POINTS KEY

ACCOMMODATION TAKINGS

- In the December quarter 2010, the trend estimate of total accommodation takings for hotels, motels and serviced apartments with 15 or more rooms increased by 1.8% to \$2,080.3 million compared with the September quarter 2010.
- Over the same period, the seasonally adjusted estimate increased by 1.7% to \$2,078.3 million.

ROOM OCCUPANCY RATE

- The December quarter 2010 trend estimate room occupancy rate of 64.8% for hotels, motels and serviced apartments with 15 or more rooms was 0.4 percentage points higher than the previous quarter.
- Over the same period, the seasonally adjusted estimate decreased by 0.1 percentage points to 64.6%.

NOTES

FORTHCOMING ISSUES

ISSUE (Quarter) RELEASE DATE

March 2011 30 June 2011

June 2011 30 September 2011

IMPACT OF THE FLOODS

Flooding began in Queensland in late December 2010, and was more extensive across Queensland and other states in January 2011. The estimates for Queensland for all Tourism Regions have been impacted by lower than usual response rates for the December quarter 2010. These estimates should therefore be used with caution.

The recent flooding and cyclone events are expected to have a larger impact on tourist accommodation data nationally for the March quarter 2011.

ABOUT THIS ISSUE

This issue presents results from the December quarter 2010 Survey of Tourist Accommodation (STA) for the following categories of establishments:

- hotels and resorts with 15 or more rooms
- motels, private hotels and guest houses with 15 or more rooms
- serviced apartments with 15 or more units

SCOPE REDUCTION

The scope of the STA was reduced as of the September quarter 2010 to cover hotels, motels and serviced apartments with 15 or more rooms. This is consistent with the scope of the quarterly STA prior to the March quarter 2005.

The following categories of establishments which were included in the STA from March quarter 2005 to June quarter 2010 are now excluded:

- hotels, motels and serviced apartments with 5 to 14 rooms
- caravan parks with 40 or more powered sites
- holiday flats, units and houses of letting entities with 15 or more rooms or units
- visitor hostels with 25 or more bed spaces

For further information, refer to the Information paper: Future Changes to Tourist Accommodation, Australia, May 2010 (8635.0.55.003).

SUMMARY OF FINDINGS

ORIGINAL

Hotels, motels and serviced apartments

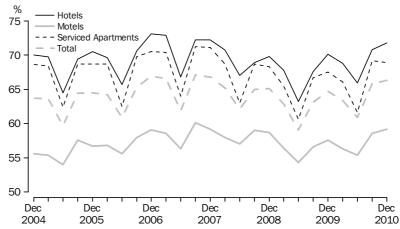

This summary contains key findings for original estimates. Original series are impacted by seasonal variations and irregular or non-seasonal influences. Comparison between quarters should be made with caution.

ROOM OCCUPANCY RATE

The room occupancy rate for hotels, motels and serviced apartments with 15 or more rooms was 66.3% in the December quarter 2010.

Traditionally, hotels have higher occupancy rates than serviced apartments or motels. Over the December 2010 quarter, hotels had an occupancy rate of 71.8% compared with 68.9% for serviced apartments and 59.2% for motels.

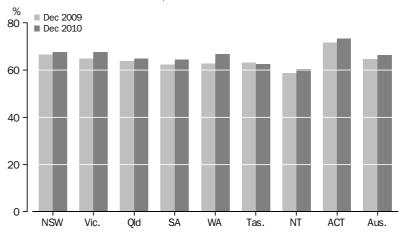

ROOM OCCUPANCY RATE, by type of establishment—Australia

Seven out of the eight states and territories experienced an increase in the occupancy rate of hotels, motels and serviced apartments with 15 or more rooms between the December quarter 2009 and the December quarter 2010. Western Australia (66.7%) experienced the largest increase (up 3.9 percentage points). Over the same period, occupancy in Tasmania (62.6%) decreased by 0.7 percentage points.

