, at 30 June 1988, these ratios stood at 41%, 32% and 10% respectively.

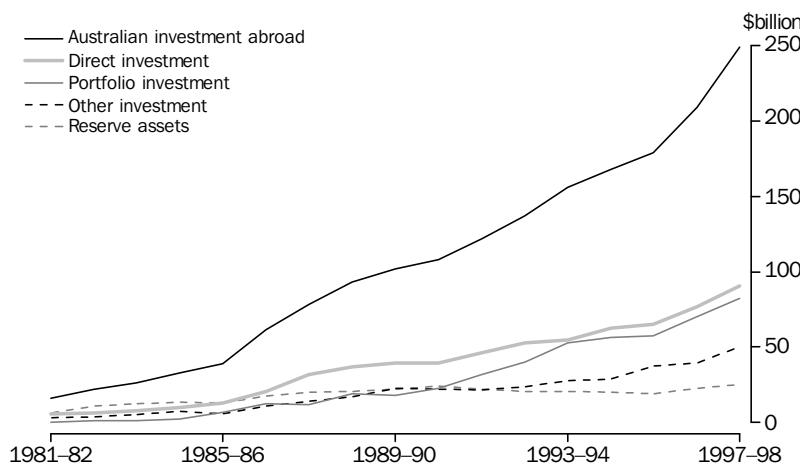

RATIO OF NET INTERNATIONAL INVESTMENT POSITION TO GDP

LEVELS OF AUSTRALIAN INVESTMENT ABROAD

The level of *Australian investment abroad* reached \$249 billion at 30 June 1998. *Direct investment abroad* accounted for \$91 billion (36%), *portfolio investment assets* for \$83 billion (33%), *other investment assets* for \$51 billion (20%) and *reserve assets* for \$25 billion (10%).

AUSTRALIAN INVESTMENT ABROAD, LEVELS BY TYPE OF INVESTMENT

ANALYSIS OF RESULTS *continued*

LEVELS OF AUSTRALIAN INVESTMENT ABROAD *continued*

Equity has been the main form of Australian investment abroad during the past decade and, at \$146 billion, represented 59% of the total level of investment at 30 June 1998.

Australian investment abroad by country is mainly in USA (\$84 billion or 34%), UK (\$41 billion or 16%), New Zealand (\$13 billion or 5%), Japan (\$11 billion or 4%) and Hong Kong (\$10 billion or 4%).

LEVELS OF FOREIGN INVESTMENT IN AUSTRALIA

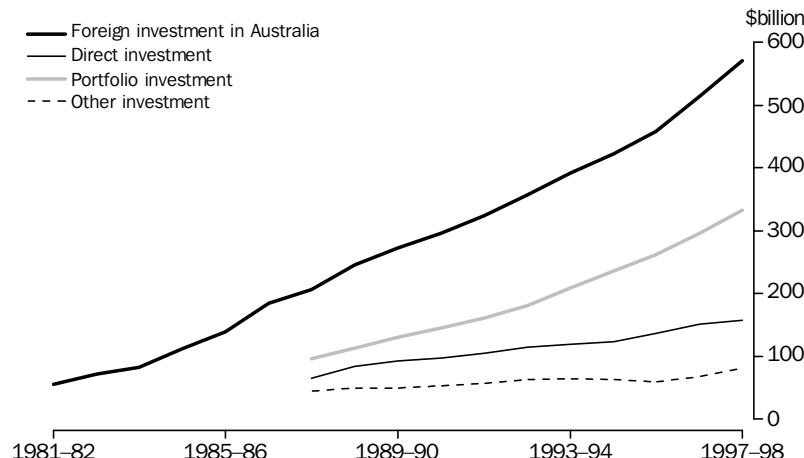

The level of *foreign investment in Australia* reached \$571 billion at 30 June 1998.

Portfolio investment liabilities (\$332 billion) was the main form of foreign investment in Australia, accounting for 58% of the total level of investment at 30 June 1998, while *direct investment in Australia* (\$158 billion) accounted for a further 28%.

Of the *portfolio investment liabilities*, debt securities accounted for \$227 billion (68%), while equity securities accounted for \$106 billion (32%).

The leading investor countries at 30 June 1998 were: UK with \$146 billion (26%), USA with \$146 billion (26%) and Japan with \$58 billion (10%). The level of borrowing raised on international capital markets (e.g. Eurobonds) was \$44 billion at 30 June 1998.

FOREIGN INVESTMENT IN AUSTRALIA, LEVELS BY TYPE OF INVESTMENT

INTERNATIONAL COMPARISON OF BALANCE OF PAYMENTS STATISTICS

There are two frequently used methods of comparing balance of payments statistics of different countries.

