## NOTES

ABOUT THIS PUBLICATION

ABOUT THIS SURVEY

SYMBOLS AND OTHER USAGES

REGIONAL INQUIRIES

This publication presents information about the labour force status of persons in June 1999, and the types of families to which they belonged. Information is also provided on the number and age of children in families.

Family data were collected for civilians aged 15 and over who were usual residents of private dwellings where all the usual residents were present and within the scope of the survey. Certain classes of families were excluded (see paragraphs 5, 9 and 10 of the Explanatory Notes for more details). The estimates in this publication covered $95 \%$ of the Australian civilian population aged 15 and over.

The information in this publication was collected as part of the monthly Labour Force Survey conducted in June 1999. Family type has been derived from questions which establish the relationships between members of the households selected in the survey.

Relationship in household and families data are collected each month in the Labour Force Survey and published in Labour Force, Australia (Cat. no. 6203.0). However, it is only the June survey each year that provides estimates of children aged 0-4, 5-9 and 10-14 in families.

## SUMMARY OF FINDINGS

OVERVIEW
The data in this publication are based on responses from people included in the June 1999 Labour Force Survey for whom family type could be derived (see paragraphs 9 and 10 of the Explanatory Notes for more details).

The data cover $14,176,000$ people or $95 \%$ of the civilian population aged 15 and over. Of these people, 11,679,400 (82\%) were members of $5,055,700$ families. Of the remaining $2,496,600$ people, i.e. those who were not members of a family, $64 \%$ lived alone.

As shown in the diagram below, the large majority of families were couple families, slightly less than half of which had dependants present.

One parent families were the next largest group, with more than two thirds having dependants present. Of the 772,400 one parent families, $86 \%$ had a female parent.

Of all families, $76 \%$ had one or more family members aged 15 and over employed, and $8.5 \%$ had one or more members unemployed. Approximately $55 \%$ of families had one or more persons aged 15 and over who were not in the labour force, and of these, $38 \%$ had all members not in the labour force.

In June 1999, $76 \%$ of couple families had at least one partner employed. This proportion is unchanged for the past four years. The proportion in June 1989 was $78 \%$. The decline since June 1989 has coincided with an increase in the proportion of couples where both partners are aged 45 and over, and both are not in the labour force.

The proportion of couple families with both partners employed has risen from $47 \%$ in June 1989 to $50 \%$ in June 1999. The percentage of couple families where one partner was employed and the other was not in the labour force has decreased from $29 \%$ in June 1989 to $24 \%$ in June 1999.

COUPLE FAMILIES: EMPLOYMENT STATUS OF PARTNER/S AND WHETHER DEPENDANTS PRESENT

The proportion of couple families with dependants present in which one or both partners were employed was $92 \%$ in June 1999. It has increased from $89 \%$ in June 1989, although the rate of increase has slowed in the last few years.

The husband was employed in $89 \%$ of all couple families with dependants. This proportion has been steady in recent years. In $94 \%$ of these cases, the husband was employed full time.

The wife was employed in $60 \%$ of couple families with dependants. The proportion where the wife was employed full time has risen from $20 \%$ in the early 1980s to $26 \%$ in June 1999. The percentage of wives employed part time has been relatively steady at around $34 \%$ in recent years, after rising slowly from around $25 \%$ in the early 1980s.

The proportion of wives in full-time employment rose as the age of youngest dependant increased, as shown in the following graph.

COUPLE FAMILIES WITHOUT DEPENDANTS PRESENT

COUPLE FAMILIES: FULL-TIME EMPLOYMENT STATUS OF PARENT BY AGE OF YOUNGEST DEPENDANT

In $3.2 \%$ of couple families with dependants present ( 64,400 families), the husband was unemployed and the wife was either unemployed or not in the labour force. In $45 \%$ of these families, the husband had been unemployed for 52 weeks or more.

The percentage of couple families with dependants present with one or both parents unemployed has been steadily declining from $10.7 \%$ in June 1993 to $6.5 \%$ in June 1999. Since June 1998, the percentage with one or both parents unemployed has fallen 1.2 percentage points. The proportion of these families with one or both partners unemployed generally reflects changes in the overall level of unemployment.

