NOTES ON THE ESTIMATES

MAIN FEATURES

NOTE: Changes in individual quarters are necessarily subject to the uncertainties discussed in the Explanatory Notes under Interpretation of quarterly estimates, and furthermore some may be substantially revised as firmer data come to hand. This applies particularly to the estimates for the two most recent years for gross operating surplus, the income of companies and non-farm unincorporated enterprises, depreciation, and therefore to the estimated magnitude of change in gross non-farm product.

ESTIMATES OF MAIN AGGREGATES AT AVERAGE 1979-80 PRICES, SEASONALLY ADJUSTED

	Percentage Change		Percentage Points Contribution to Growth in GDP	
	Sept. qtr 1986 to Dec. qtr 1986	Dec. qtr 1985 to Dec. qtr 1986	Sept. qtr 1986 to Dec. qtr 1986	Dec. qtr 1985 to Dec. qtr 1986

.. not applicable

In current price seasonally adjusted terms, wages, salaries and supplements rose by 1.4 per cent in December quarter 1986, following a rise of 2.6 per cent in the previous quarter, while gross operating surplus of trading enterprise companies rose 9.3 per cent after falling by 1.4 per cent in the September quarter 1986.

The following notes are provided to aid analysis of the estimates for recent quarters.

Changes and revisions in this issue

Significant conceptual changes affecting the full period covered by this publication have been made to the following aggregates in the domestic production account:

- Government final consumption expenditure (the inclusion of estimates of consumption of fixed capital and the inclusion of repair and maintenance expenditure on roads, previously included as capital expenditure).
- Gross fixed capital expenditure (shifts between the private and public sectors following the adoption of a revised treatment of finance leases consistent with the new accounting standard 'Accounting for Leases' (AAS 17). General government capital expenditure has been reduced following the transfer of road repair and maintenance expenditure to government final consumption expenditure).
- Gross operating surplus (shifts between trading and financial enterprises following the incorporation of AAS 17 and the inclusion of estimates for consumption of fixed capital by general government).

A more detailed discussion of these conceptual changes is presented in the 'Changes in the issue' section of the Explanatory Notes.

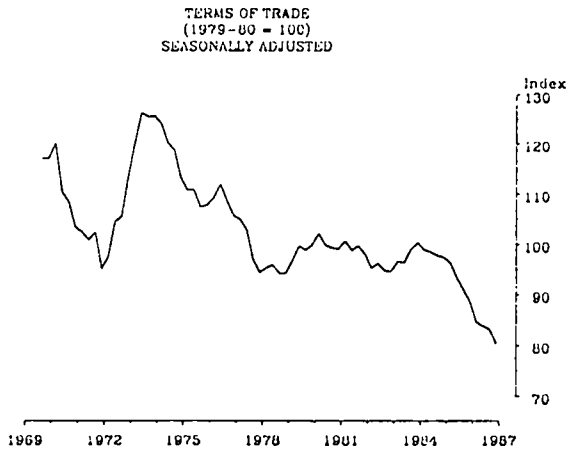

Estimates of all aggregates have been revised in accordance with revised annual estimates which will be published shortly in *Australian National Accounts, National Income and Expenditure 1985-86, Summary (5201.0)*.

Seasonally adjusted estimates have been revised following the normal annual reanalysis of all adjusted series. In addition to the normal reanalysis, the method of analysis has changed for a number of series. Significant revisions have been made to the seasonally adjusted increase in stocks; in most cases this item is now adjusted using the level of stocks series rather than directly adjusting the actual changes. From September quarter 1981 stocks of other public authorities are now seasonally adjusted. Household income from dwelling rent is now adjusted aggregatively (subtracting the seasonally adjusted total of deductions, consumption of fixed capital and interest payments from gross rent).

