CONTENTS

NOTES ON THE ESTIMATES

MAIN FEATURES

NOTE: Changes in individual quarters are necessarily subject to the uncertainties discussed in the Explanatory Notes under Interpretation of quarterly estimates, and furthermore some may be substantially revised as firmer data come to hand. This applies particularly to the estimates for the two most recent years for gross operating surplus, the income of companies and non-farm unincorporated enterprises, and therefore to the estimated magnitude of change in gross non-farm product.

ESTIMATES OF MAIN AGGREGATES AT AVERAGE 1979-80 PRICES, SEASONALLY ADJUSTED

	Percentage Change		*Percentage Points Contribution to Growth in GDP*	
	June qtr 1987 to Sept. qtr 1987	*Sept. qtr 1986 to Sept. qtr 1987*	*June qtr 1987 to Sept. qtr 1987*	*Sept. qtr 1986 to Sept. qtr 1987*
Final consumption expenditure—				
Private	1.9	2.0	1.1	1.2
Government	-1.5	1.9	-0.3	0.4
Gross fixed capital expenditure	5.3	3.3	1.1	0.7
Increase in stocks—				
Private non-farm	..	..	1.1	1.9
Farm and public authority	..	..	-0.6	-0.7
Statistical discrepancy	..	..	-1.1	0.1
Gross national expenditure	1.4	3.6	1.4	3.6
Exports of goods and services	-2.5	11.1	-0.5	2.0
Imports of goods and services	2.0	2.7	-0.4	-0.5
Gross domestic product	0.5	5.2	0.5	5.2
Gross farm product	-2.7	1.7	-0.2	0.1
Gross non-farm product	0.7	5.4	0.7	5.1

In current price seasonally adjusted terms, wages, salaries and supplements rose by 2.2 per cent in September quarter 1987 following a rise of 3.4 per cent in the previous quarter, while gross operating surplus of trading enterprise companies rose 0.7 per cent in September quarter 1987 following a rise of 5.4 per cent in June quarter 1987.

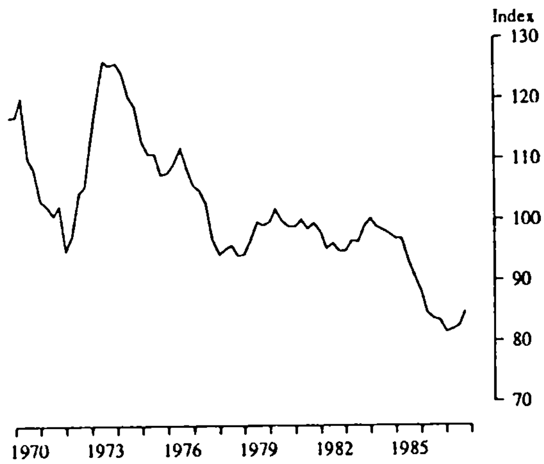
The following notes are provided to aid analysis of the estimates for recent quarters.

Terms of trade

Initial estimates indicate that Australia's *terms of trade* improved by 2.8 per cent in September quarter 1987. This reflects a 1.9 per cent increase in export prices and a 0.9 per cent decrease in import prices. There has been very little revision to estimates of the terms of trade for earlier quarters.

Movements in Australia's terms of trade are shown in the graph below.

TERMS OF TRADE
(1979-80 = 100)
SEASONALLY ADJUSTED

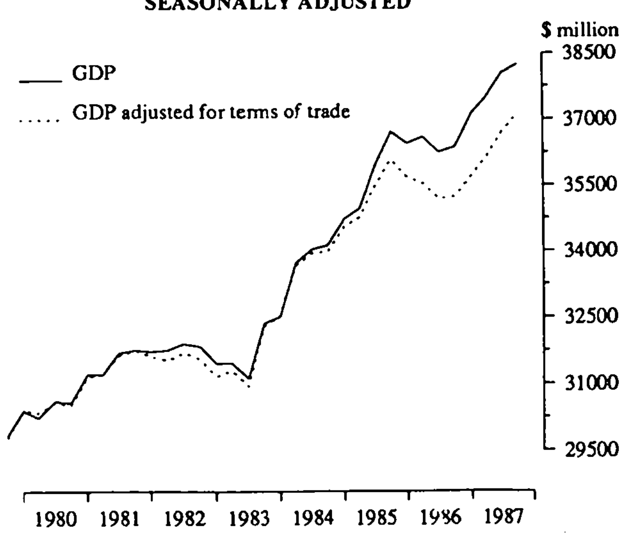


Gross domestic product (GDP) at constant prices, adjusted for the terms of trade

Changes in the aggregate 'Gross domestic product at constant prices' provide an indication of changes in the volume of goods and services produced within Australia. If, however, the terms of trade have changed significantly over the period of comparison the aggregate will not provide an accurate reflection of the change in the real purchasing power of the income generated by domestic production.

