INQUIRIES

- For more information about these and related statistics, please contact Peter Jones on Sydney (02) 9268 4495 or Tim Power on Canberra (02) 6207 0244. For information about other ABS statistics and services, refer to the back of this publication.

NOTES

This publication contains estimates of the civilian labour force in New South Wales (NSW) and the Australian Capital Territory (ACT) derived from the Labour Force Survey (LFS) component of the Monthly Population Survey, which is conducted on a sample basis throughout Australia. Explanatory notes for data contained in this publication can be found on page 45.

Care should be taken in the interpretation of month-to-month movements in the estimates. Survey estimates are subject to sampling and non-sampling variability as explained in the Technical note on data reliability on page 57.

.....

CHANGES THIS ISSUE

New sample: Following each Census of Population and Housing, the ABS selects a new sample for the Labour Force Survey. This is done to ensure that the sample continues to accurately represent the distribution of the Australian population. A new sample has recently been selected based on the 1996 Census. The bulk of the new sample is being phased in over the period September 1997 to April 1998, with one eighth of this portion of the sample being introduced each month. The remainder of the sample (about 15% of the total), which covers less settled areas of Australia and non-private dwellings, was rotated in fully in September 1997 for New South Wales, Victoria, Tasmania, Northern Territory and the Australian Capital Territory and in October 1997 for the other States.

New labour force regions: Changes were made to labour force regions in NSW from September 1997. Blacktown-Baulkham Hills Statistical Region (SR) was split up with Blacktown being merged with Outer Western Sydney SR to form Outer Western Sydney SR and Blacktown (C) and Baulkham Hills being merged with Hornsby-Ku-ring-gai SR to form Hornsby-Ku-ring-gai SR and Baulkham Hills (A). Publication of data for the former regions has been discontinued. In addition, from September 1997, the Northern, Far West-North Western and Central West SRs has included the Far West Statistical Division, previously excluded. This has resulted in an estimated additional 12,000 people in the labour force for this region and a series break in the data.

These changes affect the data in table 19 and the graphs on page 6.

SUMMARY OF FINDINGS NSW

TREND ESTIMATES

Employed persons

Trend estimates of employed people in NSW rose from 2,537,000 in February 1993 to 2,798,000 in December 1995. Following small falls in early 1996, the trend rose to a peak of 2,818,000 in February 1997. After more small falls for several months, the trend resumed rising in August 1997 and by November 1997 had reached 2,811,000.

Unemployed persons

Trend estimates of unemployed people in NSW fell from a peak of 314,000 in January 1993 to 229,000 in July 1995. The trend then rose slowly to 248,000 in April 1997 before declining to 241,000 in November 1997.

SUMMARY OF FINDINGS NSW *continued*

Unemployment rate

From a peak of 11.0% early in 1993, the trend estimate of the NSW unemployment rate fell rapidly to 7.6% in October and November 1995. It then rose slowly to 8.1% in March–June 1997 before falling to 7.9% in November 1997.

Participation rate and labour force

The trend estimate of the labour force participation rate has fallen steadily over the last two years from a peak of 62.8% at the end of 1995 to 61.5% in November 1997. The male participation rate fell from 72.9% to 71.8% in this period and the female rate fell from 53.0% to 51.6%.

Following the fall from the peak of 3,062,000 in February 1997 to 3,038,000 in August, the trend estimate of the labour force started rising again and had reached 3,052,000 by November 1997.

SEASONALLY ADJUSTED ESTIMATES

In November 1997, the seasonally adjusted estimate of employment in NSW was 2,839,000 compared to 2,799,000 a year earlier.

Seasonally adjusted unemployment was 238,000 in November 1997 compared to 228,000 the previous November. The unemployment rate was 7.7% in November 1997 compared to 7.5% a year earlier.

SUMMARY OF FINDINGS NSW *continued*

REGIONS OF NSW

While the Labour Force Survey (LFS) is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard errors. Care should therefore be taken in interpretation of regional estimates, particularly month-to-month movements.

