NOTES

ABOUT THIS PUBLICATION

This publication contains final estimates for the main commodities collected in the Agricultural Commodity Survey (ACS). These include broadacre crops, fruit and vegetables as well as livestock.

A national compendium publication, *Agriculture, Australia* (Cat. no. 7113.0) will be released in October. For further information about the release of statistics from the ACS please contact Debbie Thomas on Hobart 03 6222 5948.

CHANGES IN THIS ISSUE

Estimates in this publication are based on information obtained from the Agricultural Commodity Survey (ACS) conducted at 30 June 2000. Prior to 2000 information was obtained for the period ending 31 March. The ABS has changed the collection period to 30 June to better align with other ABS surveys. A study of respondent data indicated that there should be no significant difference in estimates collected because of the different reference period.

SUMMARY OF FINDINGS INDUSTRY STRUCTURE

The composition of agricultural industries in Australia in 2000 was little changed from the previous year.

INDUSTRY COMPOSITION

The estimated number of establishments with agricultural activity and an estimated value of agricultural operations (EVAO) of \$5,000 or more increased slightly from 145,200 in 1998–99 to 146,400 in 1999–2000, mainly as a result of growth in the grape growing industry and the beef cattle farming industry.

The beef cattle farming industry remained the largest in terms of farm numbers, up from 33,200 in 1998–99 to 35,200 in 1999–2000, and accounted for 24% of total establishments with farming activity.

Despite another fall in numbers, the mixed farming sector (grain–sheep/beef cattle) remained the second largest industry with 12% (18,200) of total establishments being classified to this industry. The grain growing industry remained the third largest in terms of numbers, accounting for 11% (16,500) of total establishments.

INDUSTRY ANALYSIS

There has been a significant movement of farms involved in the cattle farming industries (both beef and dairy) from the lowest category of EVAO (less than \$22,500) to higher categories, reflecting improved livestock prices received in these industries during the period. The estimated number of farm establishments with an EVAO below \$22,500 fell by 16% to 28,400 in 1999–2000. Despite this, just over half of all farm establishments, (76,000 farms or 52%) had an EVAO below \$100,000. At the other end of the scale, 9% (12,700) of farming establishments had an EVAO above \$500,000 in 1999–2000.

In 1999–2000, small producers made up most of the businesses in the beef cattle industry, sheep industry and the fruit industry (i.e. apple and pear, stone, kiwi and other fruit industries combined) with 82%, 68% and 57% respectively of these operations having an EVAO below \$100,000.

Industries consisting of mainly larger producers in 1999–2000 included the cotton industry, the meat poultry industry and the poultry egg industry with 80%, 42% and 34% respectively of these operations having an EVAO greater than \$500,000.

The most common size of farm holding in 1999–2000 was between 100 and 499 hectares. These 48,500 holdings accounted for 33% of all farming establishments and consisted of mainly beef cattle, sheep, grain and dairy operations.

Farm holdings of 49 hectares or less were next most common, and accounted for 21% (31,200) of all farms. Meat cattle, grape growing, fruit, vegetable and plant nursery operations comprised the majority of these farms.

Farm holdings of over 2,500 hectares accounted for 10% (14,100) of all farms. These farms were mainly large scale grazing and cropping operations.

Within the cropping sector the production of wheat, canola and grain sorghum increased while the production of barley and oats fell. This increase in wheat production largely reflects the improved outlook for wheat prices at the time of planting the 1999–2000 crop, whilst the increase in area sown to canola reflects the rotational benefits of planting canola and the introduction of improved varieties which have allowed more marginal land to be sown to canola despite poor price prospects at the time of sowing. Reductions in sowings of barley and oats are blamed in part on poor price prospects and cutbacks in water allocations at planting time.

WHEAT

The total area of wheat planted increased by 5% to a near record 12.2 million hectares in 1999–2000, largely as a result of significant increases in Victoria and New South Wales (up by 286,000 hectares and 251,000 hectares, respectively). All other States, except Queensland which fell slightly, recorded increased plantings. Western Australia had the largest area planted with 4.6 million hectares, followed by New South Wales with 3.4 million hectares.

Production of wheat increased by 15% to a record 24.8 million tonnes in 1999–2000. Improved average yields in New South Wales, Victoria and Western Australia combined with increased plantings in New South Wales and Victoria resulted in significant increases in production in these States. New South Wales recorded the biggest increase in production, up by 2.0 million tonnes (or 31%) to 8.6 million tonnes, followed by Victoria which was up by 1.2 million tonnes (or 81%) to 2.6 million tonnes. Dry conditions in South Australia resulted in lower than average yields, which more than offset increased plantings, and saw total production fall by 22% to 2.6 million tonnes. Western Australia remained the biggest producer of wheat with an 834,000 tonne (or 10%) increase in production giving a record State harvest of 9.0 million tonnes.

