

1 History, Geography, and Government

HISTORY

Permanent settlement

The first recorded sighting by Europeans of the south coast of Australia was at Point Hicks by the expedition of Captain James Cook RN in 1770. Navigators and explorers, whalers and sealers had previously set foot on its shores, but Victoria was founded in 1835 when permanent settlers seeking pastoral land crossed Bass Strait and occupied the site of the future city of Melbourne. Although there had been earlier settlements on the coast - in 1803 at Sorrento, in 1826 at Western Port, and in 1834 at Portland - it was this arrival of pastoral settlers from Van Diemen's Land that led to the first permanent settlement of Victoria (then the Port Phillip District of New South Wales).

Early development

The development of the State and its capital city was the work of many people who overcame much hardship to cultivate agriculture, husband stock, prospect and mine for gold, and provide factories and services. While it was still the Port Phillip District, many institutions had been established. The first census was taken in 1836 when the settlement numbered 142 males and 35 females. In the year of Queen Victoria's accession, 1837, the town of Melbourne was named. Robert Hoddle surveyed the site of the present inner city after a design by Robert Russell that showed great vision in its grid of wide streets. The first Post Office was opened in 1841. Gradually settlement spread out from the centre. In the sixteen years between settlement of the district and separation of the colony of Victoria from New South Wales, the township had become the hub of a largely pastoral area, banks and insurance offices had opened, newspapers were begun, churches, schools, hospitals, theatres, taverns, and bridges were built, and the Botanic Gardens laid out. Melbourne was incorporated as a town in 1842, and was proclaimed a city by Royal Letters Patent in 1847.

Discovery of gold

Almost concurrently with separation in 1851, the discovery of gold in Victoria at Ballarat, Bendigo, and many other places brought the influx of diggers from all parts of the world that hastened the colony's growth. It also, inevitably, led to a spate of bushranging, and in 1854 to the miners' riots and the insurrection at the Eureka Stockade. By 1854 Victoria's population totalled almost 300,000. In the fifties Cobb & Co. coaches were operating, law courts were established, railways ran to Sandridge (Port Melbourne) on Hobsons Bay and to Geelong, a university, a public library, an art gallery, and a museum were founded, workers won the 8 hour day, distance was conquered by telegraph, and a town water supply was ensured by the Yan Yean Reservoir. The community took some responsibility for such external matters as defence, with the formation of military units and its own naval vessel, HMVS *Victoria*, which arrived in 1856. The turbulent struggle of a frontier to become civilised was epitomised in the tragedy of the Burke and Wills exploring expedition that left Melbourne in 1860.

During the next three decades the colony consolidated its position on the foundation that gold had laid. Industries diversified, a stock exchange and a mint were begun in Melbourne, and education was made free, compulsory, and secular. Railways stretched out in a wide rural network. The Melbourne Cup was first run in 1861 and the first cricket test between England and Australia held in Melbourne was in 1877, while Australian Rules football was evolving from a local inter-school game to become more recognisably the sport of later years. The demise of bushranging followed the capture of Ned Kelly in 1880. Melbourne's solidity was exemplified in the expansion of the eighties that saw many great technological advances, including an extensive cable tram network that spread throughout the city and suburbs from 1885, and operated in parts as late as 1940. Architectural developments included the building that housed the International Exhibition of 1880.

'Marvellous Melbourne'

The city had grown from 'the place for a village' to 'Marvellous Melbourne' in only 50 years with about 300,000 inhabitants out of almost one million in the colony, tall buildings, busy factories, and a bustling commercial sector. Stone government buildings in Italian Renaissance style reflected a civic opulence that rivalled the ostentation of rich citizens whose mansions stood in spacious grounds. Gaslit streets and bridges, and horse drawn carriages and cabs in tree lined avenues and boulevards, were reminders of other great river cities such as London and Paris.

