Seasonally adjusted estimates	41 998.3	2.5

### KEY POINTS

### TREND ESTIMATES

- The trend estimate of turnover for the Australian Retail and Hospitality/Services series increased by 0.8% in June 2002. This follows increases of 0.8% in May and 0.9% in April.
- The trend estimate increased in all states. The largest increase was in the NT (1.3%) while all other states had trend growth between 0.9% (Qld) and 0.6% (ACT).
- Over the three months to June 2002 the trend estimate rose by \$362m. The Hospitality and services (+\$90m), Household good retailing (+\$82m) and Food retailing (+\$74m) industries showed the largest increases.

### SEASONALLY ADJUSTED

■ The seasonally adjusted estimate of turnover for the Australian Retail and Hospitality/Services series increased by 0.9% in June 2002 compared with May 2002. This follows increases of 1.2% in May and 0.8% in April 2002.

### ORIGINAL ESTIMATE

- In original terms, Australian turnover decreased by 4.9% in June 2002 compared with May. Chains and other large retailers (which are completely enumerated) decreased by 4.3%, while 'smaller' retailers (the sampled units) decreased by 5.7%.
- In original terms, Australian turnover increased by 6.9% in June 2002 compared with June 2001. Chains and other large retailers increased by 7.4%, while 'smaller' retailers increased by 6.2%. Turnover for 2001-02 increased 8.3% on 2000-01.

### **VOLUME MEASURES**

■ The trend volume measure of turnover rose by 1.7% in the June quarter 2002. This follows increases of 1.5% in the March quarter 2002 and 1.2% in the December quarter 2001.

### CHANGES IN THIS ISSUE

For May 2002, a revision has been made to Food retailing for Western Australia.

Quarterly chain volume data are shown in tables 14 and 15 of this issue. These data incorporate a new base year, 2000–01, which has resulted in revisions to quarterly growth rates, small in most cases, for the last few years. In addition, the reference year has been advanced to 2000–01, which has resulted in revisions to levels, but not growth rates, for all periods. Revisions are also due to the annual seasonal reanalysis of price deflators.

#### CHANGES IN NEXT ISSUE

In April 2000, the ABS released an information paper, ABS Statistics and The New Tax System (cat. no. 1358.0), which foreshadowed changes in the statistical infrastructure supporting the compilation of ABS economic series. The changes will allow better use of data available from the taxation system to improve efficiency, coverage and sample design.

This publication presents the last release of estimates from the Retail Trade Survey compiled using the old infrastructure.

In the next release of this publication, estimates for the latest period (i.e. July) will be compiled on the new basis. To facilitate comparisons over time, the historical series in that release will be adjusted so that all estimates are presented on the new basis.

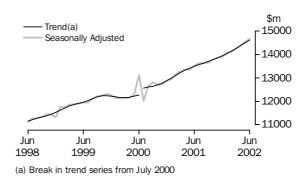

An information paper, Improvements in ABS Economic Statistics [Arising from The New Tax System] (cat. no. 1372.0), was released on 6 May 2002. That paper described the changes in more detail and provided information about the treatment of statistical impacts of the changes across ABS economic series.

The results of the annual seasonal reanalysis are normally introduced with the July issue. However, the annual reanalysis will be delayed one month so that adjustments to the historical series can be taken into account.

Dennis Trewin Australian Statistician

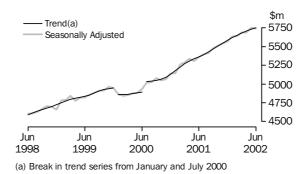

TOTAL RETAIL

There has been strong growth in the trend estimate in each of the last five months. The Household good retailing, Recreational good retailing and Hospitality and services industries had strong growth in each of these months. Clothing and soft good retailing was the only industry not to have growth in each of these months.

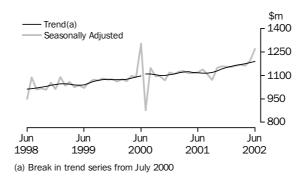

FOOD RETAILING

Moderate trend growth continued in June 2002. All states had moderate growth over the last four months, except the Northern Territory which had strong growth and New South Wales which had weak growth.

