## SUMMARY OF FINDINGS

## TRADE UNION MEMBERS, NOVEMBER 1976 TO AUGUST 1988

Of the $6,101,900$ employees in August 1988, 42 per cent were members of a trade union.
This result continues to show the decline in union membership evident from the November 1976 survey ( 51 per cent) and the August 1986 survey estimates ( 46 per cent).

Comparisons between the States show that Queensland had recorded the largest decline in union membership. Between November 1976 and August 1988 trade union membership in Queensland has declined from 53 per cent to 39 per cent. Over the same period, the proportion in the Australian Capital Territory fell from 60 per cent to 39 per cent.

Diagram 1 illustrates the extent of the declines in union membership according to sector of employment and gender.

(a) Includes some persons for whom sector could not be determined.

Table 1 shows various categories of employees and the proportion who are members of trade unions. With the exception of the Mining industry, and those working less than 35 hours per week in their main job, the proportion of employees who are trade union members has fallen in all States, across all age groups, nearly all industries, in both public and private sector and irrespective of birthplace.

Tables 1 and 2 compare results of the 1988 survey and three previous surveys of trade union members. Changes in the level of trade union members within selected categories may be compared with the overall changes in those categories. For example:

- between November 1976 and August 1988, the number of employees in the Manufacturing industry fell by 106,200 ( 9 per cent) and the number in that industry who were union members fell by 133,100 ( 20 per cent)
- between November 1976 and August 1988, the number of employees in the Community services industry grew by 398,600 ( 47 per cent) and the number in that industry who were trade union members increased by 151,900 (34 per cent)
- the number of employees in the private and public sectors grew by 25 per cent and 3 per cent respectively between May 1982 and August 1988. Over the same period, the number who were members of trade unions increased by 2 per cent for the private sector, and fell by 5 per cent for the public sector.
- the number of female employees increased by 710,500 ( 38 per cent) between November 1976 and August 1988, whereas the number who were members of trade unions increased by 124,200 ( 16 per cent). For male employees, employment increased by 339,300 ( 11 per cent) and the number who were members of trade unions fell by 101,000 (6 per cent).

While the median age ( 35 years) of employees who were trade union members has not changed since 1976 the proportion of trade union members in all of the age groups has dropped. The proportion for the 15 to 24 years group has dropped from 43 per cent in 1976 to 32 per cent in 1988. The 60 to 64 years group recorded a decrease from 60 per cent in 1976 to 45 per cent in 1988, while the proportion of trade union members in the 65 and over age group fell from 24 per cent in 1976 to 9 per cent in 1988.

## TRADE UNION MEMBERS, AUGUST 1988

Of the $6,101,900$ employees in August 1988, $2,535,900$ were members of a trade union in connection with their main job. This represents a drop of 58,000 trade union members from the August 1986 estimate.

## Gender

- Approximately 46 per cent of males and 35 per cent of females were trade union members.

DIAGRAM 2. ALL EMPLOYEES: PROPORTION OF ALL EMPLOYEES WHO WERE
MEMBERS OF A TRADE UNION, AND MARITAL STATUS, AUGUST 1988

Age

- The level of trade union membership increased with age, from 27 per cent of the 15 to 19 years grouping to peak at 51 per cent of the group aged 55 to 59 years. This trend was typical of both males and females, as shown in diagram 3.

- The highest level of trade union membership was recorded in the 55 to 59 year age group ( 55 per cent for males, 43 per cent for females), although this age group represented only 4 per cent of all wage and salary earners.
- The age group with the greatest number of employees, 25 to 34 years ( 28 per cent of all employees), recorded 43 per cent trade union membership.

## Sector

- Some 68 per cent of public sector and 32 per cent of private sector employees were members of a trade union.
- Trade union membership was more than twice as high in the public sector for both males ( 75 per cent) and females ( 58 per cent) compared to the private sector, 36 per cent for males and 26 per cent for females.

## Full-time or part-time employees

- Approximately 46 per cent of full-time and 25 per cent of part-time employees were members of a trade union.
- While males had a higher level of membership than females overall and in full-time employment, female part-time employees recorded a higher level of membership ( 25 per cent) than their male counterparts ( 22 per cent).

## Casual and permanent employees

- Approximately 50 per cent of males and 42 per cent of females who were permanent employees were members of a trade union.
- Some 21 per cent of males and 19 per cent of females employed on a casual basis were trade union members.

