ADDITIONAL DATA ON REQUEST	The ABS offers a range of unpublished data from this survey upon request. An order form can be found on page 21.
INQUIRIES	 for further information about statistics in this publication and the availability of related unpublished statistics, contact Ms Jo Jackson on Canberra (06) 252 6661 or Labour Force Inquiries in your ABS State office. (See last page for contact numbers). for information about other ABS statistics and services please refer to the last page of this publication.

SUMMARY OF FINDINGS

DIAGRAM 1. EMPLOYED PERSONS: RELATIONSHIP OF UNDEREMPLOYED WORKERS TO FULLY EMPLOYED WORKERS, MAY 1991

Overview

The focus of this survey is underemployed workers in May 1991, that is, employed persons who did not work as many hours as they would have liked. The survey provides information on the characteristics of these underemployed workers, including information about the jobs in which they are employed and their employment preferences. The data enable some comparisons between the underemployed and the fully employed. The potential hours of work that are lost due to underemployment is also measured.

In May 1991, there were 7,738,900 employed persons aged 15 and over. Of these, 7,281,600 (94%) were fully employed and 457,400 (6%) were underemployed.

Underutilisation of the labour force - Table 2

Some 1,269,600 persons (out of a labour force numbering 8,551,100 at May 1991) were found to be underutilised - comprising 457,400 underemployed persons and 812,200 unemployed persons. This represents an underutilisation

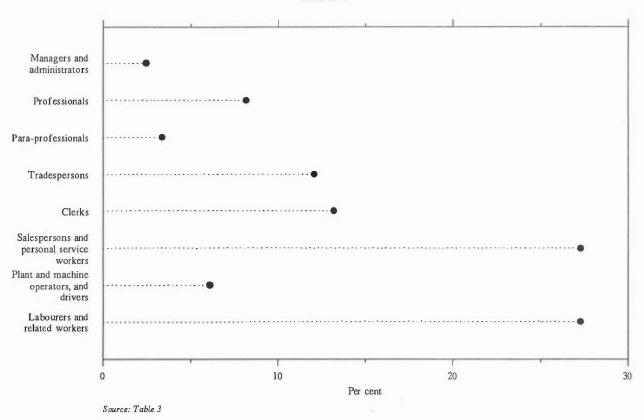

rate of 15 per cent. This is an increase on the May 1988 result (the last time this survey was conducted) when the underutilisation rate was 11 per cent and both the unemployment and underemployment rates were 2 percentage points lower than the 1991 estimates.

Underemployed workers - Table 2, Table 3 and Diagram 2

The estimate of 457,400 underemployed workers at May 1991 represents a 57 per cent increase in underemployment over May 1988. Of these underemployed persons, 85 per cent were part-time workers. The remaining 15 per cent were full-time workers who did not work full-time hours due to economic reasons (short time, insufficient work and stood down for reasons other than bad weather/breakdown).

Female underemployed workers accounted for 59 per cent of the total underemployed. (Females accounted for 42 per cent of the labour force at May 1991). Of the 267,700 underemployed female workers, 96 per cent worked part-

DIAGRAM 2. UNDEREMPLOYED WORKERS: OCCUPATION, MAY 1991

time. Of the 189,700 underemployed male workers, 71 per cent worked part-time.

With regard to all underemployed workers:

- 77 per cent were wage and salary earners.
- 63 per cent had been underemployed for 13 weeks or longer.
- 27 per cent were Salespersons and personal service workers, as were Labourers and related workers.
- 25 per cent (115,700) came from the Wholesale and retail trade industry, with a further 87,000 from Community services and 79,300 from Recreation, personal and other services.

Underemployed part-time workers - Table 5

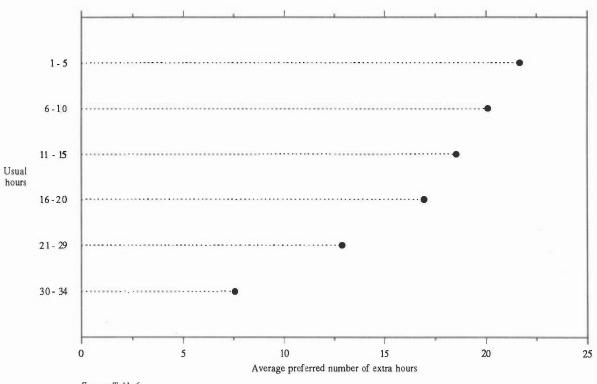

There were 390,400 underemployed part-time workers in May 1991, an increase of 61 per cent in part-time underemployment over May 1988. In that period, total part-time employment increased by 21 per cent.

