## JUNE KEY POINTS

## TREND ESTIMATES

- The trend estimate for dwellings approved in Tasmania has steadily declined from February 2000 when it had reached a high point of 172 dwellings. The current level of 160 is $7.0 \%$ below that of February.

## ORIGINAL ESTIMATES

- The number of dwellings approved in original terms was at an historically strong level at the beginning of 2000, with 180 dwellings approved in each of December and January. This level was not sustained and in April had fallen to 136 dwellings. The number of approvals in May was exceptionally high (233) and influenced by several large residential projects. However, the number dropped substantially in June, when only 91 dwellings were approved in the State.
- For the three months ended June 2000, approvals were clearly concentrated within the Greater Hobart SD, with Hobart (82 dwellings), Clarence (53) and Kingborough (Pt A) (35) accounting for the majority of approvals.
- The value of total building work approved in the June quarter 2000 was $2.1 \%$ higher than the preceding quarter. Non-residential building was $11.2 \%$ higher than the previous quarter.
- For further information about these and related statistics, contact Andrea Woods on Adelaide 0882377350 or the National Information
Service on 1300135070.

## NOTES

## FORTHCOMING ISSUES

CHANGES IN THIS ISSUE

DATA NOTES

REVISIONS THIS ISSUE

ISSUE
September 2000
December 2000

## RELEASE DATE

8 November 2000
8 February 2001

There are no changes in this issue.

Users should exercise caution when analysing movements in the value series over the next few months as they may be affected in a number of ways, including:

- changing patterns in demand and price changes brought about by the "bringing forward" of building activity prior to 1 July 2000;
- the introduction of the Goods and Services Tax (GST) and the abolition of the Wholesale Sales Tax; and
- the uncertainty as to whether approval values reported prior to 1 July 2000 included or excluded the GST component.

ABS has been liaising with councils and other approving authorities to ensure that approval values are reported inclusive of the GST.

There have been a revision made to data previously released in the March issue of this publication, resulting in one more dwelling in March 2000.

Furthermore, there is a reduction of one dwelling for April and five dwellings for May in this issue compared with the data released in the May 2000 issue of Building Approvals, Australia (8731.0).

## Stevan R Matheson

Regional Director, Tasmania

## EXPLANATORYNOTES

1 This publication presents monthly details of building work approved.
2 Statistics of building work approved are compiled from:

- permits issued by local government authorities;
- permits issued by licensed building surveyors;
- contracts let or day labour work authorised by Commonwealth, State, semi-government and local government authorities;
- major building activity in areas not subject to normal administrative approval e.g. building on remote mine sites.

3 The scope of the survey comprises the following activities:

- construction of new buildings
- alterations and additions to existing buildings
- approved non-structural renovation and refurbishment work
- approved installation of integral building fixtures

From July 1990, the statistics include:

- all approved new residential building valued at $\$ 10,000$ or more
- approved alterations and additions to residential building valued at $\$ 10,000$ or more
- all approved non-residential building jobs valued at $\$ 50,000$ or more.

Excluded from the statistics is:

- construction activity not defined as building (e.g. construction of roads, bridges, railways, earthworks, etc.). Statistics for this activity can be found in Engineering Construction Activity, Australia (Cat. no. 8762.0).

4 Value data are derived by aggregation of the estimated value of building work when completed as reported on approval documents. Such value data excludes the value of land and landscaping but includes site preparation. These estimates are usually a reliable indicator of the completed value of 'houses'. However, for 'other residential buildings' and 'non-residential buildings', these estimates can differ significantly from the completed value of the building.

5 Building ownership is classified as either public or private sector and is based on the sector of intended owner of the completed building at the time of approval. Residential buildings constructed by private sector builders under government housing authority schemes are classified as public sector when the authority has contracted, or intends to contract, to purchase the building on or before completion.

6 Building approvals are classified both by the Type of Building (e.g. 'house', 'factory') and by the Type of Work involved (e.g. 'new', 'alterations and additions'). These classifications are often used in conjunction with each other to describe building approvals in this publication.
7 The Type of Building classification refers to the intended major function of a building. A building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the building, not to the function of the group as a whole.

## EXPLANATORYNOTES

BUILDING CLASSIFICATIONS continued

8 An example is the treatment of building work approved for a factory complex. For instance, a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while the factory buildings would be classified to Factories

9 An exception to this rule is the treatment of group accommodation buildings. For example, a student accommodation building on a university campus would be classified to Education.

10 In the case of a large multi-function building, i.e. a single large physical building which, at the time of approval is intended to have more than one purpose (e.g. a hotel/shops/casino project), the ABS endeavours to split the approval details according to each main function.

11 Where this is not possible because separate details cannot be obtained, the building is classified to the predominant function of the building on the basis of the function which represents the highest proportion of the total value of the project.

12 The Type of Work classification refers to the building activity carried out: New; Alterations and additions; or Conversion. See the Glossary for definitions of these terms. Prior to the April 1998 issue of this publication, Conversions were published as part of a category called 'Conversions, etc.'. From the April 1998 issue onwards, Conversion jobs are shown separately in tables 1 and 2 . However, in other tables they are included within existing categories, as follows: in table 7 it is included in the appropriate Type of Building and 'Alterations and additions to residential buildings' categories.