BARLEY

The total area of barley planted fell by 18% to 2.6 million hectares in 1999–2000. Significant falls in plantings were recorded in all States except Victoria, which was up slightly. The biggest decrease in area planted was in Western Australia, which was down by 32% (or 261,000 hectares) to 550,000 hectares. South Australia continued to have the largest plantings with 845,000 hectares (down 13% or 130,000 hectares) and was followed by Victoria with 585,000 hectares (having overtaken Western Australia as the second largest barley grower).

Barley production continued to fall, decreasing by 16% to 5.0 million tonnes in 1999–2000. Falls in barley production were recorded in all States except Victoria. The Victorian crop showed a significant increase in production following a return to better yields after a poor season in 1998-99. Improved yields were also reported in New South Wales and Western Australia but these were not enough to compensate for the reduction in the area planted in these States. South Australia was the main barley producing State but reduced plantings and lower than average yields (due to poor seasonal conditions) resulted in a 31% fall in production, to 1.4 million tonnes.

SUMMARY OF FINDINGS CROPS continued

GRAIN SORGHUM

The total area of sorghum planted for grain increased by 6% or 35,000 hectares to 622,000 hectares in 1999-2000 with increased plantings in Queensland being partially offset by decreases in New South Wales.

Production of grain sorghum increased by 12% or 225,000 tonnes to 2.1 million tonnes in 1999–2000 as a result of increased production in Queensland. This made grain sorghum the third biggest cereal crop (in terms of production) in Australia despite it only being grown in significant quantities in Queensland and New South Wales.

OATS

The total area sown to oats fell by 36% to 584,000 hectares in 1999-2000 with decreased plantings recorded in all States.

Production of oats fell by 38% to 1.1 million tonnes in 1999–2000 with falls recorded in all States. The largest falls in production were recorded in New South Wales (down by 385,000 tonnes or 58% to 284,000 tonnes) and Victoria (down by 162,000 tonnes or 35% to 296,000 tonnes) leaving Western Australia as the main producing State with a harvest of 439,000 tonnes.

CANOLA

The area planted to canola in Australia increased by 53%, from 1.2 million hectares in 1998-99 to a record 1.9 million hectares in 1999-2000, with increases recorded in all States. The biggest increase in plantings was in Western Australia, with the area sown up by 64% to 879,000 hectares.

Canola production increased by 46% to a record 2.5 million tonnes in 1999–2000. The greatest increases were in Western Australia (with production up by 57% to 963,000 tonnes) and New South Wales (with production up by 33% to 827,000 tonnes).

SUMMARY OF FINDINGS HORTICULTURE

The 1999–2000 season saw increased production for most major fruit and vegetable crops.

FRUIT

Grapes

The total area of vines reported increased by 14% to a record 140,000 hectares in 1999-2000. Increases were reported in all States with the biggest increases in South Australia (up 14% to 59,800 hectares), Victoria (up 12% to 36,300 hectares) and New South Wales (up 12% to 32,300 hectares).

The total production of grapes increased by 4% to a record 1.3 million tonnes in 1999–2000. A decrease in the total grape harvest in South Australia (down 3% to 483,000 tonnes) was offset by increases in Victoria (up 8% to 449,000 tonnes) and New South Wales (up 8% to 327,000 tonnes).

Apples

The number of apple trees increased by 2% to 6.1 million trees with increases reported in all States except New South Wales.

Total apple production fell by 4% to 320,000 tonnes in 1999–2000 after an increase the previous year. There was decreased production in all States except Queensland. The largest falls in production were reported in Victoria, the main growing State (down 9% to 98,200 tonnes) and in Tasmania (down 8% to 57,500 tonnes).

Oranges

The total number of orange trees increased by 9% to 6.9 million trees. This was due to increases in New South Wales and Victoria, partly offset by decreases in the other orange growing States.

Total production of oranges increased by 14% to 510,000 tonnes in 1999-2000. This was a result of increased production in New South Wales (up 31% to 238,000 tonnes) and Victoria (up 17% to 84,200 tonnes), partly offset by decreases in Western Australia (down 21% to 5,400 tonnes) and Queensland (down 18% to 16,600 tonnes).

Bananas

The area of bananas harvested increased slightly to 11,700 hectares in 1999-2000. This was due to an increase in the area of bananas harvested in Queensland (up 9% to 8,600 hectares) since the areas harvested in all other banana growing States was down.