1885-1935

Between 1885 and 1935 Victoria shared the suffering that accompanied war and economic depression. The maritime strike of 1890, the bank crash, and seven years of drought from 1895 to 1902 made the approach to the twentieth century a marked contrast from the boom years. Federation in 1901 coincided with the end of the Victorian era and the emergence of the motor car age in the Edwardian era. Melbourne, with half a million people at the turn of the century, became the capital of Australia until 1927, when the seat of Federal government transferred to Canberra. During the First World War, the State was shocked at the loss of many of its men in battles at Gallipoli and on the Western Front.

After the war the suburban rail network was electrified from 1919, enabling the growing population to spread to more distant suburbs. The twenties were a time of comparative optimism that saw the advent of broadcasting and the building of palatial cinemas. Motor transport had led to a growing length of highways, and in 1924 electric power from Yallourn brown coal was first transmitted. The early thirties were the reverse with high unemployment in the Great Depression. Melbourne was a city of a million people, more than half the State total, when it celebrated its centenary and dedicated its Shrine of Remembrance.

The Past 50 Years

Since 1936, Victoria has experienced the Second World War and the boom period of post-war recovery. The stimulus of war on its existing strong manufacturing base gave the opportunity to turn to new commodities that later facilitated the mass production of motor vehicles and the building of ships and aircraft. The motor car, in turn, made possible the establishment of outer suburbs to accommodate the expanding population resulting from the post-war migration program. The last fifty years have seen Melbourne's population almost treble to nearly three million, ten times that of a century before, and three quarters of the State total.

Planners determined where growth should occur and freeways and bridges were built to allow rapid movement of goods and people. In 1962 the standard gauge railway between Melbourne and Sydney was opened to eliminate the changes of gauge at Albury which had dated from 1883. Natural gas from the Bass Strait oil fields became available from 1969 and Victoria became the foremost oil-producing State. Tullamarine was the site for an international airport which opened in 1971. Public transport was upgraded to include the underground rail loop, opened in 1981. The Port of Melbourne is the busiest container port in Australia. New universities and colleges were opened to cater for the greater need for higher education.

Victoria is a highly urbanised State. It has an invigorating climate and a pleasant environment although subject to occasional serious bushfires, droughts, and floods. Farming has become increasingly mechanised in recent years. A strong tradition as a manufacturing and financial State has been augmented by a reputation for advanced research and technology. Melbourne has the reputation of being cosmopolitan, with ethnic festivals and restaurants adding variety to traditional social activities. In 1956 it enjoyed the international spotlight as host city for the Games of the XVIIth Olympiad, which coincided with the introduction of television. Its Arts Centre, consisting of the National Gallery, the Melbourne Concert Hall, and the Theatres Complex, has given Melbourne world class cultural facilities on the river, not far from where the city began a century and a half ago.

GEOGRAPHY

Geographic position and area

The most southerly point of Wilsons Promontory, in latitude $39^{\circ} 08' S.$, longitude $146^{\circ} 22' 30'' E.$, is the southernmost point of the mainland of Victoria and similarly of the mainland of Australia; the northernmost point is where the western boundary of the State meets the Murray River, latitude $33^{\circ} 59' S.$, longitude $140^{\circ} 58' E.$; the point furthest east is Cape Howe, situated in latitude $37^{\circ} 31' S.$, longitude $149^{\circ} 58' E.$ The westerly boundary lies upon the meridian $140^{\circ} 58' E.$, and extends from latitude $33^{\circ} 59' S.$ to latitude $38^{\circ} 04' S.$, a distance of 451 kilometres.

Victoria covers an area of about 227,600 square kilometres. It is therefore slightly smaller than Great Britain which (if inland water is included) contains 229,900 square kilometres.

TABLE 1.1 AREA OF STATES AND TERRITORIES

<i>State or Territory</i>	<i>Area in square kilometres</i>	<i>Percentage of total area</i>
Western Australia	2,525,500	32.88
Queensland	1,727,200	22.48
Northern Territory	1,346,200	17.52
South Australia	984,000	12.81
New South Wales	801,600	10.44
Victoria	227,600	2.96
Tasmania	67,800	0.88
Australian Capital Territory	2,400	0.03
Australia	7,682,300	100.00

Coastline

The Victorian coastline comprises many types of environments. Broad sandy beaches and impressive cliffed headlands along the ocean coast contrast with mangrove-fringed mudflats and marshland of the sheltered embayments and estuaries. There are approximately 1,200 kilometres of ocean coast between Cape Howe and the South Australian border; in addition three large embayments — Port Phillip Bay (260 kilometres), Western Port Bay (140 kilometres), and Corner Inlet (80 kilometres) — partially enclose protected waters where most of the ports and harbours are situated.

