## OCTOBER KEY FIGURES

(a) Refer to notes on page 2.

SEASONALLY ADJUSTED ESTIMATES

| Turnover at current prices |  | Sep 2000 | Oct 2000 | \% change |
| :---: | ---: | ---: | ---: | ---: |
| (\$ millions) |  | 12759.9 | 12737.4 | -0.2 |
|  |  | Oct 1999 | Oct 2000 | \% change |
|  |  |  | 12226.0 | 12737.4 | 4.2

## TREND ESTIMATES

- Suspension of trend estimates. The retail trend series in current price terms remains suspended as at June 2000. See page 2 for details. Publication of this series will resume when it is possible to adequately estimate the trend break.

## SEASONALLY ADJUSTED

- The seasonally adjusted estimate of turnover for the Australian Retail and Hospitality/Services series fell by $0.2 \%$ in October 2000 over September 2000. This follows increases in September ( $+0.8 \%$ ) and August ( $+5.7 \%$ ) which were influenced by the Olympics and the introduction of the GST.
- The largest increases in October 2000 were recorded in Queensland (+3.7\%) and Victoria ( $+2.2 \%$ ), while the Australian Capital Territory ( $+2.0 \%$ ) and Tasmania $(+0.3 \%)$ also recorded increases. Western Australia (-4.1\%) and New South Wales (-2.5\%) recorded the largest decreases in October. For Australia, the Clothing and soft good ( $-8.4 \%$ ), Recreational good ( $-1.9 \%$ ) and Hospitality and services ( $-1.8 \%$ ) industries recorded decreases. Other retailing ( $+3.8 \%$ ) recorded the largest increase.

## ORIGINALESTIMATE

- In original terms, Australian turnover increased by 1.7\% in October 2000 over September 2000. New South Wales and Northern Territory were the only states to record decreases.
- Australian turnover increased by $2.6 \%$ in October 2000 over October 1999. For this period, chains and other large retailers increased by $4.3 \%$, while small retailers increased by $0.6 \%$.
- For further information about these and related statistics, contact Jeremy Walker on 026252 5451, or the National Information Senvice on 1300135070.

## FORTHCOMING ISSUES

CHANGES IN THIS ISSUE

THE NEW TAX SYSTEM IMPACTS

ISSUE
November 2000
December 2000
January 2001

RELEASE DATE
8 January 2001
2 February 2001
5 March 2001

There are no changes in this issue.

Estimates of retail turnover in both original and seasonally adjusted terms reflect unusual spending patterns which occurred before and after the introduction of the GST on 1 July. However, extreme values are modified during the creation of seasonal adjustment factors and, as a result, the actual factors used to create the seasonally adjusted series are not significantly influenced by such changes in spending. As the trend series attempts to measure underlying behaviour, the effect of these unusual patterns should, as far as practicable, be estimated and excluded from the series.

While an estimate of unusual pre-GST spending has been removed from the current price trend series, it has not been possible for the ABS to reliably estimate the impact of unusual post-GST spending because it takes several months for regular shopping patterns to be re-established. In addition, from July 2000 the retail series records turnover inclusive of GST, which means that there is a change in the valuation basis for the series. Accordingly, the retail trend series, in current price terms, has been suspended as at June 2000 until the GST impact stabilises.

The impact of both unusual pre-GST and post-GST spending has been removed from the September quarter chain volume trend series. There are two reasons why the impact of unusual post-GST spending can be measured for the chain volume trend series but not for the current price trend series. First, the deflation process used in calculating the chain volume measures removes the change in the valuation basis for the series. Second, it has been assumed that the pre-GST increase in spending is approximately equivalent to the post-GST decrease in spending. This assumption can be applied to the quarterly series but is not as easy to apply to the monthly series. This assumption will be reviewed prior to the release of the December quarter estimates as more information becomes available. Although some caution should be exercised because of the assumption mentioned, the chain volume series continues to provide the best measure of levels and changes in the volume of retail turnover.

## MONTHLY SEASONALLY ADJUSTED AND TREND(a) ESTIMATES

(a) Trend calculated on data up to June 2000 including adjustments for pre-GST impacts. See notes on page 2.

The seasonally adjusted estimate fell by $2.5 \%$ in October 2000. This decline was mainly due to falls in the Clothing and Hospitality and services industries which had been influenced by the Olympics.