Australian banana production rose by 14% to 257,000 tonnes in 1999-2000. Production increases were recorded in Queensland (up 19% to 207,000 tonnes) and the Northern Territory (up 31% to 7,600 tonnes) while production fell in Western Australia (down 26% to 7,700 tonnes).

SUMMARY OF FINDINGS HORTICULTURE continued

VEGETABLES

Potatoes

The total area planted to potatoes fell by 11% to 36,800 hectares in 1999–2000. Decreased plantings were reported in all States except Queensland. The biggest decreases were recorded in the main growing States of Tasmania (down 25% to 5,700 hectares), South Australia (down 10% to 8,000 hectares) and Victoria (down 8% to 9,600 hectares).

Australian potato production fell by 10%, or 127,000 tonnes, to 1.2 million tonnes during 1999–2000 with smaller harvests reported in all States except Queensland. There were slight improvements in crop yields across most States and these partially offset the falls in plantings. The biggest falls in production were recorded in Western Australia (down 25% to 82,100 tonnes), Tasmania (down 18% to 267,000 tonnes), and Victoria (down 8% to 295,000 tonnes).

Onions

The area planted to onions in Australia fell slightly to an estimated 5,300 hectares in 1999–2000 with decreased plantings in New South Wales being partially offset by increases in South Australia.

Onion production rose by 10%, or 23,000 tonnes, to an estimated 247,000 tonnes in 1999–2000. This was largely due to an increase in the estimated production in South Australia which was the main producing State with 91,900 tonnes.

Tomatoes

The area planted to tomatoes in Australia fell slightly to an estimated 8,300 hectares in 1999–2000. This occurred mainly as a result of decreased plantings in New South Wales, since the areas planted in the main growing States of Victoria and Queensland were up slightly.

Australia's tomato harvest of 414,000 tonnes in 1999–2000 was an increase of 5% over the previous year. Victoria was the main producing State accounting for 60% (249,000 tonnes) of the national harvest.

Carrots

The area planted to carrots increased by 8% to 7,000 hectares in 1999–2000. This was due to an increase in the Victorian estimate since all other States were either down or little changed.

Carrot production rose by 10% to 283,000 tonnes in 1999–2000. Increases were reported in Victoria and Queensland but were offset by decreases in most other States.

SUMMARY OF FINDINGS LIVESTOCK

Cattle and sheep numbers were up while pig and chicken numbers were down. Increased meat cattle numbers offset a decrease in dairy cattle numbers.

DAIRY CATTLE

Dairy cattle numbers fell by 2% to 3.1 million at 30 June 2000, reversing the upward trend experienced in recent years. The most significant fall in estimated herd sizes was recorded in Tasmania where the estimate fell by 12% to 206,000 head. The Victorian dairy herd fell by 3% to 1.9 million head at 30 June 2000, and represented 60% of the total Australian herd.

The number of establishments reporting dairy cattle fell by 3% to 14,800 at 30 June 2000. Numbers were down in all States except Victoria which was little changed. These structural changes probably reflect the uncertainities felt by producers prior to deregulation of the industry, where smaller farms are expected to be less competitive.

MEAT CATTLE

At 30 June 2000 there were 24.4 million meat cattle and calves in Australia which was 5% (1.1 million head) more than the previous year. There were significant increases reported in herd sizes in Queensland and Western Australia but these were offset by falls in New South Wales and Tasmania.

The number of establishments reporting meat cattle increased by 1% to 76,700 at 30 June 2000. This was mainly due to increased numbers of establishments with meat cattle in Queensland and New South Wales.

SHEEP AND LAMBS

Sheep and lamb numbers increased by 3%, (3.1 million head) to 118.6 million head at 30 June 2000. Flock sizes were again down in Western Australia and Queensland but these falls were offset by increases in New South Wales and Victoria. The Tasmanian flock decreased with many farmers losing stock during a sustained period of drought in the main sheep growing regions.

The number of ewes mated during 1999–2000 remained steady at 49.4 million head with increases in New South Wales and Victoria being offset by decreases in all other States. Improved lambing ratios in most States, and especially in New South Wales, saw numbers of lambs marked increase by 4% to 41.7 million.

The number of establishments reporting sheep and lambs remained steady at 53,200 at 30 June 2000. Numbers were either steady or up slightly in all States except South Australia, which fell for the fourth consecutive year.

PIGS

Pig numbers fell by 4% to 2.5 million at 30 June 2000 with significant falls being recorded in the main growing States of New South Wales (down 9% to 710,000 head) and Queensland (down 12% to 544,000 head).

The number of establishments reporting pigs remained steady at around 3,400 at 30 June 2000. There were falls in the number of establishments reporting pigs in all States except New South Wales and Queensland.