DEPARTMENT STORES

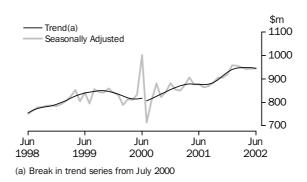

There has been moderate trend growth in each of the last six months. Over this period Victoria had strong growth in each month, while Queensland and South Australia had strong growth in each of the last two months.

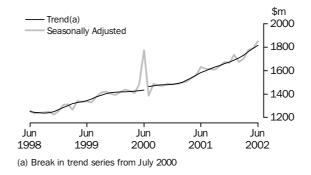

3

CLOTHING AND SOFT GOOD RETAILING

The trend growth has been slowing since November 2001, with a decline in each of the last two months. Since November Victoria, South Australia and Tasmania had moderate to strong growth in each month, while Queensland has been in decline for six months and New South Wales has been in decline for four months.

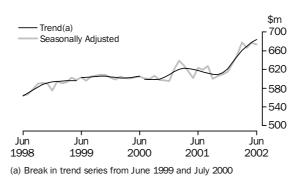

HOUSEHOLD GOOD RETAILING There has been strong trend growth in each month for over twelve months. All states except Western Australia (weak growth) and the Northern Territory (no growth or in decline) had strong growth in each of the last five months.

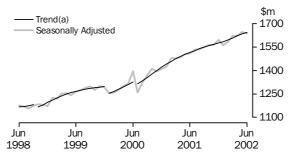

RECREATIONAL GOOD RETAILING

There has been strong growth in the trend estimate in each of the last seven months. Over this period Victoria and Queensland had strong growth in each month, while New South Wales had six months of strong growth followed by moderate growth in June 2002.

OTHER RETAILING

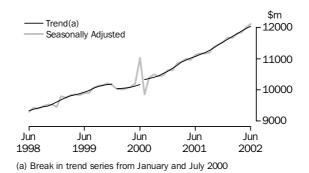

After three months of strong trend growth there was moderate growth in June 2002. There has been moderate to strong growth in New South Wales, Victoria and South Australia in each of the last five months.

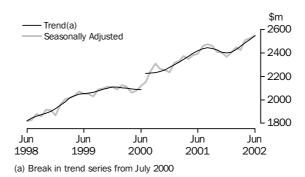

(a) Break in trend series from October 1998, January and July 2000

TOTAL RETAIL
(EXCLUDING HOSPITALITY
AND SERVICES)

The trend growth for Total retail (excluding Hospitality and services) has been slightly weaker than the trend growth for Total industries (including Hospitality and services), in each of the last three months.

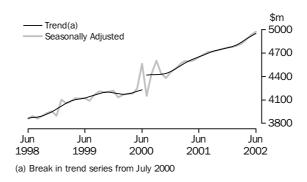

HOSPITALITY AND SERVICES There has been strong growth in the trend estimate in each of the last five months. New South Wales, Queensland and Western Australia had moderate to strong growth in each of the last four months, while Victoria has been in decline and the two Territories have been flat or in decline.

5

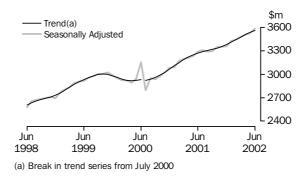

NEW SOUTH WALES

Trend growth has been strong in each of the last three months. The Household good retailing and Hospitality and services industries have had strong growth in each of these months, while Clothing and soft good retailing has been in decline.

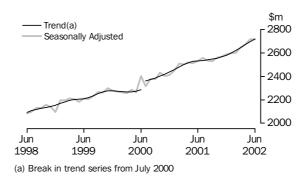

VICTORIA

After six months of strong growth there has been moderate trend growth in June 2002. All industries except Hospitality and services had moderate to strong growth in each of the last seven months.

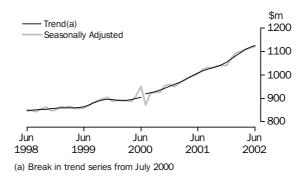

QUEENSLAND

There has been strong trend growth in each of the last five months. The Household good retailing, Recreational good retailing and Hospitality and services industries have had strong growth in each of these months, while Clothing and soft good retailing has been in decline.