A new sample, based on the 1996 Census of Population and Housing, is being phased in over the period September 1997 to April 1998. Regional estimates from September 1997 onwards may not be directly comparable with those before that date because the new sample which has been selected may have different characteristics from the old.

Sydney

In November 1997, the estimated number of people employed in the Sydney Major Statistical Region (MSR) was almost 1.9 million, about 2% higher than a year earlier.

The unemployment rate rose from a six year low of 6.0% in November 1996 to 8.0% in February 1997 before falling back to 5.9% in October–November 1997. The rate was 6.4% for males and 5.4% for females in November 1997.

The lowest unemployment rates within Sydney MSR in November 1997 were in Northern Beaches Statistical Region (SR) with 2.3% and Hornsby–Ku-ring-gai (SR) and Baulkham Hills (A) with 3.0% while the highest rate was 14.9% in Fairfield–Liverpool SR.

The labour force participation rate for Sydney MSR was 64% with a rate of 74% for males and 55% for females. Rates ranged from 72% in Northern Beaches SR to 56% in Canterbury–Bankstown SR.

Balance of NSW

In November 1997, the estimated number of employed people in this area of NSW was 981,000.

From a level of 9.3% in November 1996, the unemployment rate in Balance of NSW MSR rose to 11.7% in February 1997 then fell to 9.9% in November 1997. The unemployment rate in November 1997 varied from a low of 5.9% in Northern, Far West–North Western and Central West (SRs) to 17.7% in the combined Richmond–Tweed and Mid-North Coast SRs.

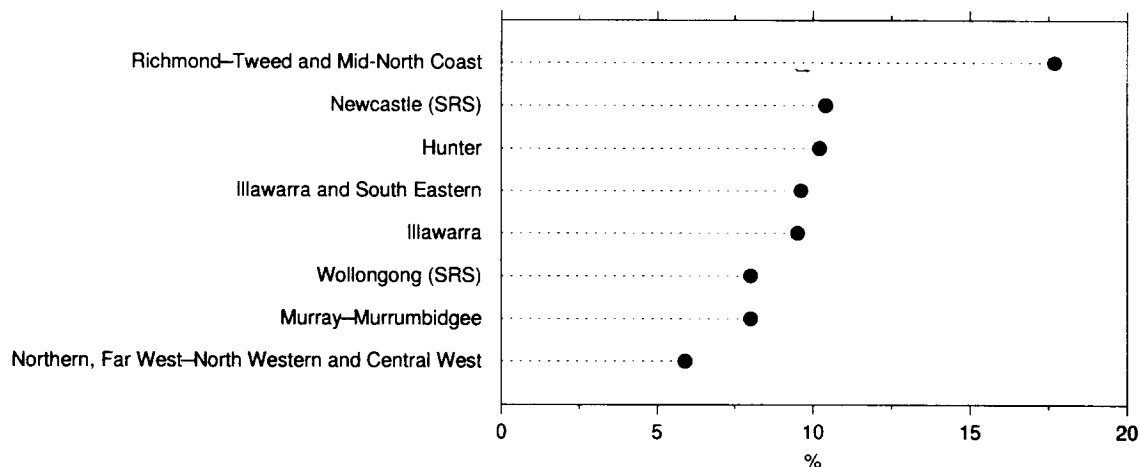

The participation rate for the Balance of NSW MSR was 58% in November 1997 with male participation at 69% and female participation at 48%.

SUMMARY OF FINDINGS NSW *continued*

Unemployment rate, Sydney MSR, November 1997

Unemployment rate, Balance of NSW MSR, November 1997

INDUSTRY AND OCCUPATION

In the year to November 1997, the largest gain in employment was in the Agriculture, forestry and fishing industry with an increase of 35,000 people (over 30%), while the largest decreases were in Finance and insurance and in Government administration and defence with falls of 17,000.

The main industries in NSW, based on employment in November 1997, were Retail trade with 15% of total employed and Manufacturing (14%). The manufacturing industry was also the top employer of males with 17% of employed men while Retail trade with 18% of employed females and Health and community services (17%) were the largest employers of women.

The largest occupation groups in NSW were Intermediate clerical, sales and service workers and Professionals both with 18% of the total.

