#### CHAPTER 8

#### **MANPOWER**

The principal subjects covered in this chapter are the labour force and unemployment, wage rates, earnings, hours of work, industrial disputes, labour organisations and Commonwealth Government employment and training programs. Further detail on these subjects is contained in *Labour Statistics*, Australia (6101.0) and in other publications which are referred to in the various sections of this chapter.

#### THE LABOUR FORCE

This section contains a number of series relating to the labour force and its components. The labour force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid family helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the labour force, classified according to industry, occupation, status of worker (i.e. whether employers, self-employed persons, wage and salary earners or unpaid family helpers) and personal characteristics such as age, sex, marital status and birthplace, are obtained only at a general census of population.

In addition to the population censuses, estimates of the labour force are obtained through the population survey, which is conducted monthly by means of personal interviews a sample of households throughout Australia (see below). The survey provides particulars of the demographic and labour force characteristics of the population.

## The population census

Statistics on the labour force from the Census of Population and Housing, conducted on 30 June 1981, are available on microfiche. Additional tables will be contained in the publications Summary Characteristics of Persons and Dwellings (2435.0-2443.0) and Cross-classified Characteristics of Persons and Dwellings (2444.0-2452.0). All tables are listed in the Catalogue of 1981 Census Tables (2139.0).

## The population survey

The population survey is the general title given to the household sample survey which since February 1978 has been conducted monthly in all States and Territories. Although emphasis in the survey is placed on the regular collection of data on demographic and labour force characteristics of the population, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from supplementary surveys are released in publications which are available on request.

The survey is based on a multi-stage area sample of private dwellings (about 30,000 houses, flats, etc.) and non-private dwellings (hotels, motels, etc.), and covers about two-thirds of one per cent of the population of Australia. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers, the interviews generally being conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the survey week).

#### The labour force survey

A description of the labour force survey and a selection of principal statistics obtained from it are given in this section. The first Australia-wide labour force survey was carried out in February 1964 and surveys were conducted quarterly until February 1978. Estimates are published in the monthly publications, The Labour Force, Australia (Preliminary) (6202.0), The Labour Force, Australia (6203.0), and Unemployment, Australia (Preliminary Estimates) (6201.0). Comprehensive statistics are published in annual publications entitled The Labour Force, Australia (6204.0), Labour Statistics, Australia (6101.0) and in Unemployment, Underemployment and Related Statistics,

Australia, February 1978 to February 1980 (6236.0). However, because of recent revisions to survey estimates, figures in monthly publications prior to February 1978 and in annual publications to 1977 are not directly comparable with current estimates shown in the following tables.

#### Scope and definitions

The labour force survey includes all persons aged 15 and over except members of the permanent defence forces; certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations; overseas visitors holidaying in Australia; and members of non-Australian defence forces (and their dependents) stationed in Australia.

The labour force category to which a person is assigned depends on his actual activity (i.e. whether working, looking for work, etc.) during the survey week. This is determined from answers given to a set of questions designed for this purpose. For further information see *Information Paper: Questionnaires used in the Labour Force Survey* (6232.0). The following definitions relate only to those persons within the scope of the survey.

Employed persons comprise all those aged 15 and over who, during the survey week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (including employees, employers and self-employed persons); or
- (b) worked for 15 hours or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the survey week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the survey week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers or self-employed persons who had a job, business or farm, but were not at work.

Unemployed persons are those aged 15 and over who were not employed during the survey week, and

- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the survey week and:
  - (i) were available for work in the survey week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the survey week); or
  - (ii) were waiting to start a new job within four weeks from the end of the survey week and would have started in the survey week if the job had been available then; or
- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the survey week (including the whole of the survey week) for reasons other than bad weather or plant breakdown.

The labour force comprises all persons who, during the survey week, were employed or unemployed, as defined above.

These definitions conform closely to the international standard definitions specified by the International Labour Organisation (ILO).

#### Population benchmarks

The population survey estimates are calculated in such a way as to conform to the independently estimated distribution of the population aged 15 and over by age and sex. These independent estimates (benchmarks) are necessarily derived from incomplete information about population changes (deaths, internal and overseas migration) and can differ from estimates of the population subsequently published by the ABS. For estimates of the population and other demographic statistics reference should be made to Australian Demographic Statistics Quarterly (3101.0).

Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each census and when population estimation bases are reviewed. Survey estimates back to August 1966 have been recalculated to conform to revised population estimates. The estimates take account of results of the 1966, 1971 and 1976 Population Censuses, including estimates of under-enumeration, and incorporate a revised method of measuring overseas migration gain (i.e. by excluding movements of less than one year's duration). For information concerning these population estimates for the period June 1971 to June 1977 see *Population and Vital Statistics*, *Australia, June Quarter 1977* (3212.0). Survey estimates based on population estimates derived from the 1981 population census will become available in mid-1983.

#### Comparison with population census

The results of the 1976 Population Census show that labour force figures derived from the census differ from estimates derived from the population surveys of May and August 1976.

The labour force definition used in the population census is similar to that used in the survey. However, evidence from census post-enumeration surveys indicates that the personal interview approach, as used in the population survey, tends to identify a larger number of persons as being in the labour force than does the filling in of the questions on the census schedule by the householder. In addition, the post-enumeration survey following the 1976 Population Census showed an under-enumeration of the population of 2.71 per cent. It has not been possible to adjust the published census labour force figures for any under-enumeration.

#### Reliability of the estimates

Since the estimates in the following tables are based on information obtained from the occupants of a sample of dwellings, the estimates and the movements derived from them are subject to sampling variability; that is, they may differ from the figures that would have been produced if all dwellings had been included in the surveys. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors.

Space does not allow for the separate indication of the standard errors of all estimates in this section. A table of standard errors which is intended to be of general application is therefore given below.

An example of the use of the table is as follows: if the estimate for Australia obtained from the sample is 100,000, the standard error is 3,900; there are then about two chances in three that the true figure is within the range 96,100 to 103,900 and about nineteen chances in twenty that this figure is between 92,200 and 107,800.

Size of estimate				Number	Per cent of estimate	Size of estimate					Number	Per cent of estimate					
4,500							970	21.6	200,000							5,100	2.6
5,000							1,000	20.0	300,000							6,000	2.0
10,000							1,400	14.0	500,000							7,200	1.4
20,000							2,000	10.0	1,000,000							9,100	0.9
50,000							2,900	5.8	2,000,000							11,000	0.6
100,000							3,900	3.9	5,000,000							15,000	0.3

STANDARD ERRORS OF ESTIMATES FOR AUSTRALIA

The standard errors of estimates relating to agricultural employment are generally somewhat higher than the standard errors of other estimates of the same magnitude. Estimates for females also tend to have higher standard errors than estimates of equivalent size for males in similar categories.

The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the numerator and the size of the denominator. However, the per cent standard error of the estimated percentage will generally be lower than the per cent standard error of the estimate of the numerator. The per cent standard errors of the numerators can be obtained from the table above.

