### MAIN FEATURES

**NOTE.** *These statistics represent the average earnings of male employees. They do not relate to average award rates, nor to the earnings of the 'average man'. See the first paragraph of the explanatory notes.*

The estimate for the June quarter 1981 of the average weekly earnings (exclusive of overtime pay) of adult male full-time employees, excluding managerial and executive staff, is \$269.50.

In seasonally adjusted terms the estimate is \$268.50, an increase of 14.5 per cent over the figure for the June quarter 1980.

The estimate of average weekly earnings per employed male unit in seasonally adjusted terms, is \$295.00. (This is a seasonally adjusted estimate of the average earnings, before tax, of all male civilian employees in Australia, including the highest paid as well as the lowest.)

### EXPLANATORY NOTES

#### Introduction

This publication contains estimates of average weekly earnings of civilian male wage and salary earners for Australia, States and Territories. These statistics of *earnings* should not be confused with the weighted average minimum weekly *wage rates*, published in *Wage Rates, Australia* (6312.0), for which the figure for adult males at the end of June 1981 was \$200.68. As the data used in the compilation of these series are not obtained from individual employees it is not possible to derive a distribution of earnings.

#### Definition of earnings

2. The earnings figures used in the calculation of the averages shown in Tables 1 and 2 comprise award and over-award wages and salaries, the earnings of employees not covered by awards, overtime earnings, bonuses and allowances, commissions, directors' fees and payments made retrospectively or in advance during the quarter. Earnings of managerial and executive staff, and of part-time as well as full-time employees, and of juniors as well as adults, are included.

3. Earnings figures used in calculating the averages shown in Table 3 comprise earnings as defined in the previous paragraph with the exception of overtime earnings and the earnings of part-time employees, juniors and managerial, executive, etc., staff.

#### Method of estimation

4. For industries other than agriculture and private domestic service, particulars of employment and wages and salaries are derived from payroll tax returns and from direct returns from government and other bodies. These returns account for approximately 85 per cent of the estimated total of wage and salary earners in these industries. Estimates are made for the unrecorded balance in terms of both numbers and earnings. The level of average earnings estimated for the unrecorded sector is approximately 80 per cent of the level shown by the direct returns. For agriculture and private domestic service, employment and earnings are estimated from other sources and are included in the calculations.

5. For employees reported on more than one payroll, all reported wage and salary earnings are included in the calculation of the averages.

#### Male units

6. Particulars of wages and salaries paid are not available for males and females separately from the sources used for this series; average weekly earnings have therefore been calculated in terms of *male units*, i.e. total male employees plus a proportion of female employees, the proportion being derived from the estimated ratio of female to male average earnings. Different ratios of female to male average earnings are used for individual States, based on information from regular surveys of weekly earnings and hours and other sources. Ratios used for the current quarter are as follows: New South Wales 67 per cent, Victoria 67, Queensland 66, South Australia 66, Western Australia 62, Tasmania 64, the Northern Territory 63, and the Australian Capital Territory 66. As the number of male units used in calculating Australian average weekly earnings is the sum of the estimates for the States and Territories, a separate ratio for Australia is not used, but the weighted average of the State and Territory ratios is approximately 66 per cent. Changes in these ratios may be necessary from one period to another to reflect, for example, appreciable and sustained changes in the levels of male overtime earnings or changes in the occupational structure. However, small differences in these ratios have relatively little effect on the earnings figures; if the ratio is understated by one per cent then average weekly earnings of \$250 would be overstated by about \$1.00.

### Seasonal adjustment

7. Quarterly figures are affected by seasonal influences. For example, special payments, including prepayment for holiday periods, tend to raise the December quarter and to depress the March quarter averages. In addition, figures are affected by the varying number of pay-days in different quarters (with the exception of Government pay-days in the Northern Territory and the Australian Capital Territory, for which special adjustments have been made in the original series). Allowance for these variations, and for recurring seasonal influences, has been made in calculating the seasonally adjusted estimates for all series shown in the tables.

8. The seasonal adjustment factors were derived from a series from which the influence of major changes in awards and determinations and estimates of the effects of pay-day variations had first been removed. While the seasonally adjusted series retain the effect of the major award, etc. changes, the pay-day effect is excluded. A detailed description of the methods of seasonal adjustment is given in *Seasonally Adjusted Indicators, Australia* (1308.0).

### Revisions to the estimates

9. For a number of reasons, estimates in these series are subject to revision. The seasonally adjusted estimates generally need to be revised following annual reanalysis of the series. The original estimates are revised whenever the employment series on which they are based is revised, for example, after the incorporation of new benchmarks following a population census. The surveys of earnings and hours, conducted in May, August and October, generally provide information about the ratio of female to male earnings, overtime earnings and hours and so on, which make it necessary from time to time to revise the average weekly earnings estimates. Other revisions are made as new or revised data become available.

### Related publications

Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0) which is available free of charge from any ABS office.