The seasonally adjusted estimate rose by $2.2 \%$ in October 2000, after a decline of $1.5 \%$ in September. All industries except Clothing and soft good and Recreational good retailing recorded increases.

In October 2000, the seasonally adjusted estimate rose by $3.7 \%$. All industries except Clothing recorded increases. The largest increases were recorded in Recreational good and Other retailing.

The seasonally adjusted estimate fell again in October 2000 following a slight fall in September. All industries recorded decreases except for Other retailing and Hospitality and services.

After two months of increases in the seasonally adjusted estimates, a fall of 4.1\% was recorded in October 2000. All industries except Hospitality and services recorded falls.

The seasonally adjusted estimate rose for the third month in a row. Food retailing and Recreational good retailing recorded increases in each of these months.

## MONTHLY SEASONALLY ADJUSTED AND TREND(a) ESTIMATES

FOOD RETAILING

DEPARTMENT STORES

CLOTHING AND SOFT GOOD RETAILING

HOUSEHOLD GOOD RETAILING

(a) Trend calculated on data up to June 2000 including adjustments for pre-GST impacts. See notes on page 2.

The seasonally adjusted estimate for the Food industry rose by $0.7 \%$ in October 2000, after a $0.6 \%$ decline in September. The largest increases were recorded in Queensland, Victoria and Tasmania.

The seasonally adjusted estimate for Department stores rose by $0.6 \%$ in October 2000. The largest increases were recorded in Victoria and Queensland, with the largest decreases in South Australia and Western Australia.

The Clothing industry fell by $8.4 \%$ in seasonally adjusted terms, after rises in the previous two months. All states except the two territories recorded falls. The largest fall was recorded in New South Wales after a large increase in September due to the Olympics.

The seasonally adjusted estimate for the Household good industry rose by $0.9 \%$ in October 2000. The largest increases were recorded in Queensland and New South Wales.

## MONTHLY SEASONALLY ADJUSTED AND TREND(a) ESTIMATES

(a) Trend calculated on data up to June 2000 including adjustments for pre-GST impacts. See notes on page 2.

For the second month in a row, a fall was recorded for the seasonally adjusted estimate for the Recreational good industry. Falls were recorded in Victoria, South Australia, Western Australia and the two territories.

The seasonally adjusted estimate rose by $3.8 \%$ in October 2000. This was the third consecutive monthly increase. South Australia was the only state to record an increase in each of these months. Victoria and Queensland recorded the largest increases in October.

Total retail (excluding Hospitality and services) rose by $0.2 \%$ in seasonally adjusted terms in October 2000. This was the third successive increase. Queensland and Victoria recorded the largest increases in October.

After five months of increases in the seasonally adjusted estimate for Hospitality and services, a fall of $1.8 \%$ was recorded in October 2000. Only New South Wales recorded a decrease, which offset a large increase recorded in September due to the Olympics.

## EXPLANATORY NOTES

| INTRODUCTION | 1 This publication presents monthly estimates of the value of turnover of retail businesses classified by industry, and by State. The principal objective of the Retail Trade survey is to show month to month movement of retail turnover. <br> 2 Estimates of turnover contained in this publication are based on a survey of about 6,600 retail and selected service businesses (covering 20,000 outlets). All 'large' businesses are included in the survey, while a sample of about 3,800 'smaller' businesses is selected. The 'large' business' contribution of approximately $56 \%$ of the total estimate ensures a highly reliable Australian total turnover estimate. |
| :---: | :---: |
| SCOPE AND COVERAGE | 3 The Retail Trade survey covers all employing businesses, with at least one retail establishment. The scope of the survey (classified according to the Australian and New Zealand Standard Industrial Classification [ANZSIC]) is detailed below: |
|  | -Food Retailing |
|  | Supermarkets and grocery stores (5110) and non-petrol sales of identified convenience stores of petrol stations |
|  | Takeaway food retailing (5125) |
|  | Other food retailing |
|  | Fresh meat, fish and poultry retailing (5121) |
|  | Fruit and vegetable retailing (5122) |
|  | Liquor retailing (5123) |
|  | Bread and cake retailing (5124) |
|  | Specialised food retailing n.e.c. (5129) |
|  | -Department Stores (5210) |
|  | -Clothing and Soft Good Retailing |
|  | Clothing retailing (5221) |
|  | Other clothing related retailing |
|  | Footwear retailing (5222) |
|  | Fabric and other soft good retailing (5223) |
|  | -Household Good Retailing |
|  | Furniture and floorcovering retailing |
|  | Furniture retailing (5231) |
|  | Floor covering retailing (5232) |
|  | Domestic hardware and houseware retailing (5233) |
|  | Domestic appliance retailing |
|  | Domestic appliance retailing (5234) |
|  | Recorded music retailing (5235) |
|  | -Recreational Good Retailing |
|  | Newspaper, book and stationery retailing (5243) |
|  | Other recreational good retailing |
|  | Sport and camping equipment retailing (5241) |
|  | Toy and game retailing (5242) |
|  | Photographic equipment retailing (5244) |
|  | - Other Retailing |
|  | Pharmaceutical, cosmetic and toiletry retailing (5251) |
|  | Other retailing |
|  | Antique and used good retailing (5252) |
|  | Garden supplies retailing (5253) |
|  | Flower retailing (5254) |
|  | Watch and jewellery retailing (5255) |
|  | Retailing n.e.c. (5259) |

