## NOTES

ABOUT THIS PUBLICATION	<ul> <li>This publication presents government finance statistics (GFS) on an accrual accounting basis for each jurisdiction for general government, the non-financial public sector and the total public sector as follows:</li> <li>Operating statements for 2005-06;</li> <li>Cash flow statements for 2005-06; and</li> <li>Balance sheets at 30 June 2006.</li> <li>Data for public non-financial corporations and public financial corporations are available on the ABS web site along with other time series tables.</li> <li>Users interested in quarterly GFS data for the current financial year should refer to <i>Government Finance Statistics, Australia, Quarterly</i> (Cat. no. 5519.0.55.001).</li> </ul>
	Information presented by the ABS in this release may differ from that published by the various jurisdictions for a variety of reasons. For further information please see paragraphs 47 to 49 in the Explanatory Notes.
ABOUT THIS ISSUE	The new Australian equivalents to International Financial Reporting Standards (AIFRS) began to be progressively implemented in Australia from 1 January 2005. All Australian governments adopted AIFRS for financial reporting for the financial year 2005-06. As GFS data is sourced primarily from the same underlying accounting and budgetary systems that each jurisdiction uses for financial reporting, some impacts have observed mainly in the accrual-based GFS statements. Details of the changes and the impacts on GFS are further discussed in Technical Note - Impact of AIFRS on GFS on page 49.
TERMINOLOGY	Within GFS the consolidated total of the general government and the public non-financial corporations sectors is referred to as the 'non-financial public sector'. The consolidated total of the general government, the public non-financial corporations and the public financial corporations sectors is referred to as the 'total public sector' In this publication, the term 'state' includes the two territories. Therefore 'state' refers to 'state and territory' and 'state and local' refers to 'state, territory and local'.

#### SUMMARY OF FINDINGS

#### ACCRUAL OPERATING RESULTS

The GFS net operating balance for all levels of government in 2005-06 was \$29,141 million for the general government sector and \$30,090 million for the total public sector.

GFS net lending in 2005-06 was \$19, 872 million for the general government sector and \$12,629 million for the total public sector.

The following table shows 2005-06 GFS operating statement aggregates by sector across the various levels of government.

#### OPERATING RESULTS-2005-06

TIME SERIES

. . . . . . . . . . .

GFS revenue for the general government sector across all levels of government increased from \$256,822 million in 2000-01 to \$363,701 million in 2005-06. Over the same period GFS expenses have increased from \$249,324 million to \$334,560 million resulting in an increase in the GFS net operating balance from \$7,498 million to \$29,141 million.

Between 30 June 2001 and 30 June 2006 GFS net worth for all levels of government increased by \$245,399 million (64.1%) from \$383,014 million to \$628,413 million.

The following tables show a time series of major aggregates for the general government across different levels of government.

#### SUMMARY OF FINDINGS continued

# TIME SERIES continuedFor the total public sector accross all levels of government GFS revenue increased from<br/>\$311,716 million in 2000-01 to \$421,703 million in 2005-06 and GFS expenses increased<br/>from \$299,611 million to \$391,613 million. As a result GFS net operating balance<br/>increased from \$12,105 million in 2000-01 to \$30,090 million in 2005-06

Between 30 June 2001 and 30 June 2006 GFS net worth across the total public sector increased by \$270,773 million or 83.4% from \$324,807 million to \$595,580 million.

The following tables show a time series of major aggregates for the total public sector across different levels of government.

# EXPLANATORY NOTES

INTRODUCTION	<b>1</b> The main functions of government are the provision of non-market services, the regulation of economic and social conditions, and the redistribution of income between sections of the community. These activities are primarily financed by taxation and are carried out by entities in the general government sector. In addition to this core activity, governments can also own or control enterprises that sell goods or services to the public and which operate largely on a market basis (public non-financial corporations) or engage in financial intermediation (public financial corporations).
	<b>2</b> The term 'Government Finance Statistics' refers to statistics that measure the financial activities of governments and reflect the impact of those activities on other sectors of the economy. The Australian system of Government Finance Statistics (GFS), which is used to derive the statistics presented here, is designed to provide statistical information on public sector entities in Australia classified in a uniform and systematic way.
	<b>3</b> GFS enables policy makers and users to analyse the financial operations and financial position of the public sector at either the level of a specific government, institutional sector or set of transactions. The system is based on international standards set out in the <i>System of National Accounts 1993</i> (SNA93) and the <i>International Monetary Fund's Government Finance Statistics Manual 2001</i> (GFSM2001).
	<b>4</b> Detailed information on the concepts, sources and methods used in compiling GFS can be found in <i>Australian System of Government Finance Statistics: Concepts, Sources and Methods</i> (cat. no. 5514.0.55.001) electronic version or (cat. no. 5514.0) PDF version .
SCOPE	<ul> <li>5 The system of GFS provides details of revenues, expenses, cash flows and assets and liabilities of the Australian public sector which includes all units owned and/or controlled by the Commonwealth, state governments and local governments. These units are grouped as follows:</li> <li>General government</li> <li>Public non-financial corporations</li> <li>Non-financial public sector</li> <li>Public financial corporations</li> <li>Total public sector.</li> </ul>
General Government	<b>6</b> The principal function of general government entities is to provide non-market goods and services (e.g. roads, hospitals, libraries) primarily financed by taxes, to regulate and influence economic activity, to maintain law and order, and to redistribute income by means of transfer payments.
	7 This institutional sector covers the departments of the Commonwealth Government, state governments and local government municipalities. It also includes agencies and government authorities under departmental administration which are engaged in the provision of public administration, defence, law enforcement, welfare, public education, and health. Also included are non-departmental bodies which independently perform the government functions of regulation (e.g. Nurses Registration Boards and the Maritime Safety Authority), provision of non-market services (e.g. the Australian Broadcasting Corporation), and redistribution of income. Some of these bodies may be called 'corporations', but they are still considered part of the general government sector if they perform general government functions. Public universities are also considered part of the general government sector.
	<b>8</b> Unincorporated government enterprises which provide goods and services to their governments and to the public at prices that are not economically significant are also included in this sector. In addition, government quasi-corporations which sell their output exclusively to other government units, while not in open competition with other producers, are also classified as general government units.

