- on TELESTATS phone (062) 52 5404.

MAIN FEATURES

At 30 June 1988, 308 trade unions were identified, with a total membership of 3,213,000 persons (an estimated 53 per cent of all employees). These figures represent an overall decrease of 8 unions and 27,100 members compared with June 1987, due primarily to the involvement of 8 unions in amalgamation proceedings and the deregistration of 2 others.

Of the 308 unions identified at 30 June 1988, 199 had less than 3,000 members, accounting for only 4.4 per cent of total union membership. The nine largest unions, which each reported membership of 80,000 or more, accounted for 34.4 per cent of total union membership.

Union membership in South Australia was the highest (277,800) for the State since the introduction of this publication in 1969. The apparent decrease in Northern Territory union membership from the previous year reflects approximately 900 Territory union members being reported in returns for affiliated unions in other States.

The female proportion of total union membership increased for the fourth consecutive year, to 34.9 per cent in June 1988.

The States with the highest proportions of employees reported as trade union members were Tasmania (60%), New South Wales (55%) and South Australia (55%).

NOTES

The trade union statistics are compiled from questionnaires completed by individual trade unions.

The statistics relate to trade union membership and state of operation.

Explanatory notes are published at the back of this publication.

PERCENTAGE OF TOTAL MEMBERS ACCORDING TO SIZE OF UNION, AUSTRALIA

Source : Table 6

EXPLANATORY NOTES

Introduction

The statistics in this publication have been compiled from questionnaires completed by individual trade unions in respect of their membership and State of operation as at 30 June 1988. The collection was changed to an end of June basis in 1985. Figures for previous years were collected as at 31 December.

Scope and coverage

2. Current lists of trade unions are maintained by reference to the following sources:

- trade unions registered under the provisions of the various Federal and State industrial arbitration Acts, trade union Acts, etc.

- unions reported to be engaged in conciliation and arbitration proceedings
- reports in trade journals, trade union and employer periodicals, newspapers and other publications.

It should be noted that not all reporting trade unions are registered under industrial arbitration legislation or State trade union Acts.

3. To reduce the possibility of duplication in the statistics of the number of unions and members, where a trade union is a branch of a larger trade union, only the larger organisation is counted. An interstate or federated trade union (i.e. a union with members in more than one State or Territory) is treated as a separate union in each State

or Territory in which it has members, but is counted only once in the Australian total. Unions with interstate associations which are not strictly branches of a common organisation are counted as separate unions in the totals for Australia.

4. The published number of trade unions varies from year to year as a result of amalgamations of unions, de-registration of unions, unions ceasing to operate, new unions being formed, existing organisations changing their status such that it brings them within the scope of the definition of a trade union (see paragraph 5), and existing unions reporting for the first time.

Definitions

5. For the purpose of these statistics a *trade union* is defined as an organisation, consisting predominantly of employees, the principal activities of which include the negotiation of rates of pay and conditions of employment for its members. Non-operating unions or branches, i.e. those with no members at the date of collection, are not included in the statistics.

6. *Membership of trade unions.* Financial members are dues paying members no more than 6 months in arrears. *The total number of members* includes all persons (financial, unfinancial, honorary, etc.) regarded by unions as members.

7. Persons who are members of more than one union cannot be separately identified and are therefore counted more than once in the totals. The extent of this duplication is not known. Members of unions who work overseas are excluded from the reported membership data. Membership figures may be affected by differences in the concept of membership adopted by different unions or by the same union at different times (see paragraph 9 below).

8. *Proportion of total employees.* The approximate percentages of wage and salary earners in employment (i.e. employees) who were members of trade unions are shown in Table 3. From 30 June 1985, the proportions of employees have been calculated using estimates of employees from the ABS Survey of Employment and Earnings. These estimates have been adjusted by adding Labour Force Survey estimates of employees in agriculture, forestry, fishing and hunting and in private households employing staff. For statistics for periods prior to 30 June 1985, estimates of employees were taken from the *Labour Force, Australia* (6203.0). The percentages shown should be regarded as giving only a broad indication of the extent of union membership among employees, because they are based on estimates of *employed* wage and salary earners; the numbers of union members who were not employed (i.e. were unemployed, retired, etc.) will affect the percentages for a particular year and comparisons over time.

Comparability of series

9. Comparability of figures for different years may be affected by a number of factors. As stated in paragraph 7, there may be duplication in the count of members. This duplication may vary over time. Union rules on member-

ship may follow different concepts and practices and this may be reflected in the level and fluctuations of the figures reported. Unions reported financial and total membership separately for the first time as at 30 June 1985. In previous years some unions confined their reported membership to 'financial' members whilst others included various other members. Individual unions may or may not include in their reported membership unemployed members, members who have retired from the labour force, disabled members, members with dues in arrears (who may be kept on union books for varying lengths of time), etc.

10. Membership of trade unions is shown separately for males and females for each State and Territory. The subdivision of total membership into males and females is not precise because some trade unions are unable to state the exact number of male and female members. The subdivision of total membership by States and Territories is also not precise because some unions in the Territories are affiliated with State organisations and their membership is reported under the heading of that State.

Organisations registered under industrial arbitration legislation

11. Details of employee organisations registered under the *Federal Conciliation and Arbitration Act* 1904 as at 30 June 1988, and comparisons for 1987, are as follows:

	1988	1987
Employee unions	146	144
Membership	2,655,700	2,650,600

1988 membership figures reflect 83% of total reported trade union membership.

12. Industrial legislation in most States also provides for the registration of employee associations. Some employee associations are registered under more than one Act but these are counted only once in these statistics.

Comparison with other trade union statistics

13. Statistics on trade union membership are also collected periodically by the ABS from a sample survey of employees, published in *Trade Union Members, Australia* (6325.0). Statistics from that survey are not directly comparable with trade union census data due to differences in timing and methodology. There are also significant differences in coverage, which are detailed in the explanatory notes to their publication.