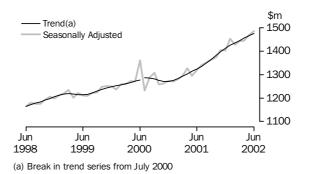

SOUTH AUSTRALIA

There has been strong trend growth in each of the last eight months. There was strong growth in each of these months for the Household good retailing industry. The rate of growth for Recreational good retailing has continued to decrease, and has been in decline for the last four months.

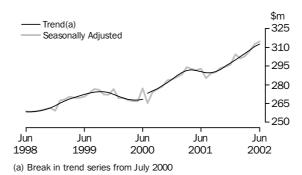

WESTERN AUSTRALIA

The trend growth has been slowing since October 2001 with moderate growth since March 2002. In each of the last eight months the Food retailing, Department stores and Hospitality and services industries had moderate to strong growth.

TASMANIA

After seven months of strong growth in the trend estimate there was moderate growth in June 2002. There has been strong growth in each of the last nine months in the Household good retailing industry.

### **EXPLANATORY NOTES**

INTRODUCTION

- **1** This publication presents monthly estimates of the value of turnover of retail businesses classified by industry, and by State. The principal objective of the Retail Trade survey is to show month to month movement of retail turnover.
- **2** Estimates of turnover contained in this publication are based on a survey of about 6,600 retail and selected service businesses (covering 20,000 outlets). All 'large' businesses are included in the survey, while a sample of about 3,800 'smaller' businesses is selected. The 'large' business' contribution of approximately 56% of the total estimate ensures a highly reliable Australian total turnover estimate.

SCOPE AND COVERAGE

- **3** The Retail Trade survey covers all employing businesses, with at least one retail establishment. The scope of the survey (classified according to the Australian and New Zealand Standard Industrial Classification [ANZSIC]) is detailed below:
  - Food Retailing

Supermarkets and grocery stores (5110) and non-petrol sales of identified convenience stores of petrol stations

Takeaway food retailing (5125)

Other food retailing

Fresh meat, fish and poultry retailing (5121)

Fruit and vegetable retailing (5122)

Liquor retailing (5123)

Bread and cake retailing (5124)

Specialised food retailing n.e.c. (5129)

- Department Stores (5210)
- Clothing and Soft Good Retailing

Clothing retailing (5221)

Footwear, fabric and other soft good retailing

Footwear retailing (5222)

Fabric and other soft good retailing (5223)

■ Household Good Retailing

Furniture and floor covering retailing

Furniture retailing (5231)

Floor covering retailing (5232)

Domestic hardware and houseware retailing (5233)

Domestic appliance and recorded music retailing

Domestic appliance retailing (5234)

Recorded music retailing (5235)

Recreational Good Retailing

Newspaper, book and stationery retailing (5243)

Other recreational goods retailing

Sport and camping equipment retailing (5241)

Toy and game retailing (5242)

Photographic equipment retailing (5244)

Other Retailing

Pharmaceutical, cosmetic and toiletry retailing (5251)

Other retailing n.e.c.

Antique and used good retailing (5252)

Garden supplies retailing (5253)

Flower retailing (5254)

Watch and jewellery retailing (5255)

Retailing n.e.c. (5259)

SCOPE AND COVERAGE continued

Hospitality and Services

Hotels and licensed clubs
Pubs, taverns and bars (5720)
Clubs (Hospitality) (5740)
Cafes and restaurants (5730)

Selected services

Video hire outlets (9511)