As the standard errors in the table above show, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the following tables, estimates less than 4,500 have not been included. Although figures for these small components can in some cases be derived by subtraction, they should not be regarded as reliable.

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the *non-sampling error*, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

<sup>(</sup>a) Period from the time the person began looking for work, or was laid off, to the end of the survey week. Periods of unemployment are recorded in complete weeks and this results in a slight understatement of duration.

(b) Includes persons aged 55 and over, details for whom are not shown separately.

(c) Never married, widowed and divorced. \* Less than 4,500. See page 167.

## Government employees

Government employees comprise not only administrative employees but also all other employees of government bodies (Commonwealth, State, local and semi-government) on services such as railways, road transport, banks, postal and telecommunications, air transport, education (including universities, colleges of advanced education, etc.), radio, television, police, public works, factories, marketing authorities, public hospitals (other than those run by charitable or religious organisations) and departmental hospitals and institutions.

GOVERNMENT EMPLOYEES (a): JUNE 1982

## **Employees of Private Business**

Publication of statistics of employees of private businesses estimated from a sample survey of 20,000 business units is expected to commence in respect of the September Quarter 1983.

#### JOB VACANCIES

Sample surveys of job vacancies were conducted by the ABS in March each year (by mail) from 1974 to 1978 and quarterly (by telephone) from May 1977 to May 1978. The annual and quarterly surveys were suspended in March and May 1978 respectively as part of the measures necessary to bring the activities of the ABS within the resources available to it at that time. The quarterly survey was reintroduced in May 1979.

A summary of the results of these surveys is shown in the table below. Results of the resumed quarterly surveys are not directly comparable with those of surveys conducted up to May 1978, because of a change of the treatment of vacancies in the government sector. More detailed results and explanatory notes are published in *Job Vacancies*, *Australia* (6231.0).

(c) ASIC Divisions A to L excluding Division C (Manufacturing), Subdivisions 01 and 02 (agriculture, etc.), 94 (private households employing staff) and defence forces.

### MINIMUM WAGE RATES AND EMPLOYMENT CONDITIONS

## **Industrial Conciliation and Arbitration**

#### General

Legal minimum rates of pay for some 90 per cent of Australian wage and salary earners are prescribed in awards and determinations of Federal and State industrial tribunals or in collective agreements registered with them.

The main tribunals operative at the end of September 1982 were as follows.

- Federal: Australian Conciliation and Arbitration Commission, Public Service Arbitrator, Flight Crew Officers' Industrial Tribunal.
- Joint Federal and New South Wales: Coal Industry Tribunal.
- New South Wales: Industrial Commission of New South Wales, Public Service Board of New South Wales.
- Victoria: Industrial Relations Commission, Public Service Board, Teachers Tribunal, Police Service Board.
- Queensland: Industrial Conciliation and Arbitration Commission of Queensland.
- South Australia: Industrial Commission, Conciliation Committees, Public Service Arbitrator, Teachers Salaries Board.
- Western Australia: Western Australian Industrial Commission, Western Australian Coal Industry Tribunal, Public Service Arbitrator, Railway Classification Board, Government School Teachers Tribunal.
- Tasmania: Industrial Boards, Public Service Board, Public Service Arbitrator.

#### **Federal Tribunals**

The Australian Conciliation and Arbitration Commission has jurisdiction in respect of the prevention and settlement of industrial disputes extending beyond the limits of any one State. The Commission consists of a President, Deputy Presidents and Commissioners. The work of the Commission is normally done by individual members; however, certain matters such as standard hours, national wage cases, the minimum wage for adults, equal pay principles, annual leave and long service leave with pay

must be determined by a Full Bench of the Commission consisting of at least three members, of whom not less than two are Presidential members. A Full Bench of the Commission also deals with appeals and references from single members of the Commission and from the Public Service Arbitrator. Where a State law or an award, etc. of a State Tribunal is inconsistent with a Federal award, etc., the latter prevails to the extent of the inconsistency.

Conditions of employment of Federal government employees are regulated by statutory provisions and by determinations of the Australian Public Service Arbitrator. Appeals and references may be made to the Australian Conciliation and Arbitration Commission.

The Flight Crew Officers' Industrial Tribunal is empowered to prevent and settle industrial disputes involving pilots, navigators and flight engineers of aircraft.

The Coal Industry Tribunal was established under the authority of Federal and New South Wales legislation, and is empowered to determine interstate and New South Wales disputes in the coal mining industry.

#### State Tribunals

State tribunals have jurisdiction over industrial disputes confined within their own State boundaries. For details of the composition and operation of the State tribunals listed above, reference should be made to the various State Year Books.

#### Determination of rates of pay

The awards, etc. of the various Federal and State tribunals prescribe minimum rates of pay, standard hours of work and other conditions of employment for particular occupations. Most awards also prescribe a minimum wage for adults, i.e., the minimum amount which must be paid to an adult employee, regardless of occupation, for working the standard weekly hours of work. The concept of equal pay for the sexes is applicable in most Federal and State awards. In recent years the wage fixing principles of the Australian Conciliation and Arbitration Commission have generally been followed by State tribunals.

In April 1975 the Commission introduced a set of wage determination principles which provided for quarterly (later half-yearly) adjustments to award wages in line with movements in the previous quarter's (half-year's) consumer price index, unless the Commission was persuaded not to grant such an increase. Other principles were designed to limit wage movements outside of indexation.

The main aims of this system were to contribute to a moderation in inflation and to reduce the degree of industrial disputation over wages matters.

In all there were eighteen national wage cases over the 1975-81 period, with full indexation being awarded on six occasions. In June 1979 the Commission said that it had come to the brink of abandoning the *indexation system* and again in April 1981 it expressed misgivings and re-fashioned some of the principles. However, on 31 July 1981, the Commission abandoned wage indexation saying in its reasons for decision: 'The events since April have shown clearly that the commitment of the participants to the system is not strong enough to sustain the requirements for its continued operation. The immediate manifestation of this is the high level of industrial action in various industries . . . (which) resulted in substantial increases being agreed without regard to the test of negligible wage cost . . . .

Since then claims have been dealt with on a case-by-case basis. For details of increases in Federal and State awards, etc., and for rates of minimum wage for adult males and adult females, see Award Rates of Pay Indexes (6312.0).

For details of wage determination in earlier periods see previous issues of the Year Book, the Labour Report (last issue 1973) and the 1975-81 issues of Labour Statistics (6101.0).

## Rates of wage

This section contains indexes (with base: year 1954 = 100.0) of minimum weekly and hourly rates of wage for adult males and adult females for Australia and each State.

Because the indexes are designed to measure movements in prescribed minimum rates of 'wages' as distinct from 'salaries', those awards, etc. which relate solely or mainly to salary earners are excluded.