The number of children aged $0-14$ in couple families where neither parent was employed was 269,800 in June 1999.

In June 1999, $52 \%$ of couple families had no dependants present. The proportion has been consistently greater than $50 \%$ since June 1994.

## COUPLE FAMILIES

With dependants
$\begin{array}{lllllllllll}1989 & 1990 & 1991 & 1992 & 1993 & 1994 & 1995 & 1996 & 1997 & 1998 & 1999\end{array}$

COUPLE FAMILIES WITHOUT DEPENDANTS PRESENT continued

ONE PARENT FAMILIES

The husband and wife were both aged 45 years or over in $73 \%$ of couple families without dependants present in June 1999, an increase from $71 \%$ in 1990 . Of these, $49 \%$ were families where both partners were not in the labour force.

At least one partner was employed in $62 \%$ of couple families without dependants present and $43 \%$ had both partners employed. The husband was employed full time in $51 \%$ of couple families without dependants and the wife was employed full time in $31 \%$.

In these families, the proportion in which wives were employed part time has risen over the last five years, from $14 \%$ in June 1993 to 17\% in June 1999, although it has remained steady in the last year.

Over time, the proportion where at least one partner was unemployed broadly reflects movements in the overall level of unemployment. In June 1999, this proportion was $3.4 \%$ for these families (compared with $6.5 \%$ for couple families with dependants present).

In June 1999, there were 772,400 one parent families, making up $15 \%$ of all families. This percentage has increased from $13 \%$ in June 1994.

ONE PARENT FAMILIES: EMPLOYMENT STATUS OF PARENT BY AGE OF YOUNGEST DEPENDANT

The percentage of one parent families where the parent was not in the labour force has decreased to $48 \%$ in June 1999 from 51\% in June 1994.

The parent was unemployed in $7.2 \%(55,400)$ of one parent families. In 16,500 or $30 \%$ of these families, the parent had been unemployed for 52 weeks or more.

ONE PARENT FAMILIES WITH DEPENDANTS PRESENT

In June 1999, there were 545,400 one parent families with dependants present, $71 \%$ of all one parent families. Of these, $89 \%$ had a female parent. In $59 \%$ of one parent families with dependants the youngest child was aged 0-9 years.

The parent was employed in $49 \%$ of one parent families with dependants present in June 1999, an increase from $46 \%$ in June 1998. Of those families with a male head, the parent was employed in $63 \%$ of cases, compared with $47 \%$ of those with a female parent. The proportion with the parent employed generally increased as the age of the youngest dependant increased, with $74 \%$ of one parent families whose youngest dependant was aged 15-24 years having an employed parent, compared to $26 \%$ whose youngest dependant was aged $0-4$.

The percentage of one parent families with dependants present where the parent was unemployed has decreased to $8.8 \%$ in June 1999. The proportion peaked at $9.5 \%$ in June 1993 before falling to $8.6 \%$ and remained relatively steadly for the next three years. It rose to $9.4 \%$ in June 1998 before falling again.

ONE PARENT FAMILIES WITH DEPENDANTS: PARENT UNEMPLOYED

The number of children aged $0-14$ in one parent families where the parent was not employed fell by $6 \%$ over the last year, to 453,200 in June 1999. The level, however, remains nearly $30 \%$ higher than in June 1993.

PERSONS WHO WERE NOT MEMBERS OF A FAMILY

Persons living alone accounted for $11 \%(1,595,200)$ of the population where relationship in household was determined in June 1999. Some characteristics of these persons were:

- Approximately $55 \%$ were female, about two thirds of whom were aged 55 and over.
- Of the males living alone, $40 \%$ were aged $25-44$, and $36 \%$ were aged 55 and over.
- $44 \%$ were employed. Some $58 \%$ of males living alone were employed and of females living alone, $32 \%$ were employed.
- $52 \%$ were not in the labour force, of whom $68 \%$ were female.

Selected characteristics of the 901,400 persons who were not members of a family and were not living alone (e.g. those in group houses) in June 1999 were:

- Some 57\% were men.
- Compared with lone persons, those not living alone had a much younger age profile, with $73 \%$ aged younger than 35 (only $18 \%$ of lone persons were under 35). Men and women not living alone had similar age distributions.
- A large proportion (75\%) were employed, with the proportion slightly lower for females than for males. The vast majority of employed males ( $85 \%$ ) and employed females ( $75 \%$ ) were working full time.
- $17 \%$ were not in the labour force.