Australian Capital Territory recorded the highest occupancy rate (73.3%) in the December quarter 2010 followed by New South Wales (67.6%) and Victoria (67.6%). Over the same period, Northern Territory experienced the lowest occupancy rate (60.5%).

ROOM OCCUPANCY RATE, States and territories

Hotels, motels and serviced apartments continued

ROOM NIGHTS OCCUPIED

Room nights occupied were 13.7 million in the December quarter 2010 for hotels, motels and serviced apartments with 15 or more rooms.

New South Wales contributed the largest proportion (31.6%) of room nights occupied for hotels, motels and serviced apartments with 15 or more rooms, followed by Queensland (26.8%).

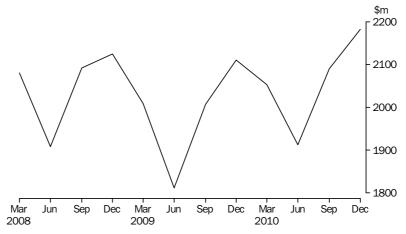

AVERAGE LENGTH OF STAY

The average length of stay over the December quarter 2010 for hotels, motels and serviced apartments with 15 or more rooms was 2.3 days. Queensland reported the longest average length of stay (2.7 days) followed by Western Australia (2.4 days) and Victoria (2.2 Days). Tasmania had the shortest average duration of stay (1.9 days).

ACCOMMODATION TAKINGS

In the December quarter 2010, accommodation takings were \$2182.3 million for hotels, motels and serviced apartments with 15 or more rooms.

TAKINGS FROM ACCOMMODATION, Hotels, motels and serviced apartments—Australia

Accommodation takings in the December quarter 2010 for hotels, motels and serviced apartments with 15 or more rooms were highest in New South Wales (\$713.6 million) and Queensland (\$562.1 million). Tasmania recorded the lowest takings for the period (\$54.3 million).

AVERAGE TAKINGS

For Australia, the December quarter 2010 average takings per room night occupied were \$158.82 for establishments with 15 or more rooms. This was 4.4% higher than the December quarter 2009.

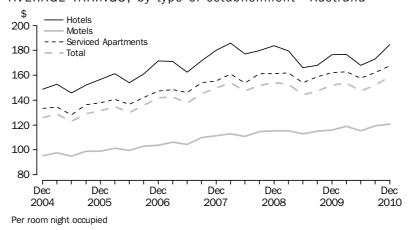

Motels have consistently lower average takings per room night occupied than hotels or serviced apartments, regularly reporting an average of \$60 less per room night occupied than hotels and an average of \$40 less than serviced apartments.

In the December quarter 2010, average takings per room night occupied in hotels were \$184.74 compared with \$167.70 for serviced apartments and \$120.89 for motels.

Hotels, motels and serviced apartments continued

AVERAGE TAKINGS continued

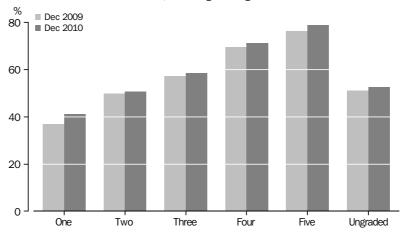

AVERAGE TAKINGS, by type of establishment—Australia

STAR GRADING

In the December quarter 2010, the room occupancy rate for five-star hotels, motels and serviced apartments with 15 or more rooms was 78.7% compared with 41.1% for one-star establishments. All grades of establishment had higher occupancy rates in the December quarter 2010 when compared with the December Quarter 2009. One-star establishments experienced the largest increase in occupancy rate (4.1 percentage points).

ROOM OCCUPANCY RATE, Star grading—Australia

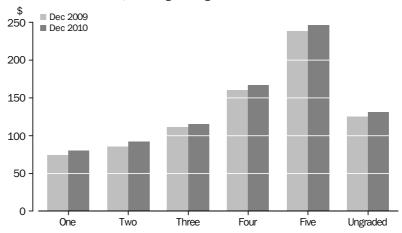

In the December quarter 2010, average takings per room night occupied were \$246.60 for five-star hotels, motels and serviced apartments with 15 or more rooms compared with \$80.40 for one-star establishments. All grades of establishment had higher takings in the December quarter 2010 than in the December quarter 2009. Five-star establishments experienced the largest increase in average takings per room night occupied with an increase of \$8.22 per room night occupied.