13 Seasonal adjustment is a means of removing the estimated effects of seasonal variation from the series so that the effects of other influences can be more clearly recognised

14 In the seasonal adjustment of series, account has been taken of both normal seasonal factors and 'trading day' effects arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month. Adjustment has also been made for the influence of Easter which may affect the March and April estimates differently.

15 Seasonal adjustment does not remove from the series the effect of irregular or non-seasonal influences (e.g. the approval of large projects or a change in the administrative arrangements of approving authorities)

16 Some of the component series have been seasonally adjusted independently. Therefore, the adjusted components may not add to the adjusted totals.

17 As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data. The timing of this review may vary and when appropriate will be notified in the 'Data Notes' section of this publication.

## EXPLANATORYNOTES

| TREND ESTIMATES | 18 Smoothing seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates trend estimates. For monthly series, these trend estimates are derived by applying a 13 -term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the last six months. Trend series are created for the last six months by applying surrogates of the Henderson moving average to the seasonally adjusted series. For further information, see A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on (02) 62526076. <br> 19 While the smoothing techniques described in paragraph 18 enable trend estimates to be produced for the latest few periods, they do result in revisions to the trend estimates as new data becomes available. Generally, revisions become smaller over time and, after three months, usually have a negligible impact on the series. Revisions to the original data and re-analysis of seasonal factors may also lead to revisions to the trend. |
| :---: | :---: |
| CHAIN VOLUME MEASURES | 20 The chain volume measures appearing in this publication are annually re-weighted chain Laspeyres indexes referenced to current price values in a chosen reference year (currently 1997-98). The reference year will updated annually in the July publication. While current price estimates reflect both price and volume changes, chain volume estimates measure changes in value after the direct effects of price changes have been eliminated and therefore only reflect volume changes. <br> 21 Further information on the nature and concepts of chain volume measures is contained in the ABS publication Information Paper: Introduction of Chain Volume Measures in the Australian National Accounts (Cat. no. 5248.0). |
| AUSTRALIAN STANDARD GEOGRAPHICAL CLASSIFICATION (ASGC) | 22 Area statistics are now being classified to the Australian Standard Geographical Classification, 1999 Edition (Cat. no. 1216.0), effective from 1 July 1999, and ASGC terminology has been adopted in the presentation of building statistics. <br> 23 Some Statistical Districts straddle State/Territory boundaries (e.g. the Gold Coast-Tweed Statistical District lies partly in Queensland and partly in New South Wales). |
| UNPUBLISHED DATA | 24 The ABS can also make available certain building approvals data which are not published. Where the data cannot be provided by telephone, it can be provided via fax, photocopy, computer printout, floppy disk and email. A charge may be made for providing unpublished data in these forms. |
| RELATED PUBLICATIONS | 25 Users may also wish to refer to the following publications: <br> - Building Activity, Building Work Done, Australia (Cat. no. 8755.0) <br> - Building Activity, Australia (Cat. no. 8752.0) <br> - Building Activity, Australia: Dwelling Unit Commencements (Cat. no. 8750.0) <br> - Building Activity, Tasmania (Cat. no. 8752.6) <br> - Building Approvals, Australia (Cat. no. 8731.0) <br> - Engineering Construction Activity, Australia (Cat. no. 8762.0) <br> - House Price Indexes: Eight Capital Cities (Cat. no. 6416.0). <br> - Housing Finance for Owner Occupation, Australia (Cat. no. 5609.0) <br> - Price Index of Materials Used in House Building (Cat. no. 6408.0) <br> - Price Index of Materials Used in Building Other than House Building (Cat. no. 6407.0). |

House A house is a detached building primarily used for long term residential purposes. It consists of one dwelling unit. For instance, detached 'granny flats' and detached dwelling units (e.g. caretakers residences) associated with a non-residential building are defined as houses.

| Miscellaneous | Includes justice and defence buildings, welfare and charitable homes, prisons and <br> reformatories, maintenance camps, farming and livestock buildings, veterinary <br> clinics, child-minding centres, police stations and public toilets. |
| :--- | :--- |
| New building work | Building activity which will result in the creation of a building which previously <br> did not exist. |
| New other residential |  |
| buildings | Building activity which will result in the creation of a residential building other <br> than a house, which previously did not exist. |
| New residential | Building activity which will result in the creation of any residential building <br> (house or other residential) which previously did not exist. |
| Non-residential building | A non-residential building is primarily intended for purposes other than long <br> term residential purposes. Note that, on occasions, one or more dwelling units <br> may be created through non-residential building activity. Prior to the April 1998 |
| issue of this publication, they have been included in the 'Conversions, etc.' |  |
| column in tables showing dwelling units approved. They are now identified |  |
| separately (e.g. see table 1). However, the value of these dwelling units cannot be |  |
| separated out from that of the non-residential building which they are part of, |  |

FOR MORE INFORMATION...