Physical divisions

The chief physical divisions of Victoria are shown in Figure 1 on page 5. Each of these divisions has certain physical features (elevation, geological structure, climate, and soils) which distinguish it from the others. The following is a list of these divisions:

1. Murray Basin Plains:
 - (a) The Mallee
 - (b) The Riverine Plains
 - (c) The Wimmera
2. Central Highlands:
 - A. The Eastern Highlands
 - B. The Western Highlands:
 - (a) The Midlands
 - (b) The Grampians
 - (c) The Dundas Tablelands
3. Western District Plains:
 - (a) The Volcanic Plains
 - (b) The Coastal Plains
4. Gippsland Plains:
 - (a) The East Gippsland Plains
 - (b) The West Gippsland Plains
5. Southern Uplands:
 - (a) The Otway Ranges
 - (b) The Barrabool Hills
 - (c) The Mornington Peninsula
 - (d) The South Gippsland Highlands
 - (e) Wilsons Promontory

The following table lists some of Victoria's highest mountains:

TABLE 1.2 HEIGHT OF SELECTED MOUNTAINS, VICTORIA
(metres)

<i>Mountain</i>	<i>Height</i>	<i>Mountain</i>	<i>Height</i>
Bogong	1,986	Niggerhead	1,843
Feathertop	1,922	Mckay	1,843
Nelse North	1,883	Cobberas No. 1	1,838
Fainter South	1,877	Cope	1,837
Loch	1,874	Spion Kopje	1,836
Hotham	1,861	Buller	1,804

CLIMATE**General conditions**

The major topographical determinant of the climate is the Great Dividing Range, running east-west across the State, and rising to nearly 2,000 metres in the eastern half. This acts as a barrier to the moist south-east and south-west winds and together with its proximity to the coast, causes the south of the State to receive more rain than the north.

To the south of Victoria, except for Tasmania and its islands, there is no land for 3,000 kilometres. This vast area of ocean has a moderating influence on

