#### Abstract

Note: Care should be taken in the interpretation of month-to-month movements in the original and seasonally adjusted data. See paragraphs 13 to 17 of the Explanatory Notes.

## MAIN FEATURES

The January 1990 seasonally adjusted estimate of employed persons was $7,870,800$, an increase of 25,200 since December 1989. A decrease of 12,500 in full-time employment was offset by a rise of 37,600 in part-time employment. Male employment rose slightly, by 7,600 to $4,628,700$. Female employment rose by 17,500 to $3,242,000$. The underlying trend in employment is still one of growth, although the rate

LNEMPLOYMENT RATE: TREND SERIES

| Indicates break in series - see paragraph 6 of the Explanatory Notes.
of growth in employment continues to fall, as it has since June 1989. The fall in the rate of growth has been greater for full-time employment than for part-time employment.

Trend estimates for males aged 15-19 employed full time have continued to decline since July 1989, following continuous growth since January 1988. For females aged 15-19 employed full time, trend estimates have been reasonably steady since January 1989 (see graphs on page 2). The graphs show that for both males and females aged 20 and over, full-time employment continues to grow, but at a slower rate over recent months.

The seasonally adjusted estimate of unemployed persons for January 1990 was 524,100 , an increase of 27,600 over the December 1989 estimate. The main component of this increase was a rise of 10,100 in the number of females looking for full-time work. The number of males aged 15-19 looking for their first full-time job increased by 4,500 .

Trend estimates of unemployed males looking for full-time work, for those aged 15-19 and those aged 20 and over, both show growth since mid 1989. Trend estimates of unemployed females aged 15-19 looking for full-time work continue to decline, while for females aged 20 and over the estimated number has been generally increasing since May 1989.

The January 1990 seasonally adjusted estimate of the unemployment rate was $6.2 \%$, an increase of 0.2 percentage points since December 1989. The seasonally adjusted rates for males and females both increased, to $5.8 \%$ and $6.9 \%$ respectively.

The January 1990 seasonally adjusted estimates of the unemployment rate for the States were: Victoria $4.6 \%$, New South Wales 6.3\%, Queensland 6.9\%, South Australia 6.9\%, Western Australia 7.5\%, and Tasmania 9.0\%.

The seasonally adjusted estimate of the participation rate for January 1990 was $63.8 \%$, a rise of 0.3 percentage points since December 1989, and the highest level recorded by the survey. Similarly, the January 1990 participation rate for females of $52.2 \%$ was a record high for the survey.

## PERSONS EMPLOYED FULL TIME: TREND SERIES

The graphs on this page have been drawn to a semi-logarithmic scale to enable comparisons to be made of rates of change - See paragraph 18 of the Explanatory Notes.

## GLOSSARY

Attending school: Persons aged 15 to 19 who, during the reference week, were enrolled full time at secondary or high schools.
Attending tertiary educational institution full time: Persons aged 15 to 24 who, during the reference week, were enrolled full time at universities, colleges of advanced education, technical colleges, colleges of technical and further education and theological colleges.

Employed: Persons aged 15 and over who, during the reference week:
(a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and self-employed persons); or
(b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
(c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
(d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

Full-time workers: Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Labour force: For any group, persons who were employed or unemployed, as defined.
Labour force status: A classification of the civilian population aged 15 and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Not in the labour force: Persons who were not in the categories employed or unemployed as defined.

Participation rate: For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.

Part-time workers: Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

Seasonally adjusted series: A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraphs 13 and 14 of the Explanatory Notes for more detail.

Trend series: A smoothed seasonally adjusted series of estimates. See paragraphs 15 to 17 of the Explanatory Notes for more detail.

Unemployed: Persons aged 15 and over who were not employed during the reference week, and:
(a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
(i) were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
(ii) were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
(b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

Unemployed looking for first full-time job: Unemployed persons looking for full-time work (as defined) who had never worked full time for two weeks or more.

Unemployed looking for full-time work: Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

Unemployed looking for part-time work: Unemployed persons who had actively looked for part-time work only, or were to resume a part-time job, from which they had been stood down.

Unemployment rate: For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

## EXPLANATORY NOTES

## Introduction

This publication contains preliminary estimates of the civilian labour force derived from the labour force survey part of the monthly population survey. Estimates for the current month are preliminary and subject to revision. Revised estimates for the current month and more detailed estimates will be published in The Labour Force, Australia (6203.0).

## The population survey

2. The population survey is based on a multi-stage area sample of private dwellings (about 31,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about three-fifths of one per cent of the population of Australia. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6 th and 12 th of each month. To avoid a clash with the Christmas period, the December 1989 survey interviews commenced on Monday 4th December 1989. The information obtained relates to the week before the interview (i.e. the reference week).

## Scope

3. The labour force survey includes all persons aged 15 and over except: members of the permanent defence forces; certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations; overseas residents in Australia; and members of non-Australian defence forces (and their dependents) stationed in Australia.

## Coverage

4. In the labour force survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are, necessarily, a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the survey is considered to be negligible.

## Population benchmarks

5. New benchmarks based on the results of the 1986 Census of Population and Housing were introduced in the February 1989 issue of this publication. Labour force estimates were revised for the period January 1984 to January 1989. All estimates produced after January 1989 are based on the new benchmarks.

## Revision of series

6. From April 1986, the definition of employed persons was changed to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. unpaid family helpers). For further information, see paragraphs 36 and 37 of the Explanatory

Notes to the February 1987 issue of The Labour Force, Australia (6203.0).