The following graph shows constant price GDP before and after adjustment for the terms of trade effect.

GDP AT AVERAGE 1979-80 PRICES
(ADJUSTED FOR TERMS OF TRADE EFFECT)
SEASONALLY ADJUSTED

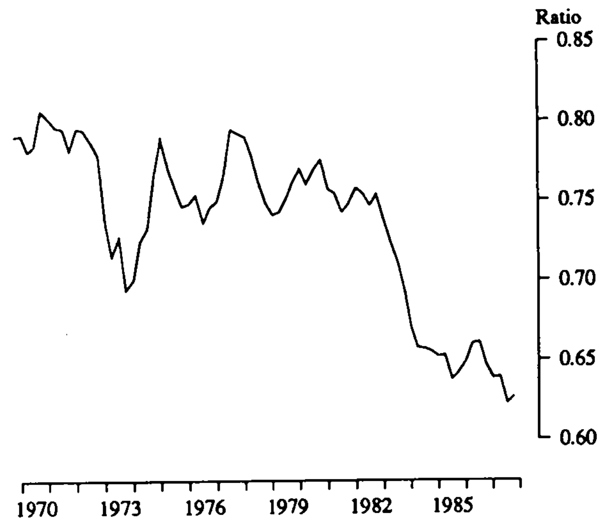


Stocks to sales ratio

In seasonally adjusted constant price terms private non-farm stocks increased by $246 million during September quarter 1987 while sales (see paragraph 19 of the 'Explanatory Notes') increased by $132 million. Consequently, there was a small increase in the stocks to sales ratio from 0.623 to 0.627.

The following graph shows this ratio from March quarter 1970 onwards.

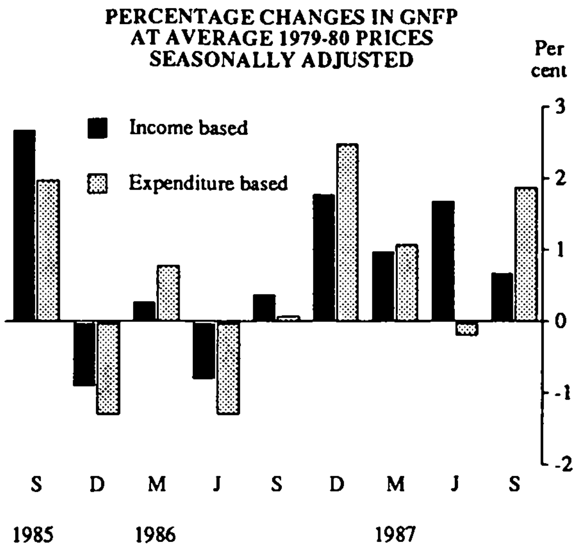
RATIO OF PRIVATE NON-FARM STOCKS TO SALES
AT AVERAGE 1979-80 PRICES
SEASONALLY ADJUSTED



Statistical discrepancy

The statistical discrepancy represents the difference between the sum of the estimates of gross domestic product (GDP) and imports of goods and services on the one hand and the sum of the estimates of components of gross national expenditure and exports of goods and services on the other hand. Conceptually these two totals are the same. The inclusion of the statistical discrepancy on the expenditure side of the domestic production account is a convention and does not necessarily imply that the sum of the income components more accurately measures GDP than the sum of the expenditure components.

The aspect of the statistical discrepancy which is of most concern in the quarterly context is the magnitude of change from one quarter to the next. In some quarters there are quite significant movements in the seasonally adjusted constant price statistical discrepancy. A useful way of examining the significance of the statistical discrepancy is to compare the change in gross non-farm product as published, with the result which would be obtained using the expenditure aggregates excluding the statistical discrepancy. The following chart shows such a comparison for the last 9 quarters.