⁽a) Comprising establishments with 15 or more rooms or units. See Glossary for definitions of hotels, motels and serviced apartments.

EXPLANATORY NOTES

INTRODUCTION

SCOPE

- **1** This publication presents data from the quarterly Survey of Tourist Accommodation (STA). The STA completely enumerates all in-scope accommodation establishments within Australia.
- **2** Establishments within the scope of the survey provide predominantly short-term non-residential accommodation, i.e. accommodation which is not leased, and which is provided to guests who would generally stay for periods of less than two months. Some of these establishments also provide long-term residential accommodation. The amount of such activity is considered to be insignificant and is included in the data presented in this publication.
- **3** Establishments in scope of the STA are:
 - hotels and resorts with 15 or more rooms
 - motels, private hotels and guest houses with 15 or more rooms
 - serviced apartments with 15 or more units
- **4** From March quarter 2005 to June quarter 2010, the scope of the STA was expanded and comprised the following categories of establishments:
 - hotels and resorts with 5 or more rooms
 - motels, private hotels and guest houses with 5 or more rooms
 - serviced apartments with 5 or more units
 - caravan parks with 40 or more powered sites
 - holiday flats, units and houses of letting entities with 15 or more rooms or units
 - visitor hostels with 25 or more bed spaces.
- **5** The current scope of the STA is consistent with STA data from 1998 to 2004, with the exception of the four quarters of 2000 and 2003.
- **6** For the four quarters of 2000 and 2003, the scope of the STA was expanded to include:
 - caravan parks with 40 or more powered sites
- holiday flats, units and houses of letting entities with 15 or more rooms or units
- visitor hostels with 25 or more bed spaces.
- **7** The main source of coverage is from the Australian Automobile Association through AAA Tourism Pty Ltd. This is supplemented by notification of new tourism developments and their likely opening dates in selected guides, major tourism journals and periodicals and newspapers. Periodic comparison with lists of accommodation establishments provided by the various tourism organisations and industry associations is also undertaken.
- **8** From 1 July 2000, takings from accommodation include gross revenue from the provision of accommodation, including GST. Takings from meals are excluded. Where businesses are unable to provide the data inclusive of GST, the amount of GST payable is estimated and the data adjusted by the ABS prior to aggregation and release in output.
- **9** Star grade classifications of establishments are continuously revised by AAA Tourism Pty Ltd. This should be taken into account when making comparisons over time. Any queries regarding the star grading process should be directed to AAA Tourism Pty Ltd on (03) 8601 2200 or email <enquiries@aaatourism.com.au>.
- **10** Data by star grade for states and territories are included in Tourist Accommodation, Small Area Data (cat. no. 8635.0.55.002 for national data and cat. no. 8635.1.55.001 8635.8.55.001 for state/territory data).