Terms of trade

Australia's *terms of trade* declined further in December quarter 1986. There was an overall fall in the price of

exports and a rise in the price of imports. The slight improvement in the terms of trade during September quarter 1986 reported in the previous edition of this publication has now been revised to show a slight deterioration. The change reflects an upward revision in the estimated price of imports, which followed from the availability of firmer information on the prices of imported goods. Movements in Australia's terms of trade are shown in the graph below.

There are several ways of measuring the terms of trade.

A common means of doing so is by calculating an index of the form:

$$\frac{\text{Price index of exports}}{\text{Price index of imports}} \times 100$$

In this publication the price indexes used in calculating the terms of trade are the implicit price deflators for exports of goods and services and for imports of goods and services. They take into account not only the changes in the prices of exports and imports but also the effects of changes in the composition of exports and imports on total recorded price movements. The actual values of the index during the last 10 quarters are presented in the table below.

Quarters ended	Index (a)
1984—	
September	97.8
December	97.4
1985—	
March	96.5
June	93.5
September	91.0
December	88.5
1986—	
March	84.6
June	83.9
September	83.2
December	80.3

(a) Base 1979-80=100.0

Gross domestic product (GDP) at constant prices, adjusted for the terms of trade

Changes in the aggregate 'Gross domestic product at constant prices' provide an indication of changes in the volume of goods and services produced within Australia. If, however, the terms of trade have changed significantly over the period of comparison the aggregate will not provide an accurate reflection of the change in the real purchasing power of the income generated by domestic production.

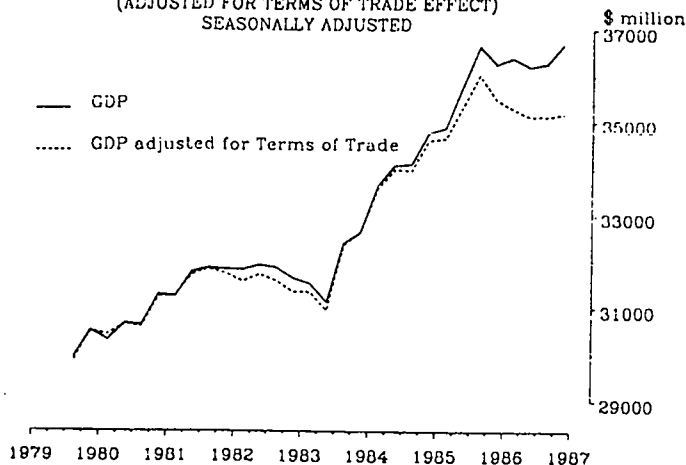

As with the terms of trade, no single agreed measure of the effect of the terms of trade on movements in GDP at constant prices is available, partly because the available methods may produce different results. An estimate of movements in GDP at constant prices, adjusted for the terms of trade effect, is shown for recent quarters in the table below. For comparison, movements in unadjusted GDP at constant prices are also shown.

GROSS DOMESTIC PRODUCT AT CONSTANT PRICES (SEASONALLY ADJUSTED)

Quarters ended	% change without adjustment for terms of trade effect	% change with adjustment for terms of trade effect
1984—		
September	0.1	-0.1
December	1.9	1.9
1985—		
March	0.3	0.1
June	2.6	2.0
September	2.4	2.0
December	-1.1	-1.5
1986—		
March	0.3	-0.6
June	-0.5	-0.5
September	0.2	—
December	1.1	0.2
December quarter 1986 on December quarter 1985		
	1.1	-0.9

The adjustment has been calculated by first revaluing exports of goods and services by the implicit price deflator of imports of goods and services (thereby providing a measure of the purchasing power of exports over imports). The actual constant price value of exports of goods and services has then been deducted from this value to provide the terms of trade adjustment which has been added to GDP at constant prices to obtain the required result. The following graph shows constant price GDP before and after adjustment for the terms of trade effect.

