COMMENTARY

WAGE PRICE INDEXES Australia/Sector (trend)	In the December quarter 2012, the Public sector, Private sector and All sectors wage price indexes rose 0.8%.						
	The Public sector rise of 3.2% through the year to the December quarter was below that of the Private sector (3.4%).						
State/Territory (original)	 The Northern Territory recorded the largest quarterly All sectors rise (1.1%) while New South Wales recorded the smallest (0.4%). Victoria (1.0%) was the only state or territory to record a rise that was larger than in the December quarter 2011 (0.9%). Quarterly rises for Tasmania (0.5%) and the Australian Capital Territory (0.7%) were the same as in the December quarter 2011. Rises through the year ranged from 3.1% for Queensland and South Australia to 4.3% for Western Australia and the Australian Capital Territory. In the Private sector, Victoria recorded the largest quarterly rise of 1.0%, while Tasmania recorded the smallest (0.4%). Rises through the year in the Private sector ranged from 2.8% for the Australian Capital Territory to 4.3% for Western Australia. In the Public sector, the Northern Territory recorded the largest quarterly rise of all states and territories (1.5%) while New South Wales recorded the smallest quarterly rise (0.3%). 						
	The largest through the year rise of all states and territories in the Public sector was recorded by the Australian Capital Territory (5.2%). The large through the year rise to the December quarter 2012 reflects the change in timing of pay increases due to the introduction of new Enterprise Agreements for some Australian Government agencies during the previous twelve months. The smallest through the year rise for the Public sector was recorded by South Australia (2.5%).						

COMMENTARY continued

Industry (original)

WPI—ANNUAL AND QUARTERLY CHANGES: ORIGINAL, Total hourly rates of pay excluding bonuses—Industry, December quarter 2012 Mining _______ Manufacturing ______

In the December quarter 2012, Information media and telecommunications services recorded the largest quarterly rise of 1.4% for both All sectors and the Private sector. The smallest quarterly rises for both All sectors and the Private sector were recorded by Accommodation and food services, and Education and training (0.3%).

In the Public sector, Health care and social assistance recorded the largest quarterly rise (1.2%), and Education and training the smallest (0.3%).

The All sectors through the year rise to the December quarter 2012 ranged from 2.2% for Accommodation and food services to 5.1% for Mining.

EXPLANATORY NOTES

INTRODUCTION	1 This publication contains indexes measuring changes in the price of wages and salaries in the Australian labour market.
	2 The methodology used to construct the WPIs is similar to that used for other price indexes such as the Consumer Price Index. In the Wage Price Index (WPI), index numbers are compiled using information collected from a representative sample of employee jobs within a sample of employing organisations. Individual indexes are compiled for various combinations of state/territory, sector (private/public) and broad industry group. Industry is classified according to the <i>Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006</i> (cat. no. 1292.0). For more detailed information on the methodology used in the construction of the WPI, refer to <i>Wage Price Index: Concepts, Sources and Methods</i> (cat. no. 6351.0.55.001).
CURRENT PUBLISHED	3 Four WPIs are constructed and published quarterly. These indexes were first
INDEXES	compiled for the September quarter 1997, and cover:
	 ordinary time hourly rates of pay excluding bonuses index
	 ordinary time hourly rates of pay including bonuses index
	 total hourly rates of pay excluding bonuses index
	 total hourly rates of pay including bonuses index.
	In these indexes the term 'bonuses' refers to bonuses and commissions.
DISCONTINUED INDEXES	 4 Four non-wage indexes were constructed and published annually each September quarter. These indexes were first compiled for the 2001–02 financial year, and cover: annual and public holiday leave index superannuation index payroll tax index workers' compensation index.
	 5 These four non-wage indexes were combined with the total hourly rates of pay indexes to produce two total labour price indexes labour price index including bonuses labour price index excluding bonuses.
	6 These indexes have been discontinued with the last data in the series relating to the 2010-11 financial year. Historical data for these indexes can be found in the September quarter 2011 edition of this publication, and the corresponding time series spreadsheets on the ABS website.
DESIGN OF THE INDEXES BROAD DESCRIPTION	7 The WPIs measure changes over time in the price of wages and salaries unaffected by changes in the quality or quantity of work performed. A range of procedures have been developed to identify and measure quality and quantity changes and ensure that only pure price changes are reflected in the indexes.
	8 Price-determining characteristics of the jobs are fixed to ensure that changes in these characteristics do not contribute toward index movements. The following are examples of changes in price-determining characteristics which are not reflected in index movements:
	 changes in the nature of work performed (e.g. different tasks or responsibilities) changes in the quantity of work performed (e.g. the number of hours worked) changes in the characteristics of the job occupant (e.g. age, apprenticeship year, successful completion of training or a qualification, grade or level, experience, length of service, etc.)
	 changes in the location where the work is performed.