Some 37 per cent of underemployed part-time workers would have preferred to work 10 to 19 hours more per week, whereas 14 per cent would have preferred to work an extra 30 or more hours per week.

An estimated 130,800 underemployed part-time workers reported that they would prefer to change employer to work more hours rather than work more hours for their current employer. A further 184,700 preferred to work more hours for their current employer. Just under half (48%) of all underemployed part-time workers indicated they would prefer to change occupation to work more hours rather than work more hours in their existing occupation.

The duration of underemployment for part-time workers increased between survey periods. In May 1988, 61 per cent of underemployed part-time workers had been underemployed for 13 weeks or more. In May 1991, this proportion had risen to 68 per cent.

DIAGRAM 3. UNDEREMPLOYED PART-TIME WORKERS WHO HAD BEEN LOOKING FOR WORK WITH MORE HOURS OR WERE AVAILABLE TO START SUCH WORK WITHIN FOUR WEEKS: USUAL NUMBER OF HOURS WORKED AND AVERAGE PREFERRED NUMBER OF EXTRA HOURS, MAY 1991

Source: Table 6

Underemployed part-time workers who had been looking for work with more hours or were available to start such work within four weeks - Table 6 and Diagram 3

Some 91 per cent of all underemployed part-time workers had been looking for work with more hours or were available to start such work within four weeks.

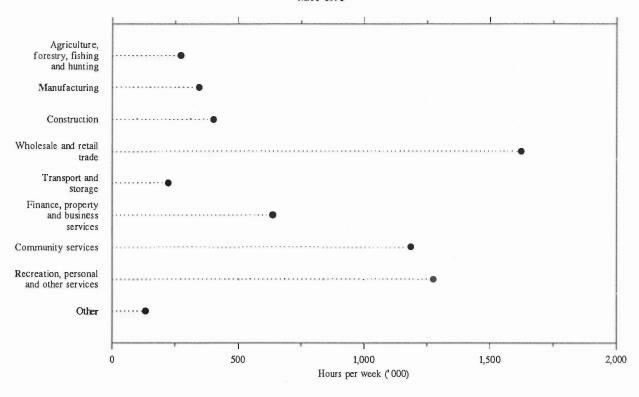

Of this group of 353,700 persons:

- 23 per cent reported they would move interstate if offered a suitable job compared to 31 per cent in May 1988.
- 20 per cent reported their main difficulty in finding work was that there were 'no vacancies at all'.

- 16 per cent stated that there were 'no vacancies in their line of work'.
- 30 per cent reported that they were registered with the CES.

Of the 219,400 persons who had been looking for work with more hours, 48 per cent said that they were registered with the CES.

DIAGRAM 4. UNDEREMPLOYED PART-TIME WORKERS WHO HAD BEEN LOOKING FOR WORK WITH MORE HOURS OR WERE AVAILABLE TO START SUCH WORK WITHIN FOUR WEEKS: QUANTUM OF UNDEREMPLOYMENT AND INDUSTRY, MAY 1991

Source: Table 7

Quantum of underemployment - Table 7 and Diagram 4

The total quantum of underemployment for those underemployed part-time workers who had been looking for work with more hours or were available to start work within four weeks was 6,111,700 hours per week.

In total, underemployed workers in the Wholesale and retail trade industry preferred to work an extra 1,624,500 hours per week, and for the Recreation, personal and other services and Community Services industries, the estimates were 1,277,100 and 1,184,800 hours per week.

Occupations with the highest estimated amounts of underemployment were Labourers and related workers with 1,874,300 hours per week and Salespersons and personal service workers, with 1,860,000 hours per week.

EXPLANATORY NOTES

Introduction

The monthly population survey (which is described in *The Labour Force, Australia* (6203.0)) comprises the monthly labour force survey and supplementary topics. This publication contains some results of a supplementary survey run in association with the May 1991 labour force survey conducted throughout Australia.