Public Non-Financial Corporations	<b>9</b> The main function of public non-financial corporations (PNFCs) is to provide goods and services which are predominantly market, non-regulatory and non-financial in nature, and mostly financed through sales to consumers.
	<b>10</b> Enterprises in the PNFC sector differ from those in the general government sector in that all or most of their production costs are recovered from consumers, rather than being financed from the general taxation revenue of government. Some enterprises, however, do receive subsidies to make up for shortfalls incurred as a result of government policy, for example, in the provision of 'community service obligations' at concessional rates.
	<b>11</b> PNFCs vary in their degree of 'commercialisation', from those which are quite heavily reliant on parent governments for subsidies, such as rail and bus transport undertakings, to those which are net contributors to government revenue. Governments may exercise control over PNFCs by either owning more than 50% of the voting stock or otherwise controlling more than half the shareholders' voting power, or through legislation, decree or regulation which empowers the government to determine corporate policy or to appoint the directors. Examples of PNFCs are Telstra, Australia Post, state rail authorities, and local bus and transport operations.
Non-financial Public Sector	<b>12</b> The non-financial public sector is a subsector formed by the consolidation of the general government and public non-financial corporations sectors.
Public Financial Corporations	<b>13</b> Public financial corrorations (PFCs) are government-owned or controlled enterprises which engage in financial intermediation (i.e. trade in financial assets and liabilities), such as the Reserve Bank of Australia, government-owned borrowing authorities and insurance offices and home lending schemes.
Total Public Sector	<b>14</b> The total public sector is the consolidated total of the general government, public non-financial corporations and public financial corporations sectors.
LEVELS OF GOVERNMENT	<b>15</b> The public sector comprises all organisations owned or controlled by any of the three levels of government within the Australian political system; national (which includes Commonwealth and multi-jurisdictional), state and local.
Commonwealth Government	<b>16</b> The Commonwealth Government has exclusive responsibility under the Constitution for the administration of a wide range of functions including defence, foreign affairs and trade, and immigration. A distinctive feature of the Australian federal system is that the Commonwealth Government levies and collects all income tax, from individuals as well as from enterprises. It also collects a significant portion of other taxes, including taxes on the provision of goods and services. The Commonwealth distributes part of this revenue to other levels of government, principally the states.
State Governments	<b>17</b> State and territory governments (referred to as 'state' governments) perform the full range of government functions, other than those the Constitution deems the exclusive domain of the Commonwealth Government. The functions mainly administered by state governments include public order, health, education, administration, transport and maintenance of infrastructure. The revenue base of state governments consists of taxes on property, on employers' payrolls, and on the provision and use of goods and services. This revenue base is supplemented by grants from the Commonwealth Government, which includes an allocation of Goods and Services Tax (GST) revenue.
Local Governments	<ul> <li>18 Local government authorities govern areas typically described as cities, towns, shires, boroughs, municipalities and district councils. Although the range of functions undertaken by local governments varies between the different jurisdictions, their powers and responsibilities are generally similar and cover such matters as:</li> <li>the construction and maintenance of roads, streets and bridges;</li> </ul>