## Hours worked in main job

- The level of union membership of employees who worked less than 35 hours per week in their main job, and those who worked more than 35 hours per week was 39 per cent and 43 per cent respectively.

## Weekly earnings

- The distribution of weekly earnings from main job shows that both male and female trade union members earn on average, more than persons who are not union members.
- Male full-time employees who were members of a trade union had mean weekly earnings of $\$ 445$, while for not union members the estimate was $\$ 418$. For male part-time employees the corresponding mean weekly earnings were $\$ 188$ and $\$ 152$ respectively.
- For female full-time employees those who were not union members had mean weekly earnings of $\$ 340$, compared with $\$ 368$ earned by union members. For female part-time employees the corresponding estimates were $\$ 151$ and \$193 respectively.

## Superannuation

- The difference in the proportion of trade union members and non-members having superannuation coverage was greatest for employees in the Construction industry, ( 72 per cent of members and 41 per cent of non-members), and the Community services industry, ( 68 per cent and 38 per cent respectively).
- The smallest difference ( 1 per cent) was recorded for employees in the Wholesale and retail trade industries. The proportions of both members and non-members having superannuation coverage in these industries were relatively low, being 35 per cent for members and 34 per cent for non-members.

DIAGRAM 4. ALL EMPLOYEES: PROPORTION OF ALL EMPLOYEES COVERED BY SUPERANNUATION, INDUSTRY AND

## Industry

- For the various industry divisions the highest rates of union membership were recorded in the Electricity, gas and water industry ( 82 per cent of male employees and 62 per cent of female employees) and the Communications industry ( 84 per cent and 55 per cent respectively).
- The lowest rates of union membership were recorded in the Agriculture, forestry, fishing and hunting industry division with 13 per cent of employees belonging to a union.

DIAGRAM 5. ALL EMPLOYEES: PROPORTYON OF ALL EMPLOYEES WHO WERE MEMBERS OF A TRADE UNION, AND SELECTED INDUSTRIES, AUGUST 1988
(Source of data: Table 9)

## Occupation

- Plant and machine operators and drivers recorded the highest level of union membership with 64 per cent of employees ( 66 per cent males and 54 per cent females).
- The lowest level was recorded for Managers and administrators with 19 per cent of employees ( 19 per cent of males and 17 per cent of females) being membership of a trade union.

## APPENDIX A

## GLOSSARY

Casual employees: employees who were not entitled to annual leave nor sick leave.

Employees: employed persons who worked for an employer for wages or salary or in their own business, either with or without employees, if that business was a limited liability company.

Employment benefits: concessions, allowances or other privileges received by or provided to employees in their main job in addition to wages or salary while the employees were working for their current employer. Some benefits which were not included in the survey are certain allowances recieved in accordance with award provisions (e.g. safety clothing); maternity and paternity leave; and payments, bonuses or payments in lieu of leave. Not all benefits came directly from the current employer but were received by or provided to employeees from other sources as a result of their employment in a particular occupation or industry: (e.g. a concession air fare granted by an airline to a travel agency employee; long-service leave granted by an industry loan employee in this industry). Further definitions were given in Employment Benefits, Australia (6334.0).

Full-time employees: all employees for whom 'full-time' was the response to the question 'Is your main job full-time or part-time?'.

Hours worked in main job: refers to actual hours worked during the reference week.

Industry: all occurrences of industry referred to in this publication are as defined by the Australian Standard Industrial Classification (ASIC) and relate to main job.

Main English speaking countries: comprises the United Kingdom, Ireland, Canada, South Africa, U.S.A., and New Zealand.

Main job: the job in which most hours were usually worked.

Manual occupations: selected occupation groups from the Australian Standard Classification of Occupations (ASCO) comprised of all tradespersons (4101-4999); plant and machine operators, and drivers (7101-7499); and labourers and related workers (8101-8999).

Mean weekly earnings: the amount obtained by dividing the total earnings of a group by the number of units in that group.

Median weekly earnings: the amount which divides the distribution of individuals into two equal groups, one having earnings above and the other below that amount. Medians were calculated from grouped data, the class intervals in some cases being finer than those published in the tables. Linear interpolation was used within the class interval in which the median fell.

Member of a trade union: employees with membership in a trade union in connection with their main job.

Non-manual occupations: comprised of all occupation not classed as manual.

Occupation: all occurrences of occupation referred to in this publication are as defined by the Australian Standard Classification of Occupations (ASCO) and relate to main job.

Part-time employees: all employees for whom 'part-time' was the response to the question 'Is your main job full-time or part-ime?'.