Further particulars of wage rates and index numbers will be found in publications *Minimum Wage Rates*, March 1939 to June 1965 (6313.0), *Wage Rates Indexes*, June 1965 to June 1968 (6314.0) and *Wage Rates Indexes*, June 1968 to June 1972 (6314.0). Figures to August 1982 were published in the monthly publications *Wage Rates*, *Australia* (6312.0) and *Wage Rates Indexes*, *Australia* (*Preliminary*) (6311.0) and may have included revisions of figures shown in the following tables.

Weighted average minimum weekly wage rates for adult males and adult females covered by Federal awards, etc. and those covered by State awards, etc. (as defined below) are shown separately in the following table. For the purposes of the index, Federal awards, etc. include awards of or collective agreements registered with the Australian Conciliation and Arbitration Commission, and determinations of the Australian Public Service Arbitrator. State awards, etc. include awards or determinations of or collective agreements registered with State industrial tribunals, together with certain unregistered collective agreements when these are dominant in the particular industries to which they refer.

Late in 1982, new indexes were released, based on a more up-to-date weighting pattern and including both wage and salary earners. Details are published monthly in *Award Rates of Pay Indexes* (6312.0)

WEEKLY WAGE RATES: ALL GROUPS(a)

<sup>(</sup>a) As prescribed in awards, determinations and collective agreements.

(b) The amounts shown should not be regarded as actual current averages, but as an index expressed in money terms, indicative of trends.

(c) For mining, rates of wage used are those prescribed for the principal mining centres and include lead bonuses, etc.

(d) Includes rates of wage (and value of keep) for occupations in the coastal shipping service, other than masters, officers and engineers.

(e) Excludes rural industry.

The following table shows for Australia weighted average minimum weekly rates of wage and index numbers in each of the industry groups in which the number of females employed is important, and the weighted average for all groups combined, at the dates specified.

<sup>(</sup>a) As prescribed in awards, determinations and collective agreements. arrages, but as an index expressed in money terms, indicative of trends. construction.

The average rates of wage in the preceding tables are based on the minimum rates prescribed for selected occupations in awards, etc. for a full week's work, excluding overtime. However, the number of hours constituting a full week's work differs in some instances between the various occupations in each State, and between the same occupations in the several States. For some purposes a better comparison may be obtained by reducing the results in the preceding paragraphs to a common basis, namely the rate of wage per hour. The particulars of weighted average minimum hourly rates of wage for adult males given in the following tables relate to all industries except the rural industry and shipping and stevedoring; for adult females the rates exclude rural industry, mining and quarrying, and building and construction.

<sup>(</sup>b) The amounts shown should not be regarded as actual current (c) Excludes rural industry; mining and quarrying; and building and

<sup>(</sup>a) See text above. (b) The amounts shown should not be regarded as actual current averages, but as an index expressed in money terms, indicative of trends. (c) Base: weighted average minimum hourly wage rate, Australia, 1954=100.0.

#### Standard hours of work

In the fixation of weekly wage rates, most industrial tribunals prescribe the number of hours constituting a full week's work (excluding overtime) for the wage rates specified. The hours of work so prescribed form the basis of the compilation of the weighted averages shown below. The main features of the reduction of hours to forty-four, and later to forty, per week were summarised in previous issues of the Year Book. Since January 1948, practically all employees in Australia have had a standard working week of forty hours or less. However, the number of hours constituting a full week's work (excluding overtime) differs between occupations and/or States. The weighted average standard hours of work (excluding overtime) prescribed in awards, determinations and collective agreements for a full working week in respect of adult male workers in all industry groups except rural industry and shipping and stevedoring, at 30 June 1982, were: New South Wales, 39.17; Victoria, 39.30; Queensland, 39.62; South Australia, 39.31; Western Australia, 39.26; Tasmania, 39.52; Australia, 39.29. Corresponding figures for adult female workers at 30 June 1982, were: New South Wales, 39.35; Victoria, 39.67; Queensland, 39.66; South Australia, 39.59; Western Australia, 39.73; Tasmania, 39.60; Australia, 39.53.

## Working hours arrangements

During the period February to May 1981 a special survey based on a sample of private and non-private dwellings was conducted throughout Australia in order to obtain information about the different types of working patterns of employed persons, such as evening and night work, shift work and weekend work. Results of this survey were published in *Working Hours Arrangements*, Australia, February to May 1981 (6338.0) A similar survey, of evening and night work and work patterns of employees, was conducted in November 1976. Results of this survey were published in Evening and Night Work, November, 1976 (6329.0) and Work Patterns of Employees, November 1976 (6328.0).

## Alternative working arrangements

During the period March to May 1982 a special survey based on a sample of private and non-private dwellings was conducted throughout Australia in order to obtain further information about working arrangements, such as the the incidence of permanent part-time work and the demand for reduced working hours and "tapered" and early retirement. Results were published in Alternative Working Arrangements, Australia, Preliminary, March to May 1982 (6340.0).

## Working conditions and employment benefits

During the period February to May 1979 a special survey based on a sample of private and non-private dwellings was conducted throughout Australia in order to obtain information about selected aspects of working conditions and a range of benefits provided by employers to employees. Results of these surveys were published in *Employment Benefits*, Australia, February to May 1979 (6334.0) and Working Conditions, Australia, February to May 1979 (6335.0).

## Annual leave and long service leave

The majority of employees in Australia at present receive four weeks paid annual leave.

Four weeks annual leave was granted to State government employees in New South Wales in 1964, in South Australia in 1971 and in Tasmania in October 1972. Australian Government employees received the entitlement in 1973, as did State Government employees in Victoria, Queensland and Western Australia. (Northern Territory Government employees are entitled to four weeks annual leave.)

In December 1973, Queensland day workers employed under State awards were granted four weeks paid annual leave. Subsequently, workers covered by State awards in other States were granted similar benefits.

In May 1974, the Australian Conciliation and Arbitration Commission granted four weeks paid annual leave to persons employed under the Metal Industry Award, to accrue from 1 January 1974. As a result, this benefit was extended to other Federal awards. In addition to the leave entitlement, workers also received a leave bonus which varies in amount (but a 17½ per cent addition to leave pay is a frequent provision in awards).

Paid long service leave, i.e. leave granted to workers who remain with the one employer or in the same industry over an extended period of time, has been included in the provisions of Federal and State industrial legislation and industrial awards. Most employees in Australia are now entitled to at least thirteen weeks paid long service leave after fifteen years continuous employment with the one employer. For employees in certain industries and for some employees of the Australian and State Governments, long service leave entitlements are more generous. In all cases the transfer of ownership of a business does not constitute a break in continuity of service with the same employer.

In May 1979, a survey based on the monthly population survey (see the section *The Population Survey* earlier in this chapter) was conducted throughout Australia in order to obtain information about the incidence and extent of annual and long-service leave-taking within Australia. Results of this survey were published in *Annual and Long-service Leave*, May 1979 (6317.0).

