JANUARY KEY POINTS

TREND ESTIMATES

EMPLOYMENT

• increased to 9,225,300.

UNEMPLOYMENT

■ increased to 677,000.

UNEMPLOYMENT RATE

• remained steady at 6.8%.

PARTICIPATION RATE

■ increased to 63.8%.

See page 2 for more information about this month's estimates.

SEASONALLY ADJUSTED ESTIMATES

EMPLOYMENT

• increased by 101,800 to 9,280,000. Full-time employment increased by 70,500 to 6,693,800 while part-time employment increased by 31,300 to 2,586,200.

UNEMPLOYMENT

 increased by 34,500 to 694,100. The number of persons looking for full-time work rose by 26,000 to 520,900 and the number of persons looking for part-time work rose by 8,500 to 173,300.

UNEMPLOYMENT RATE

- increased by 0.3 percentage points to 7.0%. The male rate increased by 0.4 percentage points to 7.1% while the female rate rose by 0.1 percentage point to 6.8%.
- NSW 6.4% (6.1% last month), Vic 6.6% (6.5%), Qld 8.2% (8.0%), SA 7.1% (7.1%), WA 7.0% (6.1%), Tas 9.1% (8.4%).

PARTICIPATION RATE

• increased by 0.8 percentage points to 64.2%.

■ For further information about these and related statistics, contact Mark Webb on 02 6252 6525, or the National Information and Referral Service on 1300 135 070.

NOTES ON ESTIMATES

Each year the ABS revises the estimated effect of seasonal patterns on key labour force estimates. The next revision will be undertaken prior to the release of the February 2002 results. Analysis of past data suggests that some of the movement apparent in the January 2002 seasonally adjusted figures may be associated with changing seasonal patterns, particularly for female full-time employment.

Also, the seasonal adjustment process makes no specific adjustment for variation in the start date of Labour Force Survey interviewing. The two-week interview period for the monthly Labour Force Survey follows a predetermined pattern (see paragraph 4 of the Explanatory Notes). As a result, January inteviewing may commence as early as the 8th or as late as the 14th, depending on the year. Interviews for January 2002 commenced on 14 January. Analysis has shown that the variation in interview start date may have an effect on labour force estimates for January, reflecting the impact of the new year holiday period on people's movements and labour market involvement.

While these effects may be present in the January 2002 figures, it is not possible to confirm or quantify them from the information currently available to the ABS. The trend figures effectively remove these irregular factors and provide the best guide to monthly movements in labour force aggregates.

SEASONAL REANALYSIS

Results from the next scheduled annual reanalysis of seasonally adjusted labour force data will be released on 7 March 2002. Revised seasonally adjusted and trend series will be included in the February 2002 issue of this publication.

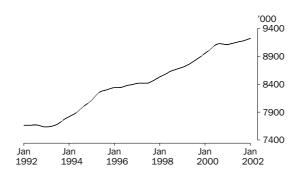

SAMPLING ERRORS

The estimates in this publication are based on a sample survey. Because the entire population is not enumerated, the published estimates and the movements derived from them are subject to sampling variability. Standard errors give a measure of this variability and appear on pages 31 and 32.

The 95% confidence intervals below provide another way of looking at the variability inherent in estimates from sample surveys. The interval bounded by the two limits is the 95% confidence interval. A 95% confidence interval indicates that we are 95% confident that the upper and lower limits enclose the true value of the estimate.

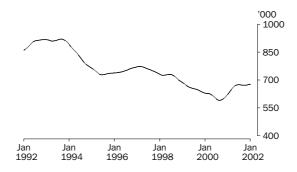

Dennis Trewin Australian Statistician EMPLOYED PERSONS

The trend estimate of employed persons rose strongly from a low of 7,634,000 in January 1993 until mid 1995. The trend then continued to rise at a slower rate until June 1997, before showing stronger growth to reach 9,130,500 in September 2000. Since then the trend has increased slowly to stand at 9,225,300 in January 2002.

