# COMMENTARY

WAGE PRICE INDEXES Australia/Sector (trend)	In the September quarter 2013, the Private sector index rose by 0.7% and the Public sector index rose at a slower rate of 0.5%. The All sectors quarterly rise was 0.6%.						
	The Private sector rise through the year to the September quarter 2013 was 2.8%, this was larger than the Public sector rise of 2.6%. Through the year the trend All sectors index rose 2.6%.						
Australia/Sector (seasonally adjusted)	The All sectors seasonally adjusted quarterly rise of 0.5% in the September quarter 2013 was smaller than the rise of 0.7% in the June quarter 2013.						
	For the fifth consecutive quarter through the year wages growth has eased. Wages have risen 2.7% through the year to the September quarter 2013.						
Australia/Sector (original)	Wages rose by 1.0% in the September quarter 2013 for both the Private sector and All sectors, an increase in the rate of growth over last quarter but the lowest September quarter rise for four years. The Public sector saw a quarterly rise of 0.9%, which was the smallest quarterly rise in a September quarter since 1999.						
	The rate of wages growth in the September quarter 2013 for the Private sector, Public sector and All sectors through the year continued to slow, with Private sector and All sectors rising by 2.7% and the Public sector rising 2.6%.						
State/Territory (original)	In the Private sector, South Australia recorded the largest quarterly rise of 1.6% and New South Wales, Victoria, Western Australia and the Northern Territory all recorded a quarterly rise of 0.9%. Rises through the year in the Private sector ranged from 2.4% for Tasmania to 3.5% for South Australia.						
	The largest quarterly Public sector rise across all states and territories was 1.6% for the Australian Capital Territory, Queensland recorded the smallest quarterly rise of 0.4%.						
	The largest through the year rise of all states and territories, Public sector, was recorded by Western Australia, 4.1%. In contrast, the smallest through the year rise was in New South Wales at 2.0%.

Industry (original)

WPI—ANNUAL AND QUARTERLY CHANGES: ORIGINAL, Total hourly rates of pay excluding bonuses—Industry, September quarter 2013

In the September quarter 2013, Public administration and safety recorded the largest quarterly rise of 1.6% for All sectors. The smallest quarterly rise for All sectors of 0.2% was recorded by Financial and insurance services.

The All sectors through the year rises to the September quarter 2013 ranged from 1.9% for Professional, scientific and technical services to 3.4% for Electricity, gas, water and waste services.

In the Private sector, the Manufacturing, Retail trade and Education and Training industries saw larger quarterly rises in the current quarter than in the September quarter 2012. All other industries showed the same or smaller rises when compared to the quarterly changes in the year before.

Through the year to the September quarter 2013 there were no rises above 4.0% in any industry in the Private sector. The last time this occurred was in the June quarter 2010.

In the Public sector Professional, scientific and technical services recorded the largest quarterly rise of 2.0%. The smallest quarterly rise of 0.3% was recorded by Education and training.

National Minimum WageA national minimum wage increase of 2.6% with effect from 1 July 2013 was granted byIncreaseFair Work Australia in June 2013. This increase in minimum wage rates impacted thewage price index (WPI) in the September quarter 2013.