Local Governments continued	<ul> <li>water, sewerage and drainage systems;</li> <li>health and sanitary services;</li> <li>the regulation of building standards; and</li> <li>the administration of regulations relating to items such as slaughtering, weights and measures, and registration of dogs.</li> </ul>
	<b>19</b> Local governments also provide transport facilities, hospitals, charitable institutions, recreation grounds, parks, swimming pools, libraries, museums and other business undertakings. Local governments' own-source revenue is derived mainly from property taxes. They also rely on grants from the Commonwealth Government and their parent state governments. The Australian Capital Territory has no separate local government.
Multi-jurisdictional	<b>20</b> The multi-jurisdictional sector contains units where jurisdiction is shared between two or more governments, or the classification of a unit to a jurisdiction is otherwise unclear. The main type of units currently falling into this category are the public universities.
CLASSIFICATIONS	<ul> <li>21 The main GFS classifications are:</li> <li>Economic Type Framework</li> <li>Type of Asset Classification</li> <li>Government Purpose Classification</li> <li>Taxes Classification</li> <li>Source/Destination Classification.</li> </ul>
Economic Type Framework	<b>22</b> The <i>Economic Type Framework</i> is the main classification of stocks and flows. Stocks refer to the holdings of assets and liabilities at a point in time, ideally valued at current market prices. Flows are economic events and other occurrences, recorded in the period in which they occur, that cause changes in the value of stocks through the creation, transformation, exchange, transfer or extinction of value. Thus, the stock of assets and liabilities recorded at the beginning of a period changes as a result of flows during the period, moving to new levels at the end of the period.
	<b>23</b> The <i>Economic Type Framework</i> resembles a set of financial statements, with sections for an operating statement, a cash flow statement and a balance sheet. In addition, there are sections to cater for the reconciliation of accounting net operating result measures with cash flows from operating activities and to capture items like assets acquired under finance leases, intra-unit transfers, revaluations and other changes in the volume of assets.
Type of Asset Classification	<b>24</b> The <i>Type of Asset Classification</i> is used to identify whether expenditure on non-financial assets (net) was on produced assets (e.g. dwellings and transport equipment) or non-produced assets (e.g. land).
Government Purpose Classification	<b>25</b> The <i>Government Purpose Classification</i> is used to group operating expenses and expenditure by purpose (education, health, etc.) with similar functions to facilitate the study of the broad function of public sector spending and the effectiveness of this spending in meeting government policy objectives.
Taxes Classification	<b>26</b> The <i>Taxes Classification</i> dissects this major form of government revenue according to type of tax collected.
Source/Destination Classification	<b>27</b> The <i>Source/Destination Classification</i> identifies the source or destination of selected flows and stocks between units within and outside the public sector. It is used in compiling consolidated statistics.

SOURCES AND METHODS Data sources	<b>28</b> The statistics shown in this publication are based on information provided in, or underlying, the published accounting statements and reports of governments and their authorities. The valuation of stocks and flows in source data are generally in accordance with requirements of market values specified in statistical standards. For the most part, the divergences between the accounting values and market values are not materially significant.
	<ul> <li>29 For the Commonwealth and state governments the primary data sources are:</li> <li>public accounts and budget management systems of state treasuries and the Commonwealth Department of Finance and Administration;</li> <li>annual reports of departments and authorities;</li> <li>budget papers; and</li> <li>reports of the Auditors-General.</li> </ul>
	<b>30</b> For local government, the main data sources are annual statements of accounts completed by local authorities.
Consolidation	<b>31</b> To compile statistics about the financial activities of a particular level of government, or any other grouping of public sector units, transactions and debtor/creditor relationships between units within the chosen grouping (sector or subsector) have to be matched and eliminated to avoid double counting. The process of matching and eliminating these items within the chosen group is known as 'consolidation'.
	<b>32</b> Consolidation is particularly important at the state government level where a significant proportion of total expenses/payments are financed by Commonwealth Government grants. Similarly, an appreciable part of the expenditure undertaken by state public non-financial corporations is financed by grants from state governments.
Revisions	<b>33</b> GFS data are revised on an annual basis. For this reason differences can occur between equivalent aggregates published in earlier years.
UNDERSTANDING THE STATEMENTS	<b>34</b> The GFS conceptual framework is divided into a number of separate statements, each of which is designed to draw out analytical aggregates or balances of particular economic significance and which, taken together, provide for a thorough understanding of the financial positions of jurisdictions individually and collectively. These published statements are the operating statement, the cash flow statement, and the balance sheet.
Operating Statement	<b>35</b> The operating statement presents details of transactions in GFS revenues, GFS expenses and the net acquisition of non-financial assets for an accounting period. GFS revenues are broadly defined as transactions that increase net worth and GFS expenses as transactions that decrease net worth. Net acquisition of non-financial assets equals gross fixed capital formation, less depreciation, plus changes in inventories plus other transactions in non-financial assets. Two key GFS analytical balances in the operating statement are GFS net operating balance (NOB) and GFS net lending(+)/borrowing(-).
	<b>36</b> GFS NOB is the difference between GFS revenues and GFS expenses. It reflects the sustainability of government operations. GFS net lending(+)/borrowing(-) is equal to NOB minus the total net acquisition of non-financial assets. A positive result reflects a net lending position while a negative result reflects a net borrowing position.
Cash Flow Statement	<b>37</b> The cash flow statement identifies how cash is generated and applied in a single accounting period. 'Cash' means cash on hand (notes and coins held and deposits held at call with a bank or other financial institution) and cash equivalents (highly liquid investments which are readily convertible to cash on hand at the investor's option and overdrafts considered integral to the cash management function).