## SURVEYS OF EARNINGS AND HOURS

## Average weekly earnings

Estimates of average weekly earnings derived from particulars of employment and wages and salaries recorded on payroll tax returns, from other direct collections and from estimates of the unrecorded balance are no longer compiled by the ABS. Details regarding the change from payroll tax data to direct collection are contained in *Information Paper*, *Review of ABS Employment* (6239.0)

In September 1981 a new quarterly survey of employers based on the ABS Central Integrated Register was introduced to obtain employment and earnings information to produce the new average weekly earnings series.

One of the primary aims of the new series is to measure the trend of average weekly earnings. Accordingly, the data collected relates to those elements of earnings which as a general rule, are received by employees regularly. For the December quarter of each year more detailed dissections of earnings and additional information on hours paid for are collected and this will replace the annual October survey of earnings and hours. For further details, see pages 188-189.

A summary of the main differences in concepts, methods and scope of the old and new earnings series is published in *Information Paper*, Average Weekly Earnings—New series to replace former Payroll Tax Based Series (6336.0). Results of the new survey are published in Average Weekly Earnings, Australia (6302.0).

#### Scope and definitions

All wage and salary earners who received pay in respect of the reference period are represented in the survey, except: (i) members of the Australian permanent defence forces; (ii) employees of establishments primarily engaged in agriculture; (iii) employees in private households employing staff; (iv) employees on workers' compensation; (v) employees based outside Australia; (vi) employees paid soley from commission without a retainer; (vii) self employed persons such as working proprietors of unicorporated businesses; (viii) subcontractors; (ix) owner/drivers.

Reference period refers to the last pay-period ending on or before a specified date near the middle of the quarter. If the operations of the establishment(s) covered by the return were seriously curtailed by an industrial dispute, breakdown; fire, etc., during the reference period, particulars for the previous normal pay-period were obtained.

Employees comprise male and female wage and salary earners who received pay for the reference period.

Full-time employees are those who work the agreed or award hours for a full-time employee in their occupation and who received pay for any part of the reference period; if agreed or award hours do not apply, employees are regarded as full-time if they ordinarily work 30 hours or more a week.

Full-time employees temporarily on short-time, or who began or ceased work during the reference period, are included. Some employees, who were paid for a weekly attendance of less than 30 hours (e.g. aircrews, teachers, university lecturers), are classified as full-time if they worked the normal scheduled hours for a full-time week.

Adults are employees 21 years of age or over and those employees who are under 21 years of age but are paid at the full adult rate for their occupation.

Weekly total earnings refers to earnings of employees in the reference period, before taxation and any other deductions, e.g. superannuation, board and lodging, have been made. Earnings comprise overtime earnings, ordinary time earnings, shift allowances, penalty rates, commission and similar payments, and that part of paid annual leave, paid sick leave, long service leave and paid holidays taken during the reference period. Retrospective pay or pay in advance, annual leave loadings and other bonuses not related to the reference period are excluded.

Weekly ordinary time earnings refers to that part of weekly total earnings attributable to award, standard or agreed hours of work. Included in relation to these hours are shift allowances, penalty rates, commissions, bonuses and incentive payments, and one week's proportion of payments for annual and other leave taken during the specified pay-period.

#### Survey design

A sample of employers listed on the ABS central register of businesses was selected to ensure adequate State and industry representation. Industry was determined at the establishment level and all establishments of an enterprise within a State classified to a common industry were treated as a single composite unit. These industry units were then formed into categories or 'strata' according to their employment as recorded on the ABS register of economic units, and a random sample was then selected within each category. Some 3,600 employers are included in the sample.

#### Comparability of results

The new series differs in several important ways from the payroll tax based series which it replaces. In particular, data on male and female, ordinary and overtime earnings are obtained directly from a sample survey of employers drawn from an ABS register of economic units which is more complete than the coverage provided by employers subject to payroll tax.

Because of the differences in coverage, concepts and methods between the old and new series it is difficult to make direct comparisons for users who wish to obtain movements in earnings for a period which takes in both the old and the new series, a table has been included in recent issues of Average Weekly Earnings, Australia (6302.0) which shows quarter to quarter movements in the old and new series, linked to a common index base.

## Earnings and hours of employees (distribution and composition), May 1981

Results of the May 1981 survey contained in the tables below relate to the pay-period which included 11 May 1981. Similar surveys have been conducted in May each year from 1974 to 1981. The results of these surveys are published in *Earnings and Hours of Employees, Distribution and Composition, Australia* (6306.0) and in earlier issues of the Year Book.

#### Scope of survey

All wage and salary earners were represented in the survey except (i) members of the permanent defence forces, (ii) employees in agriculture, (iii) employees in private households employing staff, (iv) waterside workers employed on a casual basis, (v) employees on worker's compensation and (vi) persons employed by private employers (other than hospitals) not subject to payroll tax. At the time of sample selection, payroll tax was payable by employers paying in wages and salaries more than \$150,000 a year in Queensland and the Northern Territory, more than \$96,600 a year in Victoria, more than \$72,000 a year in New South Wales, South Australia, Western Australia and the Australian Capital Territory, and more than \$60,000 a year in Tasmania. In general, Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations were specifically exempted under the Australian and State Payroll Tax Acts.

#### Coverage

The survey covered stratified random samples of government departments and authorities, non-government hospitals not subject to payroll tax and other private employers subject to payroll tax.

#### Survey design

The majority of employers selected were requested to supply relevant details, on separate questionnaires, for only a sample of their employees. Individual employees were randomly selected by the employers in accordance with instructions supplied by the ABS. Employers with fewer than 10 employees were required to complete a questionnaire for every employee.

#### **Definitions**

Employees comprise male and female wage and salary earners within the survey scope who received pay for the specified pay-period.

Full-time employees are employees who received pay for the specified pay-period and whose standard (or rostered) weekly hours of work for that pay-period were at least 30 hours. Included are full-time employees who began or ceased work during the pay-period and full-time employees on paid annual leave, paid sick leave and paid holidays. Some employees (e.g. aircrews, teachers, university lecturers), although paid for a weekly attendance of less than 30 hours, were classified as full-time.

Non-managerial employees were defined to include minor supervisory employees, leading hands, clerical and office staff as well as ordinary wages employees. They exclude managerial, executive, professional and higher supervisory staff generally defined as those employees who (i) were ineligible to receive payment for overtime, or (ii) although subject to payment for overtime, were in charge of a significant number of employees in a separate establishment (or establishments). The basis of allocation of employees to these two categories may have varied between individual private employers and between employers in the private and government sectors, with consequent effects on survey results. For some occupations in government employment, such as school teachers and doctors, there is no general payment for overtime. In these cases, managerial, etc. staff were determined according to the degree of supervision exercised or in relation to the pay structure of associated administrative employees.

Weekly hours paid for refers to the hours for which payment was made. It comprises ordinary time hours defined below and overtime hours, which are those in excess of ordinary time hours. Weekly hours paid for were not reported for managerial, executive, professional and higher supervisory staff.

Ordinary time hours refers to award, standard or agreed hours of work. It includes stand-by or reporting time which are part of standard hours, and that part of paid annual leave, paid sick leave and long-service leave taken during the specified pay-period.