EXPLANATORY NOTES continued

STATISTICAL GEOGRAPHY

- **11** Small area statistics for 2010 are classified to the Australian Standard Geographical Classification (ASGC), 2009 Edition (cat. no. 1216.0). Data are coded to the statistical local area (SLA) level. The full terms for each of the geographical abbreviations used can be found in the Abbreviations section of the Explanatory Notes of Australian Standard Geographical Classification (ASGC) 2009 Edition (cat. no. 1216.0).
- **12** These SIA data are aggregated to tourism regions as defined by relevant state and territory tourism organisations. Tourism regions are reviewed annually and are subject to boundary and name changes. Where changes have occurred, care should be taken when making comparisons with previously published data at this level.
- **13** Data by tourism regions and SLA are not presented in this publication but are available in Tourist Accommodation, Small Area Data (cat. no. 8635.0.55.002 for national data and cat. no. 8635.1.55.001 8635.8.55.001 for state/territory data).
- **14** Details of SIAs, the composition of tourism regions and maps of tourism regions are provided in the ABS publication Tourism Region Maps and Correspondence File (cat. no. 9503.0.55.001) available from the ABS web site <www.abs.gov.au>.
- **15** The survey does not have a sample component and the data are not subject to sampling variability. However, other inaccuracies collectively referred to as non-sampling error may affect the data. These non-sampling errors may arise from a number of sources, including:
 - errors in the reporting of data by providers
 - errors in the process of capturing data
 - imputation for missing data
 - definition and classification errors
 - incomplete coverage.
- **16** Every effort has been made to reduce non-sampling error to a minimum by careful design and testing of questionnaires, and efficient operating procedures and systems used to compile statistics.
- 17 The quality and reliability of survey data can be affected by the degree of response to a survey however it is rare to achieve a 100% response rate for any survey. The response rates for the Survey of Tourist Accommodation at state level for the most recent quarters are shown below. As can been seen, the recent flooding events have affected the response rates for Queensland for the December quarter 2010.

RESPONSE RATES - HOTELS, MOTELS AND SERVICED APARTMENTS

	Dec Qtr 2009	March Qtr 2010	June Qtr 2010	Sep Qtr 2010	Dec Qtr 2010
	%	%	%	%	%
NSW	91.9	93.4	93.9	92.7	91.6
Vic.	91.9	92.5	93.4	92.5	92.5
Qld	93.5	92.5	94.9	93.7	81.9
SA	95.5	93.5	96.6	95.4	93.2
WA	92.9	94.3	93.4	91.3	91.9
Tas.	92.9	92.2	94.2	91.7	94.2
NT	88.7	93.8	89.6	89.6	86.6
ACT	90.9	94.4	90.7	96.3	90.6
Aust.	92.6	93.0	94.1	92.9	89.2

Imputation rates

18 Missing data items are replaced by imputed values based on reported data. Average quarterly movements are applied to previously reported data for each non-responding unit to estimate values for missing data items. Only if previously reported data are not available, will data from a similar unit be used as a 'donor' for the missing data items.

DATA QUALITY

Response rates

Imputation rates continued

19 The imputation rates for Room nights occupied and Takings from accommodation for the most recent quarters at a national level are shown below:

IMPUTATION RATES, ROOM NIGHTS OCCUPIED

	Dec Qtr 2009	Mar Qtr 2010	Jun Qtr 2010	Sep Qtr 2010	Dec Qtr 2010
	%	%	%	%	%
Licensed hotels and resorts	3.1	6.8	6.7	3.9	4.1
Motels, private hotels and guest houses	7.3	5.1	4.6	6.6	9.0
Serviced apartments	4.9	5.1	5.1	4.2	6.8
Hotels, motels and serviced apartments	5.0	5.8	5.6	4.9	6.4

IMPUTATION RATES, TAKINGS FROM ACCOMMODATION

	Dec Qtr 2009	Mar Qtr 2010	Jun Qtr 2010	Sep Qtr 2010	Dec Qtr 2010
	%	%	%	%	%
Licensed hotels and resorts	2.5	6.8	6.5	3.2	3.7
Motels, private hotels and guest houses	7.0	4.9	4.4	6.4	8.3
Serviced apartments	4.9	5.2	5.3	4.3	5.8
Hotels, motels and serviced apartments	4.3	5.9	5.6	4.3	5.5

