NOTES

ABOUT THIS PUBLICATION

This publication contains final estimates for the main commodities collected in the 2004–05 Agricultural Survey. It contains detailed statistics on crops, livestock and livestock products, land use and industry and size characteristics of farms.

CHANGES IN THIS ISSUE

No changes in this issue.

MORE INFORMATION ON ABS AGRICULTURE STATISTICS

Information about ABS activities in the field of agriculture statistics is available from the Agriculture Statistics theme page on the ABS web site <<http://www.abs.gov.au>>. To access the Agriculture theme page, select 'Industry' under 'Themes' from the menu on the home page.

The 2004–05 Agriculture Survey also collected information relating to - Water use on farms, Computer and Internet usage by farm businesses (including the main type of Internet connection used by the business), Fencing to protect land from grazing and Trees and shrubs planted. This information is available by special request from the National Information and Referral Service on 1300 135 070 or Gordon Cameron on Hobart (03) 6222 5939.

SUMMARY OF FINDINGS INDUSTRY STRUCTURE

NUMBER OF FARMS

The 2004–05 Agricultural Survey found that the number of farms in Australia had changed little from the previous year, with an estimated 129,934 farms at 30 June 2005.

The beef cattle farming industry remained the largest in terms of farm numbers, with around 28% of all farms. The mixed farming sector (grain-sheep/beef cattle) was the next largest with around 13% of all farms, followed by the sheep farming and grain growing sectors with around 10% each.

SIZE OF OPERATIONS

EVAO of operations

The median estimated value of agricultural operations (EVAO) of all farms was approximately \$124,000 in 2004–05. Around 16% of all farms (20,300 farms) had an EVAO below \$22,500, while at the other end of the scale, around 14% (18,200 farms) had an EVAO above \$499,999.

The majority of farms with EVAO below \$22,500 were involved in beef cattle farming (11,700 farms) and sheep farming (2,300 farms) while the majority of farms with EVAO above \$499,999 were involved in grain growing (4,200 farms), mixed grain-sheep/beef cattle farming (3,100 farms), beef cattle farming (2,000 farms) and dairy cattle farming (1,900 farms).

On an industry basis, the cotton, poultry for meat, poultry for eggs, pig, and apple and pear industries were dominated by farms with large EVAOs, with around 75%, 59%, 38%, 36% and 36% respectively, having an EVAO greater than \$499,999.

Area of operations

Most farms in 2004–05 were between 100 and 499 hectares in size, and accounted for 41,900 farms (or 32% of all farms). These farms were mainly engaged in beef cattle grazing, dairying, sheep grazing or mixed grain-sheep/beef cattle growing.

Small farms under 50 hectares were the second main size group and accounted for 25,400 farms (or 20% of all farms). These small farms were mainly engaged in beef cattle grazing, grape growing, fruit growing, vegetable growing and plant nursery operations.

Large farms of over 2,499 hectares accounted for 11% (14,700) of all farms and were mainly engaged in grazing or grain growing operations.

SUMMARY OF FINDINGS CROPS

OVERVIEW

The 2004–05 harvest for many of the principal crops fell from the previous year's highs despite increased plantings.

Estimates for 2004–05 show increases in area planted for wheat, barley, canola, grain sorghum and cotton. Decreases in area planted were recorded for oats, lupins for grain, sugar cane and rice.

Estimates for 2004–05 show decreased production for all major crops, except grain sorghum, sugar cane and cotton. The fall in production reported for winter crops (i.e. wheat, barley, oats, canola and lupins) was largely due to dry conditions during their growing season. In contrast, production for summer crops (i.e. grain sorghum and cotton) was assisted by an improvement in water availability and timely rainfall.

PRODUCTION OF MAJOR CROPS, Australia—2002–03 to 2004–05

CROPS FOR GRAIN

Wheat

Less than ideal conditions during the growing season saw wheat production fall from the previous year's record despite an increase in area planted.

The total area sown to wheat for grain rose by 3% in 2004–05, to 13.4 million hectares. Increases were reported in the three main growing states, with New South Wales up by 7% (or 273,000 hectares), Western Australia up by 4% (or 201,000 hectares) and South Australia up by 1% (or 19,700 hectares).