Weekly earnings refers to gross earnings before taxation and other deductions have been made. It includes overtime earnings, which refers to payment for overtime hours as defined above, and ordinary time earnings, as defined below. It includes one week's proportion of payments made other than on a weekly basis, e.g. salary paid fortnightly or monthly and paid annual or other leave taken during the specified pay-period. Pay in advance, retrospective pay and annual or periodical bonuses, etc. are excluded.

Ordinary time earnings refers to that part of weekly earnings which is attributable to ordinary time hours, as defined above. It comprises award or agreed base rates of pay for ordinary time hours paid for, including all allowances (other than overtime) specified in the award, etc.; payment by measured result, i.e. payment by piecework, task bonus, commission, etc.; and other earnings, i.e. attendance and good timekeeping bonuses, profit-sharing and any other forms of over-award, etc. pay.

Median earnings is the amount which divides the distribution into two equal groups, one having earnings above the median and the other having earnings below it. Medians were calculated from grouped data, linear interpolation being used within the class interval in which the median fell.

Mean (or average) earnings is the amount obtained by dividing the total earnings of a group (e.g. full-time employees) by the number of employees in that group.

#### Reliability of the estimates

c

Since the estimates from this survey are based on a sample they may differ from the figures that would have been produced if the information had been obtained for all employees. One measure of the likely difference is given by the *standard error*.

The figures in Table A below provide an indication of the magnitude of the standard error of estimates of numbers of persons (distribution of weekly earnings) shown in the table on page 186. An example of the use of Table A is as follows: if the estimate for Australia obtained from the sample is 30,000, the standard error is 1,800 (6 per cent), i.e. there are about two chances in three that the true figure is within the range 28,200 to 31,800 and about nineteen chances in twenty that this figure is between 26,400 and 33,600.

Table B indicates the relative standard errors of average weekly earnings for full-time non-managerial employees. An example of the use of this table is as follows: the table on the composition of average weekly earnings indicates that average overtime earnings of full-time male non-managerial employees aged 21 years and over (Australia) were \$29.00. Table B below shows the approximate standard error for this estimate to be 1.4 per cent (i.e. about 40 cents). There are about two chances in three that the true figure is within the range \$28.60 to \$29.40, and about nineteen chances in twenty that the true figure is between \$28.20 and \$29.80.

The percentage standard errors in Table B relate only to estimates for Australia. Estimates for the States and Territories have higher standard errors, those for New South Wales and Victoria being about twice, and those for the other States and Territories about 3 to 5 times, as great as those for Australia.

The smaller the estimate the higher is the relative standard error. Estimates with a standard error greater than 15 per cent have not been published, except those relating to overtime earnings and hours; for these categories all estimates with a standard error less than 20 per cent have been published. Estimates with standard errors 20 per cent but not greater than 30 per cent have also been published if the standard errors are not greater than \$1.00 or 0.5 hours respectively.

Relative standard errors for average weekly hours paid for are generally much lower than for the corresponding relative standard errors for average weekly earnings shown in Table B.

Relative standard errors for mean and median weekly earnings of 'all employees' are less than 1.5 per cent.

Note. Estimates of average weekly earnings shown in the tables are rounded to the nearest 10 cents, and those of average weekly hours paid for are rounded to the first decimal place. Any discrepancies between sums of components and totals in tables are due to rounding.

## Earnings and hours of employees, October 1981

Results of this survey, were obtained from the Quarterly Survey of Earnings for the December quarter 1981, which included additional questions relating to hours, junior employees and non-managerial employees. The results, some of which are shown below are similar to, but not comparable with previous surveys of earnings and hours. Detailed results and explanatory notes are published in Earnings and Hours of Employees, Australia, October 1981 (6304.0). Further information about the Quarterly Survey of Earnings is shown in the section on averge weekly earnings on pages 182-183. Definitions for additional items obtained from the December quarter survey are shown below.

Juniors are all other employees under 21 years of age.

Non-managerial employees include minor supervisory employees, leading hands, clerical and office staff as well as ordinary wages employees. They exclude managerial, executive, professional and higher supervisory staff, generally defined as those employees who (a) are ineligible to receive payment for overtime or (b) although subject to payment for overtime, are in charge of a significant number of employees in a separate establishment(s).

Weekly overtime earnings refers to that part of weekly total earnings for hours paid for in excess of award standard or agreed hours of work.

Weekly hours paid for refers to the hours for which payment was made. It comprises overtime hours and ordinary time hours. For employees paid other than weekly, hours were converted to a weekly basis. For employees who began or ceased work, or were absent without pay for any reason during the specified pay-period, only the hours actually paid for were included. Where agreed hours of work were less than award hours, hours were based on agreed hours. Hours of work were not reported for managerial, etc. staff.

Overtime hours refers to hours in excess of award, standard or agreed hours of work.

Ordinary time hours refers to award, standard or agreed hours of work. It includes stand-by or reporting time which are part of standard hours of work, and that part of paid annual leave, paid sick leave and long service leave taken during the specified pay-period.

#### Reliability of the estimates

Since the estimates from the survey are based on information which, was obtained from samples of employers, they may differ from the figures that would have been produced if the information had been obtained from all employers. One measure of the likely difference is given by the *standard error* (for definition *see* page 185).

Relative standard errors for the published estimates of average weekly ordinary time earnings and average weekly total earnings are generally less than 3 per cent. Relative standard errors for the figures of average weekly overtime earnings and hours are generally less than 10 per cent.

## Overtime

From July 1979 to June 1981 the ABS conducted a monthly sample survey of employers, by telephone, to obtain information about overtime hours worked by employees. In this two year period the survey did not show sufficient month-to-month variation to warrant the continuation of the survey as a monthly collection therefore, the survey, since August 1981, has been conducted quarterly, in August, November, February and May of each year. The survey is generally conducted in respect of the last pay period ending on or before the third Friday of each survey month.

A summary of the results of the surveys to August 1982 is shown in the tables below. More detailed information and explanatory notes are published in *Overtime*, *Australia* (6330.0).

## Weekly earnings of employees (distribution) August 1981

In August 1981 a survey based on the population survey (see the section *The Population Survey* earlier in this chapter) was conducted throughout Australia in order to obtain information about weekly earnings of all persons aged 15 years and over who were employed as wage or salary earners in their main job.

Some results on weekly earnings of wage and salary earners are presented below. Additional details are published in Weekly Earnings of Employees (Distribution), Australia, August 1981 (6310.0).

In many cases the answer to the question on earnings was based on the knowledge of one person, generally the housewife. Some understatement in the estimates may be expected because of imperfect recall of minor or irregular sources of earnings.

#### **Definitions**

Weekly earnings refers to gross weekly wages and salaries from all jobs (i.e. before taxation and other deductions have been made). For persons paid other than weekly, earnings were converted to a weekly equivalent.

Median weekly earnings is the amount which divides the distribution of individuals into two equal groups, one having earnings above the median and the other having earnings below it. Medians were calculated from grouped data with linear interpolation being used within the class interval in which the median fell.