Permanent employees: employers who were entitled to annual leave or sick leave.

Superannuation: membership of a superannuation or retirement benefits scheme, but only if the scheme was arranged or provided by the person's current employer even if the employer did not contribute to the fund. There were an additional 641,200 employees covered by schemes not arranged or provided by their employers.

Trade union: an organisation (or employee association), consisting predominantly of employees, the principal activities of which include the negotiation or rates of pay and conditions of employment for its members.

Weekly earnings: the amount of 'last total pay' from main wage or salary job prior to the interview (i.e. before taxation and other deductions had been made). For persons paid other than weekly, earnings were converted to a weekly equivalent. No adjustment was made for any back payment of wage increases or pre-payment of leave, etc.

## APPENDIX B

## EXPLANATORY NOTES

## Introduction

The monthly population survey (which is described in The Labour Force, Australia (6203.0)) comprises the monthly labour force survey and supplementary topics. This publication contains some results of a supplementary survey run in association with the August 1988 labour force survey conducted throughout Australia.
2. Of the respondents to the labour force survey, those who fell within the scope of the supplementary survey were asked additional questions. They were asked about their weekly earnings and frequency of pay.

## Scope

3. The scope of this supplementary survey was the same as that used for the labour force survey (described in full in The Labour Force, Australia (6203.0)), except that it was restricted to persons who were employed as wage and salary earners ('employees') in their main job excluding persons on workers' compensation and persons who worked solely for payment in kind.

## Coverage

4. In the population survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. See The Labour Force, Australia (6203.0) for more details.

## Definitions

5. Definitions of labour force and demographic classifications appearing in this publication are given in The Labour Force, Australia (6203.0).
6. Unless otherwise stated, all characteristics referenced in this publication relate to the week before the interview (i.e. the reference week) and to all jobs.

## Results of the survey

7. The estimates in this publication refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.
8. Results of similar surveys, conducted in November 1976, March to May 1982 and August 1986 have been given in previous issues of this publication.

## Unpublished statistics

9. As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries should be made to the contact in the Phone Inquiries box at the front of this publication.

## Comparison with Trade Union Statistics, Australia (6323.0)

10. Statistics on trade union membership obtained from censuses of trade unions and employee associations are published annually in Trade Union Statistics, Australia (6323.0). The figures in that publication are higher than the estimates obtained from this survey for a number of reasons, including the following:
(i) they relate only to trade union membership in the respondent's main job (see glossary); a person who was a member of a trade union only by virtue of holding a second job was excluded;
(ii) they relate only to trade union membership in one job, whereas a persons who had recently changed jobs could be registered as a member of more than one union in the trade union collection;
(iii) the estimates relate only to persons who were employees in their main job in the reference week: other persons (e.g. unemployed and those not in the labour force) are excluded even though they may have retained union membership in respect of some earlier employment;
(iv) some persons may elect to belong to more than one union, but would be counted only once in this survey;
(v) some unions may encounter difficulties in maintaining up-to-date registers of members, which will therefore include persons who are no longer financial members.

## Discontinuities in the series

11. Classification of occupation according to the Australian Standard Classification of Occupations (ASCO 1986) was introduced in the August 1986 survey, replacing the Classification and Classified List of Occupations (CCLO), used in previous surveys. The main difference between these classifications is that ASCO occupations are classified on the basis of the level and specialisation of skill required for the satisfactory performance of primary tasks. For a more detailed explanation of ASCO see the appendix to The Labour Force, Australia, August 1986 (6203.0).
12. To provide a link between the two classifications, a matrix has been produced and is shown in Table 41 of The Labour Force, Australia, August 1986 (6203.0). This matrix shows the relationship between ASCO and CCLO at the broadest classification level (the Major Group). The estimates in the matrix are based on a sub-sample of respondents to the May 1986 labour force survey.
13. The method of deriving full-time/part-time status in main job classification varies from that used in the August 1986 issue of this publication. Full-time employees previously had been defined as persons who had worked for 35 hours or more per week, and part-time employees as those who had worked less than 35 hours per week. Full-time/part-time status in the August 1988 survey has been determined by the response to the question 'Is your main job full-time or part-time?'
14. Care should also be taken when comparing the estimates in this publication with those published in the following:
(i) Trade Union Members, Australia, November 1976 (6325.0), where unemployed persons who had been wage and salary earners in their most recent job and had lost that job in the period January to November 1976, as well as persons employed as wage and salary earners at the time of the survey, were included;
(ii) Trade Union Members, Australia, March to May 1982 (6325.0), where employees who were members of unions in either their main or second job were included. The number of employees included in Table 1 of this publication for the 1982 survey who were members of unions, but not in their main job, is 61,600 .