## Survey sample redesign

7. The LFS sample was redesigned and reselected using information collected in the 1986 Census of Population and Housing. The new sample was phased in over the period September 1987 to December 1987. For details, see Information Paper - Labour Force Survey - Sample Design (6269.0).

## Reliability of the estimates

8. Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The sampling error is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors.
9. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown in the tables. Standard errors of other estimates and other movements may be determined by using information in the Technical Note in The Labour Force, Australia (6203.0).
10. The smaller the estimate the higher is the relative standard error. Very small estimates are subject to high standard errors (relative to the size of the estimate) which detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (eg. * 3.4) to indicate they are subject to high standard errors and should be used with caution.
11. Examples of the calculation and use of standard errors are given below:
(a) An estimate of 300,000 unemployed males looking for full-time work has a standard error of about 6,900 . Therefore there are about two chances in three that the number that would have been produced if all dwellings had been included in the survey will be within the range 293,100 to 306,900 and about nineteen chances in twenty that the number will be within the range 286,200 to 313,800 .
(b) On an estimate of movement of $+28,300$ in the number of unemployed males looking for full-time
work from one month to the next (with the highest of the two monthly level estimates being 300,000 ) the standard error is about 5,300 . Therefore, there are about two chances in three that if all dwellings had been included in the surveys the movement would have been within the range $+23,000$ to $+33,600$, and about nineteen chances in twenty that it would have been within the range $+17,700$ to +38,900.
12. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding of data, and errors made in processing the data. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

## Seasonal adjustment and trend estimation

13. Seasonally adjusted series are published in Tables 2, 5 and 10. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile can still make it difficult to interpret the movement of the series even after adjustment for seasonal variation.
14. It is possible that the seasonality of employment, unemployment and labour force participation has been affected by the changed pattern of school holidays in some States. The impact of these changes on seasonally adjusted estimates of labour force characteristics cannot be assessed at this stage. Trend estimates are expected to be relatively unaffected by these changes.
15. Smoothing seasonally adjusted series produces a measure of trend by reducing the impact of the irregular component of the series. The trend estimates have been derived by applying a 13 -term Henderson-weighted moving average to the series. Trend series are used to analyse the underlying behaviour of the series over time. These are published in Tables 3, 6 and 11.
16. While this smoothing technique enables estimates to be produced for the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.
17. Users may wish to refer to the ABS Information Papers A Guide to Smoothing Time Series - Estimates of 'Trend' (1316.0), and Time Series Decomposition - an

Overview (1317.0) for more detailed information on smoothing of seasonally adjusted time series data.

## Semi-logarithmic graphs

18. Graphs on pages 2 and 3 have been drawn using a logarithmic vertical scale to facilitate comparisons of rates of growth in series of differing magnitude. Equal distances on the vertical scale (over equal time periods) indicate equal rates of growth for graphs on the same page.

## Related publications

19. Users may also wish to refer to The Labour Force, Australia (6203.0). This publication contains a detailed list of related publications which are available on request.
20. Current publications produced by the ABS are listed in the Catalogue of Publications, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

## Unpublished statistics

21. As well as the statistics included in this and related publications, the $A B S$ may have other relevant unpublished data available. Inquiries should be made to Don Clark on Canberra (062) 526525 or any ABS State Office.

## Symbols and other usages

* subject to sampling variability too high for most practical uses. See the Technical Note in 6203.0 for more details.

22. Estimates have been rounded and discrepancies may occur between sums of the component items and totals.

## Electronic services

VIATEL Key *656\# for selected current economic, social and demographic statistics.

AUSSTATS. Thousands of up-to-date time series are available on this ABS on-line service through PAXUS COMNET.

For further information phone the AUSSTATS Help Desk on (062) 526017.

TELESTATS. This service provides:

- foreign trade statistics tailored to users' requirements. Further information is available on (062) 525404.
- text and tables for selected Main Economic Indicator publications. Further information is available on (062) 525405.

## Floppy disk service

Selected ABS statistics are available on floppy disk. For further information phone (062) 526684.

## Forthcoming issues

23. The following table shows the dates on which The Labour Force, Australia, Preliminary, (6202.0) publication is scheduled to be released.

| Issue |  | Release Date |  |
| ---: | :--- | ---: | :--- |
| 1990 | January | 8th | February 1990 |
|  | February | 15th | March 1990 |
|  | March | 12th | April 1990 |
|  | April | 10th | May 1990 |
|  | May | 7th | June 1990 |
|  | June | 12th | July 1990 |
|  | July | 9th | August 1990 |

## * RECENT LABOUR FORCE PUBLICATIONS *

## $\boldsymbol{P}_{\text {Ersons not in the labour force }}$

A supplementary survey to the September 1989 Labour Force Survey. As patterns of employment and unemployment within the population have varied considerably in recent years, information is required about 'persons not in the labour force'.

Results of the survey, classified by age, gender, and other labour force characteristics are now available in:

- Persons not in the Labour Force, Australia, September 1989 (6220.0), \$11.50. Contact an ABS Bookshop in your State.

## $F_{\text {AMILIES }}$

The June 1989 Labour Force Survey shows that the proportion of one-parent families in Australia is about 8 per cent. Other important information produced about the Australian population includes the labour force status of family members, the age and number of dependents present and the age of the youngest dependent present.

Results of the survey, classified by age, sex, birthplace and other characteristics, are now available in:

- Labour Force Status and Other Characteristics of Families, Australia, June 1989 (6224.0), \$11.50. Contact an ABS Bookshop in your State.