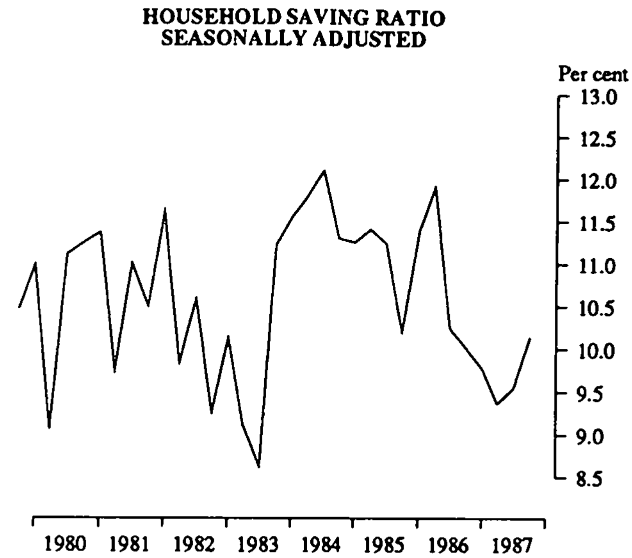


Another aspect of the statistical discrepancy which is of concern is its increasing magnitude in recent years. As a proportion of gross domestic product at constant prices it has risen from -0.3 per cent in 1983-84 to 1.8 per cent in 1986-87. While there may be many factors contributing to this phenomenon, there is evidence to suggest that the 'expenditure based' estimates for recent years are under-estimated. In particular, preliminary indications from the 1985-86 Retail Census suggest that certain components of private final consumption expenditure will be revised upwards when final Retail Census data become available. The Retail Census is the major data source for the compilation of benchmark estimates for particular components of private final consumption expenditure which comprise approximately 50 per cent of the total aggregate. Preliminary Retail Census results released in *Retail Industry : Summary of Operations, Australia 1985-86, Preliminary* (8613.0) indicated that retail sales have grown more than has currently been estimated by extrapolating results of the 1979-80 Retail Census using data from the monthly Retail Survey.

Household saving ratio

Present estimates indicate that, on a seasonally adjusted basis, the proportion of household disposable income devoted to consumption in the September quarter was 89.9 per cent while household saving, which is derived as a balancing item, represented 10.1 per cent. Both of these ratios are affected by any deficiencies or inconsistencies in the estimation and seasonal adjustment of houshold income and expenditure.

The following graph presents this ratio from March quarter 1980.



Revisions

The incorporation of more complete survey data has resulted in significant revisions, in opposite directions, to estimates for private gross fixed capital expenditure on non-dwelling construction and equipment for the June quarter 1987. Only minor revisions have been made to estimates for major aggregates such as GDP and gross non-farm product. Since the June quarter issue of this publication wages, salaries and supplements has been seasonally reanalysed.

EXPLANATORY NOTES

Introduction

This publication provides estimates of the components of gross domestic product and national expenditure and supporting tables for the September quarter 1987, together with comparative estimates for the eight previous quarters and the four years 1983-84 to 1986-87. In addition, seasonally adjusted estimates of the major aggregates and some selected series are provided for the September quarter 1987, together with comparative estimates for the twelve previous quarters.

Concepts, definitions, sources and methods

2. A basic guide to the Australian national accounts entitled *Australian National Accounts, Concepts, Sources and Methods* (5216.0) is available. It outlines major concepts and definitions, describes sources of data and methods used to derive annual and quarterly estimates for major aggregates at current and constant prices and discusses the accuracy and reliability of the national accounts. The concepts, definitions, sources and methods applicable to the estimates contained in this publication are as described in 5216.0 but with the changes outlined in Appendix A, *Australian National Accounts, National Income and Expenditure, 1985-86* (5204.0).

Interpretation of quarterly estimates

3. Estimating for a period of less than one year presents special problems in that it is often difficult to adhere strictly to definitions and concepts used in annual estimates. The measurement of income for a quarterly period is particularly difficult since it is not always possible to match the value of production for a quarter with the cost incurred in that production. This problem occurs, for example, in estimating the income of farm unincorporated enterprises in each quarter, and results in considerable variation in the estimates for this series, and for gross farm product, from quarter to quarter. Difficulties are also experienced in obtaining detailed data for short periods and in preparing consistent estimates from various sources where different accounting procedures and periods are used.

4. These problems inevitably affect the consistency and reliability of the current price estimates, and similarly affect the constant price estimates based on the current price estimates. Accordingly, these factors as well as the approximations and assumptions necessarily made in the revaluation of flows to constant prices should be borne in mind when interpreting or using the estimates, for example, in attempting to draw precise quantitative inferences relating to quarter-to-quarter changes in gross domestic product or its components, or in productivity.