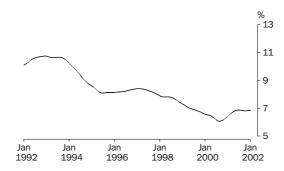

UNEMPLOYED PERSONS

The trend estimate of unemployed persons peaked at 920,500 in September 1993, before falling rapidly to 728,300 in July 1995. The trend then rose slowly, reaching 771,600 in March 1997 before falling to 589,600 in September 2000. The trend then rose to 675,300 in July 2001, before flattening to stand at 677,000 in January 2002.

UNEMPLOYMENT RATE

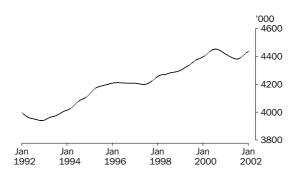

After reaching a high of 10.7% in late 1992, the trend unemployment rate remained steady for twelve months, before falling rapidly to 8.1% in July 1995. The trend then rose slowly until February 1997, before falling to 6.1% in September 2000. The trend rate then rose until July 2001, before flattening to stand at 6.8% in January 2002.

MALES EMPLOYED FULL TIME

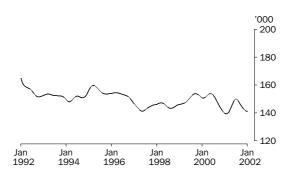

TOTAL

Apart from a flat period between June 1995 and June 1997, the trend estimate of males employed full time rose strongly, from 3,938,900 in December 1992 to a peak of 4,452,300 in August 2000. The trend then fell until July 2001, before rising to 4,436,000 in January 2002.

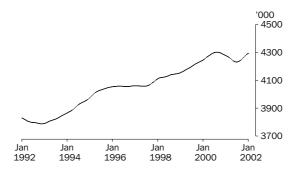

MALES AGED 15-19

Athough fluctuating, the trend estimate of males aged 15-19 employed full time has generally decreased through the decade from 164,800 in January 1992 to 140,900 in January 2002.

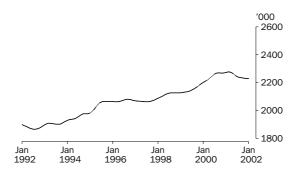

MALES AGED 20 AND OVER From a low of 3,787,000 in December 1992, the trend estimate of males aged 20 and over employed full time rose steadily to reach 4,020,400 in May 1995. The trend then remained flat until June 1997, before rising to 4,301,700 in September 2000. The trend then fell until July 2001, before rising to 4,295,000 in January 2002.

FEMALES EMPLOYED FULL TIME

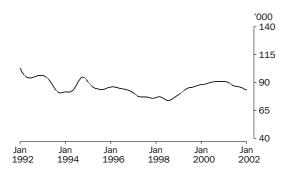

TOTAL

The trend estimate of females employed full time rose strongly from 1,865,100 in August 1992 to 2,065,500 in September 1995. The trend then remained relatively flat until July 1997, before rising to 2,276,800 in February 2001. Since then it has fallen to stand at 2,228,000 in January 2002.

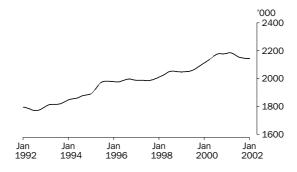

FEMALES AGED 15-19

The trend estimate of females aged 15-19 employed full time fell rapidly to 80,800 in October 1993. Although fluctuating, the trend generally decreased over the next five years to reach 73,900 in August 1998. The trend estimate then rose to stand at 90,900 in January 2001, before falling to stand at 83,200 in January 2002.

FEMALES AGED 20 AND OVER

The trend estimate of females aged 20 and over employed full time rose steadily from a low of 1,770,500 in August 1992 to 1,981,700 in September 1995. The trend then remained relatively flat until July 1997. The trend estimate then increased to 2,186,200 in March 2001 before falling to stand at 2,144,700 in January 2002.

......

INTRODUCTION

1 This publication contains preliminary estimates of the civilian labour force derived from the Labour Force Survey component of the monthly population survey. Estimates for the current month are preliminary and subject to revision. Revised estimates for the current month and more detailed estimates will be published in *Labour Force, Australia* (Cat. no. 6203.0).

