## APRIL KEY POINTS

## TREND ESTIMATES

- The trend for private sector houses has increased $13.5 \%$ since the low point of October 1998. The growth in recent months, however, appears to be slowing.
- Following the revisions made to data covering December 1998 to March 1999 (see page 2) the trend for other dwellings is now showing a steady rise, with monthly gains of between $2.0 \%$ and $2.6 \%$ in the first four months of 1999 .
- The trend for total dwellings has improved by $16.5 \%$ since September 1998 , but the monthly rate of increase which has been as high as $2.8 \%$ has slowed to $1.6 \%$ in April.

## SEASONALLY ADJUSTED ESTIMATES

- The seasonally adjusted estimate for private sector houses has fallen by $12.8 \%$ in the last two months following a substantial increase of $21.8 \%$ in February.
- The seasonally adjusted estimate for total dwellings has displayed some volatility over the past 3 months which has resulted in the April estimate being 16.5\% above the January level.

## ORIGINALESTIMATES

- The number of dwellings approved in April was 3,416, down 221 on March. A lift in the number of other dwellings (from 842 in March to 1,159 in April) was not sufficient to offset the reduction in houses approved (from 2,795 to 2,257).
- The value of non-residential approvals was $\$ 183.9$ million which is the second lowest value recorded in the past 12 months. The number of jobs and values were lower in almost all categories of this building sector.

## NOTES

12 December 1999

There are no data notes in this issue.

Following the resolution of permit details, a number of multi-residential jobs have been allocated to their actual month of approval. The impact of these revisions to the data for December 1998 to March 1999 is to add 647 dwellings (or 5.2\%) to the previously reported numbers. The revisions, which have been to the "other dwellings" series, are:

December $1998+126$ dwellings, valued at $\$ 12.5$ million
January $1999+87$ dwellings, valued at $\$ 10.0$ million
February $1999+267$ dwellings, valued at $\$ 48.9$ million
March $1999+167$ dwellings, valued at $\$ 35.0$ million

Zia ABBASI
Regional Director, Victoria

## VALUEOFBUILDING APPROVED

VALUE OF TOTAL BUILDING

VALUE OF RESIDENTIAL BUILDING

VALUE OF NON-RESIDENTIAL BUILDING

The fall evident in the trend since September 1998 has levelled out. The April value of $\$ 703.8$ million is $9.2 \%$ below the peak of $\$ 775.3$ million in September 1998.

Apart from a three month period in mid 1998 the trend has been in a growth phase since early 1997. The April 1999 value was $16.9 \%$ above that of a year ago.

The trend has fallen by $42.4 \%$ since September 1998 but the rate of decline has moderated (from a high of $-14.4 \%$ in December to $-1.7 \%$ in April).

## VALUE OF BUILDING APPROVED

## CHAIN VOLUME MEASURES

MARCH QUARTER 1999

QUARTERLY VALUE OF BUILDING APPROVED (chain volume measures)

Changes in the original series of value of building approvals in the March Quarter 1999 in chain volume measures are summarised below.

## ORIGINAL

| Dec Qtr 1998 to | Mar Qtr 1998 to |
| :--- | :--- |
| Mar Qtr 1999 | Mar Qtr 1999 |

| New residential building <br> Alterations and additions to <br> residential buildings | 2.0 | 19.1 |
| :--- | ---: | ---: |
| Non-residential building | -8.4 | 7.6 |
| Total building | -9.2 | 15.4 |

The value of buildings approved in the March quarter 1999 fell by $\$ 212.7$ million (or $-9.7 \%$ ) to $\$ 1,989.2$ million. This was entirely due to the fall in non-residential building (down by $\$ 213.7$ million). The impact of the fall in alterations and additions to residential building was offset by the increase in new residential work.

## EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Readers should exercise care when interpreting trend estimates. The last six trend estimates, in particular, are likely to be revised when new seasonally adjusted estimates become available.

## TREND REVISIONS

Generally, the greater the volatility of the original series, the larger the size of the revisions to trend estimates. Analysis of the building approval original series has shown that they can be revised substantially. As a result, some months can elapse before turning points in the trend series are reliably identified.