## Survey sample redesign

15. The Labour force survey sample has been redesigned and reselected using information collected in the 1986 Population Census. As a result, the standard errors in this supplementary survey differ from those used in surveys of the same topic run prior to September 1987. For details, see Information Paper-Labour Force Suivey Sample Design (6269.0).

## Estimation procedure

16. The estimates are derived from the population survey by use of a ratio estimation procedure, which ensures that the estimates conform to an independently estimated distribution of the population for each capital city and remainder of State by age, gender and labour force status, rather than to the corresponding distribution within the sample itself.

## Reliability of the estimates

17. Estimates in this publication are subject to sampling and non-sampling errors. For further information refer to the Technical Note, Appendix C.

## Related publications

18. Other ABS publications which may be of interest include:

The Labour Force, Australia (6202.0)-issued monthly
The Labour Force, Australia (6203.0)-issued monthly
Trade Union Statistics, Australia (6323.0)-issued annually

Employment Benefits, Australia (6334.0)-issued annually
Industrial Disputes, Australia (6322.0)-issued annually
Questionnaires Used in the Labour Force Survey, Australia (6232.0)-issued irregularly
19. Current publications are listed in the Catalogue of Publications, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the following few days. The Catalogue and Publications Advice are available from any ABS Office.

## Symbols and other usages

* subject to sampling variability too high for most practical uses. See the Technical Note, Appendix C
n.e.c. not elsewhere classified
.. not applicable
r revised
n.a. not available

20. Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.

## Electronic services

VIATEL. Key *656\# for selected current economic, social and demographic statistics.

AUSSTATS. Thousands of up-to-date time series are available on this ABS on-line service through CSIRONET.

For further information phone the AUSSTATS Help Desk on (062)

TELESTATS. This service provides foreign trade statistics tailored to users' requirements.

Further information is available on (062) 525404.

Floppy disk service
Selected ABS statistics are available on floppy disk. Further information is available on (062) 526684.

## APPENDIX C

## TECHNICAL NOTE

Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability that is they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimate.
2. Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors applicable to persons estimates is given on the following page. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these numbers will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude. Standard errors of estimates of numbers of families are approximately the same as those for numbers of persons.
3. An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 5 on page 10 shows the estimated number of females who were members of a trade union and earned between $\$ 240$ and $\$ 280$ per week is 88,400 . Since this estimate is between 50,000 and 100,000 , the standard error for Australia will be between 3,150 and 4,300 in the standard error table and can be approximated as 4,000 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range 84,400 to 92,400 and about nineteen chances in twenty that the value will fall within the range 80,400 to 96,400 . This example is illustrated in the following diagram.

## ('000)

4. As can be seen from the standard error table, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less and percentages based on such estimates are considered sufficiently reliable for most purposes. However, estimates with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) percentage to indicate they are subject to high standard errors and should be used with caution.
5. Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is:

$$
\operatorname{RSE}(x / y)=\sqrt{[\operatorname{RSE}(x)]^{2}-[\operatorname{RSE}(y)]^{2}}
$$

6. Considering the example from paragraph 3 above, the 88,400 females represent 9.9 per cent of the 895,700 female employees who were a member of a trade union in August 1988. The standard error of 895,700 is approximately 10,500 so the relative standard error is 1.2 per cent. The relative standard error for 88,400 is 4.5 per cent. Applying the above formula, the relative standard error of the proportion is $\sqrt{(4.5)^{2}-(1.2)^{2}}$ or 4.3 per cent, giving a standard error for the proportion ( 9.9 per cent) of 0.4 percentage points. Therefore, there are about two chances in three that the proportion of female employees who were a member of a trade union and earned between $\$ 240$ and $\$ 280$ per week in August 1988 is between 9.5 per cent and 10.3 per cent and nineteen chances in twenty that the proportion is within the range 9.1 per cent to 10.7 per cent.
7. Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates ( $x-y$ ) may be calculated by the following formula:

$$
\operatorname{SE}(x-y)=\sqrt{[\operatorname{SE}(x)]^{2}+[\operatorname{SE}(y)]^{2}}
$$

While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations it is expected to provide a good approximation for all differences likely to be of interest in this publication.