SEASONAL ADJUSTMENT

- **20** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the original time series so that the effect of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular quarter. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation, and cannot be assumed to indicate changes in the trend.
- 21 The seasonally adjusted estimates in this publication have been produced using a concurrent methodology whereby the seasonal factors are revised each quarter to take into account the seasonality exhibited by the latest observation. A more detailed review is conducted annually.
- **22** From the March quarter 2008, the Survey of Tourist Accommodation collection implemented Autoregressive Integrated Moving Average (ARIMA) modelling techniques for the majority of applicable time series. The revision properties of the seasonally adjusted and trend estimates can be improved by the use of ARIMA modelling. ARIMA modelling relies on the characteristics of the series being analysed to project future period data. The projected values are temporary, intermediate values, that are only used internally to improve the estimation of the seasonal factors. The projected data do not affect the original estimates and are discarded at the end of the seasonal adjustment process.
- **23** For more information on the details of ARIMA modelling see the feature article 'Use of ARIMA modelling to reduce revisions' in the October 2004 issue of Australian Economic Indicators (cat. no. 1350.0). Any queries regarding the ARIMA modelling should be directed to Time Series Analysis on (02) 6252 6345 or email <time.series.analysis@abs.gov.au>.

EXPLANATORY NOTES continued

TREND ESTIMATES

- 24 Smoothing the seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates the trend estimates. The trend estimates are derived by applying a 7-term Henderson moving average to the quarterly seasonally adjusted series. The Henderson moving average used in the middle of the time series is symmetric but, as the end of a time series is approached, asymmetric forms of the symmetric moving average are applied. Unlike the weights of the symmetric 7-term Henderson moving average, the asymmetric weights have been tailored to suit the particular characteristics of individual series.
- **25** While these techniques enable trend estimates for the latest period to be produced, the process does result in revisions to the trend estimates in recent quarters, particularly as additional original estimates become available. For further information refer to Information Paper: A Guide to Interpreting Time Series Monitoring Trends, 2003 (cat. no. 1349.0) available at the ABS web site <www.abs.gov.au>.

CONFIDENTIALISATION OF

- Quarter the Census and Statistics Act, when releasing statistics the ABS is required to do this in a manner that is "not likely" (in a legal sense) to enable the identification of a particular person or organisation. A number of techniques are used to do this, including suppression of information. To ensure provider confidentiality in the Survey of Tourist Accommodation, the ABS uses a computerised process known as Disclosure Avoidance Analysis System (DAAS) to confidentialise the entire tourist accommodation dataset each quarter. This process not only ensures that data are suppressed to ensure individual establishments cannot be identified, but also suppresses data in other (consequential) cells to ensure data cannot be derived through deduction from the information available.
- 27 The DAAS process begins by confidentialising at the Statistical Local Area (SLA) level, then across Tourism regions, then at the state level and finally the national level. If there is an SLA that has been made confidential then another SLA will have to be made confidential within that Tourism region to protect the confidentiality of the providers in the SLA that was originally made confidential. Depending on the number of SLAs in the Tourism region the whole Tourism region may need to be made confidential. As a consequence of this, at least one more Tourism region within a state or territory will also be confidentialised. This may also occur at the state/territory level.

USER AGGREGATION OF DATA

- **28** The aggregation of data by users across time periods should be undertaken with caution, due to the possibility of non-inclusion of confidentialised data (see the above section for more information about confidentialisation). Where one or more cells contributing to a total have been confidentialised (ie, contains the value of n.p.), the resulting aggregated total will be incorrect. However, some broader levels of data may not be affected by confidentialised cells.
- 29 Where data can be aggregated (ie, no confidentialised cells are included) for calendar and financial year/s purposes, the data items Establishments, Rooms, Persons employed and Bed spaces should not be aggregated. For these items it is recommended that for calendar years, the value of the December quarter is used, and for financial years, the value of the June quarter is used.
- **30** Any data items that have been derived from other items collected in the survey cannot be aggregated (ie, all those with labels ending in 'rate' or commencing with 'average'). These items must be re-derived based on the aggregation of each of the quarterly items collected in the survey used in the derivation of the rate or average (see Glossary for formulas).

EXPLANATORY NOTES continued

USER AGGREGATION OF DATA continued

31 Users are cautioned against deriving any non-standard aggregations (eg, aggregation of selected star gradings such as 4-star and 5-star; aggregation of selected geographical areas such as capital city areas and balance of state; aggregation of selected activities such as hotels and motels combined). This is because data are confidentialised based on the standard data item structure.