The first method compares the absolute size of certain key balance of payments aggregates for selected countries over time. This comparison allows analysis of the absolute size and trends in the direction of key aggregates. The method involves converting the relevant aggregates for each country from the unit of currency in which the data are normally presented, into a chosen common unit of account. This is done by use of a particular currency (often the US dollar) or a chosen weighted average of foreign currencies (often the Special Drawing Right).

The second method expresses each country's aggregates as proportions of its gross domestic product (GDP) or gross national product (GNP). These ratios place the country's balance of payments developments in the context of the size of the country's economic activity. This is a comparison in domestic currency terms; movements over time in the ratios may in part be affected by differences in the impact of exchange rate variations on the numerator and denominator series.

Care should always be exercised in the use and interpretation of international statistical comparisons. An important qualification is that, despite the fact that countries tend to follow international recommendations for the compilation of balance of payments statistics, differences still occur between countries in concepts, coverage, data sources and collection methods. For example, a significant coverage difference occurs when comparing current account balances because most countries (including Australia) follow the international recommendation that reinvested earnings should be included in the statistics, while some countries do not.

CURRENT ACCOUNT BALANCES IN US DOLLARS FOR SELECTED COUNTRIES

Table F1 shows both the current account balance, and that balance as a proportion of GDP, for Australia and nine of its trading partners for the last 15 calendar years. These balances have been converted into US dollars at period average exchange rates. The current account deficit for Australia is presented for calendar year 1998 for purposes of comparison with other countries' data, whereas the statistics for Australia in the rest of this publication are presented on a fiscal year end 30 June basis.

For the years selected, Australia, the USA and New Zealand are the only countries to record a current account deficit in each year. A number of major industrial countries also record deficits in most years. Canada recorded deficits for all years except 1996; the United Kingdom, Italy and Korea have shown deficits in most years, although Italy has shown surpluses over the last few years. In contrast Japan is the only country selected in this comparison that has maintained surpluses throughout the period shown. Germany ran surpluses in the earlier period under analysis, but since reunification, has shown a deficit position from 1991.

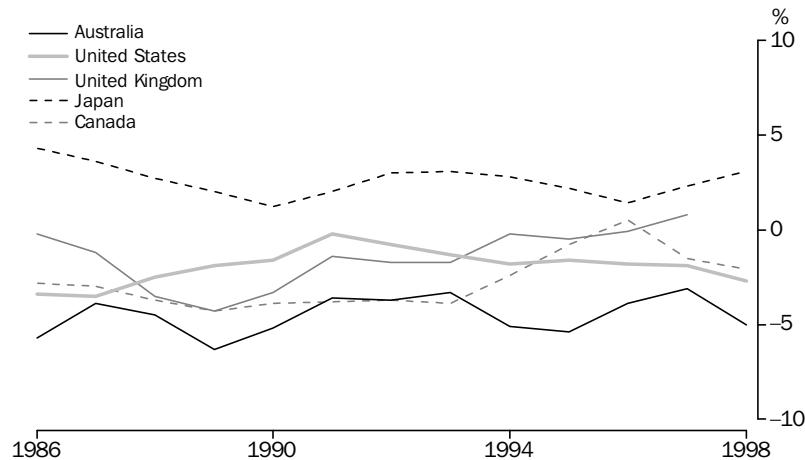

INTERNATIONAL COMPARISON OF BALANCE OF PAYMENTS STATISTICS *continued*

CURRENT ACCOUNT BALANCES AS A PERCENTAGE OF GDP FOR SELECTED COUNTRIES

In 1998, Australia's deficit on current account was -5.0% of GDP. Australia's ratio from 1984 is compared with the corresponding ratios for a selection of countries in Table F1.

Of the three countries recording deficits for each of the 15 years shown in Table F1, Australia's average ratio to GDP, at -4.6%, lies between the highest ratio, recorded at -6.1% for New Zealand, and the somewhat lower ratio recorded for the USA (-2.0%).

(a) For sign conventions, see paragraphs 4–5 of the Explanatory Notes.

(b) As a result of a change in methodology used to value non-equity securities issued on foreign capital markets, levels from 30 June 1992 are not strictly comparable with levels for earlier periods.

(c) See paragraph 12 of the Explanatory Notes.

(a) For sign conventions, see paragraphs 4–5 of the Explanatory Notes.

(b) As a result of a change in methodology used to value non-equity securities issued on foreign capital markets, levels from 30 June 1992 are not strictly comparable with levels for earlier periods.

(c) Portfolio investment debt securities are included in 'other' investment prior to 30 June 1988.