Wheat production fell by 16% in 2004–05, to 21.9 million tonnes, down from the previous year's record. Decreases were reported in Western Australia (down 22% or 2.5 million tonnes), Victoria (down 39% or 1.2 million tonnes) and South Australia (down 25% or 870,000 tonnes). New South Wales reported increased wheat production (up by 3% or 249,000 tonnes).

Barley

The total area sown to barley for grain increased by 4% in 2004–05, to 4.6 million hectares. The largest increases were reported in New South Wales (up 8% or 72,100 hectares), South Australia (up 5% or 64,200 hectares) and Victoria (up 6% or 52,700 hectares).

Production of barley for grain fell by 25% in 2004–05, to 7.7 million tonnes. All states reported decreased production compared with the previous year. The largest falls were reported in Victoria (down 43% or 969,000 tonnes), South Australia (down 26% or 712,000 tonnes) and Western Australia (down 21% or 681,000 tonnes).

SUMMARY OF FINDINGS CROPS *continued*

Oats

The total area sown to oats for grain fell by 18% in 2004–05 to 894,000 hectares, after four years of increased plantings. The three main growing states all reported decreases. Western Australia fell by 29% (or 101,000 hectares), New South Wales fell by 11% (or 49,300 hectares) and Victoria fell by 23% (or 44,400 hectares).

Production of oats for grain fell by 36% from the previous year's high, to 1.3 million tonnes in 2004–05. Decreases were reported in all the major growing states with the largest falls reported in Western Australia (down 39% or 291,000 tonnes), Victoria (down 44% or 223,000 tonnes) and New South Wales (down 30% or 181,000 tonnes).

Grain sorghum

The total area of sorghum sown for grain rose by 3% in 2004–05, to 755,000 hectares. An increase of 5% (or 24,200 hectares) in Queensland, the main growing state, was offset by small decreases in the other states.

Grain sorghum production was little changed from the previous year. A 19% increase in production in New South Wales (up by 138,000 tonnes) was offset by a 10% decrease in production in Queensland (down by 133,000 tonnes) and smaller decreases in the other states.

Lupins for grain

The total area planted to lupins for grain fell by 1% to 845,000 hectares. Increased plantings in Western Australia and Victoria were offset by decreases in South Australia and New South Wales. This was the seventh annual decrease in lupin plantings and reflects a longer term trend towards oats and barley. Decreased yields from the previous year saw total production decrease by 21% to 937,000 tonnes. Western Australia was the main producing state, although production was down by 18% to 792,000 tonnes.

OTHER CROPS

Canola

Canola plantings increased by 14% to 1.4 million hectares, with increases in all states except South Australia. Less than ideal conditions, however, saw production fall in most states with the total harvest down by 9% to 1.5 million tonnes.

Cotton lint

Increased availability of water for irrigation saw plantings of cotton increase by 34% to 304,000 hectares. Total cotton lint production was up by 78% to 563,000 tonnes.

Rice

The area planted to rice remained at low levels, with the area planted in 2004–05 falling by 23% to 51,200 hectares. Cold conditions at a critical stage of plant development reduced yields and saw estimated total production fall by 39% to 339,000 tonnes.

SUMMARY OF FINDINGS HORTICULTURE

FRUIT

Grapes

Grape production in 2004–05 equalled the previous year's record of 2.0 million tonnes. The total area of vines increased slightly to 167,000 hectares. Although the bearing area for grapes rose slightly to 153,000 hectares, the area not yet bearing fell marginally to 13,500 hectares.

Oranges

Orange production increased by 26% to 498,000 tonnes after a significant decline in the previous year. Increases were reported in the three main growing states of New South Wales (up 22% to 221,000 tonnes), South Australia (up 27% to 154,000 tonnes) and Victoria (up 53% to 106,000 tonnes). The number of bearing orange trees reported increased by 9% to 7.4 million trees, with increases in the three main growing states.

Bananas

Banana production increased by 3% to 266,000 tonnes, with increased production in Queensland partly offset by a fall in New South Wales. The total bearing area of bananas fell by 5% to 10,400 hectares.