2. Of the respondents to the labour force survey, those who fell within the scope of the supplementary survey were asked additional questions. They were asked about their type and duration of current period of underemployment; educational attainment; main difficulty in finding work during current period of underemployment and preferred number of extra hours.

Scope

3. The scope of this supplementary survey was confined to underemployed persons who were in scope for the labour force survey (which is described in full in *The Labour Force, Australia* (6203.0)).

Coverage

4. In the population survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. See *The Labour Force*, *Australia* (6203.0) for more details.

Definitions

- 5. Definitions of labour force and demographic classifications appearing in this publication are given in *The Labour Force*, *Australia* (6203.0).
- 6. Unless otherwise stated, all characteristics referenced in this publication relate to the week before the interview (ie. the reference week).

Results of the survey

- 7. Estimates of underemployed workers may be compiled from data published in *The Labour Force*, *Australia* (6203.0). However, more detailed information is contained in this publication.
- 8. Due to differences in the method of estimation used in this supplementary survey and that used in the Labour Force Survey, there are some small variations between estimates in this publication and those in the corresponding issue of *The Labour Force*, *Australia* (6203.0).
- 9. The estimates in this publication refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.
- 10. Results of similar surveys, conducted in May 1985 and May 1988, were given in previous issues of this publication.
- 11. It is proposed that this survey will be conducted next in May 1994.

ILO Guidelines

12. The resolution of the International Labour Organisation (ILO) Thirteenth International Conference in October 1982 defined underemployment as follows:

'Underemployment exists when a person's employment is inadequate in relation to specified norms or alternative employment, account being taken of his or her occupational skill'.

- 13. The Conference Resolution further distinguished two principal forms of underemployment, visible and invisible:
- (a) visible underemployment reflects an insufficiency in the volume of employment (ie. the hours worked); and
- (b) invisible underemployment exists when the labour supplied to the labour market is not being efficiently utilised in terms of either the type of work offered to the individual (disguised underemployment) or how the individual's working time is used (potential underemployment).
- 14. Due to the serious conceptual difficulties that would be encountered in seeking measures of invisible underemployment, the ILO recommended that statistical measurement be limited to visible underemployment. This is the approach adopted in this supplementary survey.

ABS Usage

- 15. The term underemployment has been used by the ABS for many years to cover persons working part-time who prefer to work more hours, plus full-time workers who did not work full-time hours in the reference week for economic reasons.
- 16. The measure of underemployment used by the ABS is broader than the ILO resolution which requires that part-time workers who are underemployed should not only have stated a preference to work more hours but should also have indicated that they were seeking or were available for additional work during the reference week.
- 17. Data collected in this supplementary survey allow more restrictive measures of underemployment, taking into account job search and availability criteria, to be compiled.

Unpublished statistics

18. As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries may be made to either the contact in the Inquiries box at the front of this publication or Labour Force Inquiries at your ABS State office.

Estimation procedure

19. The estimates are derived from the population survey by use of a ratio estimation procedure, which ensures that the estimates conform to an independently estimated distribution of the population for each State or Territory by sex and labour force status, rather than to the corresponding distribution within the sample itself.

Reliability of the estimates

20. Estimates in this publication are subject to sampling and non-sampling errors. For more information refer to the Technical Note, page 14.

Related publications

21. Other ABS publications which may be of interest include:

The Labour Force, Australia (6203.0) — issued monthly

Employment, Underemployment and Unemployment 1966-83, Australia (6246.0) — issued irregularly

Job Search Experience of Unemployed Persons, Australia, (6222.0) — issued two-yearly

Underemployed Workers, Australia, May 1985 and May 1988 (6265.0)

Successful and Unsuccessful Job Search Experience, Australia, July 1990 (6245.0) — issued two-yearly

22. Current publications produced by the ABS are listed in the Catalogue of Publications and Products, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

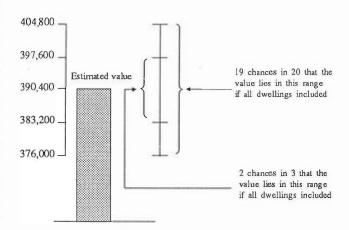

Symbols and other usages

- subject to sampling variability too high for most practical uses. See the Technical Note, page 14
- .. not applicable
- CES Commonwealth Employment Service
- 23. Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.