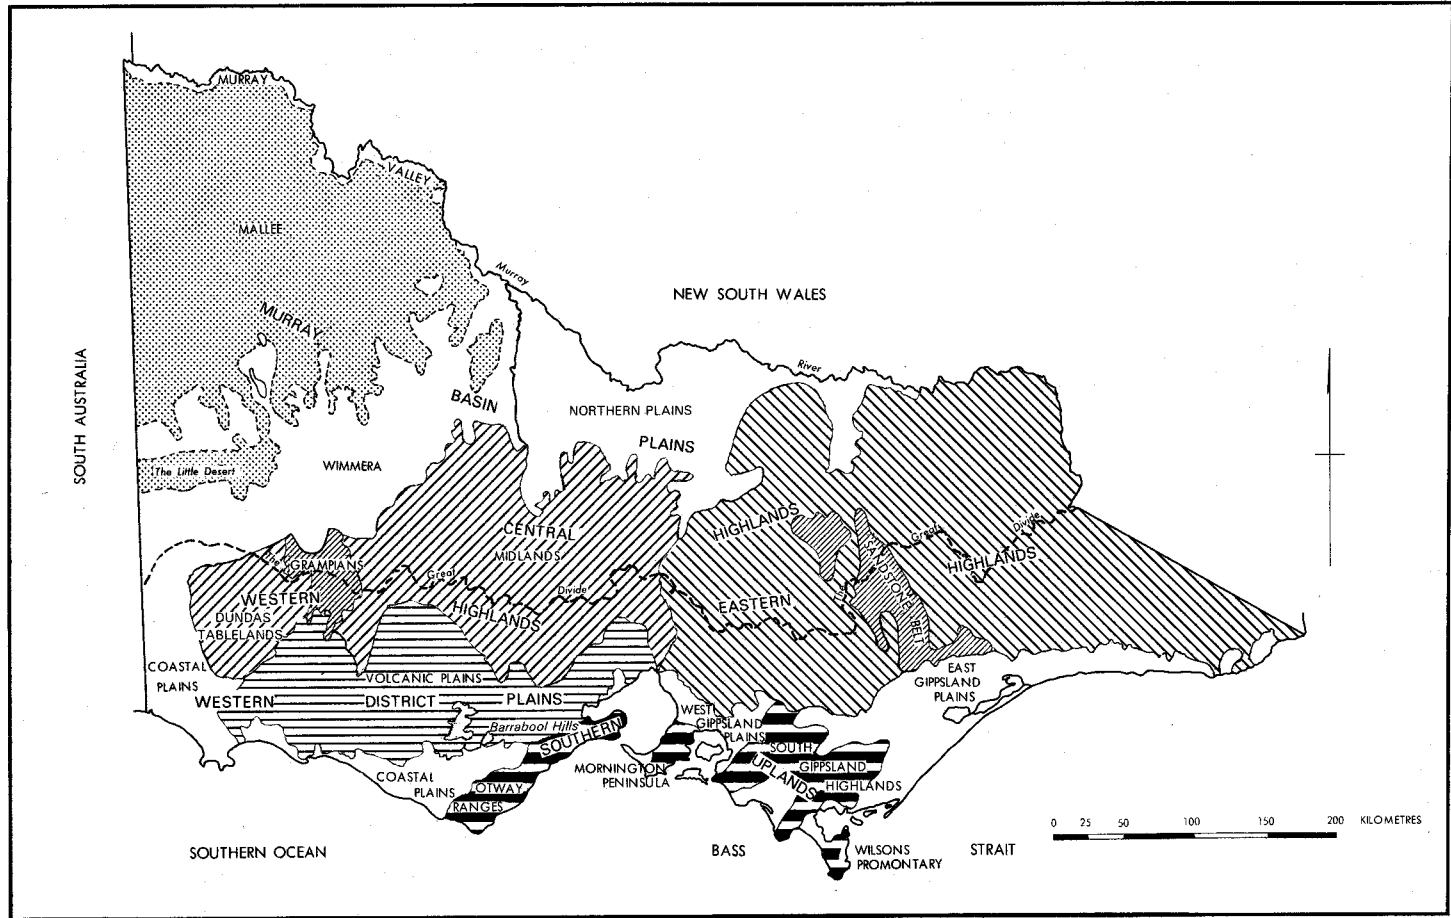

Figure 1. Physiographic divisions of Victoria.

Department of Property and Services

Victoria's climate in winter. Snow, which is a common winter occurrence at similar latitudes on the eastern seaboard of the great land masses of the northern hemisphere, is rare in Victoria below elevations of 600 metres. To the north of Victoria, the land mass of Australia becomes very hot in the summer, and on several days at this time of year the temperature over the State may rise to between 35°C and 40°C, often with a strong northerly wind.

Climate in Melbourne

The proximity of Port Phillip Bay bears a direct influence on the climate of the metropolitan area. The hottest months in Melbourne are normally January and February, when the average maximum temperature is 26°C. Inland, Watsonia has an average of 27°C, while along the Bay, Ascendale and Black Rock, subject to any sea breeze, have an average of 25°C. This difference does not persist throughout the year, however, and in July average maxima at most stations are within 1°C of one another at approximately 13°C. The hottest day on record in Melbourne was 13 January 1939, when the temperature reached 45.6°C. This is the second highest temperature ever recorded in an Australian capital city. In Melbourne, the average number of days per year with maxima over 35°C is about nine, but there were twenty-five in the summer of 1897-98 and there have been a few years with no occurrences. The average annual number of days over 30°C is approximately twenty-nine.

Nights are coldest at places a considerable distance from the sea, and away from the city where heat retention by buildings, roads, and pavements may maintain the air at a slightly higher temperature. The lowest temperature ever recorded in the city was -2.8°C on 21 July 1869, and the highest minimum ever recorded was 30.6°C on 1 February 1902.