GDP AT AVERAGE 1979-80 PRICES
(ADJUSTED FOR TERMS OF TRADE EFFECT)
SEASONALLY ADJUSTED

Stocks

In seasonally adjusted terms private non-farm stocks at constant prices decreased by \$65 million during the December quarter 1986. This relatively small decrease was associated with little growth in sales and has resulted in little change to the constant price private non-farm stocks to sales ratio(a). The recent history of this ratio is set out below.

Quarters ended	Ratio
1985—	
September	0.643
December	0.652
1986—	
March	0.664
June	0.662
September	0.649
December	0.648

(a) Constant price sales are defined as gross non-farm product plus imports of goods and services (excluding imports of fuel, imports of certain large items of equipment by both the public and private sectors and certain other government imports) less changes in private non-farm stocks. (All these variables are at average 1979-80 prices.)

The following graph shows this ratio from September quarter 1969 onwards.

RATIO OF PRIVATE NON-FARM STOCKS TO SALES
AT AVERAGE 1979-80 PRICES
SEASONALLY ADJUSTED

Statistical discrepancy

The statistical discrepancy represents the difference between the sum of the estimates of gross domestic product (GDP) and imports of goods and services on the one hand and the sum of the estimates of components of

gross national expenditure and exports of goods and services on the other hand. Conceptually these two totals are the same. The inclusion of the statistical discrepancy on the expenditure side of the domestic production account is a convention and does not necessarily imply that the sum of the income components more accurately measures GDP than the sum of the expenditure components.

The aspect of the statistical discrepancy which is of most concern in the quarterly context is the magnitude of change from one quarter to the next. In some quarters there are quite significant movements in the seasonally adjusted constant price statistical discrepancy. A useful way of examining the significance of the statistical discrepancy is to compare the change in gross non-farm product as published with the result which would be obtained using the expenditure aggregates excluding the statistical discrepancy. The following table shows such a comparison for the last 8 quarters together with an annual comparison for the last two financial years.

PERCENTAGE CHANGES IN GROSS NON-FARM
PRODUCT AT AVERAGE 1979-80 PRICES,
SEASONALLY ADJUSTED

	Income -based(a)	Expenditure -based(b)
1984-85	5.2	3.9
1985-86	4.6	4.3
1985—		
March	—	2.0
June	2.7	2.6
September	3.1	2.4
December	-1.3	-1.6
1986—		
March	0.2	0.8
June	-0.4	-1.7
September	—	0.5
December	0.9	1.5

(a) Gross non-farm product as published. (b) Gross non-farm product less statistical discrepancy.

Household saving ratio

The introduction of estimates of consumption of fixed capital (replacing depreciation allowances) has resulted in significant changes to household income, household disposable income and household saving. Hence, the household saving ratio on the new basis is significantly lower in all quarters. Present estimates indicate that, on a seasonally adjusted basis, the proportion of household disposable income devoted to consumption in the December quarter was 89.1 per cent while household saving, which is derived as a balancing item, represented 10.9 per cent. Both of these ratios are affected by any deficiencies or inconsistencies in the estimation and seasonal adjustment of household income and expenditure.

The household saving ratio in recent quarters is as follows:

Quarters ended	Percentage
1985—	
September	10.4
December	11.7
1986—	
March	12.5
June	10.1
September	10.7
December	10.9

EXPLANATORY NOTES

Introduction

This publication provides estimates of the components of gross domestic product and national expenditure and supporting tables for the December quarter 1986, together with comparative estimates for the eight previous quarters and the four years 1982-83 to 1985-86. In addition, seasonally adjusted estimates of the major aggregates and some selected series are provided for the December quarter 1986, together with comparative estimates for the twelve previous quarters. Tables 32-43 provide time series, in both original and seasonally adjusted terms, for the period from September quarter 1969 for the aggregates contained in the domestic production account (at both current and average 1979-80 prices), some selected income aggregates and implicit price deflators.