SUMMARY OF FINDINGS NSW *continued*

AGE

The year to November 1997 saw employment increase across all age groups in NSW except 20–24 and 35–44 year olds. The largest change was in the 65 years and over age group, where employment increased by over 30%.

Part-time workers represented nearly one-quarter of all employed people in November 1997. This proportion varied between age groups with the highest levels for 15–19 years (60%) and 65 years and over (54%) and the lowest for 25–34 years (16%).

The unemployment rate was highest for the 15–19 years age group at 17.2%.

DURATION OF UNEMPLOYMENT

In November 1997, the long-term unemployed represented over a third of all unemployed people. Average (mean) duration of unemployment was 60 weeks and the median duration of unemployment was 28 weeks.

Average duration of unemployment

SUMMARY OF FINDINGS ACT

Note: Seasonally adjusted estimates are not available for the ACT.

TREND ESTIMATES

Employed persons

Trend estimates of employed people in the ACT has continued to fall over the last six months, dropping from a high of 159,000 in May 1997 to 156,000 in November. This fall occurred exclusively in female employment.

Unemployed persons

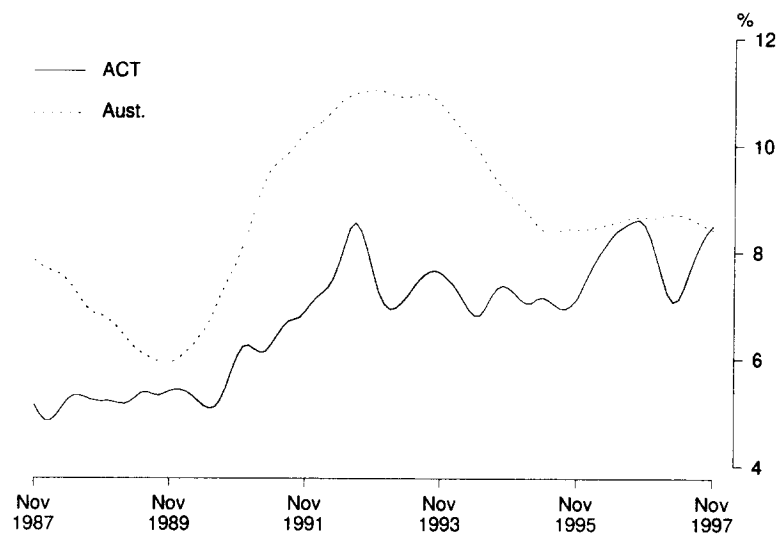

The trend estimate of unemployed people in the ACT has risen by over 20% in the last seven months from a low point of 12,000 in April 1997 to 14,500 in November. Unemployment has now returned to the historically high level experienced in August to October 1996.

SUMMARY OF FINDINGS ACT *continued*

Unemployment rate

The trend estimate of the unemployment rate in the ACT has risen sharply over the past six months from 7.1% in May 1997 to 8.5% in November. The rate has returned to the level that occurred in the second half of 1996.

Participation rate and labour force

The ACT trend estimate of the labour force participation rate increased from a low of 71.0% in December 1996 to 73.0% in July 1997 then fell to 72.3% in November. Whereas the male participation rate increased throughout 1997 to reach 80.2% in November, the female rate increased to 67.1% in May 1997 before dropping quickly to 64.6% in November.

The labour force estimate increased in the first half of 1997 but declined a little in the past five months to 170,000 in November.

INDUSTRY AND OCCUPATION

For the year ending November 1997, the major industries in the ACT based on employment were Government administration and defence which had an annual average of 40,000 employed people or 26% of the total and both Retail trade and Property and business services with 13% of the total.

The largest occupation groups were Professionals with an annual average of 24% of employed people and Intermediate clerical, sales and service workers with 19%.

SUMMARY OF FINDINGS ACT *continued*

AGE

Part-time workers represented almost a quarter of all employed persons in the ACT but this proportion decreased with age from 74% of 15–19 year olds to 18% of those aged 25 years and over. Average weekly hours worked ranged from 18 hours per week for teenagers to 37 hours per week for those 25 years and over.