LABOUR FORCE STATUS OF NON-FAMILY MEMBERS

INTRODUCTION

THE POPULATION SURVEY

SCOPE

COVERAGE

1 In June 1999, details of the labour force status of family members and family composition were derived from the Labour Force Survey (LFS) component of the Monthly Population Survey.

2 For further information about the LFS, see Labour Force, Australia (Cat. no. 6203.0). This publication contains information about survey design, sample redesign, scope, coverage and population benchmarks relevant to the LFS, which also apply to supplementary surveys. It also contains definitions of demographic and labour force characteristics, and information about telephone interviewing which are relevant to both the LFS and supplementary surveys.

3 Tables 1 and 2 summarise the relationship in household of persons aged 15 and over. Tables 3 to 24 provide information about couple, one parent and other families-for example, the number of dependants present, the labour force status of husband, wife or family head. Tables 25-29 contain more detailed estimates of the labour force status of persons aged 15 and over according to their relationship in household, and classified by age, weekly hours worked and other variables.

4 The population survey is based on a multi-stage area sample of private dwellings (currently about 30,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.) and covers about $0.5 \%$ of the usually resident civilian population aged 15 and over in Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The interviews for this survey were conducted during the two weeks beginning on Monday 7 June 1999. The information obtained relates to the week before the interview (i.e. the reference week).

5 The LFS includes all persons aged 15 and over except:

- members of the permanent defence forces;
- certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- overseas residents in Australia; and
- members of non-Australian defence forces (and their dependants) stationed in Australia.

6 From July 1993, Jervis Bay Territory has been excluded from the scope of the survey. Before July 1993, it was included in estimates for the Australian Capital Territory.

7 In the LFS, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible.

POPULATION BENCHMARKS

REVISION OF POPULATION BENCHMARKS

8 Persons who are away from their usual residence for six weeks or less at the time of interview are enumerated at their usual residence (relevant information may be obtained from other usual residents present at the time of the survey).

9 In order to derive estimates of families, the scope of the data is further restricted to usual residents of private dwellings. As a result, all persons living in non-private dwellings (including hotels, motels, hospitals and other institutions) and persons enumerated as visitors to private dwellings are excluded.

10 Also excluded are households where it was not possible to obtain information relating to all the usual residents. For example, households which include a member of the permanent defence forces, who is outside the scope of the population survey, are excluded. In addition, households which, at the time of the survey, have one or more of their usual residents away for more than six weeks, and households from which an incomplete or inadequate questionnaire was obtained for any usual resident are excluded. In June 1999, relationship in household and family type were determined for $95 \%$ of the usually resident civilian population aged 15 and over.

11 LFS estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated distribution of the usually resident civilian population aged 15 and over by age, sex and part of state. This procedure compensates for under-enumeration in the survey, and leads to more reliable estimates. Persons who, at the time of interview, are overseas for more than six weeks but for less than 12 months are included in the independent population statistics (benchmarks) and are thus provided for in the calculation of the estimates. The benchmarks are the latest available estimates at the time the LFS is conducted, but they usually differ from the official population estimates subsequently published in Australian Demographic Statistics (Cat. no. 3101.0) because they are projected estimates of population changes.

12 Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each Census of Population and Housing, and when population estimation bases are reviewed. These revisions affect original, seasonally adjusted and trend estimates. The last such revision was made in February 1999 to take account of the results of the 1996 Census of Population and Housing, which affected all the monthly estimates from January 1995 to January 1999. Consequently, person level estimates for June 1998 in tables 1, 2 and 28 will differ from those published in the previous issue of this publication.

REVISION OF POPULATION BENCHMARKS continued

## CHANGES IN FAMILIES CLASSIFICATIONS

13 Population benchmarks used in the estimation of LFS data are compiled according to place of usual residence. For details of the conceptual basis of population estimates, see Information Paper: Population Estimates: An Outline of the New Conceptual Basis of ABS Population Estimates (Cat. no. 3216.0). Prior to October 1982, labour force estimates were based on a combination of place of enumeration and place of usual residence.