TECHNICAL NOTE

Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is, they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimate.

- 2. Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors for general application is given on the following page. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these numbers will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.
- 3. An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 1 shows the estimated number of persons in Australia who were underemployed part-time workers was 390,400. Since this estimate is between 300,000 and 500,000 the table below shows that the standard error for Australia will lie between 6,600 and 8,000 and can be approximated, by interpolation, as 7,200 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range 383,200 to 397,600 and about nineteen chances in twenty that the value will fall within the range 376,000 to 404,800. This example is illustrated in the following diagram.
- 4. As can be seen from the standard error table, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In this publication, only estimates with relative standard errors less than 25 per cent are considered sufficiently reliable for most purposes. However, estimates with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.

5. Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is given below:

RSE
$$(x/y) = \sqrt{[RSE (x)]^2 - [RSE (y)]^2}$$

- Considering the example from paragraph 3 above, of the 390,400 persons who were underemployed and working part-time, 117,500 or 30.1 per cent had been underemployed for more than a year. The standard error of 117,500 is approximately 4,500 so the relative standard error is 3.8 per cent. The relative standard error for 390,400 is 1.8 per cent. Applying the above formula, the relative standard error of the proportion is $\sqrt{(3.8)^2 - (1.8)^2}$ or 3.3 per cent, giving a standard error for the proportion (30.0%) of 1.0 percentage point. Therefore, there are about two chances in three that the proportion of persons who were underemployed and working part-time and who had been underemployed for more than a year was between 29.0 per cent and 31.0 per cent and nineteen chances in twenty that the proportion is within the range 28.0 per cent to 32.0 per cent.
- 7. Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

SE
$$(x-y) = \sqrt{[SE(x)]^2 + [SE(y)]^2}$$

While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations, it is expected to provide a good approximation for all differences likely to be of interest in this publication.

8. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in coding and processing data. Inaccuracies of this kind are referred to as the *non-sampling error*, and they

may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

STANDARD ERRORS OF ESTIMATES

GLOSSARY

Average preferred number of extra hours: the aggregate preferred number of extra hours reported by a group divided by the number of persons in that group.

Certificate or diploma: completion of an approved certificate or diploma in secretarial or business studies, administration, teaching, nursing, etc.

CES: Commonwealth Employment Service.

Degree: a bachelor degree (including honours), a graduate or post-graduate diploma, masters degree or doctorate.

Duration of current period of underemployment: the period from the time the person became underemployed to the end of the reference week. Periods of underemployment are recorded in full weeks and this results in a slight understatement of duration. Average (mean) duration is obtained by dividing the aggregate number of weeks a group has been underemployed by the number of persons in that group. Median duration is that which divides underemployed persons into two equal groups, one comprising persons whose duration of underemployment is above the median and the other, persons whose duration is below it.

Educational attainment: measures the highest educational qualifications obtained by the respondent. Qualifications may include those obtained at other than educational institutions (eg. nursing qualifications obtained at a hospital).

Employed persons: comprise all persons aged 15 and over who, during the reference period —

- (a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and self-employed persons); or
- (b) worked for one hour or more without pay in a family business or on a farm (ie. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

Full-time workers: employed persons who usually worked 35 hours or more a week and others who, although working less than 35 hours a week, worked 35 hours or more during the reference period.

Fully employed workers: persons who are voluntarily working part-time, or who worked full-time hours in the reference week, or who are full-time workers who did not work full-time hours in the reference week for non-economic reasons. It should be noted that persons who are normally underemployed but who worked full-time hours in the reference week are classified as fully employed.

Highest level of secondary school available: the highest level of secondary schooling (or equivalent) offered by the education system at the time the respondent left school.

Interstate: movement to another State or Territory.

Intrastate: movement to another part of the home State or Territory.

Looking for work with more hours: looking for work with more hours at some time during the four weeks up to the end of the reference week.

Main difficulty in finding work: the main difficulty experienced during the current period of underemployment.

Main English-speaking countries: comprises United Kingdom, Ireland, Canada, South Africa, U.S.A. and New Zealand.