Unemployment rate by age

DURATION OF UNEMPLOYMENT

In November 1997, the average duration of unemployment in the ACT was 33 weeks. The average ranged from 22 weeks for 15–19 year olds to 40 weeks for those aged 25 years and over.

Average duration of unemployment

(a) While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard error. Care should therefore be taken in interpretation of regional estimates, particularly month to month movements. Tables of standard errors are included in the Technical Note on pages 57–62 of this publication. Regional estimates from September 1997 onward may not be directly comparable with those before September 1997 because a new sample has been selected which may have different characteristics to the old. (b) New region from September 1997. (c) Estimates for the South Eastern (SR) are not published separately. Data for the South Eastern (SR) are included in ACT and South Eastern (SRs) and in Illawarra and South Eastern (SRs). (d) From September 1997 includes Far West Statistical Division, previously excluded. Break in the series from September 1997.

LONG-TERM UNEMPLOYED AS A PROPORTION OF TOTAL UNEMPLOYED, ACT

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains estimates of the labour force derived from the Labour Force Survey (LFS) component of the monthly population survey, which is conducted on a sample basis throughout Australia.

THE POPULATION SURVEY

2 This survey consists of the LFS and, in most months, one or more supplementary topics. The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers 1 in 300 of the population of NSW. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

TELEPHONE INTERVIEWING

3 The ABS has introduced the use of telephone interviewing into the LFS. Households selected for the LFS are interviewed each month for eight months, with one-eighth of the sample being replaced each month. The first interview is conducted face-to-face with subsequent interviews conducted by telephone (if acceptable to the respondent). Telephone interviewing was phased in for each new sample group from August 1996 to February 1997.

SCOPE

4 The LFS includes all persons aged 15 years and over, except:

- members of the permanent defence forces;
- certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- overseas residents in Australia; and
- members of non-Australian defence forces (and their dependants) stationed in Australia.

SURVEY SAMPLE REDESIGN

5 The LFS sample has been reselected using information collected in the 1996 Census of Population and Housing.

6 The bulk of the new sample will be phased in over the period September 1997 to April 1998, with one eighth of this portion of the sample being introduced every month. The remainder of the sample (about 15% of the total), which covers less settled areas of Australia and non-private dwellings was rotated in fully for New South Wales, Victoria, Tasmania, Northern Territory and Australian Capital Territory in September 1997 and for the other States in October 1997. Such a pattern of implementation means that any changes to labour force estimates due to differences between the two samples, or any other influences, will be spread over the eight months.

7 For further details, see *Information Paper: Labour Force Survey Sample Design* (Cat. no. 6269.0)

DEFINITIONS

8 The labour force category to which a person is assigned depends on the actual activity undertaken during the reference week (i.e. whether working, looking for work, etc.). The following definitions, which conform closely to the international standard definitions specified by the International Labour Office (ILO), relate only to those persons within the scope of the survey.

9 *Employed persons* comprise all civilians aged 15 years and over who, during the reference week:

- worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and self-employed persons) in a job or business, or on a farm; or
- worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

10 Prior to April 1986, unpaid family helpers who worked for 1–14 hours were excluded from the category of employed persons.

11 Employed persons can be classified into:

- *full-time workers* (i.e. those who usually worked 35 hours or more a week (in all jobs) and others who, although usually part-time workers, worked 35 hours or more during the reference week); and
- *part-time workers* (i.e. those who usually worked less than 35 hours a week and who did so during the reference week).

12 *Unemployed persons* are all those aged 15 years and over who were not employed during the reference week, and:

- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:
 - ◆ were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
 - ◆ were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
- were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

13 *Actively looking for work* includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service notice-boards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

14 *The unemployment rate* for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.

15 The *labour force* comprises all persons who, during the reference week, were employed or unemployed as defined above.