### EXPLANATORY NOTES

INTRODUCTION	<b>1</b> This publication contains indexes measuring changes in the price of wages and salaries in the Australian labour market.
	<b>2</b> The methodology used to construct the WPIs is similar to that used for other price indexes such as the Consumer Price Index. In the Wage Price Index (WPI), index numbers are compiled using information collected from a representative sample of employee jobs within a sample of employing organisations. Individual indexes are compiled for various combinations of state/territory, sector (private/public) and broad industry group. Industry is classified according to the <i>Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006</i> (cat. no. 1292.0). For more detailed information on the methodology used in the construction of the WPI, refer to <i>Wage Price Index: Concepts, Sources and Methods</i> (cat. no. 6351.0.55.001).
CURRENT PUBLISHED INDEXES	<ul> <li><b>3</b> Four WPIs are constructed and published quarterly. These indexes were first compiled for the September quarter 1997, and cover:</li> <li>ordinary time hourly rates of pay excluding bonuses index</li> </ul>
	<ul> <li>ordinary time hourly rates of pay including bonuses index</li> </ul>
	<ul> <li>total hourly rates of pay excluding bonuses index</li> </ul>
	<ul> <li>total hourly rates of pay including bonuses index.</li> </ul>
	In these indexes the term 'bonuses' refers to bonuses and commissions.
DISCONTINUED INDEXES	<ul> <li>4 Four non-wage indexes were constructed and published annually each September quarter. These indexes were first compiled for the 2001–02 financial year, and cover:</li> <li>annual and public holiday leave index</li> <li>superannuation index</li> <li>payroll tax index</li> <li>workers' compensation index.</li> </ul>
	<ul> <li>5 These four non-wage indexes were combined with the total hourly rates of pay indexes to produce two total labour price indexes</li> <li>labour price index including bonuses</li> <li>labour price index excluding bonuses.</li> </ul>
	<b>6</b> These indexes have been discontinued with the last data in the series relating to the 2010-11 financial year. Historical data for these indexes can be found in the September quarter 2011 edition of this publication, and the corresponding time series spreadsheets on the ABS website.
DESIGN OF THE INDEXES BROAD DESCRIPTION	<b>7</b> The WPIs measure changes over time in the price of wages and salaries unaffected by changes in the quality or quantity of work performed. A range of procedures have been developed to identify and measure quality and quantity changes and ensure that only pure price changes are reflected in the indexes.
	<ul> <li>8 Price-determining characteristics of the jobs are fixed to ensure that changes in these characteristics do not contribute toward index movements. The following are examples of changes in price-determining characteristics which are not reflected in index movements:</li> <li>a changes in the nature of work performed (e.g. different tasks or responsibilities)</li> <li>b changes in the quantity of work performed (e.g. the number of hours worked)</li> <li>changes in the characteristics of the job occupant (e.g. age, apprenticeship year,</li> </ul>
	successful completion of training or a qualification, grade or level, experience, length of service, etc.)
	<ul><li>changes in the location where the work is performed.</li></ul>

BROAD DESCRIPTION continued	<b>9</b> Changes in the price of wages and salaries resulting from changes in the composition of the labour market are also excluded from index movements. To achieve this, a longitudinal survey methodology is used to measure a similar sample of jobs over time. Once a business is selected in the sample, it will be expected to provide data for a sample of jobs for a minimum of five years.
WAGE PRICE INDEXES	<b>10</b> The <i>ordinary time bourly rates of pay indexes</i> that <i>exclude bonuses</i> measure quarterly changes in ordinary time hourly wage and salary rates. Changes in rates of pay reflected in these indexes (i.e. pure price changes) arise from a range of sources including award variations, enterprise and workplace agreements, minimum wage setting, individual contracts and informal arrangements.
	<ul> <li>11 These indexes are not affected by changes in:</li> <li>penalty payments for overtime, shifts, weekends and public holidays (which fluctuate depending on the number of hours paid at penalty rates)</li> <li>allowances which fluctuate (such as those paid according to how much work is performed under special work conditions e.g. height, dirt, heat allowances)</li> <li>bonus payments (which may, or may not, relate to an individual's work performance). These payments are specifically excluded when calculating ordinary time hourly wage and salary rates.</li> </ul>
	<b>12</b> The effect of rolling ordinary time penalty payments and allowances into ordinary time hourly rates is excluded from these indexes. However, when overtime penalty payments and non-separable shift allowances are rolled into ordinary time hourly rates, the ordinary time indexes will increase accordingly.
	<b>13</b> The <i>total hourly rates of pay indexes</i> that <i>exclude</i> bonuses are based on a weighted combination of ordinary time hourly wage and salary rates (described in paragraphs 11 and 12) and overtime hourly rates. As a result, the total hourly rates of pay indexes reflect changes in both the ordinary time and overtime hourly rates. However, the effect of changes in the amount of overtime paid at each overtime rate is not shown in these indexes.
	<b>14</b> Only those indexes that exclude bonuses and commissions are pure price indexes because bonus and commission payments can reflect changes in the quality of work performed. No attempt is made to remove this quality element from the indexes that include bonuses and commissions.
SCOPE AND COVERAGE	<ul> <li>15 The target population of employers for the WPIs are all employing organisations in Australia (private and public sectors) except:</li> <li>enterprises primarily engaged in agriculture, forestry or fishing</li> <li>private households employing staff</li> <li>foreign embassies, consulates, etc.</li> </ul>
	<b>16</b> A sample redesign was undertaken and the outcome implemented from the December quarter 2009. A result of this review was to stop collecting data on a quarterly basis from micro businesses (0-4 employment). The size and frequency of pay changes for jobs in micro businesses was found to be the same as businesses with employment of five or more. Therefore, micro businesses are now treated as being out of coverage but remain in scope through their continued inclusion in the expenditure weights used in compiling the WPIs. The introduction of this change does not impact what the indexes are measuring.
	<ul> <li><b>17</b> All employee jobs in the target population of employers are in scope of the WPIs, except the following:</li> <li>Australian permanent defence force jobs</li> <li>non-salaried directors</li> <li>proprietors/partners of unincorporated businesses</li> </ul>