Apples

The production of apples increased by 26% to 327,000 tonnes in 2004–05. Increases were reported in all states except Western Australia with many producers reporting generally better conditions, compared to the previous 'difficult' season. The number of bearing apple trees increased by 2% to 9.2 million. Increases in bearing tree numbers were reported in all states with the exception of Western Australia and New South Wales.

Pears

Pear production increased by 7% to 148,000 tonnes in 2004–05 with increases reported in all states except New South Wales and Western Australia. The number of bearing pear trees increased by 4% from the previous year to 1.4 million. This was mainly due to an increase in tree numbers of 4% in Victoria, which is by far the largest pear growing state with 1.2 million bearing trees (or 80% of the national total).

PRODUCTION OF MAJOR FRUIT CROPS, Australia—2002–03 to 2004–05

SUMMARY OF FINDINGS HORTICULTURE *continued*

VEGETABLES

Potatoes

Production of potatoes in 2004–05 fell by 2% to 1.3 million tonnes. This was due mainly to a 20% decrease in production in Victoria (down to 271,000 tonnes) since all other states, except Tasmania, reported increases. The area planted to potatoes increased by 4% to 37,400 hectares with increases in all states, except Victoria and Tasmania.

Tomatoes

Production of tomatoes fell by 14% to 408,000 tonnes. This was largely due to falls in Queensland (down 31% to 85,800 tonnes) and Victoria (down 12% to 237,000 tonnes), but was partly offset by an increase in New South Wales (up 13% to 76,100 tonnes). The area planted to tomatoes was down by 8% to 7,800 hectares, with the main fall in Queensland, which was down by 23% to 2,670 hectares.

Carrots

Production of carrots increased by 4% to 316,000 tonnes, with increases in all states except South Australia and Western Australia. The area planted to carrots fell by 9% to 6,530 hectares, with falls reported in all states except New South Wales and Victoria.

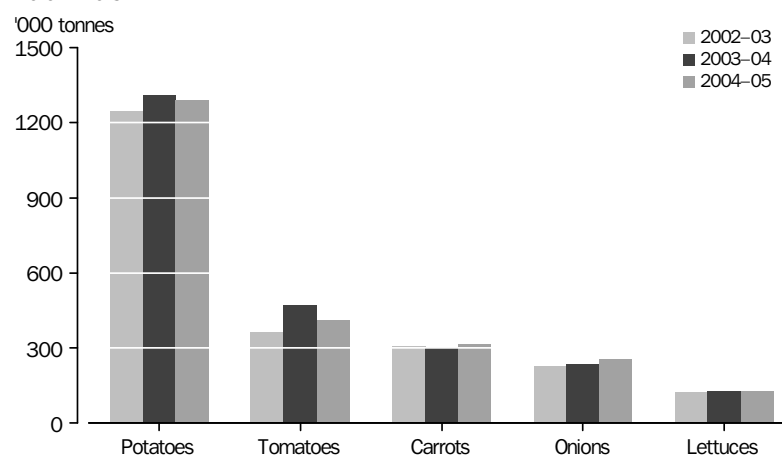

Onions

Production of onions rose by 10% to 256,000 tonnes. Increases in production in South Australia and Tasmania were partly offset by falls in New South Wales and Victoria. The area planted to onions rose by 7% to 5,970 hectares, with increases reported in all states except New South Wales and Victoria.

Lettuces

Production of lettuces rose by 4% to 132,000 tonnes. Increases in Victoria and Queensland were partly offset by falls in all other states. The area planted to lettuces was down by 7% to 5,720 hectares. Falls were reported in all major growing states.