EFFECTS OF ROUNDING

- **32** Where figures have been rounded, discrepancies may occur between totals and the sum of the component items.
- **33** Estimates of movement shown in this publication are obtained by taking the difference of unrounded estimates. The movement is then rounded to one decimal place. Therefore where a discrepancy occurs between the reported movement and the difference of the rounded estimates, the reported movement will be more accurate.

RELATED PUBLICATIONS

- **34** Other ABS publications and products which may be of interest are outlined below. All publications released from 1998 onwards are available on the ABS web site www.abs.gov.au.

ABS DATA AVAILABLE ON REQUEST

36 As well as the statistics included in this publication, the ABS has other relevant data available on request. Inquiries should be made to the National Information and Referral Service on 1300 135 070.

GLOSSARY

Average length of stay Average number of days each guest stayed during the reference period. It is a derived

item calculated by dividing the number of guest nights occupied by the number of guest

arrivals with the result expressed as a number of days, $Average \ length \ of \ stay(days) = \frac{Guest \ nights \ occupied}{Guest \ arrivals}$

Average takings per room night

available for the

The takings from accommodation divided by the total number of room nights available

for the survey period,

Average takings per available room night(\$) = $\frac{Takings from \ accommodation}{Room \ nights \ available}$

Average takings per room night occupied

The takings from accommodation divided by the total number of room nights occupied for the survey period,

 $Average \ takings \ per \ room \ night \ occupied(\$) = \frac{Takings \ from \ accommodation}{Room \ nights \ occupied}$

Bed occupancy rate Bed occupancy expressed as a percentage of total capacity available during the survey

period,

Bed occupancy rate (%) = $\frac{Guest\ nights\ occupied}{Guest\ nights\ available} * 100$

Bed spaces Bed spaces normally in place and available to accommodate paying guests during the

survey period. Single beds, three-quarter beds and any beds designed to sleep one person are counted as one bed space. Double, queen and king size beds and any beds designed to sleep two people are counted as two bed spaces. Bunk beds have various configurations. If a bunk bed is designed to sleep two guests, it will count as two bed spaces. Any style of bed that is normally used as a bed is included. Fold away beds and sofas permanently made up as beds are included. Cots, divans and any other type of

temporary beds not normally used as beds are excluded.

Capacity Capacity is the measure of total accommodation stock available at an establishment to accommodate paying guests on the last day of the survey period. It may be given by various measures such as the maximum number of rooms, units, apartments or suites.

various measures such as the maximum number of rooms, units, apartments or suites.

Capacity closed temporarily for seasonal reasons is included.

Establishments Hotels and resorts, motels, private hotels, guest houses and serviced apartments within

the scope of the survey which operated for any part of the survey period, or which

closed temporarily for the quarter for seasonal reasons.

Facilities Establishments may provide a wide variety of facilities to their paying guests. For the

purposes of this survey, all establishments within the scope of the survey provide bath/shower and toilet facilities in most of their rooms. Serviced apartments also provide

fully self-contained cooking facilities in most rooms/units.

Guest arrivals Paying guests counted only on the first night of their stay at the accommodation

establishment during the survey period. Guest arrivals may also be known as 'check ins'. If the same individual returns for a second stay at the accommodation establishment during the same survey period, the first night of the second stay is regarded as a separate

guest arrival.

Guest nights available The total number of bed spaces multiplied by the number of days for which they were available to paying guests during the survey period. For establishments closing (other

than for seasonal reasons) or opening during this period, operating periods only are

included.

Guest nights occupied The total number of paying guests counted on each night they stayed at the

accommodation establishment during the survey period.

Hotels and resorts (Hotels) Establishments which operate a public bar and which provide accommodation on a

room/unit/apartment/suite basis rather than by the bed as is the practice of visitor hostels. Most guest rooms are equipped with a bath/shower and toilet but not full cooking facilities (i.e. hot plates and oven/microwave). Hotels and resorts may also

include establishments referred to as resort hotel and spa, luxury hotel, apartment hotel,

Hotels and resorts (Hotels)

continued

boutique hotel, hotel motel, and commercial hotel. This group of establishments is sometimes abbreviated to 'Hotels' in the text as well as in the table and graph titles in this publication.