. . . . . . . . . . . . . . .

. . . . . . . . . . . . . . . . . .

Cash Flow Statement continued	<b>38</b> The cash flow statement reflects a cash basis of recording (the other statements are on an accrual accounting basis) where the information has been derived indirectly from underlying accrued transactions and movements in balances. In effect, the transactions are captured when cash is received or when cash payments are made. Cash transactions are specifically identified because they allow the compilation of the cash-based surplus(+)/deficit(-) measure and because the management of cash is considered an integral function of accrual accounting.
	<b>39</b> The surplus(+)/deficit(-) is a broad indicator of a sector's cash flow requirements. When it is positive (i.e. in surplus), it reflects the extent to which cash is available to government to either increase its financial assets or decrease its liabilities (assuming that no revaluations or other volume changes occur). When it is negative (i.e. in deficit), it is a measure of the extent to which government requires cash, either by running down its financial assets or by drawing on the cash reserves of the domestic economy, or from overseas.
Balance Sheet	<b>40</b> The balance sheet is the statement of financial position at a specific point in time. It shows the stock of assets and liabilities and the GFS net worth. GFS net worth is an economic measure of 'wealth' calculated as assets less liabilities for the general government sector and as assets less liabilities less shares and other contributed capital for the PNFCs and PFCs sectors.
	<b>41</b> The net debt measure is included as a memorandum item in the balance sheet presentation together with net financial worth, which is the difference between total financial assets and total liabilities. In GFS balance sheets, shares and other contributed capital are treated as liabilities by convention.
INTERSTATE COMPARISONS	<b>42</b> The statistics in this publication have been compiled using standard definitions, classifications and treatment of government financial transactions to facilitate comparisons between levels of government and between states within a level of government.
	<b>43</b> However, the statistics also reflect real differences between the administrative and accounting arrangements of the various governments and these differences need to be taken into account when making interstate comparisons. For example, only a state level of government exists in the Australian Capital Territory and a number of functions performed by it are undertaken by local government authorities in other jurisdictions.
	<b>44</b> Interstate comparisons of data may also be significantly affected by differences in the mix of operations undertaken by state governments and local governments. For example:
	<ul> <li>water and sewerage undertakings in Victoria, Western Australia and South Australia are operated exclusively by State authorities, but are run by local governments in other jurisdictions; and</li> </ul>
	<ul> <li>government transport undertakings are operated exclusively by state authorities in all states except Queensland where bus transport is operated by the local government sector.</li> </ul>
	• The SA Local Government Financing Authority (SA LGFA) is classified as a general government sector unit. As a result, transactions between other local government units and the SA LGFA will be eliminated by applying the principles of consolidation.
RELATIONSHIP TO OTHER INFORMATION Uniform Presentation Framework	<b>45</b> Following the May 1991 Premiers' Conference, the Commonwealth Government and the state governments resolved to implement a uniform presentation framework in their budget documents. The purpose of the uniform presentation framework was to introduce uniformity into the presentation of GFS so that users of the information could make valid comparisons between jurisdictions.

46 ABS • GOVERNMENT FINANCE STATISTICS • 5512.0 • 2005-06

Uniform Presentation Framework continued	<b>46</b> Since budget year 1992-93 the Commonwealth and state governments have presented information in their budget documents on the ABS GFS basis. The information presented in the budget documents of each jurisdiction is compiled with the advice and assistance of ABS officers and generally conforms with the standards applied by the ABS. Jurisdictions may present the information based on their interpretation of the GFS classifications, but must provide a reconciliation of this information with information reflecting the ABS treatment on these issues. In 1999, the uniform presentation framework was revised from a cash to an accruals basis and the accrual uniform presentation framework was to be implemented beginning with most jurisdictions' Budgets for 2000-01.
	<ul> <li>47 Variations between ABS statistics and those presented by the jurisdictions can exist because the ABS may:</li> <li>disagree with classification treatments applied by jurisdictions;</li> <li>employ a different consolidation methodology to those used in jurisdiction Treasuries;</li> <li>apply reconciliation adjustments when it consolidates data for all jurisdictions and compares annual data with quarterly data used in compiling the national accounts; and</li> <li>include data which were not available when a jurisdiction's GFS presentations were published (e.g. major asset sales).</li> </ul>
	<b>48</b> Differences caused as a result of the first three points above are generally minor. However, differences attributable to the last point can be significant.
AAS31	<b>49</b> The Australian Accounting Standard <i>AAS31</i> ' <i>Financial Reporting by Governments</i> ' has been adopted by all Australian governments in the preparation of their financial statements. Accounting reports prepared under AAS31 and statistical reports prepared on a GFS basis serve different purposes and are aimed at different sets of users. Thus, differences between GFS and AAS31 analytical measures (GFS net operating balance and AAS31 operating surplus/deficit for example) can be expected. Descriptions of GFS/AAS31 reconciliations are outlined in Chapter 7 of <i>Australian System of Government Finance Statistics: Concepts, Sources and Metbods</i> (cat. no. 5514.0).
Australian System of National Accounts (ASNA)	<b>50</b> While GFS and ASNA share the same conceptual framework (SNA93), there are methodological differences between GFS and ASNA analytical measures (GFS and ASNA net worth and net lending/borrowing for example). Descriptions of GFS/ASNA reconciliations are outlined in Chapter 7 of <i>Australian System of Government Finance Statistics: Concepts, Sources and Methods</i> (cat. no. 5514.0).
DATA AVAILABLE ON REQUEST	<ul> <li>51 Accruals GFS data for the PNFC and PFC sectors are available from the ABS Web site.</li> <li>52 Some GFS data are available back to 1961-62. Prior to 1998-99, however, GFS were compiled on a cash basis. Cash data prior to 1998-99 are not directly comparable with data for 1998-99 onwards due to the different data sources adopted by some jurisdictions. The ABS has not established a quantitative measure of this break in series because the existing data sources do not permit this.</li> <li>53 Generally, a charge is made for providing data available on request. Inquiries should be made to the officer whose name appears in the Inquiries section of the publication, or</li> </ul>