EXPLANATORY NOTES

INTRODUCTION

1 This annual publication presents comprehensive details of Australia's international accounts: its balance of payments and international investment position statistics. It is primarily a reference document, and more timely estimates are available in various monthly and quarterly publications listed below under Related Products and Services.

CONCEPTS, SOURCES AND METHODS

2 The conceptual framework used in Australia's balance of payments and international investment position statistics is based on the Fifth Edition of the International Monetary Fund's *Balance of Payments Manual* (BPM5, 1993). This framework is summarised in the 1998 edition of the ABS publication *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods* (Cat. no. 5331.0) released on 22 September 1998. As well as providing descriptions of the underlying concepts and structure of the balance of payments and international investment position, 5331.0 also describes the sources, methods and terms used in compiling Australia's BOP and IIP statistics.

3 The following basic principles guide the compilation of Australia's balance of payments and international investment statistics:

- balance of payments statistics cover transactions between residents of Australia and residents of other countries;
- international investment position statistics cover the levels (stock) of foreign financial assets and liabilities at a given point in time; increases and decreases in these assets and liabilities as a result of financial transactions (investment flows); and other changes in value of these assets and liabilities;
- transactions in goods are recorded at the time ownership changes; services are recorded when the service is performed; income is recorded as it accrues; and financial transactions are recorded at the time ownership changes or the asset or liability is created or extinguished; and
- transactions and levels are recorded at market value. Data recorded in foreign currencies are converted to Australian dollars at the appropriate exchange rate.

SIGN CONVENTION

4 In keeping with balance of payments conventions, credit entries are shown without sign and debit items are shown as negative entries. However, references to debit items in Analysis of Results are made without regard to sign.

5 International investment position statistics follow the balance of payments sign convention. For foreign liabilities, position data and any transaction increase or other flow increase in liabilities is shown without sign. A negative sign for transactions and other flows in liabilities denotes a fall in liabilities. For foreign assets, position data and any transaction increase or other flow increase in assets is shown with a negative sign. Transactions and other flows in assets shown without sign denote a decrease in assets.

ACCURACY AND RELIABILITY

6 The transactions recorded in the international accounts are of many different kinds, and therefore the compilation of balance of payments and international investment position estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness.

EXPLANATORY NOTES *continued*

CHAIN VOLUME MEASURES

7 To enable analysis of the movement of goods and services in 'real' terms, estimates of chain volume measures are compiled. Chain volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price estimates of the reference year. The reference year for chain volume measures is the year prior to the latest financial year incorporated in this issue. The reference year is updated with the release of each June quarter issue of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0). Prior to the reference year chain volume measures are non-additive, in that the component chain volume measures of an aggregate will not add through to the chain volume measure of the total aggregate. For further information on chain volume measures refer to the ABS publication *Information Paper: Australian National Accounts, Introduction of Chain Volume and Price Indexes* (Cat. no. 5248.0), released on 19 March, 1998.

INDEXES

Implicit price deflator (IPD)

8 The annual implicit price deflators (IPDs) are derived by dividing current price estimates by the corresponding chain volume measures. Movements in IPDs can be greatly affected by changes in the physical composition of the aggregates and their components.

Terms of trade

9 There are several ways of measuring the terms of trade. In this publication, the following index is used:

$$\frac{\text{Implicit price deflator for the credit item}}{\text{Implicit price deflator for the debit item}} \times 100$$

Chain Laspeyres

10 The chain Laspeyres indexes are derived by combining individual component prices with weights which reflect the average relative importance of the components in the previous year. These are then indexed to the relevant reference year. For all periods since the latest reference year, reference year weights are used.

DIRECT INVESTMENT ADJUSTMENT

11 Direct investment adjustments are required in Tables 29 and 30 to adjust total foreign assets and liabilities to the net basis for recording foreign investment in Australia (FIA) and Australian investment abroad (AIA). For both FIA and AIA, the adjustment is symmetrical and includes claims of Australian direct investment enterprises on direct investors abroad plus liabilities of Australian direct investors to direct investment enterprises abroad.

EXPLANATORY NOTES *continued*

FOREIGN DEBT

12 Foreign debt interest income, transactions and levels shown in Tables 17, 22, 25, 53, 54, 56 and 59 are recorded on a gross basis for assets and liabilities. The direct investment adjustment is not applied in these tables.