Other post-school qualifications: completion of other types of education, eg. adult education, preparatory/bridging course or hobby course.

Part-time workers: employed persons who usually work less than 35 hours a week and who did so during the reference period.

Persons with a post-school qualification: those who had left school and answered 'Yes' to the question: 'Since leaving school have you obtained a trade qualification, certificate, diploma, degree or any other qualification?'. Respondents indicated which of the following groups best described their highest qualifications: degree; trade qualification or apprenticeship; certificate or diploma; other post-school qualification.

Quantum of underemployment: the sum of the preferred number of extra hours reported. It measures the number of potential hours of work lost due to underemployment.

Trade qualification or apprenticeship: completion of an approved trade/technical apprenticeship in fitting and turning, hairdressing, plumbing, carpentry, etc.

Underemployment: there are two categories of underemployed workers —

- (a) Part-time workers who indicate that they would prefer to work more hours, ie. underemployed parttime workers.
- (b) Full-time workers who did not work full-time hours (ie. did not work 35 hours or more) in the reference week for economic reasons, ie. underemployed full-time workers. Economic reasons comprise short time, insufficient work and stood down for reasons other than bad weather/breakdown.

Underemployment rate: for any group, the number of underemployed persons expressed as a proportion of the labour force (ie. employed plus unemployed) for the same group.

Underutilisation rate: for any group, the sum of the number unemployed and the number underemployed expressed as a proportion of the labour force for the same group.

Underutilised persons: those persons who are either unemployed or underemployed.

Unemployment rate: for any group, the number of unemployed persons expressed as a proportion of the labour force (ie. employed plus unemployed) for the same group.

Usual number of hours worked: the number of hours usually worked in a week.

SPECIAL DATA SERVICES

DATA ITEMS AND HOW TO ORDER SPECIAL TABLES FROM THIS SURVEY

The ABS offers a range of unpublished data from this survey upon request. When ordering special tables from this survey, please ensure you identify the population(s) and the data item(s) which you require.

This section specifies the data items, categories and populations which relate to the survey and includes an order form for special tables. More detailed breakdowns of some data items are available on request.

The population(s) for a particular data item refers to the persons in the Survey to whom the data item relates.

POPULATIONS

POPULATION 1: Persons aged 15 and over.

POPULATION 2: Employed persons.

POPULATION 3: Fully employed workers.

POPULATION 4: Underemployed workers.

POPULATION 5: Underemployed part-time workers.

POPULATION 6: Underemployed part-time workers who had been looking for work with more hours at some time in the four weeks up to the end of the reference week or were available to start such work within four weeks.

SPECIAL DATA REQUEST ORDER FORM

UNDEREMPLOYED WORKERS, MAY 1991

Please specify your special data request(s) on the order form provided on the following page.

The following points should be noted when requesting special tables:

- 1. Table requests will be available on computer printout, floppy disk or microfiche.
- 2. The current cost of special tables is as follows -

No. of data items	
(excluding populations)	Cost per table (\$)
2	120
3	150
4	210
5	300
6 or more	negotiable

- NOTE (i) For tables provided on floppy disk, an additional cost of \$65.00 per 360k will be charged;
 - (ii) For tables provided on microfiche, an additional cost of \$50.00 plus \$5.00 per microfiche will be charged;
 - (iii) Prices quoted are subject to revisions.
- 3. Return the completed order form together with the address advice to -

Assistant Director Labour Force Supplementary Surveys Australian Bureau of Statistics PO Box 10

OR

Facsimile No. (06) 252 6530

Belconnen ACT 2616

- 4. The invoiced cost is payable in full within 28 days of supply.
- 5. Any inquiries about this order should be directed to Ms Jo Jackson on (06) 252 6661.

For more information ...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below for contact details).

Information Consultancy Service

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

Electronic Data Services

A growing range of our data are available on electronic media. Selections of the most frequently requested data are available, updated daily, on DISCOVERY (Key *656#). Our TELESTATS service delivers major economic indicator publications ready to download into your computer on the day of release. Our PC-AuSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on our electronic data services, contact Information Services in any of our Offices on the numbers below.

Bookshops and Subscriptions

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free on 008 02 06 08 Australia wide.