14 The Relationship in bousehold and Family type classifications were introduced for the Labour Force Survey in the March 1994 issue of Labour Force, Australia (Cat. no. 6203.0). Most categories in the two classifications remain comparable with categories in the previous classifications. The cases in which there are differences between the two are discussed in the following paragraphs:

- Relationship in bousebold. This classification was previously referred to as Family status.
- Lone parents (previously referred to as Sole parents) now includes parents with non-dependent children (provided those children are without a spouse or children of their own). These Lone parents without dependants are shown separately in table 1.
- Dependent students (previously Full-time students aged 15-24) now comprise sons or daughters (of a couple or a lone parent) aged 15-19 attending school or aged 15-24 attending a tertiary educational institution full time. Other related full-time students, who were also previously classified as Full-time students aged 15-24 are now included in Other family persons.
- Other family persons now comprises the previous groups Other family head, excluding those now counted as Lone parents, other related full-time students classified as Full-time students aged 15-24 and Other relative of married couple or family head.

15 Family type. This classification was previously referred to as Type of family. There are three types of families in the new classification, as follows:

- Couple families is the term used to describe families previously referred to as Married-couple families. Apart from the name change, the new category is otherwise exactly comparable with the old category.
- One parent families now includes those families in which there is a lone parent with only non-dependent children present. Such families were previously included in Other families.
- Other families now excludes those families in which there is a lone parent with only non-dependent children present (see above).

16 Estimates of families published for June 1999 are based on population estimates derived from the results of the 1996 Census of Population and Housing (adjusted for under-enumeration). Family estimates from 1994 to 1998 were based on 1991 Census results, with those from 1989 to 1993 based on 1986 Census results.

17 Commencing with the June 1989 issue, the category other families was split into one parent families and other families. Therefore these estimates are not strictly comparable with estimates in issues prior to June 1989. However, in June 1988, 98\% of other families with dependants were one parent families.

18 Estimates of the number of husbands and wives with dependants in June 1988, as published in selected tables in the June 1989 issue of this publication, are slightly higher than those published in the June 1988 issue. The estimates of the number of husbands and wives without dependants are correspondingly lower. This is due to a small error made at the computer processing stage of the production of family status estimates in the June 1988 issue of this publication.

19 For the July 1982 and previous surveys, office imputation was undertaken to determine the family status of those persons enumerated in private dwellings where family information could not be obtained for all usual residents, and for those persons enumerated in non-private dwellings or as visitors to private dwellings where family information could not be obtained for each member of the family. Due to the increased demand for family data on a consistent and more regular basis, it was decided to change the processing methodology to eliminate office imputation and rely solely on the reported information. Consequently the scope of the July 1983 and subsequent surveys was narrowed to exclude those respondents for whom it is known that complete family information is difficult to collect (see paragraphs 9 and 10).

20 Surveys from July 1983 onwards are thus not strictly comparable with previous surveys since the persons excluded may have differing family and labour force characteristics to those persons included in the survey. Because of these exclusions the total number of persons with particular family characteristics will also differ between surveys conducted prior to July 1983 and those conducted from July 1983 onwards. Table 1 shows the number of persons excluded from the survey.

21 In the July 1985 and previous surveys, dependants (then described as dependent children) comprised all family members under 15 years of age and all family members aged $15-20$ who were full-time students, except those classified as husbands, wives or other family heads. The current definition is given in the Glossary. Tables 24,25 and 31 of the June 1986 issue of this publication provide an indication of the differences between the student component of the old and new definitions.

COMPARABILITY OF SERIES continued

RELIABILITY OF THE ESTIMATES

NEXT SURVEY

RELATED PUBLICATIONS

22 Since the July 1985 survey was conducted, the definition of employed persons has been extended to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. contributing family workers). This new definition aligns the Australian labour force concepts with a set of changed international definitions adopted by the International Labour Organisation at the 13th Conference of Labour Statisticians in October 1982.

23 Previously, such persons who worked 1-14 hours or who had such a job but were not at work were defined as either unemployed or not in the labour force, depending on whether they were actively looking and available for work. The changes in definition resulted in original (unadjusted) estimates of employment for March 1986 increasing by 34,900 and unemployment decreasing by 5,800.