13 In Table 26 'currency' refers to the currency in which assets or liabilities are likely to be repaid, while 'residual maturity' refers to the time remaining until an asset or liability is due to be fully repaid. Where currency allocation is not relevant, such as for monetary gold, or not yet available, including data on certain official reserve assets and financial derivatives, the data are allocated to the 'Reserve Assets and Derivatives' category. Data which are not relevant to, or are not yet able to be classified to a residual maturity grouping, including liabilities in the form of debt securities domiciled in Australia and financial derivatives, are recorded as 'unallocated'. All reserve assets are allocated to the repayment category 'less than or equal to 90 days' although a range of maturities may be involved.

INDUSTRY DATA

14 The industry categories shown are based on the *Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993* (Cat. no. 1292.0). Industry statistics should be treated with some caution as they do not necessarily reflect the industry of the end use of the funds. First, the statistical unit (that is, the unit of observation and classification) generally consists of all enterprises in an enterprise group within a single resident institutional sector. The industry of this statistical unit, which may cover a broad range of activities, is determined on the basis of the predominant activity of the unit as a whole which may be quite different from the industry in which funds are used. Second, financial enterprises such as trading and merchant banks, may borrow funds as principals and then on-lend to clients in other industries.

COMMODITY BREAKDOWNS OF GENERAL MERCHANDISE

15 Commodity breakdowns of general merchandise credits are provided in Tables 5 (at current prices) and 7 (chain volume measures). The groupings shown are based on the third revision of the United Nations' Standard International Trade Classification (SITC Rev 3). For further details refer to Table 6.6 in the 1998 edition of *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods* (Cat. no. 5331.0).

16 Commodity breakdowns of general merchandise debits are provided in Table 6 (at current prices) and 8 (chain volume measures). The three broad end-use categories—*Consumption goods, Capital goods and Intermediate and other merchandise goods*—are based on United Nations' Classification of Broad Economic Categories (BEC), but differ from the BEC to the extent that intermediate goods are combined with other merchandise goods. These broad end-use categories are further divided into a total of 25 SITC Rev 3-based commodity groupings, which have also been aligned to the BEC.

17 For more information on the commodity classification of general merchandise debits and a detailed concordance between balance of payments general merchandise debits end-use categories, commodity groups, BEC and SITC Rev 3, refer to the ABS *Information Paper: Change to Commodity Classification of Merchandise Imports in Balance of Payments Publications* (Cat. no. 5344.0) and *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods* (Cat. no. 5331.0).

EXPLANATORY NOTES *continued*

COUNTRIES

Changing composition

18 Monaco and Andorra are included with France. Switzerland includes Liechenstein. San Marino and Vatican City are included with Italy. The remaining republics of the former USSR are included in either Europe nes or Asia nes.

Care to be exercised

19 Care should be exercised in interpreting country data. In the first instance, source data often do not identify the country of the non-resident transactor. Imports of goods are largely classified by the country of origin of the goods rather than by the country from which Australia buys the goods. For example, goods from China that are bought by traders in Hong Kong and then on-sold to Australia will appear as imports from China, not from Hong Kong. The extent of this mismatch between the country of transactor and the country of origin of the goods varies with the commodity and the country concerned. For some countries the error is as high as 20%; in other cases, such as Australia's imports from the USA (our largest imports supplier) the error is about 10%. Gold purchases and sales reported by the Reserve Bank on behalf of non-residents (reported in the Survey of International Investment) are not allocated to country.

20 Care should also be exercised, whenever either the residual country groupings designated 'not elsewhere specified' (or nes) or when the designated 'unallocated' category are significant for the table. 'Nes' categories include: data for those countries in the region that are not separately identified in the tables; data that are reported for the region as a whole but which cannot be allocated by country; and data that are reported by country, but which cannot be separately disclosed. This issue arises in all country tables but particularly affects the tables for services, income, financial account transactions and levels of investment.

International capital markets

21 This category is used for securities issued on several markets at once (e.g. Eurobonds) and loans made by a syndicate of lenders in several countries (e.g. Euro-currency or Asian dollar loans). From 1996-97, data has been collected on a BPM5 basis and greater emphasis has been placed on identifying the country of each capital market or of each syndicate member and, where possible, recording these as the country of the foreign creditor or debtor. For this reason, transactions and levels data on a regional basis from 1996-97 are not strictly comparable with data for earlier years. This is especially true in the case of the UK.

Reserve Bank gold

22 The 'Reserve Bank gold' category refers to gold held by the Reserve Bank as part of reserve assets for which allocation by country is not applicable.

EXPLANATORY NOTES *continued*

Reconciliation

23 A reconciliation of the current, capital and financial accounts by individual country or region is not possible as goods and services purchased from or sold to another country may be financed by capital raised in a third country. For an explanation refer to *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods* (Cat. no. 5331.0).

RELATED PRODUCTS AND SERVICES