In Melbourne the overnight temperature remains above 20°C on about four nights per year. During the early years of record, temperatures below 0°C were recorded during most winters. However, over more recent years, the urban 'heat island' effect has resulted in such low temperatures occurring only once in two years on average. Minima below -1°C have been experienced during the months of May to August, while even as late as October extremes have been down to 0°C. During the summer, minima have never been below 4°C.

Wide variations in the frequencies of occurrences of low air temperatures are noted across the Melbourne metropolitan area. For example, there are approximately ten annual occurrences of 2°C or less around the Bay, but frequencies increase to over twenty in the outer suburbs and probably to over thirty a year in the more frost susceptible areas. The average frost-free period is about 200 days in the outer northern and eastern suburbs, gradually increasing to over 250 days towards the city, and approaching 300 days along parts of the bayside.

The means of the climatic elements for the seasons in Melbourne, computed from all available official records, are given in Table 1.3.

Rainfall

The average annual number of days of rain (0.2mm or more in 24 hours) is over 150 on the West Coast and in West Gippsland, and exceeds 200 over the Otway Ranges. The average number of wet days a year is reduced to 100 at a distance of approximately 160 kilometres inland from the coast. The distribution of rainfall in Victoria by districts is given in Table 1.4.

Figure 2 on page 8 shows the rainfall districts in Victoria while distribution of average rainfall in Victoria is shown in Figure 3 on page 9. Average rainfall ranges from 2.50mm for the driest parts of Mallee to 2,600mm at Falls Creek in the Alps.

TABLE 1.3 MEANS OF CLIMATIC ELEMENTS, MELBOURNE

Meteorological element	Spring	Summer	Autumn	Winter
Mean atmospheric pressure (millibar)	1,015.0	1,013.2	1,018.3	1,018.4
Mean temperature of air in shade (°C)	14.4	19.4	15.4	10.2
Mean daily range of temperature of air in shade (°C)	10.2	11.5	9.5	7.7
Mean relative humidity at 9 a.m. (saturation = 100)	64	61	72	79
Mean rainfall (mm)	186	153	169	148
Mean number of days of rain	40	25	34	44
Mean amount of evaporation (mm) (a)	365	574	288	142
Mean daily amount of cloudiness (scale 0 to 8) (b)	4.9	4.2	4.8	5.1
Mean daily hours of sunshine (c)	6.6	8.4	5.6	4.6
Mean number of days of fog	1.4	0.6	5.8	10.6

(a) Measured by Class A Pan (records commenced 1967).

(b) Scale: 0 = clear, 8 = overcast.

(c) Measured at Laverton (records commenced 1968).

AVERAGE ANNUAL RAINFALL MAP OF VICTORIA

NOTES

1. This map is intended for general purposes only. Rainfall information required for particular purposes should be obtained from the Victorian Regional Office of the Bureau of Meteorology, G.P.O. Box 1636M, Melbourne, 3001.
2. Isohyets are based on average rainfalls computed from station records prior to 1971. The length of these records varies from 20 years to more than 100 years.
3. It should be noted that as the averages refer to unequal periods of years they are affected in varying degrees by prolonged spells of dry and wet seasons and therefore are not strictly comparable.
4. Isohyets are in millimetres.

REGIONS

Statistical divisions In 1974 Victoria was divided into twelve statistical divisions, the standard Australian Bureau of Statistics regions, which were combinations of legal local government areas forming coherent socio-economic zones.

These statistical divisions correspond with the regions adopted by the Victorian Government in October 1981 except in the cases of the Metropolitan region and, because of consequential effects, the Central Highlands and Loddon-Campaspe regions. The Victorian Government's Metropolitan region comprises the Melbourne and East Central Statistical Divisions, and the Shires of Bacchus Marsh and Gisborne. Statistical divisions are subject to change.

Figure 5. Melbourne Statistical Division.