24 Estimates of the number of families in June 1986 and subsequent years have been calculated differently to those for earlier years. This is due to the adoption of a new weighting procedure where the family weight is determined using an average of all family members responding to the LFS. Previously, the family weight used to publish estimates of the number of families was determined by nomination of a proxy 'head of household' as representative of the family. For these reasons, estimates for the June 1986 and subsequent surveys are not strictly comparable with those for earlier surveys.

25 Although comparisons may generally be made, users should be aware of the above differences.

26 Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they may differ from the figures that would have been produced if the information had been obtained from occupants of all dwellings. More information is given in the Technical Notes.

27 The ABS plans to release the next issue of this publication based on information collected in the June 2000 LFS.

28 Other ABS publications which may be of interest include:

29 Current publications produced by the ABS are listed in the Catalogue of Publications and Products (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a Release Advice (Cat. no. 1105.0) which lists publications to be released in the following few days. The Catalogue and Release Advices are available from any ABS office.

ESTIMATION PROCEDURE

RELIABILITY OF THE ESTIMATES

Estimates of families and persons are derived from the population survey by use of a ratio estimation procedure, which ensures that estimates of persons conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The sampling error is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the estimates that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included in the survey. There are about two chances in three that a sample estimate will differ by less than one standard error from the estimate that would have been obtained if all dwellings had been included in the survey, and about 19 chances in 20 that the difference will be less than two standard errors. Another measure of sampling variability is the relative standard error (RSE) which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The RSE is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer also to the size of the estimate.

Space does not allow for the separate presentation of the standard errors of all estimates in this publication. Standard errors of estimates should be determined by using table T1, if necessary in conjunction with the factors given on page 39 .

The size of the standard error increases with the level of the estimate, so that the larger the estimate the larger is the standard error. However, it should be noted that the larger the sample estimate the smaller will be the standard error in percentage terms. Thus, larger sample estimates will be relatively more reliable than smaller estimates.

As the standard errors in table T1 show, the smaller the estimate the bigher is the RSE. Very small estimates are thus subject to such high RSEs (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with RSEs of $25 \%$ or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes.
However, estimates and percentages with larger RSEs have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution. The derivation of RSEs for some estimates is discussed further.

The annual movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. Standard errors of all annual movements can be obtained by multiplying the figures in table T1 by 1.3 . When using table T1 to calculate standard errors of annual movements, refer to the larger of the two estimates from which the movement is derived.

An example of the calculation and use of standard errors is as follows:

From table T1 it will be seen that the estimate of 663,100 one parent families with a female parent in June 1999 has a standard error of about 9,600 . Therefore, there are about two chances in three that the actual number of one parent families was within the range 653,500 to 672,700 and about 19 chances in 20 that it was within the range 643,900 to 682,300.

The RSEs of estimates of average family size, average bours worked, average duration of unemployment and median duration of unemployment are obtained by first finding the RSE of the estimate of the total number of persons or families contributing to the estimate (see table T1) and then multiplying the figure so obtained by the following relevant factors:

- average family size: 0.3
- average hours worked: 0.9
- average duration of unemployment: 1.5
- median duration of unemployment: 1.7

The levels at which these and other labour force estimates have a RSE of $25 \%$ are shown in table T2.

An example of the calculation of standard errors by the use of these factors follows.

In June 1999 the estimate of median duration of unemployment for husbands of couple families was 29 weeks and the number of families with the husband unemployed was estimated as 126,300 . From table T1 it can be calculated that this estimate has a standard error of about 5,150 and therefore a RSE of about $4.1 \%$. The RSE of the estimate of median duration of unemployment is calculated by multiplying this figure by the appropriate factor shown in the previous paragraph (in this case 1.7 ): $4.1 \times 1.7=7.0 \%$. The standard error of this estimate of

RELIABILITY OF THE ESTIMATES continued
median duration of unemployment is therefore $7.0 \%$ of 29 , i.e. about 2 . Therefore there are about two chances in three that the median duration of unemployment for unemployed husbands was within the range 27 to 31 weeks and about 19 chances in 20 that it was within the range 25 to 33 weeks.