Concepts, definitions, sources and methods

2. A basic guide to the Australian national accounts entitled *Australian National Accounts, Concepts, Sources and Methods* (5216.0) is available. It outlines major concepts and definitions, describes sources of data and methods used to derive annual and quarterly estimates for major aggregates at current and constant prices and discusses the accuracy and reliability of the national accounts. The concepts, definitions, sources and methods applicable to the estimates contained in this publication are as described in 5216.0 but with the changes outlined below in 'Changes in this issue' and in Appendix A, *Australian National Accounts, National Income and Expenditure, 1984-85* (5204.0).

Changes in this issue

3. The conceptual changes incorporated in this issue of the accounts are outlined below. While a number of aggregates in the domestic production account have been affected by the changes, the only change affecting GDP is the introduction of estimates of consumption of fixed capital for general government.

Consumption of fixed capital

4. As foreshadowed in the Preface to Occasional Paper 1985/3 *Estimates of Depreciation and Capital Stock, Australia*, this publication incorporates estimates of current cost depreciation. In order to clearly distinguish the new estimates of current cost depreciation from the former 'depreciation allowances' new terminology has been adopted in accordance with the United Nations *A System of National Accounts*. 'Consumption of fixed capital' is used throughout this publication to signify estimates of depreciation at current replacement cost.

5. The methods employed in the derivation of these estimates are explained in detail in Occasional Paper 1985/3 and will be outlined in the new publication *Australian National Accounts, Consumption of Fixed Capital and Capital Stock, 1985-86* (5221.0).

6. As the estimates for consumption of fixed capital are much higher than the former depreciation allowances significant revisions have been made to estimates of net operating surplus and consequential aggregates such as company income, income of unincorporated enterprises and income from dwelling rent.

7. It should be noted that estimates of consumption of fixed capital for the general government sector have been

included in government final consumption expenditure (previously no depreciation allowances were included for general government). Estimates of gross operating surplus for general government, equal in value to the estimates of consumption of fixed capital, have also been introduced.

Finance leases

8. In previous issues of this publication capital expenditure was generally recorded on a strict ownership basis. Consequently, gross operating surplus for trading enterprises was recorded after the deduction of total finance lease payments, and depreciation allowances were attributed to the lessor. This former treatment was in contrast to that applied to hire purchase transactions where the user was regarded as the owner of the capital asset from the time of purchase even though strict legal title did not pass to the user of the asset until the final repayment was made. The former treatment of finance leases was considered to be unsatisfactory (because estimates of gross fixed capital expenditure by industry and by institutional sector were being distorted), but was maintained largely because of data limitations.

9. In March 1984 Australian Accounting Standard 17 (AAS 17) 'Accounting for Leases' was issued. This standard requires that leases be classified as either operating or finance leases, and specifies accounting treatments for each type of lease. A finance lease is defined to exist where substantially all the risks and benefits incident to ownership of leased property effectively pass to the lessee. AAS 17 requires that lessees should capitalise finance leases in their accounts, in effect accounting for assets acquired under finance lease arrangements in substantially the same way as they account for assets purchased. The usual business accounting treatment prior to AAS 17 was that most payments associated with a finance lease, termed 'lease payments', were treated as current period expenses. This will continue to be the business accounting treatment of operating leases. Application of AAS 17 in the case of finance leases means that a lessee will now record the acquisition of an asset (capital expenditure), an allowance for its replacement (depreciation) equivalent to the rate of consumption of the asset, and financing of the acquisition of the asset (interest payments). The converse applies to lessors, who will no longer account on the basis that they own the asset subject to a finance lease, but instead account on the basis that they are financing acquisition of the asset by another party (the lessee).

10. The release of AAS 17, and its progressive adoption in business accounting records, has enabled the ABS to revise its treatment of finance leases in a number of its collections, bringing the treatment into line with the underlying conceptual framework of the national accounts and with the requirements of users.

11. Commencing with this issue the treatment of finance leases in the Australian national accounts has been changed to accord with that required by AAS 17. The adoption of the AAS 17 treatment of finance leases involves significant changes to estimates by institutional sector and by industry for gross fixed capital expenditure, gross operating surplus and interest receipts and payments.