#### TECHNICAL NOTE 1 IMPACT OF AIFRS ON GFS

IMPACT OF AIFRS ON GFS Background

**1** In 2005 the ABS published an Information Paper entitled *Impact of the Implementation of International Financial Reporting Standards on ABS Statistics* (cat no 1279.0). This paper outlined the possible impacts on ABS economic statistics arising from the adoption of the *Australian equivalents to International Financial Reporting Standards* (AIFRS). These standards became operational for financial reporting periods beginning on or after 1 January 2005. Accordingly, all Australian governments were required to implement the standards with respect to financial reports compiled for financial year 2005-06.

**2** While the accounting standards underpinning financial reporting changed as above, those underlying government finance statistics (GFS) have remained unchanged. Ideally then, there should not be any impact on the data included in this publication from the change in accounting standards. However, as the GFS data is sourced primarily from the same underlying accounting and budgetary systems that each jurisdiction uses for financial reporting, some impacts have been observed. This article discusses the key areas where impacts have been noted, based on information required to be disclosed under the new standards. It should be noted that the main impacts affect the accrual-based GFS statements, with only very minor impacts on the GFS cashflow statements.

**3** In their first AIFRS-based financial report entities (including governments) were required to restate their 2004-05 results on an AIFRS basis, along with reconciliations demonstrating the impact of the conversion to the new standard on their results for that year. These reconciliations can be found in all Australian governments' 2005-06 year-end accounts.

**4** ABS used these published reconciliations in attempting to quantify the impact of AIFRS on the GFS time series. Owing to the different ways in which Treasuries restated their 2004-05 results on an AIFRS basis, ABS was not able to collect comparable information from all jurisdictions. However, enough information was available to identify significant impacts in the following two areas:

- Post employment (superannuation) benefits; and
- Recognition of non-financial assets at fair value.

Post-employment (superannuation) benefits **5** Under AASB 119, entities operating defined benefit superannuation schemes are obliged to recognise the net surplus or deficit of these schemes on their balance sheets, based on the actuarial valuation of the gross liability towards employees less the fair value of any plan assets. Reviews are to be undertaken annually, with future benefits ideally discounted using market yields on government bonds consistent with the expected profile of their superannuation obligations.

**6** In their consolidated financial statements all Australian governments now use 10-year Commonwealth bond rates, the longest available Commonwealth bond rate, or some average of Commonwealth bond rates to discount their defined benefit superannuation obligations. Previously most jurisdictions used average long-term earnings rates on fund assets to discount their future defined benefit superannuation liabilities. Consequently, the adoption of AASB 119 has resulted in a significant increase in provisions for unfunded superannuation for most jurisdictions. Based on information published by the Commonwealth and the States in 2004-05 accounts, the combined level of unfunded superannuation liabilities for 2004-05 is assessed as \$170 billion under AIFRS compared with \$152 billion under previous financial reporting standards. The majority of this \$18 billion increase relates to State governments.

**7** The calculation of the discounted value of defined benefit obligations also depends on a range of demographic and economic assumptions which may be modified whenever an actuarial review is undertaken in the light of the latest experience. Any changes arising from movements in discount rates and demographic or economic

Post-employment (superannuation) benefits continued

assumptions are recognised as revenues or expenses for accounting purposes, but are treated as other economic flows in GFS.

**8** Ongoing superannuation expenses to be recognised each year in operating statements reflect the cost of providing future benefits under the plan in respect of service rendered in the current and past periods. This comprises a number of elements including: current service cost, interest cost, expected return on fund assets (to be deducted) and actuarial gains and losses. The measurement of these items has been affected to varying degrees by the adoption of AIFRS.

**9** Current service cost (or unfunded superannuation expenses) is reflected in GFS as part of employee expenses. Measurement of this item for financial reporting purposes has been affected by changes in measurement of the actual unfunded liability as well as adoption of a discount rate derived from Commonwealth long-term bond rates. Previous reporting arrangements were somewhat less prescriptive with most jurisdictions using long-term fund earnings rates rather than long-term bond rates for discounting purposes.