The graphs and tables which follow present the effect of two possible scenarios on the previous trend estimates: that the May seasonally adjusted estimate is higher than the April estimate by $5 \%$ for the number of private sector houses approved and $8 \%$ for total dwelling units approved; and that the May seasonally adjusted estimate is lower than the April estimate by $5 \%$ for the number of private sector houses approved and $8 \%$ for total dwelling units approved. These percentages were chosen because they represent the average absolute monthly percentage change for these series over the last ten years.

(a) Includes conversions and dwelling units approved as part of
(b) Refer to Explanatory Notes paragraph 12. alterations and additions or the construction of non-residential building.

## EXPLANATORYNOTES

SCOPE

1 This publication presents monthly details of building work approved

2 Statistics of building work approved are compiled from:

- permits issued by licensed building surveyors;
- contracts let or day labour work authorised by Commonwealth, State, semi-government and local government authorities;
- major building activity in areas not subject to normal administrative approval e.g. building on remote mine sites;

3 The scope of the survey comprises the following activities:

- construction of new buildings
- alterations and additions to existing buildings
- approved non-structural renovation and refurbishment work
- approved installation of integral building fixtures.

From July 1990, the statistics include:

- all approved new residential building valued at $\$ 10,000$ or more
- approved alterations and additions to residential building valued at $\$ 10,000$ or more
- all approved non-residential building jobs valued at $\$ 50,000$ or more.

Excluded from the statistics is:

- construction activity not defined as building (e.g. construction of roads, bridges, railways, earthworks, etc.). Statistics for this activity can be found in Engineering Construction Activity, Australia (Cat. no. 8762.0).

4 Value data are derived by aggregation of the estimated value of building work when completed as reported on approval documents. Such value data excludes the value of land and landscaping but includes site preparation. These estimates are usually a reliable indicator of the completed value of 'houses'. However, for 'other residential buildings' and 'non-residential buildings', these estimates can differ significantly from the completed value of the building.

5 Building ownership is classified as either public or private sector and is based on the sector of intended owner of the completed building at the time of approval. Residential buildings constructed by private sector builders under government housing authority schemes are classified as public sector when the authority has contracted, or intends to contract, to purchase the building on or before completion.

6 Building approvals are classified both by the Type of Building (e.g. 'house', 'factory') and by the Type of Work involved (e.g. 'new', 'alterations and additions'). These classifications are often used in conjunction with each other to describe building approvals in this publication.

7 The Type of Building classification refers to the intended major function of a building. A building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the building, not to the function of the group as a whole.

BUILDING CLASSIFICATIONS continued

8 An example is the treatment of building work approved for a factory complex For instance, a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while the factory buildings would be classified to Factories.

9 An exception to this rule is the treatment of group accommodation buildings. For example, a student accommodation building on a university campus would be classified to Education.

10 In the case of a large multi-function building, i.e. a single large physical building which, at the time of approval is intended to have more than one purpose (e.g. a hotel/shops/casino project), the ABS endeavours to split the approval details according to each main function.

11 Where this is not possible because separate details cannot be obtained, the building is classified to the predominant function of the building on the basis of the function which represents the highest proportion of the total value of the project.

12 The Type of Work classification refers to the building activity carried out: New; Alterations and additions; or Conversion. See the Glossary for definitions of these terms. Prior to the April 1998 issue of this publication, Conversions were published as part of a category called 'Conversions, etc.'. From the April 1998 issue onwards, Conversion jobs are shown separately in tables 5 and 6 . However, in other tables they are included within existing categories, as follows: in tables 1, 2, 11 and 12 they are included in the appropriate Type of Building category, and in tables 3, 4,11 and 12 they are included in the 'Alterations and additions to residential buildings' category.

13 Seasonal adjustment is a means of removing the estimated effects of seasonal variation from the series so that the effects of other influences can be more clearly recognised

14 In the seasonal adjustment of series, account has been taken of both normal seasonal factors and 'trading day' effects arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month. Adjustment has also been made for the influence of Easter which may affect the March and April estimates differently.