- 16** *Long-term unemployed* comprises persons unemployed for a period of 52 weeks or more.
- 17** *Persons not in the labour force* are those who, during the reference week, were not in the categories *employed* or *unemployed* as defined above.
- 18** *The labour force participation rate* for any group is the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.
- 19** *Duration of unemployment* is the period from the time the person began looking for work or was stood down to the end of the reference week.
- 20** *Unemployed persons classified by industry and occupation*. Unemployed persons who had worked full-time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
- 21** *Industry classification*. From August 1994, LFS industry data have been classified according to the *Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993* (Cat. no. 1292.0). For further information about the application of ANZSIC to LFS data, see *Information Paper Labour Force Survey: Introduction of ANZSIC for industry data* (Cat. no. 6259.0).
- 22** *Occupation classification*. From August 1996, occupation data are classified according to the *Australian Standard Classification of Occupations (ASCO), Second Edition*. This replaces the First Edition which was introduced into the survey in August 1986. A detailed description of the new classification appears in *ASCO — Australian Standard Classification of Occupations, Information Paper* (Cat. no. 1221.0).
- 23** *Marital status*. In the LFS, persons are classified as married or not married. Persons are classified as married if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey.
- 24** *Persons attending school or a tertiary educational institution*. Persons attending school comprise those aged 15–19 years who, during the reference week, were enrolled full-time at secondary or high schools (including boarding school pupils). Persons attending a tertiary educational institution comprise those aged 15–24 years who were enrolled full-time at universities, colleges of advanced education, technical colleges, colleges of technical and further education, and theological colleges.
- 25** *Employment/population ratio*. For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 years and over in the same group.

STATISTICAL AREAS

- 26** The regional structure for NSW used in tables 16–19 is based on the Statistical Region structure of the Australian Standard Geographical Classification (ASGC). For further information concerning statistical areas, please refer to pages 51–56 and the publications *Regional Statistics, New South Wales* (Cat. no. 1304.1) and *Australian Standard Geographical Classification* (Cat. no. 1216.0).

27 Changes were made to labour force regions in NSW from September 1997. Blacktown–Baulkham Hills SR was split up with Blacktown being merged with Outer Western Sydney SR to form Outer Western Sydney SR and Blacktown (C) and Baulkham Hills being merged with Hornsby–Ku-ring-gai SR to form Hornsby–Ku-ring-gai SR and Baulkham Hills (A). Publication of data for the former regions has been discontinued. In addition, Northern, Far West–North Western and Central West SRs now include the Far West Statistical Division, previously excluded. This has resulted in a series break in the data for this area.

28 For further details, see *Information Paper: Regional Labour Force Statistics, September 1997* (Cat. no. 6262.0).

SEASONAL ADJUSTMENT AND TREND ESTIMATION

29 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

- employment: 5 in 10 monthly movements;
- unemployment: 7 in 10 monthly movements; and
- participation rate: 9 in 10 monthly movements

30 Smoothing seasonally adjusted series produces a measure of the underlying trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available.

31 Seasonally adjusted series for NSW appear in this publication in table 2. Trend estimates for NSW and ACT appear in tables 2 and 21 respectively. Seasonally adjusted data is not available for ACT.

RELIABILITY OF THE ESTIMATES

32 Estimates in this publication are subject to sampling and non-sampling errors. The Technical note on pages 57–59 of this publication gives information on these sources of error.

ADDITIONAL DATA

34 In addition to the LFS, the ABS publishes a wide range of supplementary labour market information. For details see page 50 of this publication.

35 The ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, clerically-extracted tabulation. In general, a charge is made for providing unpublished information.

ROUNDING

36 Figures have been rounded and discrepancies may occur between sums of the component items and the totals shown.

APPENDIX SUPPLEMENTARY TOPICS

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time.

It was ABS practice to release statistics from supplementary and special surveys in *Labour Force, Australia* (Cat. no. 6203.0). This practice ceased with the release of the February 1996 issue of *Labour Force, Australia*. For future releases of supplementary labour data, separate publications containing summary results and key findings will be produced.

Equivalent tables at the State level are available on microfiche. In addition, other unpublished data can be provided to meet special requirements.