BROAD DESCRIPTION continued	9 Changes in the price of wages and salaries resulting from changes in the composition of the labour market are also excluded from index movements. To achieve this, a longitudinal survey methodology is used to measure a similar sample of jobs over time. Once a business is selected in the sample, it will be expected to provide data for a sample of jobs for a minimum of five years.
WAGE PRICE INDEXES	10 The <i>ordinary time bourly rates of pay indexes</i> that <i>exclude bonuses</i> measure quarterly changes in ordinary time hourly wage and salary rates. Changes in rates of pay reflected in these indexes (i.e. pure price changes) arise from a range of sources including award variations, enterprise and workplace agreements, minimum wage setting, individual contracts and informal arrangements.
	 11 These indexes are not affected by changes in: penalty payments for overtime, shifts, weekends and public holidays (which fluctuate depending on the number of hours paid at penalty rates) allowances which fluctuate (such as those paid according to how much work is performed under special work conditions e.g. height, dirt, heat allowances) bonus payments (which may, or may not, relate to an individual's work performance). These payments are specifically excluded when calculating ordinary time hourly wage and salary rates.
	12 The effect of rolling ordinary time penalty payments and allowances into ordinary time hourly rates is excluded from these indexes. However, when overtime penalty payments and non-separable shift allowances are rolled into ordinary time hourly rates, the ordinary time indexes will increase accordingly.
	13 The <i>total hourly rates of pay indexes</i> that <i>exclude</i> bonuses are based on a weighted combination of ordinary time hourly wage and salary rates (described in paragraphs 11 and 12) and overtime hourly rates. As a result, the total hourly rates of pay indexes reflect changes in both the ordinary time and overtime hourly rates. However, the effect of changes in the amount of overtime paid at each overtime rate is not shown in these indexes.
	14 Only those indexes that exclude bonuses and commissions are pure price indexes because bonus and commission payments can reflect changes in the quality of work performed. No attempt is made to remove this quality element from the indexes that include bonuses and commissions.
SCOPE AND COVERAGE	 15 The target population of employers for the WPIs are all employing organisations in Australia (private and public sectors) except: enterprises primarily engaged in agriculture, forestry or fishing private households employing staff foreign embassies, consulates, etc.
	16 A sample redesign was undertaken and the outcome implemented from the December quarter 2009. A result of this review was to stop collecting data on a quarterly basis from micro businesses (0-4 employment). The size and frequency of pay changes for jobs in micro businesses was found to be the same as businesses with employment of five or more. Therefore, micro businesses are now treated as being out of coverage but remain in scope through their continued inclusion in the expenditure weights used in compiling the WPIs. The introduction of this change does not impact what the indexes are measuring.
	 17 All employee jobs in the target population of employers are in scope of the WPIs, except the following: Australian permanent defence force jobs non-salaried directors proprietors/partners of unincorporated businesses