**10** Interest cost less the expected return on fund assets is recorded in GFS as nominal interest on unfunded superannuation<sup>1</sup>. For most jurisdictions nominal interest on unfunded superannuation for each defined benefit scheme was previously calculated on the net outstanding liability multiplied by the long-term earnings rate for the related superannuation fund. Under AIFRS the calculation is based on the gross liability multiplied by the discount rate derived from Commonwealth bond rates, less the expected return on fund assets. Consequently, nominal interest flows are affected by both the use of a different discount rate and the use of gross liabilities in the calculation.

**11** Actuarial gains and losses are treated as other economic flows and are therefore excluded from the GFS operating statement. However, changes in the recording of these items due to the adoption of AIFRS are reflected in the GFS Statement of Stocks and Flows (see Technical Note 2 on page 52)

**12** Based on information published by jurisdictions, the overall effects on current service costs and nominal interest cost have been in opposite directions, with current service costs generally higher and nominal interest costs generally lower. The impact of the adoption of AIFRS on total GFS expenses in 2004-05 for the Commonwealth and State governments arising from superannuation has been an increase of approximately \$400 million, equal to 0.12% of total GFS expenses for the general government sector.

**13** Under AASB 116, entities are obliged to reflect their 'property, plant and equipment' on the balance sheet at 'fair value'. Wherever possible, fair values are based on market-based evidence and are determined by professionally qualified valuers. Where market conditions do not exist (generally because of the specialised nature of the asset and/or the fact that the asset is rarely or never sold) 'fair value' may be estimated using some other approach.

**14** The concept of 'fair value' can be thought of as the closest possible approximation to market value, given the characteristics of each asset and the market conditions (or lack thereof) surrounding each class of asset. Those items experiencing significant and volatile changes in 'fair value' are to be revalued annually, but other items with insignificant changes to 'fair value' can be revalued less frequently (every three or five years).

Recognition of non-financial assets at 'fair value'

<sup>1</sup> Ideally, in GFS, nominal interest on unfunded superannuation should be calculated by taking account of the actual, rather than the expected, return on fund assets, with the difference between the two deducted from the AIFRS measure of actuarial gains and losses to derive the GFS measure of other economic flows. However, it has not been possible to do this for the 2005-06 estimates.

Recognition of non-financial assets at 'fair value' *continued* 

**15** While the adoption of 'fair value' for 'property, plant and equipment' has had an impact on balance sheet entries, the ABS does not have the data that would be required to remove the discontinuity from the GFS balance sheet time series on a consistent basis across all jurisdictions. However, this change to standards has had no impact on GFS transactions series, such as the operating statement.

**16** The principles of 'fair value' underpinning AASB 116 also underpin AASB 139, which deals with measurement of financial assets and liabilities. Since most Australian governments were reporting a significant portion of their financial assets and liabilities at fair value already, the AIFRS-related impact on financial assets and liabilities (other than provisions for unfunded superannuation discussed above) is considered to be minor.

Conclusion

**17** The ABS has not been able to collect enough reliable information with which to eliminate the impact of the adoption of AIFRS from the GFS time series. However, it is clear that the main effects on GFS occur on the balance sheet and to other economic flows. The effects on transactions accounts have been relatively small overall. In addition to the changes to superannuation-related items discussed above, some other transactions items have also been affected but to a lesser extent.

**18** It should be noted that the international standard for the compilation of the national accounts, the System of National Accounts 1993 (SNA93), is in the final stages of a revision process with SNA93 Rev1 expected to be published in 2008. SNA93 Rev1 will include revised recommendations for the treatment of defined benefit superannuation schemes. It is expected that these recommendations will subsequently be incorporated in the International Monetary Fund's Government Finance Statistics Manual (GFSM2001). Consequently, some further changes may be necessary to the treatment of public sector defined benefit superannuation schemes in both GFS and national accounts statistics when ABS implements these updated international standards. These changes will be announced in relevant publications at an appropriate time.

STATEMENT OF STOCKS AND FLOWS

**1** The international GFS standard as promulgated by the International Monetary Fund recommends that opening and closing 'stock' values be reconciled with all 'flows' occurring throughout the year. The standard is based on an analytical framework in which all changes in the values of stocks from one year to the next can be fully explained by the flows that have occurred during that year.

**2** Institutional units hold assets (financial and non-financial) and incur liabilities (which by definition are financial). The level of these assets and liabilities at any point in time is the stock. The difference between assets and liabilities is net worth, which is a measure of the 'wealth' of units or of government. Anything which causes a change in these stocks of assets and liabilities is a flow. Flows are disaggregated into transactions and 'other economic flows'. A transaction is, for the most part, an interaction between two units by mutual agreement, whereas an 'other economic flow' is a change in the volume or value of a stock of a unit not resulting from a transaction.