**Australian
Standard
Geographical
Classification
(ASGC)**

Since January 1986, ABS geographical division and nomenclature have been based on the Australian Standard Geographical Classification (ASGC), edition 3. The Statistical Local Areas (SLAs) of the ASGC are either identical to, or have been aggregated to, legal local government areas with three exceptions: the Shires of Cranbourne, Healesville, and Pakenham are each composed of two SLAs which are separately shown, one within Melbourne Statistical Division and the other in East Central Statistical Division.

Statistical districts

For statistical purposes, certain areas comprising local government areas or parts thereof have been designated statistical districts. In Victoria, these are the Albury-Wodonga, Ballarat, Bendigo, Geelong, Morwell, and Shepparton-Mooroopna Statistical Districts.

GOVERNMENT

The system of government in Victoria provides for responsible Cabinet government based on a legislature of two Houses, the Legislative Assembly (Lower House) and the Legislative Council (Upper House), both elected by Australian citizens over the age of 18. Voting is compulsory.

The Constitution

From 1855 until 1975, the Constitution of Victoria was contained in the Schedule to an Act of the United Kingdom in 1855, but Victoria finally adopted a Constitution of its own with the *Constitution Act 1975*.

Under the Victorian Constitution, the ultimate executive power is vested in the Crown, and is exercised by the Governor as the Monarch's representative. The Governor is the titular head of the government, while the Premier is the effective head of government. Further information on the powers and function of the Governor may be found on page 60 of the *Victorian Year Book 1986*.

The Constitution is affected by the Commonwealth Constitution enacted by the *Commonwealth of Australia Constitution Act 1900*, an act of the Imperial Parliament, by which legislative and executive powers upon certain specified matters were granted to the Commonwealth Parliament and the Commonwealth Government, some of them exclusively, and provision was made that, in case of inconsistency of valid laws, the Commonwealth law should prevail.

**Victorian
Government
responsibilities**

The Victorian Government is responsible for such things as health, education, law enforcement, administration of justice, the control of resources, and the provision of roads, water, sewerage, power, and other services. Under Victorian law a complete system of courts, a police force, a teaching service, and many statutory bodies have been established.

1984	2,542,452	1987	2,702,932

Source: Australian Electoral Commission

Victorian government departments and statutory authorities

Victorian government departments and statutory authorities administer legislation, implement government policy, provide policy advice to government, and supply goods and services to the people of Victoria.

Information concerning Victorian government departments and statutory authorities may be found in previous editions of the *Victorian Year Book*. More recent information may be found in the *Victorian Government Directory*, compiled by the Department of the Premier and Cabinet.

Victorian representation in the Commonwealth Parliament

The federation of the Australian colonies formally commenced on 1 January 1901. The House of Representatives was seen as representing the people and directly chosen by the people for a maximum three year term on single Member constituencies. The Senate was seen as representing the rights of the States, and Senators are appointed for a six year term with half of them retiring every three years. Senators are chosen directly by the people on a single State wide electorate and on a proportional representation system.

Since the 1984 electoral redistribution Victoria has had 39 members in the House of Representatives, and 12 Senators.

Local government administration

At 30 June 1986, Victoria was divided, for local government purposes, into 210 municipal districts and the Yallourn Works Area, which was severed from the municipal districts of which it then formed a part by the *State Electricity Commission (Yallourn Area) Act 1947*. For certain purposes it is deemed to be a borough and municipal administration is the responsibility of the Commission, assisted by an Advisory Council. The 210 municipalities comprise 66 cities, 1 rural city, 5 towns, 6 boroughs, and 132 shires.

The only unincorporated areas of Victoria are French Island (154 square kilometres) in Western Port, Lady Julia Percy Island (1.3 square kilometres) off Port Fairy, Bass Strait islands (3.8 square kilometres), Gippsland Lakes (part) (309 square kilometres), and Tower Hill Lake Reserve (5.0 square kilometres) which is within the Shire of Warrambool.

Councils may make by-laws on a number of specified subjects. They exercise functions relating to roads and bridges, for which they have a construction and maintenance responsibility; drainage, water supply and sewerage; building control; community welfare, including infant and pre-school centres, home help, elderly citizens, meals-on-wheels and garbage; parking areas and traffic engineering.