SCOPE AND COVERAGE continued	<ul> <li>persons paid by commission only</li> <li>working proprietors/owner managers of Pty Ltd companies</li> <li>employees on workers' compensation who are not paid through the payroll</li> <li>'non-maintainable' jobs (i.e. jobs that are expected to be occupied for less than six months of a year)</li> <li>jobs for which wages and salaries are not determined by the Australian labour market (e.g. most employees of Community Development Employment Programs, or jobs where the remuneration is set in a foreign country).</li> <li><b>18</b> As such, full-time, part-time, permanent, casual, managerial and non-managerial jobs are in scope. Costs incurred by employers for work undertaken by self-employed persons such as consultants and subcontractors are out-of-scope, as they do not relate to</li> </ul>
DATA COLLECTION	<ul><li>employee jobs.</li><li><b>19</b> Information for the WPI is collected each quarter by mail questionnaires from a sample survey of private and public sector employers selected from the ABS Business Register. The survey reference date is the last pay period ending on or before the third Friday of the middle month of the quarter. Data for bonuses are collected in respect to those bonuses paid during the three month period ending on the third Friday of the middle month of the quarter.</li></ul>
	<ul> <li>20 In the first quarter they participate in the survey, each employer selects a sample of jobs from their workplace(s) using sampling instructions provided by the ABS, and provides information for these jobs, including detailed pricing specifications. In subsequent quarters survey respondents are asked to provide details of payments made to the current occupants of these same jobs. It is essential that the same jobs are priced in successive quarters, whether the individual job occupants are the same or not. Approximately 18,000 matched jobs are priced each quarter from the selected employers.</li> </ul>
	<b>21</b> The sampling method retains the highest possible common sample of employers over time, and retains the same sampled jobs within those employers where possible. However, it is also necessary to ensure the WPIs continue to be relevant and representative over time. For these reasons, the employer sample is refreshed annually (for the December quarter) in a way that ensures a high proportion of common selections while allowing new employers to be represented in the sample. Refreshing the sample also allows the ABS to control the length of time that small businesses are included in the sample.
	<b>22</b> Between each annual refresh of the employer sample, a small number of employee jobs will be lost from the survey sample because of the closure of some businesses. In addition, some jobs in continuing businesses will be replaced in the sample because of restructuring and other job changes.
WEIGHTING	<b>23</b> Weighting practices vary at different levels of the WPI. WPI expenditure weights are a measure of the relative importance of each elementary aggregate (EA), based on employers' expenditure on wages and salaries. Below the EA level, sample weights applied to each job on the WPI survey indicate the number of jobs in the Australian labour market a particular sampled job represents.
	<b>24</b> Businesses selected in the WPI are assigned sample weights according to the number of similar businesses they represent in their state, industry and sector. Jobs are similarly assigned sample weights according to the number of jobs they represent in that business. The total sample weight for a job is determined by multiplying business and job sample weights together. This total sample weight indicates the number of jobs in the Australian labour market, a particular sampled job represents.

WEIGHTING continued	<ul> <li>25 To ensure the WPI sample remains representative, the latest total employment figures for each business on the WPI survey are obtained from providers each September quarter. Job weights are updated based on these employment figures and applied to the WPI sample each December quarter.</li> <li>26 The Laspeyres index methodology requires that prices in each period are compared to those in a given base period. To ensure the index remains relevant, expenditure weights need to be updated to reflect changes in expenditure patterns. Once updated, the weights are fixed again, and a new weighting base is created. In the following quarters, prices will be compared using this new weighting base. This process is referred to as reweighting.</li> </ul>					
	<b>27</b> The December quarter 2013 weight update will use expenditure on wages and salaries from the 2012 Survey of Employee Earnings and Hours adjusted for price change to represent current period values.					
	recommence at 100.0. Instead, the series l based on the new weights are linked to fo calculation, which is referred to as chainin	pdated, the published index numbers will not based on the old expenditure weights and that rm a continuous series via an arithmetic g. This provides a continuous series from the porating the updated expenditure weights.