CONCEPTS, SOURCES AND METHODS

2 The conceptual framework used in Australia's Labour Force Survey aligns closely with the standards and guidelines set out in Resolutions of the International Conference of Labour Statisticians. Descriptions of the underlying concepts and structure of Australia's labour force statistics, and the sources and methods used in compiling the estimates, are presented in *Labour Statistics: Concepts, Sources and Methods* (Cat. no. 6102.0) which is also available on the ABS website www.abs.gov.au (Statistics—Statistical Concepts Library).

MONTHLY POPULATION SURVEY

- **3** The population survey is based on a multi-stage area sample of private dwellings (currently about 30,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about 0.5% of the population of Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The information obtained relates to the week before the interview (i.e. the reference week).
- **4** The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. Each year, to deal with operational difficulties involved with collecting and processing the Labour Force Survey around the Christmas and New Year holiday period, interviews for December start four weeks after November interviews start, and January interviews start five weeks after December interviews start. Occasionally, circumstances that present significant operational difficulties for survey collection can result in a change to the normal pattern for the start of interviewing.
- **5** Estimates from the Labour Force Survey are published first in this publication 31 days after the commencement of interviews for that month, with the exception of estimates for each December which are published 38 days after the commencement of interviews.

TELEPHONE INTERVIEWING

- **6** The ABS has introduced the use of telephone interviewing into the Labour Force Survey. Households selected for the Labour Force Survey are interviewed each month for 8 months, with one eighth of the sample being replaced each month. The first interview is conducted face-to-face. Subsequent interviews are conducted by telephone (if acceptable to the respondent). Telephone interviewing was phased in for each new sample group from August 1996 to February 1997.
- **7** During the period of implementation, the new method produced different estimates than would have been obtained under the old methodology. The effect peaked in November 1996, when it is estimated that the published estimate of total employment was about 36,000 to 48,000 lower than would have been measured under the old methodology. The effect dissipated over the final months of implementation and was no longer discernible from February 1997. Therefore, the estimates for February 1997 and onwards are directly comparable to estimates for periods prior to August 1996.

SCOPE OF SURVEY

8 The Labour Force Survey includes all persons aged 15 and over except members of the permanent defence forces, certain diplomatic personnel of overseas governments customarily excluded from census and estimated population counts, overseas residents in Australia, and members of non-Australian defence forces (and their dependants) stationed in Australia.

COVERAGE

9 In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are necessarily a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the survey is considered to be negligible.

POPULATION BENCHMARKS

10 Labour Force Survey estimates are calculated in such a way as to add up to independent estimates of the civilian population aged 15 and over (population benchmarks). From February 1999, labour force estimates have been compiled using benchmarks based on the results of the 1996 Census of Population and Housing. Small revisions were made to many of the historical estimates from January 1995 to January 1999.

REVISION OF SERIES

- **11** From April 1986, the definition of employed persons was changed to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. contributing family workers). For further information, see paragraphs 36 and 37 of the Explanatory Notes to the February 1987 issue of *Labour Force, Australia* (Cat. no. 6203.0).
- **12** From April 2001 the Labour Force Survey has been conducted using a redesigned questionnaire containing additional data items and some minor definitional changes. Core labour force series were revised for the period April 1986 to March 2001 to ensure continuity. For further details, see *Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire* (Cat. no. 6295.0) and *Information Paper: Questionnaires Used in the Labour Force Survey* (Cat. no. 6232.0).

SURVEY SAMPLE REDESIGN

- **13** The Labour Force Survey sample was last reselected using information collected in the 1996 Census of Population and Housing.
- 14 The bulk of the new sample was phased in over the period September 1997 to April 1998, with one eighth of this portion of the sample being introduced every month. The remainder of the sample (about 15% of the total), which covers less settled areas of Australia and non-private dwellings was rotated in full for New South Wales, Victoria, Tasmania, Northern Territory and Australian Capital Territory in September 1997, and for Queensland, South Australia and Western Australia in October 1997. Such a pattern of implementation means that any changes to labour force estimates due to differences between the two samples, or any other influences, were spread over the eight months.
- **15** For further details, see *Information Paper: Labour Force Survey Sample Design* (Cat. no. 6269.0).

RELIABILITY OF ESTIMATES

16 Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error.

Sampling error occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown on pages 31 and 32. Standard errors of other estimates and other movements may be determined by using information in the Technical Notes in *Labour Force*, *Australia* (Cat. no. 6203.0).