5. Analysis of trends requires allowance for these uncertainties in estimation. The effects are in some measure indicated by the change in the statistical discrepancy for corresponding periods. Uncertainty in trends arises also from the likelihood of revisions as more information becomes available and from the irregularity of short-term movements. The inclusion of the statistical discrepancy on the expenditure side of the accounts is a convention and does not necessarily imply that the sum of the income components more accurately measures GDP than the sum of the expenditure components (plus exports less imports). As household and other saving are estimated as balancing items in their respective accounts, care should be exercised in their interpretation.

6. Estimates of national income and expenditure are necessarily prepared from a wide range of statistical information, some of which is available quickly and some only with a delay of several years. For this reason most figures should be regarded as subject to revision as more complete and more accurate information becomes available. The revisions will be of two main types — those made to the most recent quarters as firmer quarterly or monthly data come to hand and those which are a consequence of revisions to annual totals and are distributed to the quarters approximately in accordance with existing quarterly patterns.

7. No simple measure is available of the accuracy of the major summary national accounting aggregates. However, the following example illustrates the *sensitivity* of quarter-to-quarter growth to the timing of recording a transaction. If, in the latest year, the timing of recording a transaction were delayed by one quarter and if the transaction had an impact on constant price gross domestic product of +$37 million then the measure of the rate of growth would be affected in three adjoining quarters (centred on the quarter in which the transaction was recorded) by -0.1, +0.2, and -0.1 percentage points respectively. Of course the percentage impact of such a timing delay on relevant sub-aggregates would be greater.

8. The quarterly implicit price deflators (IPDs) shown in Table 9 are derived by dividing seasonally adjusted current price estimates by the corresponding seasonally adjusted constant price estimates. Movements in the levels of individual implicit price deflators can be greatly affected by changes in the physical composition of the aggregates and their components. Generally, it is considered that IPDs derived from seasonally adjusted data are more reliable than those obtained by using original (i.e. unadjusted) series, because the former are less likely to be affected by compositional change than are the latter. However the seasonal adjustment process is itself a source of possible distortion, especially to the extent that it is not possible to identify, in a fully consistent way, the seasonality of the current price estimates and of the constant price estimates. A discussion of the limitations involved in using IPDs as measures of pure price change is contained in Appendix B of *Australian National Accounts, Concepts, Sources and Methods* (5216.0).

Seasonal adjustment

9. As most series are affected to some extent by seasonal factors, allowance should be made for normal seasonal variation. In a number of tables *seasonally adjusted* values are presented for selected series. Series which show substantial irregularities in the original or adjusted series should be treated with some reserve. As different methods of seasonal adjustment tend to produce different results, it is necessary to bear in mind the methods by which they have been derived and the limitations to which those methods are subject. It should also be noted that the methods of seasonal adjustment used by the ABS do not force the sum of the seasonally adjusted estimates for each quarter of a financial year to equal the original annual total.

10. The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia, 1983* (1308.0). However, special methods have been used to adjust some of the components of gross farm product which were not amenable to seasonal adjustment by the usual methods. To obtain the seasonally adjusted estimates, the estimated values of production of wheat, other grain and sugar cane, for any financial year, are distributed equally over the four quarters of the year ended June. One effect of these methods is that changes in the annual production of these commodities first enter into the seasonally adjusted figures in the September quarter.

11. Where there is no apparent seasonality in their implicit price deflators, constant price estimates are seasonally adjusted using the same factors as are used for adjusting the corresponding current price estimates. As far as possible the remaining constant price estimates have been adjusted using methods similar to those for the corresponding current price estimates.

Analysis of contributions to growth table

12. Table 3 presents an analysis of the contribution provided by each major aggregate to the percentage change in seasonally adjusted gross domestic product at constant prices. The formula used to calculate the contribution of each aggregate to the growth in GDP is:

$$\frac{A(t)-A(t-1)}{GDP\ (t-1)} \times 100.0$$

where A(t)= value of aggregate A in quarter under consideration

A(t-1)= value of aggregate A in preceding quarter

GDP(t-1)= value of GDP in preceding quarter

All these values are seasonally adjusted constant price estimates. It should be noted that the figures in this table are additive within each quarter, unlike the percentage change tables shown elsewhere in this publication.