Motels, private hotels and guest houses (Motels)

Establishments that do not operate a public bar but which provide accommodation on a room/unit/apartment/suite basis rather than by the bed as is the practice of visitor hostels. Most guest rooms are equipped with a bath/shower and toilet but do not have full cooking facilities (i.e. hot plates and oven/microwave). A motel would typically offer guests overnight accommodation and is targeted to the motorist with car parking provided. A private hotel is often a residential hotel that also offers short-term stays. A guest house is typically a personal residence with some accommodation available for paying guests. This group of establishments is sometimes abbreviated to 'Motels' in the text as well as in the table and graph titles in this publication.

Occupancy

Occupancy can refer to the total number of nights each room/unit/apartment/suite was occupied during the survey period or the total number of paying guests counted on each night they stayed at the accommodation establishment during the same period. Room occupancy rates and bed occupancy rates are calculated from room nights and guest nights.

Paying guest

Guests occupying rooms provided for short-term non-residential accommodation.

Persons employed

Persons working at each accommodation establishment during the last pay period ending within the survey period (including working proprietors and those working on other than accommodation activities). Non-salaried workers including volunteers, contractors, and self-employed persons are excluded.

Room nights available

The number of rooms/units available multiplied by the number of days for which they were available during the survey period. For establishments closing (other than for seasonal reasons) or opening during this period, operating periods only are included.

Room nights occupied

The nights each guest room/unit was occupied by a paying guest during the survey period.

Room occupancy rate

Room occupancy expressed as a percentage of total capacity available during the survey period,

Room occupancy rate (%) = $\frac{Room\ nights\ occupied}{Room\ nights\ available} * 100$

providing that, for establishments closing (other than for seasonal reasons) or opening during the survey period, the denominator of the above expression includes only operating periods.

Rooms

Rooms available for accommodating short-term paying guests at each hotel and resort, motel, guest house, and serviced apartment during the survey period. Units, apartments and suites are treated as rooms for these types of establishments.

Serviced apartments

Establishments with five or more units which mostly comprise self-contained units at the same location, and which are available on a unit/apartment basis to the general public for a minimum of one night. The units should have full cooking facilities (i.e. hot plates and oven/microwave), refrigerator and bath/shower and toilet facilities; all bed linen and towels should be provided, and daily servicing (i.e. cleaning and bed making) must be available through the on-site management, although this service may not necessarily be used.

Star grading

The grading of hotels and resorts, motels, private hotels and guest houses and serviced apartments is based on the classification system owned by AAA Tourism Pty Ltd. The gradings are allocated according to a points system based on the amenities and facilities available to guests. Details of the grading scheme are contained in the publication *Accommodation Guide* published by AAA Tourism Pty Ltd for each of the individual Australian Motoring Organisations. For the purpose of classifying establishments to a star

GLOSSARY continued

Star grading continued

grading in this publication, 'half' star gradings are ignored (e.g. a two and a half star grading has been shown as two star).

While coverage has significantly improved, some establishments (including some competing in the four and five star markets and having significant takings) still remain outside the star grading scheme. These establishments have been given a star grading of 'ungraded'.

Periodic additional investigations are made to validate the small proportion of establishments changing star grade between reference periods.

Takings from accommodation (Takings)

Revenue received from the provision of accommodation (excluding revenue received from the provision of meals and other foods and beverages). Since 1 July 2000, takings from accommodation include gross revenue from the provision of accommodation, including GST. In cases where takings from accommodation data cannot be provided inclusive of GST, the amount of GST payable is estimated and the data revised accordingly. Takings from accommodation for each month generally represent the takings received during that month. Where payments are received in advance of, or after the provision of accommodation to guests, the monthly figure for takings from accommodation may not necessarily bear a direct relationship to the number of guests accommodated during the month. Takings from accommodation is sometimes abbreviated as 'Takings' in the text as well as in the table and graph titles in this publication.