PRODUCTION OF MAJOR VEGETABLE CROPS, Australia—2002–03 to 2004–05

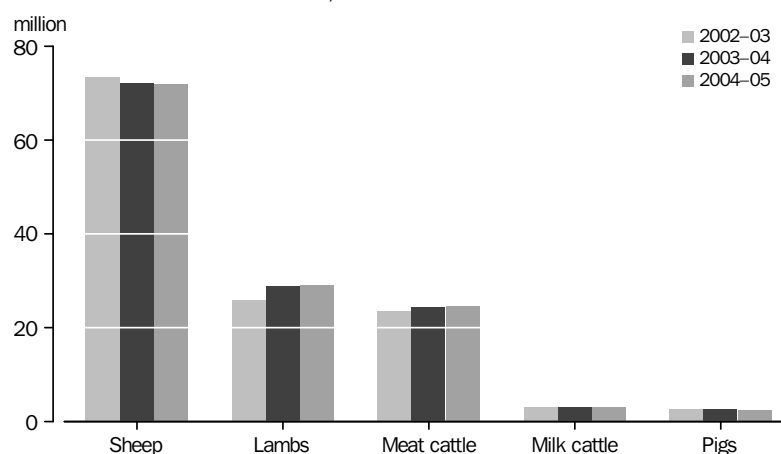

SUMMARY OF FINDINGS LIVESTOCK

OVERVIEW

Livestock numbers were mostly stable in 2004–05 following some increases post-drought the previous year. Sheep and lamb, milk cattle and pig numbers were little changed from the previous year. Meat cattle and chicken layer numbers increased while meat chicken numbers decreased.

NUMBERS OF LIVESTOCK, Australia—2002–03 to 2004–05

MILK CATTLE

The number of milk cattle remained steady at 3.1 million head at 30 June 2005. A small increase in milking cow numbers was offset by a decrease in other milk cattle numbers. Some industry re-structuring still seems to be occurring with the Victorian herd increasing its dominance of the industry. Some of the smaller herds further declined.

MEAT CATTLE

Meat cattle numbers increased slightly to 24.7 million, indicating the return of overall growth seen in the herd size prior to the worst drought affected years around 2002–03. Increases were seen in all states, except New South Wales which has declined steadily over recent years. Queensland's herd was up by 1% to 11.4 million, making it by far the largest state herd in Australia, and Victoria's herd was up by 6% to 2.5 million. New South Wales' herd was down by 1% to 5.3 million, the smallest herd size recorded in that state for 12 years.

SHEEP AND LAMBS

Sheep and lamb numbers were unchanged at 101 million, with a small increase in the number of lambs reported offset by a decrease in reported sheep numbers. Early-season estimates of a small increase in total sheep and lamb numbers did not eventuate, as reports of difficult conditions in some areas of New South Wales saw final numbers drop in that state. Additional falls in sheep and lamb numbers in South Australia and Tasmania offset increases in Victoria, Western Australia and Queensland.

Lamb markings rose by 3% to 37.2 million, with increases reported in all states except New South Wales, which was down slightly. The number of ewes mated was up by 5%, with increases reported in all states. The lambing percentage was down slightly to 81% (from 83% in 2003–04) with falls in New South Wales (down from 83% to 76%) and South Australia (down from 87% to 84%) partly offset by increases in the other states.

SUMMARY OF FINDINGS LIVESTOCK *continued*

PIGS

The number of pigs in Australia remained steady at 2.5 million at 30 June 2005. Increases in pig numbers in New South Wales were offset by falls in all other states. New South Wales reported the biggest state herd with 732,000 pigs, followed by Queensland with a herd of 666,000 pigs.

CHICKENS

Reported numbers of chickens for meat production fell by 4% to 62.7 million birds, with the largest falls reported in the main growing states of New South Wales and Victoria. The number of chickens reported for egg production increased by 4% to 13.2 million birds, with increases in New South Wales, Victoria and Queensland partly offset by falls in the other states. Egg production increased by 5% to 203 million dozen.

(a) Number of trees refers to trees of bearing age (i.e. for apples it is trees four years and over, for other fruit it is trees six years and over). Information on the total number of trees is available on request. Yield is based on the number of bearing trees or the bearing area.

r revised

(a) Excludes crops harvested for hay and seed, and pasture and grasses.

(b) Total area of establishments with EVAO of \$5,000 or more.

(c) Non-agricultural land is the difference between agricultural land as reported in the Agricultural Survey and total area of the state or territory. It comprises conserved land, forestry, urban and unused land such as vacant Crown land, commercially unused land on Aboriginal and other Crown reserves and waste land, ephemeral lakes and mangrove swamps, as well as establishments not included in the scope of the Agricultural Survey.

(d) Total area for Australia includes Jervis Bay.