- Hairdressing and beauty salons (9526).
- 4 The Retail Trade survey, like most ABS economic surveys, takes its frame from the ABS Business Register which is primarily based on registrations to the Australian Taxation Office's Pay As You Go Withholding (PAYGW) scheme (and prior to 1 July 2000 the Group Employer (GE) scheme). The frame is updated quarterly to take account of new businesses, businesses which have ceased employing, changes in employment levels, changes in industry and other general business changes. The estimates include an allowance for the time it takes a newly registered business to get on to the survey frame.
- Businesses which have ceased employing are identified when the Australian Taxation Office cancels their PAYGW registration (or previously their GE registration). In addition, from July 1999, businesses which did not remit under the GE scheme for the previous five quarters were removed from the frame. A similar process will be adopted to remove businesses who do not remit under the PAYGW scheme. Updating the frame to take account of changes in employment levels and industry was introduced from the April 2000 reference month. The July 1999 and April 2000 changes resulted in a shift in the level of the Retail series. However, in both cases historic data have been revised to progressively phase in this shift of level. As a result of this process, month to month movements are not perceptibly affected.

CHANGES TO ABS BUSINESS REGISTER

- 6 The introduction of The New Tax System has a number of significant implications for ABS business statistics, and these are discussed in the *Information Paper: ABS Statistics And The New Tax System* (Cat. no. 1358.0). The replacement of the GE registration process by PAYGW registration resulted in a number of changes to most business survey frames. However, an adjustment has been made to the Retail Trade series so that these changes will not affect broader level estimates of level and movement.
- **7** From July 2002, the ABS will make further changes to business statistics including adopting a new units model and expanding the frames to include all units on the Australian Business Register, including non-employers. However, these non-employers will continue to be excluded from the scope of the Retail Trade survey. For further information see *Information Paper: Improvements in ABS Economic statistics [Arising from The New Tax System]* (Cat. no. 1372.0).

DEFINITION OF TURNOVER

**8** Turnover includes retail sales; wholesale sales; takings from repairs, meals and hiring of goods (except for rent, leasing and hiring of land and buildings); and commissions from agency activity (e.g. commissions received from collecting dry cleaning, selling lottery tickets, etc.) and net takings from gaming machines etc. From July 2000, turnover includes GST.

SEASONAL ADJUSTMENT

**9** Seasonally adjusted estimates are derived by estimating and removing systematic calendar related effects from the original series. In the Retail trade series, these calendar related effects are known as seasonal (e.g. increased spending in December as a result of Christmas) and trading day influences (arising from the varying length of each month and the varying number of

SEASONAL ADJUSTMENT continued

Sundays, Mondays, Tuesdays, etc. in each month). Each influence is estimated by separate seasonal and trading day factors which, when combined, are referred to as the combined adjustment factors.

- **10** The seasonally adjusted estimates also have an allowance for an Easter proximity effect, which is caused when Easter falls late in March or early in April. This effect, when present, is combined with the seasonal and trading day factors to form the combined adjustment factors. See the Appendix of the July 2001 issue of this publication for more information.
- **11** The Retail series uses a concurrent seasonal adjustment methodology to derive the combined adjustment factors. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent seasonal adjustment replaced the forward factor methodology from the April 2000 reference month. For more information see *Information Paper: Introduction of Concurrent Seasonal Adjustment into the Retail Trade Series* ( Cat. no. 8514.0).
- **12** Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. The following table shows how the combined adjustment factor for these months, at the total Australian Retail, hospitality and services level, evolved under the concurrent seasonal adjustment methodology. The table presents two different estimates of the combined adjustment factors. The first row gives the combined adjustment factors estimated following the last annual reanalysis in July 2001 using data up to and including the June 2001 reference month. The second row gives the most recent combined adjustment factors estimated and used in this month's calculation of the concurrent seasonally adjusted series.

### COMBINED ADJUSTMENT FACTORS

	Jun 2001	May 2002	Jun 2002
Factors as estimated at last reanalysis (June 2001 reference month)	0.94960	0.99158	0.93588
Factors as estimated with current month's data (June2002 reference month)	0.94903	0.99214	0.93463

**13** The seasonal adjustment methodology is able to produce combined adjustment factors for future months. The latest factors for some future months are shown in the following table. While these factors represent the best current estimate, the actual factors used for estimating the seasonally adjusted estimates in these months will differ because they will incorporate subsequent months' data as it becomes available.