**3** By definition, the value of a stock at the end of a period is the sum of the stock at the beginning of the period and all the flows affecting that stock which took place during the period, i.e.  $S_1 = S_0 + F_1$ , where  $S_0$  and  $S_1$  represent the values of a specific stock at the beginning and end of an accounting period, and  $F_1$  represents the net value of all flows during the period relevant to that particular stock.

**4** Statistics on transactions giving rise to revenues and expenses are currently published as part of the GFS operating statement. Revenues are defined as transactions which increase net worth whereas expenses are transactions which decrease net worth. The difference between revenues and expenses, therefore, represents the change in net worth due to transactions. This equates to the GFS net operating balance.

**5** Other economic flows can be further disaggregated into movements in asset/liability values resulting from price changes ('revaluations') and those resulting from volume changes ('other volume changes').

**6** Revaluations result from changes to the value of the assets and liabilities whilst held. Revaluations can accrue to financial assets such as bonds and bills, shares and other forms of equity, as well as non-financial assets such as land and buildings.

- 7 Other volume changes refer to events that include:
  - the recognition or de-recognition of assets or liabilities on the balance sheet e.g. when resources become economically exploitable, or when an asset is no longer providing an economic benefit, and so is removed from the balance sheet.
  - changes in the quantity or quality of the existing asset these typically result from catastrophic losses through natural disasters, changes in the volume of natural assets such as fish or forest stocks, creation, discovery, cancellation or seizure of assets, or quality differences arising from events such as a change in the expected life of the asset.
  - changes in the classification of assets these usually arise when the use of an asset changes, e.g. if the use of a parcel of public land changes from recreational use to industrial use.

**8** The net effect of all revaluations and other volume changes occurring through the year represents the change in net worth due to other economic flows.

**9** Since the values of stocks at the end of a year must be equal to their values at the start of a year, plus all transactions and other economic flows affecting them during the year, it follows that the total change in net worth during a given year is equal to the change in net worth due to transactions, plus the change in net worth arising from other economic flows.

STATEMENT OF STOCKS AND FLOWS continued

**10** When working with actual reported data, it is often assumed that the difference between opening and closing net worth and the change in net worth due to transactions is attributable to the change in net worth due to other economic flows (i.e. other economic flows is effectively used as a balancing item). However, to ensure data quality it is necessary to independently collect and calculate the change in net worth due to other economic flows. In situations where the reported data do not add through, it is not necessarily the case that the data quality issue is in the other economic flows component of the framework. Where data quality is high throughout the reported data set, the three independently reported components (i.e. change in net worth as derived via the balance sheet, change in net worth due to transactions, and change in net worth due to other economic flows) will be consistent with each other.

**11** The Commonwealth government publishes a statement of other economic flows for the general government sector. This statement outlines all revaluations and other volume changes occurring throughout the year, which allows a full reconciliation of stocks and flows. This information allows the ABS to disaggregate other economic flows into price and volume effects. While some states also publish a statement of other economic flows, the majority currently do not. For local government, information on the components of other economic flows are also generally unavailable. Accordingly, the ABS does not have enough information on which to disaggregate other economic flows into its two components across the state and local levels of government.

**12** Users should be aware that Australian equivalents of International Financial Reporting Standards (AIFRS) were adopted by all Australian governments in 2005-06. Ideally, all source data in a statement of stocks and flows would be compiled according to a common financial reporting framework; however opening balance sheet data in the tables below was compiled under the previous financial reporting standards, Australian Generally Accepted Accounting Principles (AGAAP). As a result, some AIFRS-related events are reflected in these tables as other economic flows. For further information on the impact of AIFRS on GFS, see Technical Note 1 on page 49 of this publication.

Commonwealth General Government - Statement of Stocks and Flows **13** During 2005-06 the net worth of the Commonwealth general government sector increased by \$14,627 million. However, GFS net operating balance (which reflects the change in net worth due to transactions) was \$17,992 million. There was therefore -\$3,365 million of other economic flows which are explicitly shown in the statement of stocks and flows. This -\$3,365 million change in net worth arising from other economic flows can be disaggregated further. The vast majority of this -\$3,365 million was due to revaluations: -\$3,372 million. The key driver on the liability side is unfunded superannuation and other employee entitlements (\$6,648 million). On the asset side, significant impacts relate to other non-equity assets (\$10,808 million) and equity (-\$5,574 million). Only \$7 million is explained by other volume changes; specifically, assets recognised for the first time in 2005-06.

State and Local General Government - Statement of Stocks and Flows

**14** Both the state and local tables highlight the significance of other economic flows. Though the net worth of state governments increased by \$20,826 million during 2005-06, only \$8,230 million of this increase can be attributed to transactions. The remainder (\$12,596 million) derives from other economic flows. The largest impacts are reflected against land and fixed assets (\$18,404 million) and unfunded superannuation liabilities (\$14,898 million). Both of these impacts partially result from the implementation of AIFRS. The net worth of local government increased by \$15,455 million during 2005-06. Only \$2,580 million of this increase derives from transactions. \$12,875 million of this increases in land and fixed assets.