#### FINANCIAL YEAR INDEXES

**33** Index numbers for financial years are calculated as simple (arithmetic) averages of the four quarterly index numbers for the financial year. As the WPIs were first produced for the September quarter 1997, the first financial year index number that can be calculated is for 1997–98. Consequently, the first percentage change between financial years that can be calculated is between 1997–98 and 1998–99. The following example illustrates the method of calculating the financial year index number for 2012–13:

Total bourly rates of pay excluding bonuses, Australia

Index numbers, original (see table 2)

September quarter 2012	113.5
plus December quarter 2012	114.3
<i>plus</i> March quarter 2013	115.0
<i>plus</i> June quarter 2013	115.5
Financial year 2012–13	458.3/4 = 114.6

**34** Percentage changes between the index numbers for any two financial years can be calculated using the method outlined in paragraph 32 above.

**35** Seasonally adjusted estimates are derived by estimating and removing systematic calendar related effects from the original series. In most economic data these calendar related effects are a combination of the classical seasonal influences (e.g. the effect of the weather, social traditions or administrative practices) plus other kinds of calendar related variations, such as the number of trading days, Easter or the proximity of significant days in the year (e.g. Christmas). In the seasonal adjustment process, both seasonal and other calendar related factors evolve over time to reflect changes in activity patterns. The seasonally adjusted estimates reflect the sampling and non-sampling errors to which the original estimates are subject.

**36** The *total hourly rates of pay excluding bonuses index* is the only index of the WPI that is seasonally adjusted. Institutional effects largely drive the seasonality of this index. Important factors in determining this seasonality are the timing of effect of agreements, the length of these agreements, and the timing of the implementation of significant wage determinations that impact on rates of pay. A significant institutional change in wage setting arrangements can affect the relative level (or trend) and seasonality of the index.

**37** Prior to 2006, the Australian Industrial Relations Commission (AIRC) handed down annual Safety Net Review (SNR) decisions which set federal full-time minimum award rates. Since the commencement of the WPI, the SNR has contributed to the level of the index. Most of its impact on the WPI was in the September quarter with some residual effect in the December quarter each year. This impact contributed to the level of seasonality for those quarters. As a result of industrial relations changes associated with Work Choices there was no SNR decision in 2006. The setting of federal minimum wage rates became the responsibility of the Australian Fair Pay Commission (AFPC).

**38** The AFPC's first decision was handed down on 26 October 2006 with a date of effect of 1 December 2006. The impact on the WPI of the first AFPC ruling was mainly in the March quarter 2007. From 2007 to 2009, AFPC determinations impacted the December quarter WPI.

**39** On 1 July 2009 Fair Work Australia (FWA) began operations as part of a new national workplace relations system underpinned by the Fair Work Act 2009. In June 2010 FWA announced its first annual minimum wage decision and the increase impacted the WPI in the September quarter 2010. Since 2010, FWA minimum wage decisions have taken effect in the September quarter of each year and have resulted in a change of seasonality. To account for the change in timing, the seasonally adjusted and trend series were reanalysed in the September quarter 2010 to remove the influence of the different timing of minimum wage decisions in any year on the WPI.