Non sampling error arises from inaccuracies in collecting, recording and processing the data. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures.

SEASONAL ADJUSTMENT AND TREND ESTIMATION

- **17** Seasonally adjusted series are published in Tables 2, 5 and 12 to 17. Seasonal factors are reviewed annually to take account of each additional year's original data. Information about the last annual review of seasonal factors was published in a feature article in the February 2001 issue of *Labour Force, Australia* (Cat no. 6203.0). An additional review was conducted following the revision of series associated with the introduction of the redesigned questionnaire in April 2001 (see paragraph 12). The results of this additional review were used to compile the seasonally adjusted and trend estimates in this publication.
- **18** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

Employment: 6 in 10 monthly movements Unemployment: 8 in 10 monthly movements Unemployment rate: 7 in 10 monthly movements Participation rate: 9 in 10 monthly movements.

- 19 The smoothing of seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series, and creates trend estimates. These trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months except the last six. The last six monthly trend estimates are obtained by applying surrogates of the Henderson average to the seasonally adjusted series. Trend series are used to analyse the underlying behaviour of the series over time. These are published in tables 3, 6 and 12 to 19.
- **20** While this smoothing technique enables estimates to be produced for the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.

SEASONAL ADJUSTMENT AND TREND ESTIMATION continued

- **21** Trend estimates are published for the Northern Territory in table 18 and for the Australian Capital Territory in table 19. Unadjusted series for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month to month revisions. They may be affected by revision resulting from the annual re-analysis of seasonal factors.
- **22** For further information, see *A Guide to Interpreting Time Series—Monitoring 'Trends': an Overview* (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on (02) 6252 6345.

RELATED PUBLICATIONS

- **23** Users may also wish to refer to *Labour Force, Australia* (Cat. no. 6203.0). This publication contains a detailed list of related publications which are available from ABS Bookshops.
- **24** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

DATA AVAILABLE ON REQUEST

25 As well as the statistics included in this and related publications, the ABS may have other relevant data available. Inquiries should be made to Mark Webb on 02 6252 6525 or to any ABS office.

EFFECTS OF ROUNDING

- **26** Estimates have been rounded and discrepancies may occur between sums of the component items and totals.
- **27** Estimates of movement shown in this publication are obtained by taking the difference of unrounded estimates. The movement estimate is then rounded to one decimal place. Therefore where a discrepancy occurs between the reported movement and the difference of the rounded estimates, the reported movement will be more accurate.

SYMBOLS AND OTHER USAGES

- * subject to sampling variability too high for most practical uses. See the Technical Notes in Cat. no. 6203.0 for more details.

GLOSSARY

Actively looking for work

Includes writing, telephoning or applying in person to an employer for work; answering an advertisement for a job; checking factory noticeboards or the touchscreens at the Centrelink offices; being registered with Centrelink as a jobseeker; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

Attending school

Persons aged 15 to 19 years enrolled at secondary or high school in the reference week.

Attending tertiary educational institution full time

Persons aged 15 to 24 years enrolled full time at a TAFE college, university, or other educational institution in the reference week, except those persons aged 15 to 19 years who were still attending school.

Civilian population aged 15 years and over

All usual residents of Australia aged 15 years and over except members of the permanent defence forces, certain diplomatic personnel of overseas governments customarily excluded from census and estimated population counts, overseas residents in Australia, and members of non-Australian defence forces (and their dependants) stationed in Australia.

Employed

All persons aged 15 years and over who, during the reference week:

- worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or
- worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
- were employees who had a job but were not at work and were:
 - away from work for less than four weeks up to the end of the reference week; or
 - away from work for more than four weeks up to the end of the reference week and received pay for some or all of the four week period to the end of the reference week; or
 - away from work as a standard work or shift arrangement; or
 - on strike or locked out; or
 - on workers' compensation and expected to return to their job; or
- were employers or own account workers, who had a job, business or farm, but were not at work.

Full-time workers

Employed persons who usually worked 35 hours or more a week (in all jobs) and those who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Labour force

For any group, persons who were employed or unemployed, as defined.