Mean weekly earnings is the amount obtained by dividing the total earnings of a group by the number of units in that group.

Full-time workers are those who usually work 35 hours a week or more and others who, although usually part-time workers, worked 35 hours or more during the survey week.

Part-time workers are those who usually work less than 35 hours a week and who did so during the survey week. When recording hours of work, fractions of an hour were disregarded.

#### Reliability of estimates

Since the estimates from this survey are based on information obtained from the occupants of a sample of dwellings, they may differ from the figures that would have been produced if the information had been obtained from occupants of all dwellings. One measure of the likely difference is given by the standard error.

The following estimates have not been shown as they are subject to sampling variability too high (more than approximately 20 per cent) for most practical uses; less than 4,500 for Australia, New South Wales and Victoria; less than 3,500 for Queensland; less than 2,500 for South Australia and Western Australia; less than 1,500 for Tasmania; and less than 2,000 for the Northern Territory and the Australian Capital Territory.

Means and medians are also subject to sampling variability. Standard errors vary according to the size and distribution of the population for which the mean and median have been obtained. Standard errors of means and medians in the tables below could generally be expected to be below 6 per cent. For populations of 100,000, the standard errors of the means and median would both be about 2 per cent.

## INCOME DISTRIBUTION SURVEYS

A survey of annual income in respect of 1978-79 was conducted throughout Australia in the period September to December 1979 in order to obtain information about income of individuals, unemployed persons, income units and families. Some results of this survey were published in the 1981 and 1982 issues of the Year Book. Additional details are published in *Income Distribution*, Australia, 1978-79: Unemployed Persons (6521.0); Individuals (6502.0); Income Units (6523.0) and Supplementary Tables (6504.0), the last of which contains tables for individuals, income units and families.

Similar surveys were conducted in November 1969 and November 1974 in respect of 1968-69 and 1973-74. Results were published in *Income Distribution*, 1968-69, Consolidated and Revised Edition (6505.0); Income Distribution, 1973-74 Part 1 (6502.0) individuals, Part 2 (6503.0) families and Part 3 (6504.0) individuals, families and income units.

Questions were asked in respect of each person aged 15 years or over, except those attending school full-time, on the amount of income received in 1978-79 from each of the following sources: wages or salary; own business, profession, farm, etc. (net income); share in a partnership (net income); government social security and welfare cash benefits; superannuation; interest, dividends, rent, etc.; other sources

Although some respondents referred to personal records, in many cases answers were based on memory. Some understatement in the estimates may be expected because of imperfect recall, particularly of minor or irregular sources of income, or because of misunderstanding of the questions.

#### **Definitions**

Total income is the sum of income received from each of the sources listed above.

Median income is the amount which divides the distribution into two equal groups, one having incomes above the median and the other having incomes below it. Medians were calculated from grouped data with linear interpolation being used within the class interval in which the median fell.

*Mean income* is the amount obtained by dividing the total income of a group by the number in that group.

A family consists of two or more persons living in the same household, the head of the family and spouse (if any) and any person(s) related to them either by blood, marriage (including de facto relationships) or adoption.

Married couple income units consist of a husband, wife and dependent children (if any), as defined.

One parent income units consist of a parent and at least one dependent child; they cannot include a married couple.

One person income units consist of persons not included in units defined in the above paragraphs. Non-dependent children living with their parents are classed as one person income units.

Dependent children are all unmarried persons living with their parent(s) and either under 15 years of age, or full-time students aged 15-20 years whose earned income in 1978-79 was less than \$1,600.

#### Reliability of the estimates

Since the estimates are based on information from occupants of a sample of dwellings, they may differ from the figures that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the *standard error* (for definition *see* page 185). All estimates in the tables below have standard errors of less than 20 per cent. An estimate of 100,000 persons or income units would have a standard error of approximately 5.5 per cent. Standard errors of the medians and means are less than 1 per cent.

<sup>(</sup>a) Comprises persons who were not married and had no dependent children and who either lived alone or with other persons with whom they are not related.

#### INDUSTRIAL DISPUTES

The tables in this section refer to disputes involving stoppages of work of ten man-days or more: statistics of persons affected at establishments other than those at which the stoppages occurred are not included.

The statistics are compiled according to the Australian Standard Industrial Classification (ASIC), described in the ABS publication Australian Standard Industrial Classification, 1978, Vol. 1 (1201.0). Prior to 1980 the statistics were compiled using the Preliminary Edition, 1969.

Detailed information, including explanatory notes, definitions, etc. on industrial disputes involving stoppages of work, is given in the annual publication *Labour Statistics*, *Australia* (6101.0). A table showing statistics of industrial disputes for each year from 1913 is contained in the Appendix to *Labour Report* No. 58, 1973. Current statistics are published in the monthly publication *Industrial Disputes*, *Australia* (6321.0). Quarterly and annual figures are published in *Industrial Disputes*, *Australia* (6322.0).

The annual figures contained in tables on this page and pages 199, 200 and 202 relate to disputes in progress in the year, whilst figures in tables on page 201 relate only to disputes which ended in the reference year.

PLATE 34

0

The following table shows, for the years 1979 to 1981, working days lost in industrial disputes which ended in those years, classified according to duration, causes and methods of settlement. Causes (i.e. the direct causes of stoppages of work) are grouped as follows:

Wages—claims involving general principles relating to wages, including combined claims relating to wages, hours or conditions of work. Hours of work—claims involving general principles relating to hours of work. Leave, pensions, compensation provisions, etc.—claims involving general principles relating to these provisions. Managerial policy—disputes concerning managerial policy of employers including computation of wages, hours, leave, etc. in individual cases; docking pay, etc.; dismissals, etc.; principles of promotion, etc.; employment of particular persons and personal disagreements; production limitations, etc. Physical working conditions—disputes concerning physical working conditions including safety issues; protective clothing and equipment, etc.; amenities; shortage of, or condition of, equipment or material; new production methods, etc.; arduous physical tasks, etc. Trade unionism—disputes concerning employment of nonunionists; inter-union and intra-union disputes; sympathy stoppages; recognition of union activities, etc. Other—disputes concerning protests directed against persons or situations other than those dealing with employer-employee relationship; non-award public holidays; accidents and funerals; no reason given for stoppage; etc.

<sup>(</sup>a) Refers to disputes which ended in the year. See page 198. (b) For nature of classification, see text above. (c) Method directly responsible for ending the stoppage of work. (d) Includes Industrial Tribunals under (i) Conciliation and Arbitration Act, (ii) Coal Industry Acts, (iii) Stevedoring Act, (iv) Other Acts, and intervention, etc. of Federal government officials.

The following table shows the number of working days lost per 1,000 employees in the years 1976 to 1981. For classification of causes see grouping on page 201. The figures to 1979 are based on estimates of employees as published in *Civilian Employees*, Australia (6213.0). As this series was suspended from April 1980, estimates from 1980 have been calculated by using estimates of employees from the labour force survey. For purposes of comparison, figures for 1979 have been shown on both bases.