Proportions and percentages (for example, participation rates) formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and denominator. The formula for the RSE of a proportion or percentage is given below:

$$
\operatorname{RSE}(x / y)=\sqrt{[\operatorname{RSE}(x)]^{2}-[\operatorname{RSE}(y)]^{2}}
$$

Standard errors contained in table T1 are designed to provide an average standard error applicable for all monthly LFS estimates. Analysis of the standard errors applicable to particular survey estimates has shown that the standard errors of estimates of employment are generally $5 \%$ lower than those shown in table T1, while standard errors of estimates of unemployment and not in the labour force are both approximately 4\% higher than those shown in table T1. Standard errors of estimates of numbers of families are approximately the same as those for numbers of persons.

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding data, and errors made in processing the data. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

## T1 STANDARD ERRORS OF ESTIMATES

| Estimates(b) of |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

(a) See Technical Notes, page 38. (b) The entries in this table refer to the number of families or persons contributing to the estimate.

## GLOSSARY

## Actively looking for work

Aggregate hours worked

## Average duration of unemployment

Average family size

Includes writing, telephoning or applying in person to an employer for work; answering an advertisement for a job; checking factory noticeboards or the touchscreens at Centrelink offices; being registered with Centrelink as a jobseeker; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.

For any group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.

For any group of families, the total number of family members divided by the number of families in the group.

Average hours worked
Aggregate hours worked by a group divided by the number of persons in that group.

Couple families
Families in which there are two married persons and these persons are husband and wife. See Marital status.

Dependants All family members under 15 years of age; all family members aged 15-19 attending school or aged 15-24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents).

Dependent student
In couple or one parent families, sons or daughters aged 15-19 attending school or aged 15-24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents).

Duration of unemployment
The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full time for two weeks or more to the end of the reference week.

Employed Persons aged 15 and over who, during the reference week:

- worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or
- worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
- were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

Family Two or more related persons (relationship includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:

- sons or daughters of any age, if not married and with no children of their own present;
- other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
- any children under 15 years of age who do not have a parent present.

Family head Any person without a spouse present:

- with a son or daughter aged under 15 present; or
- without a son or daughter aged under 15 present, but with a son or daughter aged 15 or over present (provided that the son or daughter has no spouse, son or daughter of his/her own present); or

Where a family has no person falling into either of these categories, the family head is generally defined to be the eldest person in the family.

No family head is determined for a couple family.
Full-time workers
Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

| Household | A group of one or more persons in a private dwelling who consider themselves to be separate from other persons (if any) in the dwelling, and who make regular provision to take meals separately from other persons, i.e. at different times or in different rooms. Lodgers who receive accommodation but not meals are treated as separate households. Boarders who receive both accommodation and meals are not treated as separate households. A household may consist of any number of families and non-family members. |
| :---: | :---: |
| Husband | See Marital status. |
| Labour force | For any group, persons who were employed or unemployed, as defined. |
| Labour force status | A classification of the civilian population aged 15 and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians. |
| Lone parent | The head of a one parent family. |
| Lone person | A person who is the sole member of a household. |
| Main English-speaking countries | The United Kingdom, Ireland, South Africa, Canada, the United States of America and New Zealand. |
| Marital status | Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not-married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usually lived in the household. |
| Median duration of unemployment | The duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is below it. |
| Non-dependent child | In couple or one parent families, sons or daughters aged 15 and over, other than those classified as dependent students, husbands, wives or sole parents. |
| Non-family member | A person who is not related to any other member of the household in which they are living. |
| Not in the labour force | Persons who were not in the categories employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons in institutions (hospitals, gaols, sanatoriums, etc.), trainee teachers, members of contemplative religious orders, and persons whose only activity during the reference week was jury service or unpaid voluntary work for a charitable organisation. |

One parent families Other countries

Other families

Participation rate

Part-time workers

Unemployed

## Unemployed looking for

full-time work Unemployment rate

Families in which there is a family head together with at least one son or daughter of his/her own.

All countries outside Australia other than the main English-speaking countries defined previously.

Families which are not couple families or one parent families, as defined. They include families in which there is no parent, for example, a family head living with a brother or sister.

For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.

Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

Persons aged 15 and over who were not employed during the reference week, and:

- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
- were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
- were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
- were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

Wife See Marital status.