Terms of trade

13. There are several ways of measuring the terms of trade. A common means of doing so is by calculating an index of the form:

$$\frac{\text{Price index of exports}}{\text{Price index of imports}} \times 100.0$$

14. In this publication the price indexes used in calculating the terms of trade are the implicit price deflators for exports of goods and services and for imports of goods and services. They take into account not only the changes in the prices of exports and imports, but also the effects of changes in the composition of exports and imports on total recorded price movements. The terms of trade are presented as a memorandum item in Table 9.

Gross domestic product (GDP) at constant prices, adjusted for the terms of trade

15. Changes in the aggregate 'gross domestic product at constant prices' provide an indication of changes in the volume of goods and services produced within Australia. If, however, the terms of trade have changed significantly over the period of comparison, the aggregate will not provide an accurate reflection of the change in the real purchasing power of the income generated by domestic production.

16. As with the terms of trade, no single agreed measure of the effect of the terms of trade on movements in GDP at constant prices is available, partly because the available methods may produce different results.

17. In this publication the adjustment has been calculated by first revaluing exports of goods and services by the implicit price deflator of imports of goods and services (thereby providing a measure of the purchasing power of exports over imports). The actual constant price value of exports of goods and services has then been deducted from this value to provide the terms of trade adjustment which has been added to GDP at constant prices to obtain the required result. The series is presented as a memorandum item in Table 8.

Expenditure-based estimate of gross non-farm product

18. The published measure of GDP is the sum of the income components in the domestic production account. Alternatively, expenditure-based estimates of GDP and gross non-farm product can be produced by subtracting the statistical discrepancy from the published estimates. Expenditure-based estimates of gross non-farm product are presented as a memorandum item in Table 8.

Private non-farm stocks to sales ratio

19. The denominator of this ratio is defined as gross non-farm product *plus* imports of goods and services (excluding imports of fuel, imports of certain large items of equipment by both the public and private sectors and certain other government imports) *less* changes in private non-farm stocks. All of these variables are at constant prices. The ratio is presented as a memorandum item in Table 8.

Household saving ratio

20. This is defined as the ratio of household saving to household disposable income, where household saving is a balancing item derived as the difference between household disposable income and private final consumption expenditure. The ratio is presented as a memorandum item in Table 23.

Rounding of figures

21. Although percentage changes are given to one decimal place in this publication, this does not imply that they can be regarded as accurate to the last digit shown. The figures after the decimal point are given to avoid distortions which may occur in rounding off the figures to the nearest half or whole number.

22. The procedures used in preparing this publication may occasionally result in rounding differences between figures in this publication and corresponding figures in other publications. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

Occasional Papers

23. Occasional Papers produced by officers within the national accounts area of the ABS report on various aspects of research being undertaken. They are not used for the release of official statistics and do not necessarily reflect the views of the ABS. The following Occasional Papers are available at all ABS offices:

Studies in National Accounting: Current Cost Depreciation and Net Capital Stock — Cherylee Bailey (1981/1)

The Accuracy and Reliability of the Quarterly Australian National Accounts — A. G. Johnson (1982/2)

State Accounts, Australia : Issues and Experimental Estimates — S. Burrell, J. Daniel, A. Johnson and R. Walters (1984/4)

The Effects of Rebasing the Constant Price Estimates of the Australian National Accounts — R. Dippelsman (1985/1)

Estimates of Depreciation and Capital Stock, Australia — R. Walters and R. Dippelsman (1985/3)

Related publications

24. In addition to those mentioned above other ABS publications which may be of interest include:

Historical Series of Estimates of National Income and Expenditure, Australia (5207.0) — issued for December quarter only.

Australian National Accounts, Gross Product by Industry, 1985-86 (5211.0)

Budget Related Paper No. 2, National Income and Expenditure, 1986-87 (5213.0)

Australian National Accounts, State Accounts, 1985-86 (5220.0)

Australian National Accounts, Estimates of Capital Stock, 1985-86 (5221.0)

25. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Electronic services

26. VIATEL. Key *656# for selected current economic, social and demographic statistics.

AUSSTATS. Thousands of up-to-date time series are available on this ABS on-line service through CSIRONET.

For further information phone the AUSSTATS Help Desk on (062) 52 6017.

TELESTATS. This service provides foreign trade statistics tailored to users' requirements.

Further information is available on (062) 52 5404.