SEASONAL ADJUSTMENT continued

#### COMBINED ADJUSTMENT FACTORS

Factors as estimated with current month's data
(June 2002 reference month)

O.97695 0.98382 0.95749

- **14** The seasonal and trading day factors are reviewed annually at a more detailed level than possible in the monthly processing cycle. The annual reanalysis will not normally result in significant changes. For Retail Trade, the results of the latest review are shown in the July issue each year.
- 15 In the seasonal adjustment process, both the seasonal and trading day factors evolve over time to reflect changes in spending and trading patterns. Examples of this evolution include the slow move in spending from December to January; and, increased trading activity on weekends and public holidays. The seasonally adjusted estimates still reflect the sampling and non-sampling errors to which the original estimates are subject.
- **16** As a result of the different treatment of Australian and State totals in the seasonal adjustment process, the Australian total for an industry group may not necessarily equal the sum of the State totals for that industry group.
- 17 The monthly trend estimates are derived by applying a 13-term Henderson moving average to the seasonally adjusted estimates (7-term for quarterly series). The Henderson moving average is symmetric, but as the end of a time series is approached, asymmetric forms of the moving average have to be applied. The asymmetric moving averages have been tailored to suit the particular characteristics of individual series and enable trend estimates for recent periods to be produced. Estimates of the trend will be improved at the current end of the time series as additional observations become available. This improvement is due to the combined effect of the concurrent seasonal adjustment methodology and the application of different asymmetric moving averages for the most recent six months (or three quarters). As a result of the improvement, most revisions to the trend estimates will be observed for the most recent six months (or three quarters).
- 18 Trend estimates are used to analyse the underlying behaviour of the series over time. As a result of the introduction of The New Tax System, a break in the monthly trend series has been inserted between June 2000 and July 2000. Care should therefore be taken in comparing the series over time. For more details refer to the Appendix in the December 2000 issue of this publication.
- **19** For further information on trend estimates, see *Information Paper: A Guide to Interpreting Time Series Monitoring 'Trends': an Overview* (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on Canberra 02 6252 6345.

CHAIN VOLUME MEASURES

20 The chain volume measures of retail turnover appearing in the quarterly issue of this publication are annually reweighted chain Laspeyres indexes referenced to current price values in a chosen reference year. The reference year has been advanced to 2000-2001 in this issue and will next be updated in the June publication next year. Each year's data in the Retail chain volume series are based on the prices of the previous year, except for the quarters of the latest

TREND ESTIMATES

CHAIN VOLUME MEASURES continued

incomplete year. Data for the 2002-2003 financial year will initially be based upon price data for the 2000-2001 financial year. Comparability with previous years is achieved by linking (or chaining) the series together to form a continuous time series

RELIABILITY OF ESTIMATES

- 21 There are two types of error possible in estimates of retail turnover: Sampling error which occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all establishments in the survey is given by the standard error, see below. Sampling error may be larger for the first month of each quarter, when some of the businesses in the sample are replaced by other businesses so that the reporting load can be spread across retailers.
  Non sampling error which arises from inaccuracies in collecting, recording
  - and processing the data. The most significant of these errors are: misreporting of data items; deficiencies in coverage; non-response; and processing errors. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures.

STANDARD ERRORS

- 22 Seasonally adjusted and trend estimates and chain volume measures are also subject to sampling variability. For seasonally adjusted estimates, the standard errors are approximately the same as for the original estimates. For trend estimates, the standard errors are likely to be smaller. For chain volume measures, the standard errors may be up to 10% higher than those for the corresponding current price estimates because of the sampling variability contained in the prices data used to deflate the current price estimates.
- **23** Standard errors for the Australian estimates (original data) for June 2002 contained in this publication are:

DATA SERIES	ESTIMATE	STANDARD ERROR
Level of retail turnover (\$m) Change from preceding month (\$m) % change from preceding month	13 705.7 -712.8 -4.9	143.9 35.7 0.2