Further information

**15** For more information on the statement of stocks and flows, refer to Table 2.1 in *Australian System of Government Finance Statistics: Concepts, Sources and Metbods (cat no 5514.0)* and Chapter 4 of the *International Monetary Fund's Government Finance Statistics Manual 2001* 

# GLOSSARY

AAS31	Australian Accounting Standard 31 (Financial reporting by governments) is the principal
	accounting standard applicable to the Commonwealth and State governments.
AIFRS	Australian equivalents to International Financial Reporting Statements
Accrual recording	A recording method in which revenues, expenses, lending and borrowing are recorded as they are earned, accrued or incurred regardless of when payment is made or received.
Advances paid (net)	Lending by public authorities with the aim of achieving government policy objectives less repayment of past lending.
Advances received (net)	Borrowing, net of repayments, from other public authorities.
Assets	Instruments or entities over which ownership rights are enforced by institutional units and from which economic benefits may be derived by holding them, or using them, over a period of time. Assets are distinguished between non-financial and financial.
Balance sheet	A statement of an entity's financial position at a specific point in time. Contains information on assets, liabilities and owners' equity at a specific date.
Borrowing (net)	Net borrowing by public authorities from public and private bodies and individuals within Australia and from abroad. Net borrowing is gross borrowing less the repayment of past borrowing.
Capital grant expenses	Unrequited payments by government to finance the acquisition of non-financial capital assets by the recipient, or compensate the recipient for damage or destruction of capital assets, or increase the financial capital of the recipient.
Change in net worth	Change in net worth due to transactions is also equivalent to the net operating balance and excludes the impact of revaluations and other changes in volume of assets and liabilities.
Current grant expenses	Voluntary transfers intended to finance the current activities of the recipient. Includes grants for current purposes to private non-profit organisations serving households, grants made to foreign governments and organisations including grants made for aid projects, and current grants from one level of government to another (e.g. Commonwealth to State) and between units within the same level of government.
Deposits received (net)	Net increase in cash held by a government unit as a result of a net change to its liabilities generated by taking deposits from a private body or other government unit.
Depreciation	The accounting process of systematically allocating the cost less estimated residual value of an asset over its expected life.
Distributions paid	Cash transfers by public enterprises to their parent entities and other shareholders in the form of dividends, transfer of profits or other similar distributions.
Expenditure on non-financial assets (net)	Net expenditure on new and second-hand fixed assets, land and intangible assets excluding capitalised interest. Fixed assets are durable goods intended to be employed in the production process for longer than a year.
Finance leases	Leases and other arrangements which effectively transfer most of the risks and benefits associated with ownership of the leased property from the lessor to the lessee.
GFS net lending/borrowing (NLB)	The financing requirement of government, calculated as the GFS net operating balance less the net acquisition of non-financial assets. A positive result reflects a net lending position and a negative result reflects a net borrowing position.
GFS net worth (NW)	Assets less liabilities and shares/contributed capital. For the general government sector, net worth is assets less liabilities since shares and contributed capital is zero. It is an economic measure of wealth and reflects the contribution of governments to the wealth of Australia.

## **GLOSSARY** continued

Gross domestic product (GDP)	Total market value of goods and services produced in Australia within a given period after deducting the cost of goods and services used up in the process of production, but before deducting allowances for the consumption of fixed capital (depreciation).
Interest expense	Nominal interest on unfunded superannuation and other interest payable. Nominal interest on unfunded superannuation is the imputed interest accrued during the period on unfunded superannuation liabilities. See 'Superannuation expense' below.
Interest income	Income accrued by owners of financial assets such as deposits, securities other than shares, loans and accounts receivable in return for providing funds to other entities.
Liabilities	Legal obligations to make payments to other institutional units.
Net debt	Net debt is included in the balance sheet presentation for information. It is equal to (deposits held plus proceeds from advances plus borrowing) minus (cash and deposits plus investments plus advances outstanding).
Net financial worth	Net financial worth is equal to financial assets minus liabilities. It is a broader measure than net debt in that it incorporates provisions made (such as superannuation, but excluding depreciation and bad debts) as well as holdings of equity. Net financial worth includes all classes of financial assets and liabilities, only some of which are included in net debt.
Net operating balance (NOB)	This is calculated as GFS revenue minus GFS expenses. It is equivalent to the change in net worth arising from transactions.
Other financing transactions	Total financing less advances received (net), less borrowing (net), less deposits received (net) plus distributions paid. This is a residual calculation within cash flow statements and hence encompasses any errors and omissions in the components used to derive it.
Sales of goods and services	Revenue from the direct provision of goods and services by general government and public corporations
Superannuation expense	Superannuation expense is a component of 'compensation of employees'. Superannuation expense in a period represents the increase in superannuation liabilities due to services provided by employees in that period.
Surplus(+)/Deficit(-)	Net cash flows from operating activities plus net cash flows from investments in non-financial assets, less distributions paid, less assets acquired under finance leases and similar arrangements.