12. The new treatment of finance leases has been applied to the data for all years included in this publication. As data on which to base the adjustments were not

as detailed as would ideally be required, aggregates affected by this change should be interpreted cautiously.

Repair and maintenance expenditure on roads

13. All expenditure on roads by general government was previously classified to capital expenditure. In this issue a distinction has been made between repair and maintenance expenditure (included in government final consumption expenditure) and expenditure on new road-works or upgrading of existing roads (included in gross fixed capital expenditure).

14. The data for the series relating to repair and maintenance on roads were obtained from the Bureau of Transport Economics (Information Paper 18), 'Australian Road Financing Statistics 1974-75 to 1983-84'. This interim source of data will eventually be replaced by more detailed government finance statistics and some revisions may result.

Interpretation of quarterly estimates

15. Estimating for a period of less than one year presents special problems in that it is often difficult to adhere strictly to definitions and concepts used in annual estimates. The measurement of income for a quarterly period is particularly difficult since it is not always possible to match the value of production for a quarter with the cost incurred in that production. This problem occurs, for example, in estimating the income of farm unincorporated enterprises in each quarter, and results in considerable variation in the estimates for this series, and for gross farm product, from quarter to quarter. Difficulties are also experienced in obtaining detailed data for short periods and in preparing consistent estimates from various sources where different accounting procedures and periods are used.

16. These problems inevitably affect the consistency and reliability of the current price estimates, and similarly affect the constant price estimates based on the current price estimates. Accordingly, these factors as well as the approximations and assumptions necessarily made in the revaluation of flows to constant prices should be borne in mind when interpreting or using the estimates, for example, in attempting to draw precise quantitative inferences relating to quarter-to-quarter changes in gross domestic product or its components, or in productivity.

17. Analysis of trends requires allowance for these uncertainties in estimation. The effects are in some measure indicated by the change in the statistical discrepancy for corresponding periods. Uncertainty in trends arises also from the likelihood of revisions as more information becomes available and from the irregularity of short-term movements. The inclusion of the statistical discrepancy on the expenditure side of the accounts is a convention and does not necessarily imply that the sum of the income components more accurately measures GDP than the sum of the expenditure components (plus exports less imports). As household and other saving are estimated as balancing items in their respective accounts, care should be exercised in their interpretation.

18. Estimates of national income and expenditure are necessarily prepared from a wide range of statistical information, some of which is available quickly and some only with a delay of several years. For this reason most figures should be regarded as subject to revision as more

complete and more accurate information becomes available. The revisions will be of two main types — those made to the most recent quarters as firmer quarterly or monthly data come to hand and those which are a consequence of revisions to annual totals and are distributed to the quarters approximately in accordance with existing quarterly patterns.

19. No simple measure is available of the accuracy of the major summary national accounting aggregates. However the following example illustrates the *sensitivity* of quarter to quarter growth to the timing of recording a transaction. If, in the latest year, the timing of recording a transaction were delayed by one quarter and if the transaction had an impact on constant price gross domestic product of +\$35 million then the measure of the rate of growth would be affected in three adjoining quarters (centred on the quarter in which the transaction was recorded) by -0.1, +0.2, and -0.1 percentage points respectively. Of course the percentage impact of such a timing delay on relevant sub-aggregates would be greater.

20. The quarterly implicit price deflators (IPDs) shown in Table 9 are derived by dividing seasonally adjusted current price estimates by the corresponding seasonally adjusted constant price estimates. Movements in the levels of individual implicit price deflators can be greatly affected by changes in the physical composition of the aggregates and their components. Generally, it is considered that IPDs derived from seasonally adjusted data are more reliable than those obtained by using original (i.e. unadjusted) series, because the former are less likely to be affected by compositional change than are the latter. However the seasonal adjustment process is itself a source of possible distortion, especially to the extent that it is not possible to identify, in a fully consistent way, the seasonality of the current price estimates and of the constant price estimates. A discussion of the limitations involved in using IPDs as measures of pure price change is contained in Appendix B of *Australian National Accounts, Concepts, Sources and Methods* (5216.0).