## EXPLANATORY NOTES

SCOPE AND COVERAGE continued

- Hospitality and Services

Hotels and licensed clubs
Pubs, taverns and bars (5720)
Clubs (Hospitality) (5740)
Cafes and restaurants (5730)
Selected services
Video hire outlets (9511)
Hairdressing and beauty salons (9526).

4 The Retail Trade survey, like most ABS economic surveys, takes its frame from the ABS Business Register which is primarily based on registrations to the Australian Taxation Office's Group Employer scheme. The frame is updated quarterly to take account of new businesses, cessations, changes in employment levels, changes in industry and other general business changes. Cessations include businesses which have cancelled their Group Employer registration or have not remitted to the Australian Taxation Office for five quarters or more. The estimates include an allowance for the time it takes a newly registered business to get on to the suvey frame.

5 The use of Group Employer information to remove businesses from the Retail survey frame was introduced from the July 1999 reference month. Updating the frame to take account of changes in employment levels and industry was introduced from the April 2000 reference month. Both of these changes resulted in a shift in the level of the Retail series. However, in both cases historic data were revised to progressively phase in this shift of level. As a result of this process, month to month movements were not perceptibly affected.

6 Turnover includes retail sales; wholesale sales; takings from repairs, meals and hiring of goods (except for rent, leasing and hiring of land and buildings); and commissions from agency activity (e.g. commissions received from collecting dry cleaning, selling lottery tickets, etc.) and net takings from gaming machines etc. From July 2000, turnover includes GST.

7 Seasonally adjusted estimates are derived by estimating and removing systematic calendar related effects from the original series. In the Retail trade series, these calendar related effects are known as seasonal (eg increased spending in December as a result of Christmas) and trading day influences (arising from the varying length of each month and the varying number of Sundays, Mondays, Tuesdays, etc in each month). Each influence is estimated by separate seasonal and trading day factors which, when combined, are referred to as the combined adjustment factors.

8 The Retail series uses a concurrent seasonal adjustment methodology to derive the combined adjustment factors. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent seasonal adjustment replaced the forward factor methodology from the April 2000 reference month. For more information see the information paper Introduction of Concurrent Seasonal Adjustment into the Retail Trade Series (Cat. no.8514.0).

## EXPLANATORY NOTES

9 Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. The following table shows how the combined adjustment factor for these months, at the total Australian Retail, hospitality and services level, evolved under the concurrent seasonal adjustment methodology. The table presents two different estimates of the combined adjustment factors. The first row gives the combined adjustment factors estimated following the last annual reanalysis in July 2000 using data up to and including the June 2000 reference month. The second row gives the most recent combined adjustment factors estimated and used in this month's calculation of the concurrent seasonally adjusted series.

## COMBINED ADJUSTMENT FACTORS

$$
\text { Oct } 1999 \text { Sep } 2000 \text { Oct } 2000
$$

| Factors as estimated at last reanalysis <br> (June 2000 reference month) | 1.01354 | 0.97992 | 0.99816 |
| :--- | :--- | :--- | :--- |
| Factors as estimated with current month's data | 1.01524 | 0.98091 | 0.99974 | (October 2000 reference month)

10 The seasonal adjustment methodology, is able to produce combined adjustment factors for future months. The latest factors for some future months are shown in the following table. While these factors represent the best current estimate, the actual factors used for estimating the seasonally adjusted estimates in these months will differ because they will incorporate subsequent month's data as it becomes available.