INDUSTRIAL DISPUTES: WORKING DAYS LOST PER 1.000 EMPLOYEES

	1976	1977	1978	1979	1979(a)	1980(a)	1981(a)

volving employer/employee re- lationship	344	323	387	594	594	592	794

<sup>(</sup>a) Based on estimates from the labour force survey.

#### INDUSTRIAL ACCIDENTS

Statistics of industrial accidents and diseases and workers' compensation are currently available only on a State basis and are included in the various State Year Books and publications. Some work to develop a collection including national totals and estimates on a uniform basis throughout the States began in 1978 and is continuing. Work is proceeding with respect to improving coverage, especially under jurisdictions other than the principal Workers' Compensation Act in each State.

# LABOUR ORGANISATIONS Labour organisations in Australia

#### Labout of Gamisacions

#### Trade unions

For the purpose of these statistics a *trade union* is defined as an organisation, consisting predominantly of employees, whose principal activities include the negotiation of rates of pay and conditions of employment for its members. Returns showing membership by States and Territories at 31 December each year are obtained for all trade unions and employee organisations. Results of this collection are published in the annual bulletin *Trade Union Statistics*, *Australia* (6323.0). The following table shows the position at the end of each of the years 1976 to 1981. Some of the figures shown have been revised; for a more detailed explanation of the revisions, see *Trade Union Statistics*, *Australia*, *December 1981* (6323.0).

TRADE UNIONS: NUMBER, MEMBERSHIP AND PROPORTION OF TOTAL EMPLOYEES

								Number of	Number of men ('000)	Proportion of total									
End of	Dec	en	ıbe	r						separate unions(a) Males					Females	employees (per cent)			
1976																322	1,956.8	843.3	55
1977																324	1,940.6	857.4	55
1978																330	1,969.2	861.5	56
1979	Ţ.															328	1,971.4	902.2	56
1979																• 328	1,971.4	902.2	56 (b)
1980		Ī	·	Ċ		Ċ	Ċ	i	į.							325	2,009.5	946.3	56 (b)
1981			324	2,029.4	964.7	56 (b)													

<sup>(</sup>a) Without inter-State duplication. (b) Based on estimates from the labour force survey, see below.

In the table above the approximate percentages of wage and salary earners in employment who were members of trade unions are shown. The estimates of employees have been derived by adding figures for employees in agriculture and in private households employing staff to the estimates of employees in all other industries as at the end of each year. Estimates of the proportion of total employees for 1976 to 1979 are based on estimates of employees as published in Civilian Employees, Australia (6213.0). As this series was suspended as from April 1980 the proportions of total employees shown from December 1980 have been calculated by using estimates of employees from the labour force survey. For purposes of comparison figures for December 1979 have been shown on both bases. The percentages shown should be regarded as giving only a broad indication of the extent of union membership among wage and salary earners because they are based on estimates of employed wage and salary earners which are subject to revision and because the degree of unemployment of reported union members will affect the percentages for a particular year and comparison over time.

TRADE UNIONS: CLASSIFICATION ACCORDING TO NUMBER OF MEMBERS, 1981

												Separate	unions	Members	
Number of mem	<del>_</del> ·										Number	Proportion of total (per cent)	Number ('000)	Proportion of total (per cent)

In November 1976 a survey based on the population survey (for details see the section The Population Survey earlier in this chapter) was conducted throughout Australia in order to obtain information about the industry and occupation, and some demographic characteristics, of wage and salary earners who were members of trade unions. Results of the survey are published in Trade Union Members, November 1976 (6325.0).

#### Employer and employee organisations registered under Industrial Arbitration Acts, etc.

The Federal Conciliation and Arbitration Act 1904 and a number of State industrial arbitration Acts provide for the registration of employer and employee organisations as outlined below. In general, registration is necessary before an organisation may appear before the relevant industrial arbitration tribunal.

In Victoria and Tasmania, where wages and conditions of work in the State sphere are determined by Wages Boards and Industrial Boards respectively, there is no provision in industrial arbitration legislation for registration of trade unions or employer organisations.

Federal. At the end of 1981 the number of employers' organisations registered under the provisions of the Conciliation and Arbitration Act 1904 was 82. The number of unions registered at the end of 1981 was 151, with membership of approximately 2.44 million, representing 82 per cent of the total membership of all trade unions in Australia. Lists of organisations of employees and employers registered under this Act are published periodically by the Office of the Industrial Registrar (Australian Conciliation and Arbitration Commission). (Branches of employer organisations and unions may also register under various State Acts, as outlined below.)

New South Wales. At 30 June 1981 there were 112 employee unions and 299 employer unions registered under provisions of the Industrial Arbitration Act 1940, and 131 employee unions, 11 employer unions, and 8 other unions registered under the Trade Union Act 1881. (Unions may register under either or both Acts.) Lists of unions registered under these Acts are included in the New South Wales Industrial Gazette. (See Vol. 226 for details at 30 June 1981.)

Queensiand. At 31 December 1981 there were 74 employee unions registered under the Industrial Conciliation and Arbitration Act 1961–1980 with a reported membership of 374,013. At the same date, 39 employer unions with a reported membership of 36,854 employers were registered. Lists of registered employee and employer unions are published in the annual report of the President of the Industrial Court.

South Australia. At the end of December 1981 there were 10 employer associations and 73 employee associations registered under the provisions of the *Industrial Conciliation and Arbitration Act* 1972 as amended. Membership of these employee associations totalled approximately 200,300.

Western Australia. At 30 June 1982 there were 69 unions of workers, with an aggregate membership of 171,912, registered under the provisions of the Industrial Arbitration Act, 1979-1981. At the same date there were 14 registered unions of employers with a reported aggregate membership of 2,142 employers. Lists of registered unions of workers and of employers, together with membership figures, are published in the Annual Report of the Chief Industrial Commissioner of the Western Australian Industrial Commission.

### **Central Labour Organisations**

At the end of September 1982 there remained in Australia two main central labour organisations: the Australian Council of Trade Unions (ACTU), which came into being in 1927 and at the end of September 1982 had affiliated with it 156 trade unions with a combined membership of approximately 2.35 million; and the Council of Professional Associations which was formed in 1956 and as at September 1982 had 8 organisations affiliated with it with an aggregate membership of approximately 22,000.

## **International Labour Organisation**

The International Labour Organisation (ILO) was established on 11 April 1919, as an autonomous institution associated with the League of Nations. Its original constitution was adopted as Part XIII of the Treaty of Versailles. With certain amendments this constitution remains the charter of ILO to this day, bringing governments, employers and trade unions together to discuss international labour and social problems. A new definition of the aims and purposes of the ILO known as the Declaration of Philadelphia, which was added to the constitution at the 1944 Session of the International Labour Conference, asserted the responsibility of ILO in combating poverty and insecurity. In 1946 the Organisation became the first of the specialised agencies of the United Nations. Under the terms of agreement, the United Nations recognises the ILO as a specialised agency having responsibility in the field defined by its constitution, which embraces labour conditions, industrial relations, employment organisation, social security and other aspects of social policy.