15 Seasonal adjustment does not remove from the series the effect of irregular or non-seasonal influences (e.g. the approval of large projects or a change in the administrative arrangements of approving authorities).

16 Some of the component series have been seasonally adjusted independently. Therefore, the adjusted components may not add to the adjusted totals.

17 As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data. The timing of this review may vary and when appropriate will be notified in the 'Data Notes' section of this publication.

18 Smoothing seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates trend estimates. For monthly series, these trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the last six months. Trend series are created for the last six months by applying surrogates of the Henderson moving average to the seasonally adjusted series. For further information, see A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on (02) 62526345.

SYMBOLS AND OTHER USAGES

19 While the smoothing techniques described in paragraph 18 enable trend estimates to be produced for the latest few periods, they do result in revisions to the trend estimates as new data becomes available. Generally, revisions become smaller over time and, after three months, usually have a negligible impact on the series. Revisions to the original data and re-analysis of seasonal factors may also lead to revisions to the trend.

20 The chain volume measures appearing in this publication are annually re-weighted chain Laspeyres indexes referenced to current price values in a chosen reference year (currently 1996-1997). The reference year will be updated annually in the July publication. While current price estimates reflect both price and volume changes, chain volume estimates measure changes in value after the direct effects of price changes have been eliminated and therefore only reflect volume changes.

21 Further information on the nature and concepts of chain volume measures is contained in the ABS publication Information Paper: Introduction of Chain Volume Measures in the Australian National Accounts (Cat. no. 5248.0).

22 Area statistics are now being classified to the Australian Standard Geographical Classification, 1998 Edition (Cat. no. 1216.0), effective from 1 July 1998, and ASGC terminology has been adopted in the presentation of building statistics.

23 Some Statistical Districts straddle State/Territory boundaries (e.g. the Gold Coast-Tweed Statistical District lies partly in Queensland and partly in New South Wales).

24 The ABS can also make available certain building approvals data which are not published. Where the data cannot be provided by telephone, it can be provided via fax, photocopy, computer printout, floppy disk and email. A charge may be made for providing unpublished data in these forms.

25 Users may also wish to refer to the following publications:

Alterations and additions
Alterations and additions to
residential buildings

Building activity carried out on existing buildings. Includes adding to or diminishing floor area, altering the structural design of a building and affixing rigid components which are integral to the functioning of the building.

Alterations and additions carried out on existing residential buildings, which may result in the creation of new dwelling units. See also Explanatory Notes paragraph 12.

## Building

A building is a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design is the provision for regular access by persons in order to satisfy its intended use.

Conversion
Building activity which converts a non-residential building to a residential building, e.g. conversion of a warehouse to residential apartments. Conversion is considered to be a special type of alteration, and these jobs have been separately identified as such from the July 1996 reference month, though they have only appeared separately in this publication from the April 1998 issue. Prior to that issue, conversions were published as part of the 'Conversions, etc.' category or included elsewhere within a table. Prior to July 1996, Table 5 includes the number of Conversions in the 'Alterations and additions to residential buildings' category while Table 6 includes the value of Conversions in the 'Alterations and additions to residential buildings, creating dwellings' category. See also Explanatory Notes paragraph 12.

Dwelling unit A dwelling unit is a self-contained suite of rooms, including cooking and bathing facilities and intended for long-term residential use. Regardless of whether they are self-contained or not, units within buildings offering institutional care (e.g. hospitals) or temporary accommodation (e.g. motels, hostels and holiday apartments) are not defined as dwelling units. Such units are included in the appropriate category of non-residential building approvals. Dwelling units can be created in one of four ways: through new work to create a residential building; through alteration/addition work to an existing residential building; through either new or alteration/addition work on non-residential building or through conversion of a non-residential building to a residential building.

Educational Includes schools, colleges, kindergartens, libraries, museums and universities.

Entertainment and recreational

Factories
Flats, units or apartments

Health
Hotels, motels and other short term accommodation

House A house is a detached building primarily used for long term residential purposes. It consists of one dwelling unit. For instance, detached 'granny flats' and detached dwelling units (e.g. caretakers residences) associated with a non-residential building are defined as houses.