## COMBINED ADJUSTMENT FACTORS

$$
\text { Nov } 2000 \text { Dec } 2000 \text { Jan } 2001
$$

$\begin{array}{llllll}\text { Factors as estimated with current month's data } & 1.03978 & 1.30491 & 0.98277\end{array}$ (October 2000 reference month)

11 The seasonal and trading day factors are reviewed annually at a more detailed level than possible in the monthly processing cycle. The annual reanalysis will not normally result in significant changes. For Retail Trade, the results of the latest review are shown in the July issue each year.

12 In the seasonal adjustment process, both the seasonal and trading day factors evolve over time to reflect changes in spending and trading patterns. Examples of this evolution include the slow move in spending from December to January; and, increased trading activity on weekends and public holidays. The seasonally adjusted estimates still reflect the sampling and non-sampling errors to which the original estimates are subject.

13 As a result of the different treatment of Australian and State totals in the seasonal adjustment process, the Australian total for an industry group may not necessarily equal the sum of the State totals for that industry group.

## EXPLANATORY NOTES

TREND ESTIMATES

CHAIN VOLUME MEASURES

RELIABILITY OF ESTIMATES

STANDARD ERRORS

14 Most monthly trend estimates in this publication have been obtained by smoothing the seasonally adjusted series using a centred 13 -term Henderson weighted moving average (7-term for quarterly series). However, to estimate the last six monthly trend values (or the last three quarters) a set of asymmetric moving averages is used that have been tailored to reduce a small bias associated with estimating these recent values when the trend growth is increasing or decreasing.

15 For further information, see A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on (02) 62526345.

16 The chain volume measures of retail turnover appearing in the quarterly issue of this publication are annually reweighted chain Laspeyres indexes referenced to current price values in a chosen reference year (currently 1998-1999). The reference year will be updated in the June quarter publication each year. Each year's data in the Retail chain volume series are based on the prices of the previous year, except for the quarters of the latest incomplete year (i.e. for the 2000-2001 financial year) which are based upon the 1998-1999 financial year.
Comparability with previous years is achieved by linking (or chaining) the series together to form a continuous time series.

17 There are two types of error possible in estimates of retail turnover:
Sampling error which occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all establishments in the survey is given by the standard error, see below.

Non sampling error which arises from inaccuracies in collecting, recording and processing the data. The most significant of these errors are: misreporting of data items; deficiencies in coverage; non-response; and processing errors. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures.

18 Seasonally adjusted and trend estimates and chain volume measures are also subject to sampling variability. For seasonally adjusted estimates, the standard errors are approximately the same as for the original estimates. For trend estimates, the standard errors are likely to be smaller. For chain volume measures, the standard errors may be up to $10 \%$ higher than those for the corresponding current price estimates because of the sampling variability contained in the prices data used to deflate the current price estimates.

19 Standard errors for the Australian estimates (original data) for October 2000 contained in this publication are:

| DATA SERIES | ESTIMATE | STANDARD ERROR |
| :--- | ---: | :---: |
| Level of retail turnover $(\$ \mathrm{~m})$ | 12734.0 | 118.4 |
| Change from September to October $(\$ \mathrm{~m})$ | 217.6 | 69.5 |
| \% change from September to Octoberr | 1.7 | 0.6 |

## EXPLANATORYNOTES

20 To assist users in assessing the reliability of estimates, each data series has been given a grading of A to D . Where:

- A represents a relative standard error on level of less than $2 \%$. The published estimates are highly reliable for movement analysis;
- B represents a relative standard error on level between 2 and $5 \%$, meaning the estimate is reliable for movement analysis purposes;
- C represents a relative standard error on level between 5 and $10 \%$, meaning users are advised to exercise some caution in interpreting movements for such series; and
- D represents a relative standard error on level greater than $10 \%$ (mainly affects unpublished state by industry series).

21 The table below provides an indicator of reliability for key retail turnover estimates.

|  | Food retailing | Department stores | $\begin{aligned} & \text { Clothing } \\ & \text { and } \\ & \text { soft good } \\ & \text { retailing } \end{aligned}$ | Household good retailing | Recreationa good retailing | Other retailing | Hospitality and services | Total |