Seasonal adjustment

21. As most series are affected to some extent by seasonal factors, allowance should be made for normal seasonal variation. In Tables 6, 8, 9, 13, 17, 19, 22, 23, 33, 35 and 37 to 43 *seasonally adjusted* values are presented for selected series. Series which show substantial irregularities in the original or adjusted series should be treated with some reserve. As different methods of seasonal adjustment tend to produce different results, it is necessary to bear in mind the methods by which they have been derived and the limitations to which those methods are subject. It should also be noted that the methods of seasonal adjustment used by the ABS do not force the sum of the seasonally adjusted estimates for each quarter of a financial year to equal the original annual total.

22. The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia, 1983* (1308.0). However, special methods have been used to adjust some of the components of gross farm product which were not amenable to seasonal adjustment by the usual methods. To obtain the seasonally adjusted estimates, the estimated values of

production of wheat, other grain and sugar cane, for any financial year, are distributed equally over the four quarters of the year ended June. One effect of these methods is that changes in the annual production of these commodities first enter into the seasonally adjusted figures in the September quarter.

23. Where there is no apparent seasonality in their implicit price deflators, constant price estimates are seasonally adjusted using the same factors as are used for adjusting the corresponding current price estimates. As far as possible the remaining constant price estimates have been adjusted using methods similar to those for the corresponding current price estimates.

Analysis of contributions to growth table

24. Table 3 presents an analysis of the contribution provided by each major aggregate to the percentage change in seasonally adjusted gross domestic product at constant prices. The formula used to calculate the contribution of each aggregate to the growth in GDP is:

$$\frac{A(t)-A(t-1)}{GDP(t-1)} \times 100.0$$

where A(t) = value of aggregate A in quarter under consideration

A(t-1) = value of aggregate A in preceding quarter

GDP(t-1) = value of GDP in preceding quarter

All these values are seasonally adjusted constant price estimates. It should be noted that the figures in this table are additive within each quarter, unlike the percentage change tables shown elsewhere in this publication.

Rounding of figures

25. Although percentage changes are given to one decimal place in this publication, this does not imply that they can be regarded as accurate to the last digit shown. The figures after the decimal point are given to avoid distortions which may occur in rounding off the figures to the nearest half or whole number.

26. The procedures used in preparing this publication may occasionally result in rounding differences between figures in this publication and corresponding figures in other publications.

27. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

Occasional Papers

28. Occasional Papers produced by officers within the national accounts area of the ABS report on various aspects of research being undertaken. They are not used for the release of official statistics and do not necessarily reflect the views of the ABS. The following Occasional Papers are available at all ABS offices:

Studies in National Accounting : Current Cost Depreciation and Net Capital Stock — Cherylee Bailey (1981/1)

The Accuracy and Reliability of the Quarterly Australian National Accounts — A. G. Johnson (1982/2)

State Accounts, Australia : Issues and Experimental Estimates — S. Burrell, J. Daniel, A. Johnson and R. Walters (1984/4)

The Effects of Rebasings the Constant Price Estimates of the Australian National Accounts — R. Dippelsman (1985/1)

Estimates of Depreciation and Capital Stock, Australia — R. Walters and R. Dippelsman (1985/3)

Related publications

29. In addition to those mentioned above other ABS publications which may be of interest include:

Historical Series of Estimates of National Income and Expenditure, Australia (5207.0) -issued for December Quarter only.

Australian National Accounts, Gross Product by Industry, 1984-85 (5211.0)

Budget Paper: *National Income and Expenditure, 1985-86* (5213.0)

30. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Electronic services

31. VIATEL. Key *656# for selected current economic, social and demographic statistics.

AUSSTATS. Thousands of up-to-date time series are available on this ABS on-line service through CSIRONET.