SCOPE AND COVERAGE continued	 persons paid by commission only working proprietors/owner managers of Pty Ltd companies employees on workers' compensation who are not paid through the payroll 'non-maintainable' jobs (i.e. jobs that are expected to be occupied for less than six months of a year) jobs for which wages and salaries are not determined by the Australian labour market (e.g. most employees of Community Development Employment Programs, or jobs where the remuneration is set in a foreign country). 18 As such, full-time, part-time, permanent, casual, managerial and non-managerial jobs are in scope. Costs incurred by employers for work undertaken by self-employed persons such as consultants and subcontractors are out-of-scope, as they do not relate to
DATA COLLECTION	employee jobs.19 Information for the WPI is collected each quarter by mail questionnaires from a sample survey of private and public sector employers selected from the ABS Business Register. The survey reference date is the last pay period ending on or before the third Friday of the middle month of the quarter. Data for bonuses are collected in respect to those bonuses paid during the three month period ending on the third Friday of the middle month of the quarter.
	 20 In the first quarter they participate in the survey, each employer selects a sample of jobs from their workplace(s) using sampling instructions provided by the ABS, and provides information for these jobs, including detailed pricing specifications. In subsequent quarters survey respondents are asked to provide details of payments made to the current occupants of these same jobs. It is essential that the same jobs are priced in successive quarters, whether the individual job occupants are the same or not. Approximately 18,000 matched jobs are priced each quarter from the selected employers.
	21 The sampling method retains the highest possible common sample of employers over time, and retains the same sampled jobs within those employers where possible. However, it is also necessary to ensure the WPIs continue to be relevant and representative over time. For these reasons, the employer sample is refreshed annually (for the December quarter) in a way that ensures a high proportion of common selections while allowing new employers to be represented in the sample. Refreshing the sample also allows the ABS to control the length of time that small businesses are included in the sample.
	22 Between each annual refresh of the employer sample, a small number of employee jobs will be lost from the survey sample because of the closure of some businesses. In addition, some jobs in continuing businesses will be replaced in the sample because of restructuring and other job changes.
WEIGHTING	23 Weighting practices vary at different levels of the WPI. WPI expenditure weights are a measure of the relative importance of each elementary aggregate (EA), based on employers' expenditure on wages and salaries. Below the EA level, sample weights applied to each job on the WPI survey indicate the number of jobs in the Australian labour market a particular sampled job represents.
	24 Businesses selected in the WPI are assigned sample weights according to the number of similar businesses they represent in their state, industry and sector. Jobs are similarly assigned sample weights according to the number of jobs they represent in that business. The total sample weight for a job is determined by multiplying business and job sample weights together. This total sample weight indicates the number of jobs in the Australian labour market, a particular sampled job represents.

FINANCIAL YEAR INDEXES

33 Index numbers for financial years are calculated as simple (arithmetic) averages of the four quarterly index numbers for the financial year. As the WPIs were first produced for the September quarter 1997, the first financial year index number that can be calculated is for 1997–98. Consequently, the first percentage change between financial years that can be calculated is between 1997–98 and 1998–99. The following example illustrates the method of calculating the financial year index number for 2011–12:

Total bourly rates of pay excluding bonuses, Australia

Index numbers, original (see table 2)

September quarter 2011	109.5
plus December quarter 2011	110.5
plus March quarter 2012	111.4
<i>plus</i> June quarter 2012	112.2
Financial year 2011–12	443.6/4 = 110.9

34 Percentage changes between the index numbers for any two financial years can be calculated using the method outlined in paragraph 32 above.

35 Seasonally adjusted estimates are derived by estimating and removing systematic calendar related effects from the original series. In most economic data these calendar related effects are a combination of the classical seasonal influences (e.g. the effect of the weather, social traditions or administrative practices) plus other kinds of calendar related variations, such as the number of trading days, Easter or the proximity of significant days in the year (e.g. Christmas). In the seasonal adjustment process, both seasonal and other calendar related factors evolve over time to reflect changes in activity patterns. The seasonally adjusted estimates reflect the sampling and non-sampling errors to which the original estimates are subject.

36 The *total hourly rates of pay excluding bonuses index* is the only index of the WPI that is seasonally adjusted. Institutional effects largely drive the seasonality of this index. Important factors in determining this seasonality are the timing of effect of agreements, the length of these agreements, and the timing of the implementation of significant wage determinations that impact on rates of pay. A significant institutional change in wage setting arrangements can affect the relative level (or trend) and seasonality of the index.

37 Prior to 2006, the Australian Industrial Relations Commission (AIRC) handed down annual Safety Net Review (SNR) decisions which set federal full-time minimum award rates. Since the commencement of the WPI, the SNR has contributed to the level of the index. Most of its impact on the WPI was in the September quarter with some residual effect in the December quarter each year. This impact contributed to the level of seasonality for those quarters. As a result of industrial relations changes associated with Work Choices there was no SNR decision in 2006. The setting of federal minimum wage rates became the responsibility of the Australian Fair Pay Commission (AFPC).