Note: Agricultural land is generally divided into cropped land, land sown to pasture and grasses and a broad balance comprising grazing land, land lying idle or under fallow, etc.

EXPLANATORY NOTES

- INTRODUCTION**
- 1** This publication contains final estimates for the main commodities collected in the 2004–05 Agricultural Survey and related Supplementary Collections (i.e. Apples and Pears Collection and Vineyards Collection). It contains detailed statistics on crops, livestock and livestock products and industry and size characteristics of farms.
- GENERAL**
- 2** Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
- SCOPE AND COVERAGE**
- 3** Estimates of farm production are based on information obtained from the Agricultural Survey conducted at 30 June 2005. Prior to 1999–2000 information was obtained for the period ending 31 March. The Australian Bureau of Statistics (ABS) changed the collection period to 30 June to better align with other ABS surveys. A study of respondent data indicated that there should be no significant difference in estimates collected between the reference periods.
- 4** The scope of the 2004–05 Agricultural Survey is establishments undertaking agricultural activity with an estimated value of agricultural operations (EVAO) of \$5,000 or more. This is the same as the scope for Agricultural Censuses from 1993–94 to 1996–97 and for 2000–01, and the Agricultural Surveys from 1997–98 to 1999–2000, and 2001–02 to 2003–2004. Prior to 1993–94 scope has varied and these details are available on request.
- 5** From 2005–06 the ABS will use the Australian Business Register as the main source of frames for its agricultural surveys. It is considered that this will give an improved level of coverage of the agricultural industry.
- 6** For the 2002–03 Agriculture Survey, a sub-sample of 28,000 units was selected from the sample of 35,000 farms selected in the previous year. This helped control the estimates of movement for that year which was particularly important given the impact of the drought. The sample for 2003–04 was expanded to 30,500 to cover sample loss due to units in the original selection having ceased farming and to reduce the sampling error of some estimates which were approaching or exceeding design parameters in the previous year.
- 7** The sample for the 2004–05 Agriculture Survey used the same 30,500 units selected for the 2003–04 survey. This provided reliable estimates of movements from the previous year and controlled the level of sampling error for design commodities.
- AGRICULTURAL ESTABLISHMENTS**
- 8** An agricultural establishment is the smallest accounting unit of business within a state or territory controlling its productive activities and maintaining a specified range of detailed data enabling value added to be calculated. In general, an establishment covers all operations at a physical location, but may consist of a group of locations provided they are within the same Statistical Local Area (SLA) or contiguous SLAs. The majority of establishments operate at one location only.
- INDUSTRY CLASSIFICATION**
- 9** Since 1991–92, units in the Agricultural Census and the Agricultural Survey have been classified according to the methodology described in *Australian and New Zealand Standard Industrial Classification (ANZSIC)* (cat. no. 1292.0). Prior to 1991–92, establishments were classified according to the methodology described in the 1983 edition of *Australian Standard Industrial Classification (ASIC), Volume 1 – The Classification* (cat. no. 1201.0). Therefore care should be taken when making comparisons between years where different classifications have been used.
- SAMPLE ERROR**
- 10** The estimates in this publication are based on information obtained from a sample drawn from the total farm population in scope of the collection, and are subject to sampling variability; that is, they may differ from the figures that would have been produced if all farms had been included in the Agricultural Survey. One measure of the likely difference is given by the standard error (SE) which indicates the extent to which

EXPLANATORY NOTES *continued*

SAMPLE ERROR *continued*

an estimate might vary by chance because only a sample was taken. There are about two chances in three that a 'sample' estimate will differ by less than one SE from the figure that would have been obtained if all farms had responded, and about nineteen chances in twenty that the difference will be less than two SEs.

11 In this publication, 'sampling' variability of the estimates is measured by the relative standard error (RSE) which is obtained by expressing the SE as a percentage of the estimate to which it refers.

12 Most published national estimates have RSEs less than 5%. For some states with limited production of certain commodities, RSEs are greater than 10%. Estimates that have an estimated RSE between 10% and 25% are annotated with the symbol '^'. These estimates should be used with caution as they are subject to sampling variability too high for some purposes. Estimates with an RSE between 25% and 50% are annotated with the symbol '*', indicating that the estimate should be used with caution as it is subject to sampling variability too high for most practical purposes. Estimates with an RSE greater than 50% are annotated with the symbol '**' indicating that the sampling variability causes the estimates to be considered too unreliable for general use. Separate indication of the RSEs of all estimates is available on request.