REGIONS OF NSW AND ACT

REGIONS OF SYDNEY (MSR)

TECHNICAL NOTE DATA RELIABILITY

SOURCES OF ERROR

There are a number of possible sources of error in sample surveys and these can be classified into two types: sampling error; and non-sampling error.

NON-SAMPLING ERRORS

Non-sampling errors may arise as a result of errors in the reporting, recording or processing of the data and can occur even if there is a complete enumeration of the population. Non-sampling errors can be introduced through: inadequacies in the questionnaire; non-response; inaccurate reporting by respondents; errors in the application of survey procedures; incorrect recording of answers; and errors in data entry and processing.

It is difficult to measure the size of the non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey, and from question to question. However, every effort is made in the design of the survey and development of survey procedures to minimise the effect of these errors.

SAMPLING ERRORS

Sampling error is the error which occurs by chance because the data were only obtained from a sample, not the entire population.

Standard errors of estimates

One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the standard error (SE). There are about two chances in three that a survey estimate is within one standard error of the figure that would have been obtained if all persons had been included and about 19 chances in 20 that it is within two standard errors. That is, there are 19 chances in 20 that the true estimate is in the range—

$$X - 2 \times SE(X) \text{ to } X + 2 \times SE(X)$$

(where X is the estimate)

The standard error of an estimate can be obtained from the tables on pages 60–62. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example on page 59).

In the tables in this publication, only estimates with relative standard errors of 25% or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.

The standard error can also be expressed as a percentage of the estimate and this is known as the relative standard error (RSE). The RSE is determined by dividing the standard error of an estimate $SE(X)$ by the estimate X and expressing it as a percentage.

That is—

$$RSE(X) = \frac{SE(X) \times 100}{X}$$

(where X is the estimate)

The look up list on the following page provides a guide for the calculation of standard errors and relative standard errors for a range of statistics.

TECHNICAL NOTE DATA RELIABILITY *continued*

CALCULATING STANDARD ERRORS

The methods described below refer to the calculation of standard errors for NSW estimates. Standard errors of ACT estimates should be calculated from the table on page 62, using column 2 (from September 1992) instead of the table on page 60, and column 3 (Monthly movements for December 1992–January 1993 onwards) instead of the table on page 61.

<i>MEASURE OF RELIABILITY TO BE DETERMINED</i>	<i>METHOD</i>
Standard errors of estimates of employed persons.	Determine the SE from the table on page 60 directly.
Standard errors of estimates of unemployed persons.	Multiply the SE from the table on page 60 by 1.06.
Standard errors of estimates of persons not in the labour force.	Multiply the SE from the table on page 60 by 1.1.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the RSE of the numerator (X) and the denominator (Y) then apply the following formula: $RSE\left(\frac{X}{Y}\right) = \sqrt{[RSE(X)]^2 + [RSE(Y)]^2}$
Standard error of average duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 1.3.
Standard error of median duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 2.0.
Standard error of monthly movements.	From the table on page 61, look up the SE of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate from the table on page 60 and multiply this by 1.11.
Standard error of annual movements.	Determine the standard error of the larger estimate from the table on page 60 and multiply this by 1.3.

LINEAR INTERPOLATION

Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the size of estimate column in the tables on page 60 or 61. Linear interpolation is best described using an example. In November 1997, there were 686,800 (X_e) employed persons working part-time in NSW. This estimate falls between the values 500,000 (X_l) and 1,000,000 (X_u) in the table on page 60.

The standard error of the estimate is determined as follows. Firstly calculate

$$\begin{aligned} F &= \frac{X_e - X_l}{X_u - X_l} \\ &= \frac{686,800 - 500,000}{1,000,000 - 500,000} \\ &= 0.37 \end{aligned}$$

Secondly, calculate the standard error of the estimate, $SE(X_e)$ thus:

$$\begin{aligned} SE(X_e) &= SE(X_l) + \left(F \times [SE(X_u) - SE(X_l)] \right) \\ &= 8,800 + (0.37 \times [11,300 - 8,800]) \\ &= 9,725 \end{aligned}$$

Therefore the standard error of the number of employed persons in November 1997 working part-time in NSW (686,800) is 9,725.