Labour force status

A classification of the civilian population aged 15 years and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Not in the labour force

Persons who were not in the categories employed or unemployed as defined.

Participation rate

For any group, the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.

Part-time workers

Employed persons who usually worked less than 35 hours a week (in all jobs) and either did so during the reference week, or were not at work in the reference week.

Seasonally adjusted series

A time series of estimates with the estimated effects of normal seasonal variation removed. See Explanatory Notes 17 and 18 for more detail.

Trend series

A smoothed seasonally adjusted series of estimates. See Explanatory Notes 19 to 21 for more detail.

Unemployed

Persons aged 15 years and over who were not employed during the reference week, and:

- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
 - were available for work in the reference week; or
 - were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then.

Unemployed looking for full-time work

Unemployed persons who:

- actively looked for full-time work and were available for work in the reference week; or
- actively looked for work and were not available for work in the reference week because they were waiting to start a new full-time job.

Unemployed looking for part-time work

Unemployed persons who:

- actively looked for part-time work only and were available for work in the reference week; or
- actively looked for work and were not available for work in the reference week because they were waiting to start a new part-time job.

Unemployment rate

For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

Unemployment to population ratio

For any group, the number of unemployed persons expressed as a percentage of the civilian population in the same group.

STANDARD ERRORS

The estimates in this publication are based on information gained from the occupants of a sample survey of dwellings. Because the entire population is not surveyed, the published estimates are subject to sampling error. The most common way of quantifying such sampling error is to calculate the standard error for the published estimate or statistic.

LEVEL ESTIMATES

To illustrate, let us say the published level estimate for employed persons aged 15 to 19 is 500,000. The calculated standard error in this case is 8,700. The standard error is then used to interpret the level estimate of 500,000. For instance, the standard error of 8,700 indicates that:

- There are approximately two chances in three that the real value falls within the range 491,300 to 508,700 (500,000 + or 8,700)
- There are approximately nineteen chances in twenty that the real value falls within the range 482,600 to 517,400 (500,000 + or 17,400).

The real value in this case is the result we would obtain if we could enumerate the total population.

The following tables show the standard errors for this month's level estimates.

MOVEMENT ESTIMATES

The following example illustrates how to use the standard error to interpret a movement estimate. Let us say that one month the published level estimate for females employed part time in Australia is 1,390,000; the next month the published level estimate is 1,400,000. The calculated standard error for the movement estimate is 13,000. The standard error is then used to interpret the published movement estimate of 10,000. For instance, the standard error of 13,000 indicates that:

- There are approximately two chances in three that the real movement over the two month period falls within the range -3,000 to 23,000 (10,000 + or -13,000)
- There are approximately nineteen chances in twenty that the real movement falls within the range -16,000 to 36,000 (10,000 + or 26,000).

The following tables show the standard errors for this month's movement estimates.

• • • • • • • • • • •	• • • • • • • • •	• • • • • •	• • • • •	• • • • • • • • • • • • • • • • • • • •	• • • • •	• • • • • • •	• • • • • • • • • • • • • • • •	• • • • •	• • • • • • •

EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Each time new seasonally adjusted estimates become available, trend estimates are revised (see paragraphs 19 and 20 of Explanatory Notes).

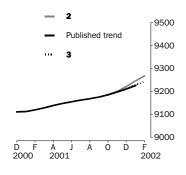

TREND REVISIONS

The examples in the tables below show four illustrative scenarios and the consequent revisions to previous trend estimates of employment and unemployment rate.

- **1** The February seasonally adjusted estimate is the same as the January estimate.
- **2** The February seasonally adjusted estimate is higher than the January estimate by:
 - +0.30% for employment
 - +1.82 for the unemployment rate
- **3** The February seasonally adjusted estimate is lower than the January estimate by:
 - -0.30% for employment
 - -1.82% for the unemployment rate
- **4** The February seasonally adjusted estimate results in a revised January trend estimate which is identical to the new February trend estimate.

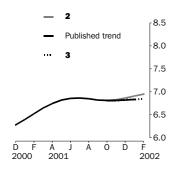

The percentage changes of 0.30% and 1.82% were chosen because they represent the average absolute monthly percentage changes in employment and the unemployment rate respectively.