SUMMARY OF FINDINGS LIVESTOCK continued

CHICKENS

There were falls in the estimated numbers of both chickens for meat production and chickens for egg production. The number of chickens for meat production fell by 6% to 72.9 million birds at 30 June 2000 and the number of chickens for egg production fell by 14% to 12.0 million birds at 30 June 2000.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains detailed statistics on crops, livestock and characteristics of farms.

SCOPE AND COVERAGE

- **2** Estimates in this publication are based on information obtained from the Agricultural Commodity Survey (ACS) conducted at 30 June 2000. Prior to 2000 information was obtained for the period ending 31 March. The ABS has changed the collection period to 30 June to better align with other ABS surveys. A study of respondent data indicated that there should be no significant difference in estimates collected between the reference periods.
- **3** The scope of the 1999–2000 Survey is establishments undertaking agricultural activity which have an estimated value of agricultural operations (EVAO) of \$5,000 or more. This is the same as the scope for Agricultural Censuses and Surveys since 1993–94. Prior to 1993–94 scope has varied. Details are available on request.

GENERAL

- **4** The estimates for earlier years shown in this publication have been revised where necessary.
- **5** Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

AGRICULTURAL ESTABLISHMENTS

6 For the Agricultural Commodity Survey, the concept of an establishment is the same as that used by the ABS for all industry statistics collections. The establishment is the smallest accounting unit of business within a State or Territory, controlling its productive activities and maintaining a specified range of detailed data enabling value added to be calculated. In general an establishment covers all operations at a physical location, but may consist of a group of locations provided they are within the same State or Territory. The majority of establishments operate at one location only.

INDUSTRY CLASSIFICATION

7 Units in the ACS have been classified according to the methodology described in *Australian and New Zealand Standard Industrial Classification (ANZSIC)* (Cat. no. 1292.0).

SAMPLE ERROR

8 The estimates in this publication are based on information obtained from a sample drawn from the total farm population in scope of the collections, and are subject to sampling variability; that is, they may differ from the figures that would have been produced if all farms had been included. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample was taken. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all farms had been included, and about nineteen chances in twenty that the difference will be less than two standard errors.

9 In this publication, sampling variability of the estimates is measured by the relative standard error (RSE) which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The ACS is designed to produce estimates of major commodities with RSEs of 2% at the Australian level and 5% at the State level. Some estimates may be subject to higher RSEs due to sampling variability, particularly for less common commodities. If an estimate is identified by a single asterisk (e.g. *182) the RSE is between 25% and 50%. If an estimate is identified by a double asterisk (i.e. **) the RSE is above 50% and the estimate is not published. Separate indication of the RSEs of all estimates is available on request .

RELATIVE STANDARD ERROR OF SELECTED COMMODITIES—As at 30 June 2000

EXPLANATORY NOTES continued

ABS DATA AVAILABLE ON REQUEST

10 As well as the statistics included in this and related publications, the ABS may have other relevant data available on request. Inquiries should be made to either Debbie Thomas on Hobart 03 6222 5948 or the National Information Service on 1300 135 070.

GENERAL ACKNOWLEDGMENT

11 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

RELATED PUBLICATIONS

- **12** A range of agricultural publications is produced by the ABS, including:
- Agriculture, Australia (Cat. no. 7113.0)
- Agricultural Industries, Financial Statistics, Australia, Preliminary Estimates (Cat. no. 7506.0)
- Apparent Consumption of Selected Foodstuffs, Australia, Preliminary (Cat. no. 4315.0)
- Livestock Products, Australia (Cat. no. 7215.0)
- Principal Agricultural Commodities, Australia, Preliminary (Cat. no. 7111.0)
- Value of Principal Agricultural Commodities Produced, Australia, Preliminary (Cat. no. 7501.0)
- **13** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

FOR MORE INFORMATION...

INTERNET www.abs.gov.au the ABS web site is the best place to

start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a

statistical profile.

LIBRARY A range of ABS publications is available from public and

tertiary libraries Australia-wide. Contact your nearest library to determine whether it has the ABS statistics you require, or visit our web site for a list of libraries.

CPI INFOLINE For current and historical Consumer Price Index data,

call 1902 981 074 (call cost 77c per minute).

DIAL-A-STATISTIC For the latest figures for National Accounts, Balance of

Payments, Labour Force, Average Weekly Earnings, Estimated Resident Population and the Consumer Price Index call 1900 986 400 (call cost 77c per minute).

INFORMATION SERVICE

Data which have been published and can be provided within five minutes are free of charge. Our information consultants can also help you to access the full range of ABS information—ABS user-pays services can be tailored to your needs, time frame and budget. Publications may be purchased. Specialists are on hand to help you with analytical or methodological advice.