38 The AFPC's first decision was handed down on 26 October 2006 with a date of effect of 1 December 2006. The impact on the WPI of the first AFPC ruling was mainly in the March quarter 2007. From 2007 to 2009, AFPC determinations impacted the December quarter WPI.

39 On 1 July 2009 Fair Work Australia (FWA) began operations as part of a new national workplace relations system underpinned by the Fair Work Act 2009. In June 2010 FWA announced its first annual minimum wage decision and the increase impacted the WPI in the September quarter 2010. Since 2010, FWA minimum wage decisions have taken effect in the September quarter of each year and have resulted in a change of seasonality. To account for the change in timing, the seasonally adjusted and trend series were reanalysed in the September quarter 2010 to remove the influence of the different timing of minimum wage decisions in any year on the WPI.

SEASONALLY ADJUSTED INDEXES

CONCURRENT SEASONAL ANALYSIS	40 The WPI uses a concurrent seasonal adjustment methodology to derive the adjustment factors. This method uses the original time series available at each reference period to estimate seasonal factors for the current and previous quarters. Concurrent seasonal adjustment is technically superior to the more traditional method of reanalysing seasonal patterns once each year because it uses all available data to fine tune the estimates of the seasonal component each quarter. With concurrent analysis, the seasonally adjusted series are subject to revision each quarter as the estimates of the seasonal factors for the previous quarter as the estimates of the seasonal factors are improved. In most instances, the only significant revisions will be to the combined adjustment factors for the previous quarter and for the same quarter in the preceding year as the reference quarter (i.e. if the latest quarter is Q_t then the most significant revisions will be to Q_{t-1} and Q_{t-4}). Seasonal patterns are also reanalysed when there are known changes to regular events. This can lead to additional revisions.
ARIMA MODELLING	41 The ABS uses Autoregressive Integrated Moving Averages (ARIMA) modelling techniques to produce seasonally adjusted estimates. ARIMA modelling is a technique that can be used to extend original estimates beyond the end of a time series. The extended values are temporary, intermediate values that are used internally to improve seasonal adjustment. They do not affect the original estimates and are discarded at the end of the seasonal adjustment process. The use of ARIMA modelling generally results in a reduction in revisions to the seasonally adjusted estimates when subsequent data becomes available. ARIMA modelling in the WPI was introduced in the June quarter 2008. For more information on the details of ARIMA modelling see the feature article 'Use of ARIMA modelling to reduce revisions' in the October 2004 issue of <i>Australian Economic Indicators</i> (cat. no. 1350.0).
TREND ESTIMATES	42 The trend is a measure of the underlying direction of a series. The ABS trend estimates for the WPI are derived by applying a 7-term Henderson-weighted moving average to all quarters of the respective seasonally adjusted indexes except the first three and last three quarters. Trend estimates are created for these quarters by applying surrogates of the 7-term Henderson weighted moving average to the seasonally adjusted indexes, tailored to each time series. In general, trend estimates give a better indication of underlying behaviour than the seasonally adjusted estimates. Please refer to the ABS Information Paper, <i>A Guide to Interpreting Time Series - Monitoring Trends</i> (cat. no. 1349.0).
	43 Increases in minimum wage rates contribute to the relative level (or trend) of the WPI. A review of the seasonally adjusted series was undertaken in the September quarter 2010 to remove the impacts of the different timing of the increases in minimum wage rates. A trend break correction has been applied between the June quarter and the September quarter 2009 to remove the shift in the underlying level as a result of no increase to minimum wage rates being awarded in 2009.
INDEX REFERENCE PERIOD	44 The index reference period of an index series is that period for which the value of the index is set to 100.0. It is most commonly a year but can also be a different length of time, ranging from two or three years down to a single quarter. It often coincides with the weighting base for the series, but this is not essential. The September quarter 1997 was used as the original index reference period for the WPIs as it was the first quarter for which data was available. With the introduction of the non-wage indexes, the index reference period was changed to 2003–04.
	45 With the implementation of the Australian and New Zealand Standard Industrial Classification 2006, all indexes are presented on an index reference period of 2008–09.

REVISIONS TO INDEXES	46 Original index numbers will be released as final figures at the time they are first published. Revisions will only occur in exceptional circumstances. Trend and seasonally adjusted indexes for some quarters will be revised as extra quarters are included in the series analysed for seasonal influences (see paragraphs 35 to 43).