13 A table with RSEs for selected commodities follows:

RELATIVE STANDARD ERRORS OF SELECTED COMMODITIES—At 30 June 2005

	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Aust.

.. not applicable

— nil or rounded to zero (including null cells)

CROPS, PASTURES AND HORTICULTURE

14 Statistics on area and production of crops relate, in the main, to crops sown during the year ended 30 June. Statistics of perennial crops relate to the position at 30 June and the production during the year ended on that date, or fruit set by that date. Statistics for apples and pears and grapes, which in some states are harvested after 30 June, are collected by supplementary collection forms and are included in this publication.

LIVESTOCK SLAUGHTERING AND LIVESTOCK PRODUCTS

15 The statistics on livestock slaughtering and meat production are based on data collected from abattoirs and other major slaughtering establishments and include estimates of animals slaughtered on farms and by country butchers and other small slaughtering establishments. Care should be taken when using this information as the figures only relate to slaughtering for human consumption and do not include animals condemned or those killed for boiling down. Definitions of livestock categories may differ between states and within states, particularly with regard to calves.

EXPLANATORY NOTES *continued*

WOOL

16 Wool production statistics contained in this publication are derived from the quarterly ABS Wool Brokers and Dealers Receipts Collection and are published on the basis of state of production.

17 Wool receipts statistics show the amount of taxable wool received by brokers and dealers from wool producers. They exclude wool received by brokers on which wool tax has already been paid by other dealers (private buyers) or brokers.

MILK

18 Milk statistics have been collected and provided to the ABS by Dairy Australia. Data for the Australian Capital Territory are included with New South Wales; data for the Northern Territory are included with South Australia.

POULTRY SLAUGHTERING

19 Poultry slaughtering statistics have been compiled from quarterly returns supplied by commercial poultry slaughtering establishments. Producers in Tasmania, the Northern Territory and the Australian Capital Territory are not included in the aggregates derived from the Poultry and Game Birds Slaughtered collection. However, the statistics represent a high level of coverage.

ABS DATA AVAILABLE ON REQUEST

20 As well as the statistics included in this and related publications, the ABS may have other relevant data available on request. Inquiries should be made to either the National Information and Referral Service on 1300 135 070 or Gordon Cameron on Hobart (03) 6222 5939.

GENERAL ACKNOWLEDGMENT

21 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

RELATED PUBLICATIONS

22 A range of agricultural publications is produced by the ABS, including:
Livestock and Meat, Australia — Electronic Publication, cat. no. 7218.0.55.001
Livestock Products, Australia, cat. no. 7215.0
Principal Agricultural Commodities, Australia, Preliminary, cat. no. 7111.0
Value of Agricultural Commodities Produced, Australia, cat. no. 7503.0
Value of Principal Agricultural Commodities Produced, Australia, Preliminary, cat. no. 7501.0

23 For comparisons of the agriculture industry with other industries, users are referred to:

Australian National Accounts: National Income, Expenditure and Product, cat. no. 5206.0

Australian National Accounts: State Accounts, cat. no. 5220.0

24 Current publications and other products released by the ABS are listed in the *Catalogue of Publications and Products* (cat. no. 1101.0). The Catalogue is available from any ABS office or the ABS web site <<http://www.abs.gov.au>>. The ABS also issues a daily Release Advice on the web site which details products to be released in the week ahead.

FOR MORE INFORMATION . . .

- INTERNET* **www.abs.gov.au** the ABS web site is the best place for data from our publications and information about the ABS.
- LIBRARY* A range of ABS publications are available from public and tertiary libraries Australia wide. Contact your nearest library to determine whether it has the ABS statistics you require, or visit our web site for a list of libraries.

INFORMATION AND REFERRAL SERVICE

Our consultants can help you access the full range of information published by the ABS that is available free of charge from our web site, or purchase a hard copy publication. Information tailored to your needs can also be requested as a 'user pays' service. Specialists are on hand to help you with analytical or methodological advice.