The ILO operates through a tripartite structure which enables governments, employers and workers to participate directly in its activities. The Organisation consists of the International Labour Conference, which is responsible for the formulation of international labour standards, and is composed of four representatives (2 government, one employers' and one workers') from each of the 150 Member States; the Governing Body, which decides numerous matters relating to the overall direction of the ILO and which consists of the representatives of 28 governments, 14 employers' and 14 workers' representatives; and the International Labour Office, which collects and distributes information on all subjects relating to the international adjustment of conditions of work and provides the secretariat. Particulars of the proceedings of International Labour Conferences up to the 58th Session and details of ILO conventions ratified by Australia are given in *Labour Report* No. 58, 1973, pages 255-9.

ILO publications on labour statistics include International Recommendations on Labour Statistics, An Integrated System of Wages Statistics, the quarterly Bulletin of Labour Statistics and the Year Book of Labour Statistics.

One of the functions of the ILO is to sponsor the International Conferences of Labour Statisticians at which the ABS is usually represented. Since 1923, the ILO has conducted 13 International Conferences of Labour Statisticians, the latest being held in Geneva in October 1982. These conferences are responsible for recommending and reviewing standards which the ABS adopts wherever practicable.

## EMPLOYMENT AND TRAINING PROGRAMS

The Commonwealth Government has a range of programs designed to promote work experience and training. The principal aims of these programs are to maintain an adequate supply of trained persons to meet the needs of industry and to assist disadvantaged groups in the labour market. The main Commonwealth programs are described below.

## Trade Training

## Commonwealth Rebate for Apprentice Full-time Training (CRAFT)

This program compensates employers for the cost of releasing apprentices to attend off-the-job-training courses, including basic trade courses provided by technical education institutions. From 1 January 1983 it pays tax exempt rebates of between \$21.00 and \$41.00 per day, depending upon the trade and level of training.

#### Special apprentice training

Four types of support are available for certain categories of apprentices. Under the *Group One Year Scheme* assistance is provided to enable apprentices indentured to private employees to undertake their first year of training in Government establishments.

The Special Assistance Program makes provision for a subsidy to employers to employ apprentices who have been retrenched by their former employer. Assistance provided under the Group Apprenticeship Support Program enables small employers who would normally be unable to employ apprentices to establish joint projects to train apprentices. The Special Trade Training Program has been developed to provide special assistance for the training of adult apprentices in skills which are in short supply.

#### **Skills Training**

#### Skills in demand

This program promotes the training of persons in particular skills which are in demand by industry. It offers a range of assistance including the costs of establishing and running training courses and providing allowances for unemployed trainees. The development and management of this training is on a joint industry and government basis.

#### General training assistance

Under General Training Assistance subsidies can be provided to employers who employ and train an unemployed person if they are unable to obtain a suitably trained applicant. The weekly rates for on-the-job training are \$50.80 per week for juniors and \$69.30 per week for adults. A training allowance equal to the rate of unemployment benefit plus an allowance of \$37.00 per week (\$15.30 for persons aged under 18) can be provided to eligible unemployed persons who undertake formal study in an occupation which is in demand.

#### **Industry training services**

In addition to specific schemes directed at the training of individuals, the Government also provides aid to assist industry to develop and improve its own training programs.

### Youth training

A School to Work Transition Allowance, equal to the level of unemployment benefit plus \$6.00 per week, is available to eligible unemployed young persons to enable them to attend full-time transition courses conducted by Technical and Further Education (TAFE) Colleges. For further details refer to Education chapter on page 271). A Pre-Apprenticeship Allowance of \$20.00 per week is available to persons who do not meet the eligibility criteria for the transition allowance while they are attending Government funded pre-apprenticeship training at TAFE institutions.

#### Special Youth Employment Training Program (SYETP)

A major disadvantage faced by young people in competing in the labour market is a lack of appropriate work skills and previous work experience. Often a lack of the personal qualities or formal qualifications required by employers add to their difficulties.

To offset these disadvantages, wage subsidies may be provided to employers. To qualify for the subsidy employers must be prepared to make available work experience and on-the-job training in full-time jobs for 17 or 34 weeks.

Two levels of subsidy are available:

Standard SYETP where \$75.00 per week is provided for up to 17 weeks for young people aged between 15 and 24 years who are registered as unemployed with the Commonwealth Employment Service (CES) and have been so registered and away from full-time education for at least four of the last twelve months; and

Extended SYETP where a subsidy at \$100.00 per week is provided for up to 17 weeks, then \$75.00 per week for a further 17 weeks for young people aged between 18 to 24 years who are registered as unemployed with the CES and have been so registered and away from full-time education for at least eight of the last twelve months.

### Special training

Some groups in the community, because of background and circumstances beyond their control, face additional disadvantages in gaining and maintaining employment. In recognition of these disadvantages special programs, allowances and subsidies are available.

Two such groups are Aboriginals and the disabled. Assistance provided includes the provision of public sector training positions, training allowances and employer subsidies. Special training projects for Aboriginals and work preparation courses for disabled persons are also supported.

## **Employment services**

A number of programs are funded to support the Government's manpower and training policies and to offset the effects of certain inefficiencies in the labour market.

The two main types of program are mobility assistance programs and information programs. Mobility assistance includes *Relocation Assistance Scheme* (RAS) which assists the relocation of unemployed people or people who have received notification of impending redundancy and who are unable to obtain within a reasonable time continuing employment in the area in which they live, and the *Fares Assistance Scheme* (FAS) which assists unemployed people to attend job interviews with prospective employers.

The information programs include the provision of Occupation Information and a National Promotional Campaign to ensure a widespread knowledge of the assistance provided under the Government's programs.

#### Youth affairs

A number of programs other than manpower and training programs are maintained to assist youth.

### Community-based youth programs

Community-based youth programs encourage the community to support unemployed youth; these include:

The Community Youth Support Scheme (CYSS). The objective of CYSS is to encourage communities to assist local unemployed young people to develop their capacity for obtaining and retaining employment, and also to become more self-reliant during periods of unemployment.

The Volunteer Youth Program which provides grants to community organisations for the purpose of facilitating the placement of unemployed young people in voluntary community service activities with the aim of developing and enhancing their work-related skills.

The Community Youth Special Projects Program which assists community organisations to develop individual projects aimed at offering the young unemployed full-time structured training and employment-related activities.

There are also a number of other related youth schemes which make grants to Youth Organisations and Youth Exchanges and Youth Studies.

## Trade Union Training Authority

The Trade Union Training Authority (TUTA) was established in 1975 for the provision, coordination, promotion and evaluation of trade union training in Australia. Training programs are conducted at TUTA's centres in each capital city, in country locations throughout Australia and at the TUTA's national residential college at Albury/Wodonga, the Clyde Cameron College.