## SEASONALLY ADJUSTED

20 ABS • WAGE PRICE INDEX • 6345.0 • SEP 2013

CONCURRENT SEASONAL ANALYSIS	<b>40</b> The WPI uses a concurrent seasonal adjustment methodology to derive the adjustment factors. This method uses the original time series available at each reference period to estimate seasonal factors for the current and previous quarters. Concurrent seasonal adjustment is technically superior to the more traditional method of reanalysing seasonal patterns once each year because it uses all available data to fine tune the estimates of the seasonal component each quarter. With concurrent analysis, the seasonally adjusted series are subject to revision each quarter as the estimates of the seasonal factors for the previous quarter as the estimates of the seasonal factors are improved. In most instances, the only significant revisions will be to the combined adjustment factors for the previous quarter and for the same quarter in the preceding year as the reference quarter (i.e. if the latest quarter is $Q_t$ then the most significant revisions will be to $Q_{t-1}$ and $Q_{t-4}$ ). Seasonal patterns are also reanalysed when there are known changes to regular events. This can lead to additional revisions.
ARIMA MODELLING	<b>41</b> The ABS uses Autoregressive Integrated Moving Averages (ARIMA) modelling techniques to produce seasonally adjusted estimates. ARIMA modelling is a technique that can be used to extend original estimates beyond the end of a time series. The extended values are temporary, intermediate values that are used internally to improve seasonal adjustment. They do not affect the original estimates and are discarded at the end of the seasonal adjustment process. The use of ARIMA modelling generally results in a reduction in revisions to the seasonally adjusted estimates when subsequent data becomes available. ARIMA modelling in the WPI was introduced in the June quarter 2008. For more information on the details of ARIMA modelling see the feature article 'Use of ARIMA modelling to reduce revisions' in the October 2004 issue of <i>Australian Economic Indicators</i> (cat. no. 1350.0).
TREND ESTIMATES	<b>42</b> The trend is a measure of the underlying direction of a series. The ABS trend estimates for the WPI are derived by applying a 7-term Henderson-weighted moving average to all quarters of the respective seasonally adjusted indexes except the first three and last three quarters. Trend estimates are created for these quarters by applying surrogates of the 7-term Henderson weighted moving average to the seasonally adjusted indexes, tailored to each time series. In general, trend estimates give a better indication of underlying behaviour than the seasonally adjusted estimates. Please refer to the ABS Information Paper, <i>A Guide to Interpreting Time Series - Monitoring Trends</i> (cat. no. 1349.0).
	<b>43</b> Increases in minimum wage rates contribute to the relative level (or trend) of the WPI. A review of the seasonally adjusted series was undertaken in the September quarter 2010 to remove the impacts of the different timing of the increases in minimum wage rates. A trend break correction has been applied between the June quarter and the September quarter 2009 to remove the shift in the underlying level as a result of no increase to minimum wage rates being awarded in 2009.
INDEX REFERENCE PERIOD	<b>44</b> The index reference period of an index series is that period for which the value of the index is set to 100.0. It is most commonly a year but can also be a different length of time, ranging from two or three years down to a single quarter. It often coincides with the weighting base for the series, but this is not essential. The September quarter 1997 was used as the original index reference period for the WPIs as it was the first quarter for which data was available. With the introduction of the non-wage indexes, the index reference period was changed to 2003–04.
	<b>45</b> With the implementation of the Australian and New Zealand Standard Industrial Classification 2006, all indexes are presented on an index reference period of 2008–09.

REVISIONS TO INDEXES	<b>46</b> Original index numbers will be released as final figures at the time they are first published. Revisions will only occur in exceptional circumstances. Trend and seasonally adjusted indexes for some quarters will be revised as extra quarters are included in the series analysed for seasonal influences (see paragraphs 35 to 43).

## GLOSSARY

Bonuses	Payments made to a job occupant that are in addition to regular wages and salaries and which generally relate to the job occupant's, or the organisation's, performance. In the WPI, the term 'bonuses' refers to bonuses and commissions.
Elementary aggregates	The finest aggregations of jobs, in terms of state/territory, sector and industry group, for which expenditure weights are available.
Employee job	A job for which the occupant receives remuneration in wages, salary, payment in kind, or piece rates.
Employer	Organisation with one or more employees.
Expenditure weights	A measure of the relative importance of each elementary aggregate, based on employers' total expenditure on wages and salaries. Expenditure weights are used to combine elementary aggregate indexes into broader level indexes.
Index number	Measures the ratio of the price of labour between the commencement of the index series and a later period.
Index reference period	The period for which an index series is given the value of 100.0. The current index reference period for the WPI is the 2008–09 financial year.
Industry	Classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006 (cat. no. 1292.0).
Ordinary time hourly rates of pay index	Measures quarterly change in ordinary time hourly rates of pay (see Explanatory Notes paragraphs 10 and 11).
Ordinary time hours	Award, standard or agreed hours of work paid for at the ordinary rate.
Overtime hours	The number of hours paid for in excess of ordinary time hours.
Reference date	The reference date for this survey is the last pay period ending on or before the third Friday of the middle month of the quarter, except for bonuses which are collected in respect to those paid during the three month period ending on the third Friday of the middle month of the quarter.
Sector	Public sector comprises local government authorities and all government departments and agencies created by, or reporting to, the Commonwealth, or state/territory parliaments. The private sector comprises all organisations not classified as public sector.
Seasonal adjustment	Process of removing systematic calendar related effects from the original series (see Explanatory Notes paragraphs 35–41, 46).
Total hourly rates of pay index	Measures quarterly change in combined ordinary time and overtime hourly rates of pay (see Explanatory Notes paragraph 13).
Trend	A measure of the underlying direction of a series (see Explanatory Notes paragraphs 42–43, 46).
Wage price index	Measures changes in the price of wages.
Weight reference period	The period to which the expenditure weights relate.