- **24** Estimates for sampled businesses in the first month of each quarter can be influenced by the quarterly rotation of approximately 10% of sampled businesses. This is done to spread the reporting load across retailers. At times, the businesses rotated in to the sample can perform differently to the businesses they replace or those already in the sample. The potential impact of the quarterly rotation is reflected in the sampling errors.
- **25** To assist users in assessing the reliability of estimates, each data series has been given a grading of A to E. Where:
  - A represents a relative standard error on level of less than 2%. The published estimates are highly reliable for movement analysis;
  - B represents a relative standard error on level between 2 and 5%, meaning the estimate is reliable for movement analysis purposes;

STANDARD ERRORS continued

- C represents a relative standard error on level between 5 and 10%, meaning users are advised to exercise some caution in interpreting movements for such series;
- D represents a relative standard error on level between 10 and 15% meaning users are advised to exercise caution in interpreting movements for such series; and
- E represents a relative standard error on level greater than 15% (mainly affects unpublished state by industry series.
- **26** The table below provides an indicator of reliability for key retail turnover estimates.

		Depart-	Clothing & soft	House- hold	Recre- ational		Hospit-

ABS DATA AVAILABLE ON REQUEST

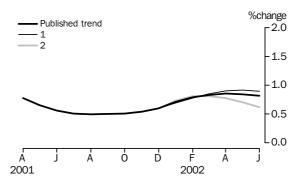

**27** Retail Survey Special Data Service provides additional retail trade statistics which include further State industry dissections through to 'top ten' industry reports. For more information, contact the Retail Trade Special Data Services manager on Canberra 02 6252 5220.

RELATED PUBLICATIONS

**28** Current publications and other products released by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The Catalogue is available from any ABS office or the ABS web site <a href="http://www.abs.gov.au">http://www.abs.gov.au</a>. The ABS also issues a daily Release Advice on the web site which details products to be released in the week ahead.

EFFECT OF NEW SEASONALLY
ADJUSTED ESTIMATES ON
TREND ESTIMATES

- 1 The most recent trend estimates published in this release are likely to be revised when next month's seasonally adjusted estimates become available. To assist readers of this publication in analysing retail trends, the approximate effect of the two possible scenarios on the previous trend estimates of the percentage change in total retail turnover for Australia are presented below. For more information see the trend estimates section of the explanatory notes.
  - $1\,$  The July seasonally adjusted estimate of retail turnover is 1.0% higher than the June estimate.
  - 2 The July seasonally adjusted estimate of retail turnover is 1.0% lower than the June estimate.

TECHNICAL NOTE

2 Under concurrent seasonal adjustment, the most recent seasonally adjusted and trend estimates are likely to be revised when original estimates for subsequent months become available. The trend revision is a combined result of the revision of the seasonally adjusted estimates and the revision derived from the use of asymmetric moving averages as future data become available (for more information, refer to paragraph 17 in the explanatory notes). ABS research shows that about 75% of the total revision to the trend estimate at the current end of the time series is due to the use of different asymmetric moving averages when the original estimate for the next time period becomes available. To assess the reliability of the trend estimate at the current end, the "what-if" chart presents trend estimates under two different scenarios of the next time period. The chart shows only the impact due to the changes of the asymmetric moving averages and does not include the unknown impact of revision to seasonal factor estimates that would arise when the original estimate for the next time period becomes available.

### FOR MORE INFORMATION

INTERNET www.abs.gov.au the ABS web site is the best place to

start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a

statistical profile.

LIBRARY A range of ABS publications is available from public and

tertiary libraries Australia-wide. Contact your nearest library to determine whether it has the ABS statistics you require,

or visit our web site for a list of libraries.

CPI INFOLINE For current and historical Consumer Price Index data, call

1902 981 074 (call cost 77c per minute).

DIAL-A-STATISTIC For the latest figures for National Accounts, Balance of

Payments, Labour Force, Average Weekly Earnings, Estimated Resident Population and the Consumer Price Index call 1900 986 400 (call cost 77c per minute).

### INFORMATION SERVICE

Data that is already published and can be provided within five minutes is free of charge. Our information consultants can also help you to access the full range of ABS information—ABS user-pays services can be tailored to your needs, time frame and budget. Publications may be purchased. Specialists are on hand to help you with analytical or methodological advice.