APPENDIX DISTRIBUTION OF EXPENDITURE ON WAGES

AS UPDATED DECEMBER QUARTER 2012

A1 DISTRIBUTION OF EMPLOYERS' EXPENDITURE ON WAGES(a)(b)

	Private	Public	Total	
	%	%	%	
Australia by sector				
Australia	77.0	23.0	100.0	
Sector by State/Territory				
New South Wales	30.6	29.1	30.3	
Victoria	24.7	20.6	23.7	
Queensland	19.3	19.5	19.3	
South Australia	6.8	7.3	6.9	
Western Australia	14.5	12.9	14.1	
Tasmania	1.4	2.3	1.6	
Northern Territory	1.1	1.6	1.2	
Australian Capital Territory	1.7	6.7	2.8	
Australia	100.0	100.0	100.0	
Sector by broad industry group(c)				
Mining	4.4	(d)	3.4	
Manufacturing	11.8	(d)	9.1	
Electricity, gas, water and waste services	0.9	4.6	1.8	
Construction	9.9	(d)	7.7	
Wholesale trade	6.6	(d)	5.1	
Retail trade	8.4	(d)	6.5	
Accommodation and food services	4.4	(d)	3.4	
Transport, postal and warehousing	5.1	(d)	5.5	
Information media and telecommunications	2.7	(d)	2.3	
Financial and insurance services	5.8	(d)	4.8	
Rental, hiring and real estate services	1.8	(d)	1.5	
Professional, scientific and technical services	12.8	2.0	10.3	
Administrative and support services	7.5	(d)	5.8	
Public administration and safety	0.6	32.2	7.9	
Education and training	3.6	27.3	9.1	
Health care and social assistance	8.5	23.1	11.8	
Arts and recreation services	1.1	(d)	1.1	
Other services	3.9	(d)	3.0	
All industries	100.0	100.0	100.0	

(a) Components may not sum to 100.0 due to rounding.

(b) See paragraphs 23-28 of the Explanatory Notes.

(c) Classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006 (cat. no. 1292.0).

(d) For the public sector, these industries are combined and included in the 'All industries' total.

GLOSSARY

Bonuses	Payments made to a job occupant that are in addition to regular wages and salaries and which generally relate to the job occupant's, or the organisation's, performance. In the WPI, the term 'bonuses' refers to bonuses and commissions.
Elementary aggregates	The finest aggregations of jobs, in terms of state/territory, sector and industry group, for which expenditure weights are available.
Employee job	A job for which the occupant receives remuneration in wages, salary, payment in kind, or piece rates.
Employer	Organisation with one or more employees.
Expenditure weights	A measure of the relative importance of each elementary aggregate, based on employers' total expenditure on wages and salaries. Expenditure weights are used to combine elementary aggregate indexes into broader level indexes.
Index number	Measures the ratio of the price of labour between the commencement of the index series and a later period.
Index reference period	The period for which an index series is given the value of 100.0. The current index reference period for the WPI is the 2008–09 financial year.
Industry	Classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006 (cat. no. 1292.0).
Ordinary time hourly rates of pay index	Measures quarterly change in ordinary time hourly rates of pay (see Explanatory Notes paragraphs 10 and 11).
Ordinary time hours	Award, standard or agreed hours of work paid for at the ordinary rate.
Overtime hours	The number of hours paid for in excess of ordinary time hours.
Reference date	The reference date for this survey is the last pay period ending on or before the third Friday of the middle month of the quarter, except for bonuses which are collected in respect to those paid during the three month period ending on the third Friday of the middle month of the quarter.
Sector	Public sector comprises local government authorities and all government departments and agencies created by, or reporting to, the Commonwealth, or state/territory parliaments. The private sector comprises all organisations not classified as public sector.
Seasonal adjustment	Process of removing systematic calendar related effects from the original series (see Explanatory Notes paragraphs 35–41, 46).
Total hourly rates of pay index	Measures quarterly change in combined ordinary time and overtime hourly rates of pay (see Explanatory Notes paragraph 13).
Trend	A measure of the underlying direction of a series (see Explanatory Notes paragraphs 42–43, 46).
Wage price index	Measures changes in the price of wages.
Weighting base	The period to which the expenditure weights relate.
